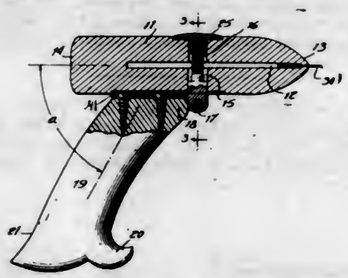
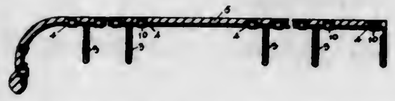
1. In a combined electric fan and heater, a plurality of fan blades assembled to form a reflector bowl, a separate heating unit, the heat from which is adapted to be reflected forwardly from such bowl, the blades overlapping to form when viewed from front a continuous reflecting surface.



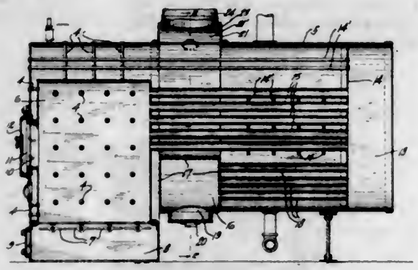
1,785,753. DEVICE FOR HOLDING COMBS. HARRY WEISSNER, Philadelphia, Pa. Filed Jan. 16, 1930. Serial No. 421,121. 3 Claims. (Cl. 211—120.)

1. A device for holding combs comprising a body member having base flanges for mounting the same at suitable locations, side walls extending outwardly therefrom, and an outer wall connected to the side walls, said outer wall having a plane outer surface parallel to the base flanges, pivot pins carried by the body member, comb retaining plates pivotally supported by said pins, and spring means adapted to impel the retaining plates toward the outer wall of the body member and to retain the combs between said retaining plates and said outer wall of the body member.



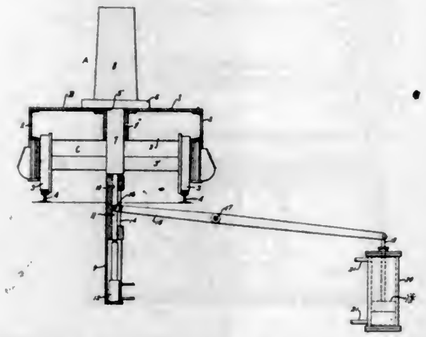
1,785,754. HAND SCRAPER. ERVIN WERNER, Brooklyn, N. Y. Filed May 10, 1930. Serial No. 451,297. 5 Claims. (Cl. 145—47.)

1. A hand scraper, in combination a blade, a head provided with a slot in one end for receiving a blade and on the other end a hand grip, a hole at right angles to the slot, a handle provided with a heel and a toe having a hingle plate fastened thereto, a stud hinged to the plate



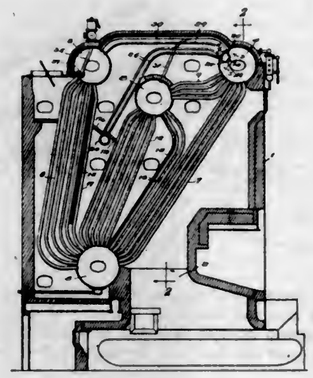
and passing through the hole in the head, a nut on the screw, the stud so hinged to the plate that the slot will be decreased when the heel of the handle contacts with the head.

1,785,755. CUSHION STEP TREAD FOR AUTOMOBILES. GEORGE E. WHITLOCK, Toledo, Ohio, assignor to The City Auto Stamping Company, Toledo, Ohio, a Corporation of Ohio. Filed June 3, 1929. Serial No. 367,847. 2 Claims. (Cl. 280—169.)



1. In a tread for sheet metal supporting members, a cushioning material in sheet form, a plurality of eyelets for securing the sheet material to the sheet metal, the eyelets having flanged portions embedded within the cushioning material and flanged portions extending through the sheet metal and engaging the sheet metal on the side opposite to that on which the sheet material is located, the openings of the eyelets substantially filled with the composition of the sheet material for interlocking the eyelets with the sheet material.

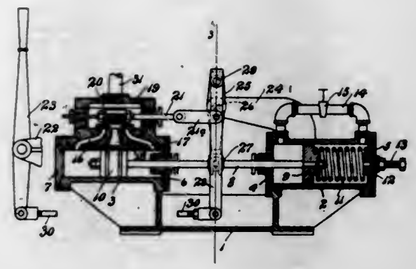
1,785,756. BOILER. HENRY L. WRATTEN, Racine, Wis. Filed May 28, 1928. Serial No. 281,177. 4 Claims. (Cl. 122—76.)



1. A boiler comprising an outer casing, a combustion chamber within one end of said casing, a chamber at the other end of the casing, a tubular member connecting the combustion chamber with the end chamber and extending through the boiler for conveying gases of combustion therethrough, an intermediately positioned chamber in a lower portion of the boiler, a tubular member connecting the end chamber with the intermediate chamber and extending through the boiler, and a discharge passageway surrounding a portion of the boiler and connecting with both sides of the intermediate chamber.

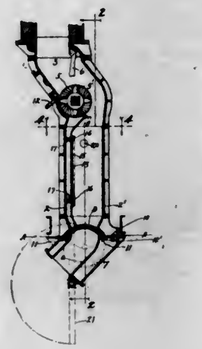
1,785,757. APPARATUS FOR JARRING INGOT MOLDS. LAFAYETTE YOUNG, Alton, Ill., assignor to Laclede Steel Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 19, 1929. Serial No. 356,471. 8 Claims. (Cl. 22—26.)

1. A jarring apparatus for an ingot mold mounted on a support, comprising means for elevating the ingot mold above its normal support, and means independent of said elevating means for jarring said mold while it is so elevated.



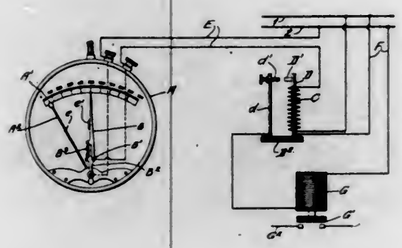
1,785,758. BOILER. RALEIGH J. ADAMS, Chicago, Ill. Filed June 3, 1927. Serial No. 196,257. 2 Claims. Cl. 122—302.)

1. In a boiler of the class described, a pair of drums, a plurality of baffles defining passes for gases of combustion, a header disposed in one of said passes, a chamber associated with one of said drums and sealed against communication therewith, tubes connecting said drums with each other, tubes connecting said chamber with the other of said drums than the one with which said chamber is associated, tubes connecting said chamber with said header, and means for withdrawing steam from said header.



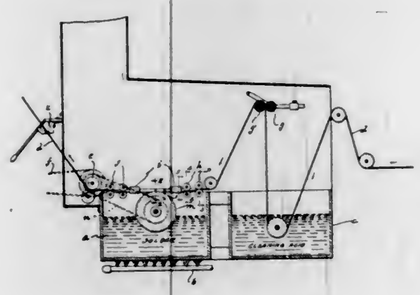
1,785,759. PRESSURE-CONTROL VALVE. FRED BAUMGARTNER, Muskegon, Mich. Filed June 18, 1928. Serial No. 286,101. 10 Claims. (Cl. 303—54.)

1. In a construction of the class described, a cylinder, a valve housing connecting with said cylinder, a piston in the cylinder, a valve in the valve housing, there being a port connecting said valve housing and one end of the cylinder with the valve adapted in one position to cover the port, a piston rod extending from said piston, a valve rod extending from said valve, spring means tending to move the piston toward the port end of the cylinder, a lever pivotally mounted between its ends on a fixed pivot and having connection at its lower end with said piston



rod, a bar pivotally connected at its upper end to the upper end of said lever, means connecting the valve rod with said bar, and manually operable means for turning said bar about its point of pivotal connection to said lever to thereby change the position of said valve.

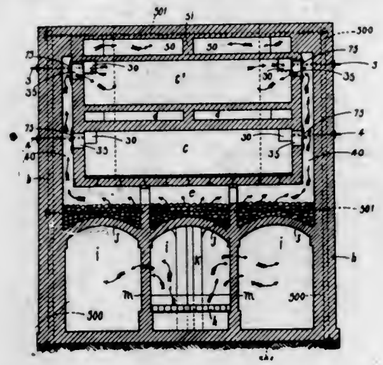
1,785,760. COKE RETORT WITH QUENCHING DEVICE AND METHOD FOR SAME. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 16, 1925. Serial No. 9,509. 12 Claims. (Cl. 202—258.)



1. In an apparatus for discharging coke ovens, in combination: an extractor magazine having its upper portion offset from its lower portion; means for subjecting the hot coke as it descends from said upper portion to the action of a quenching liquid; means located below said upper portion for feeding the quenched coke across said magazine to and down the side of said lower portion remote from said upper portion, said means being pervious to the passage of the quenching liquid for separation of the spent liquid from the coke during the transverse passage; means located below said feeding means for collecting the separated spent liquid in the lower portion of the magazine that supports previously quenched coke and for maintaining the separated spent liquid out of contact with the previously quenched coke therein; and means for discharging the spent liquid from the magazine from the portion thereof that supports the previously quenched coke.

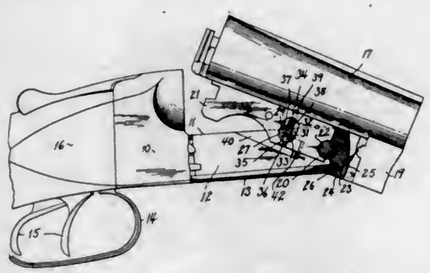
1,785,761. METER-CONTROLLED RELAY MECHANISM. RICHARD P. BROWN, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1924. Serial No. 741,975. 2 Claims. (Cl. 236—68.)

1. The combination with a sensitive control meter including a deflecting member adapted to make rapid oscillations in response to variations in the quantity metered, of a relay comprising an electric heater and a bimetallic thermostatic actuating element energized by said heater, and means including a contact engaged by said member in one position of the latter for energizing said heater when said member is in said position.



1,785,762. TINNING APPARATUS. HARRY W. BUNDY, Detroit, Mich., assignor, by mesne assignments, to Bundy Tubing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 4, 1925. Serial No. 73,116. 5 Claims. (Cl. 91—12.2.)

1. An apparatus for the purpose specified, having in combination, means for moving a piece of strip stock, a tank for containing molten solder, a solder feed roll partly immersed in said solder and provided with a circumferential groove, means for rotating said roll whereby the solder is raised by being retained in the groove above the surface of the solder by capillary action, and means for guiding said strip stock to engage an edge of said strip stock in said circumferential groove at a point substantially above the surface of the solder in the tank for the purpose of forming a ribbon-like coating along the edge of the stock and which runs lengthwise of the stock.

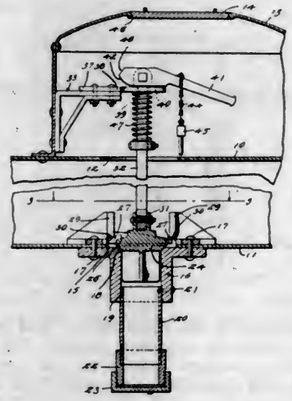


1,785,763. OVEN. ROMIAL BURT, Montreal, Quebec, Canada. Filed Nov. 12, 1928, Serial No. 318,744, and in Canada June 14, 1928. 2 Claims. (Cl. 107—55.)

1. An oven embodying outer walls, a combustion chamber, baking ovens disposed above said combustion chamber, a heat-radiation chamber between said combustion chamber and said ovens, there being an air space between said ovens and said outer walls, heat-storing and radiating

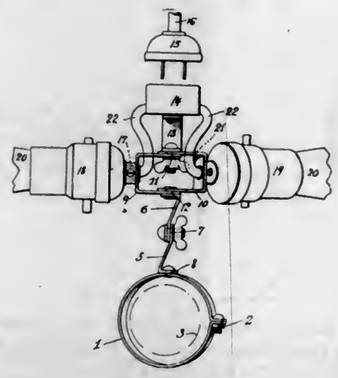
material in said heat radiation chamber, with an air space between said material and said ovens, in communication with the first-mentioned air space.

1,785,764. BARREL STOP FOR BREAKDOWN FIREARMS. FRANK F. BURTON, Mount Carmel, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Delaware. Filed Dec. 3, 1929. Serial No. 411,237. 11 Claims. (Cl. 42—40.)



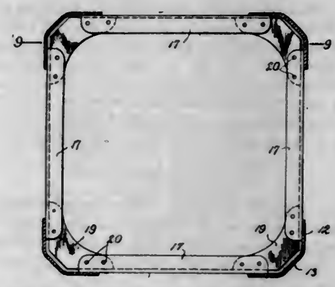
5. In a breakdown firearm, the combination with the frame-body and the barrel-lug thereof; of a floating barrel-stop carried by the said lug and coacting with the said frame-body to limit the breakdown movement.

1,785,765. MULTIPLE-BARREL FIREARM. FRANK F. BURTON, Mount Carmel, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Delaware. Filed Dec. 3, 1929. Serial No. 411,238. 8 Claims. (Cl. 42—40.)



1. A multiple-barrel firearm having a pair of substantially-parallel barrels, each of which is formed upon its inner face with a lump secured to the complementary lump of the other barrel; and a top-rib lying between the said barrels and embracing the upper ends of the said lumps thereof.

1,785,766. OUTLET CONSTRUCTION. ROBERT M. CALLAWAY, Waco, Tex. Filed Sept. 29, 1928. Serial No. 309,237. 5 Claims. (Cl. 137—21.)



1. In an outlet construction for tanks, tank cars and the like, a tank having aligned openings in its upper and lower walls, an outlet fitting secured to the lower wall about the edges of the opening and including a valve seat, a valve coacting with said seat, said valve having oppositely arranged cam wedges at the opposite sides thereof, adjacent edges of said wedges being spaced to provide a notch therebetween and brackets secured upon the interior of the lower wall of the tank at opposite sides of the seat and with which said notches are alignable, the lower portions of said brackets being cut-away to form downwardly facing shoulders beneath which said cam wedges may engage.

1,785,767. ELECTRIC-LAMP BRACKET. PAUL CESAR, New York, N. Y. Filed June 4, 1929. Serial No. 368,309. 4 Claims. (Cl. 240—52.)

1. A lamp bracket comprising a main clamping ring, two pivotally connected opposed horizontally disposed symmetrical U-shaped lamp socket supports, means for supporting the latter on said ring to permit horizontal and vertical adjustment of said supports with respect to the ring, a push plug socket carried by said supports in rotatable relation thereto, means for supporting lamp sockets on said support and cables passing from said lamp sockets to the said push plug socket in fixed relation to the said supports.

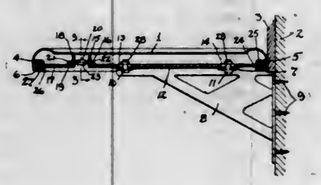
1,785,768. STOOL. JAMES H. COATES, RALPH S. HOWE, and WILLIAM F. COSTELLO, New Britain, Conn., assignors to The New Britain Machine Company, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 16, 1929. Serial No. 332,838. 2 Claims. (Cl. 155—194.)

2. A sheet metal stool having a seat and at least three legs each leg being united at its upper end to the seat by welding, the legs diverging downwardly, and means connecting all of the legs intermediate their upper and lower ends, such connecting means comprising vertical web portions, each web portion being united at its opposite ends respectively by welding to a pair of adjacent legs and being deeper at its ends than at its middle, the connecting means also comprising a continuous uninterrupted horizontal portion integrally united to each of the vertical web portions.

1,785,769. PROCESS OF MAKING AMINO-AZO COMPOUNDS. PAUL DIETERLE, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 2, 1927. Serial No. 230,696. 12 Claims. (Cl. 260—96.)

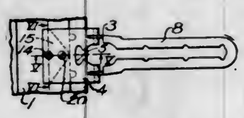
1. In the process of making an aromatic amino-azo compound, the improvement which comprises coupling an aromatic diazo compound with an aromatic amino compound in the presence of water and of an organic solvent immiscible in water, one of said coupling components being relatively insoluble in water but soluble in said organic solvent.

1,785,770. AERIAL TOY. HENRY B. FABER, New York, and LOUIS L. DRIGGS, Jr., New Rochelle, N. Y. Filed Dec. 10, 1928. Serial No. 325,018. 8 Claims. (Cl. 42—55.)



1. In a device of the class described, a base, a tube secured to the base, an explosive chamber in said tube, a

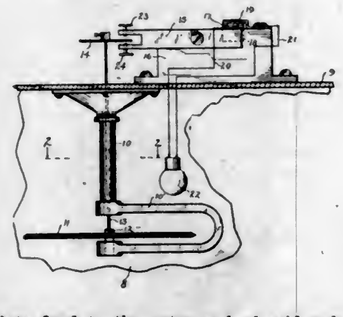
fuse running to said explosive chamber, an explosive in said chamber, a projectile closing the upper end of said chamber, said projectile having a time fuse, an expelling charge chamber, an explosive in said last mentioned chamber, means for transmitting a thrust from the bottom to the top of the chamber, a rigid means mounted on the top of said second explosive chamber, a parachute wrapped about said means and means for securing the parachute to the means, whereby the thrusts due to the various explosions will in no way injure the parachute nor interfere with its operation when functioning.



4. In a device of the class described, a time fuse composed of two concentric eyelets and a slow burning charge, the inner of said eyelets having a perforated dome.

1,785,771. DRAIN BOARD. FREDERICK GEIGER, Cleveland, Ohio, assignor to The Enamel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 4, 1928. Serial No. 244,415. 7 Claims. (Cl. 141—11.)

1. The combination with a drain board, of supporting means therefor comprising a relatively long strip formed with a plurality of longitudinally extending slots therethrough, a bracket, means adapted to coact with said bracket and to pass through said slots to secure said strip to said bracket, and a second relatively short strip adjustably secured to said first strip, the free ends of said strips engaging said drain board to support the same.

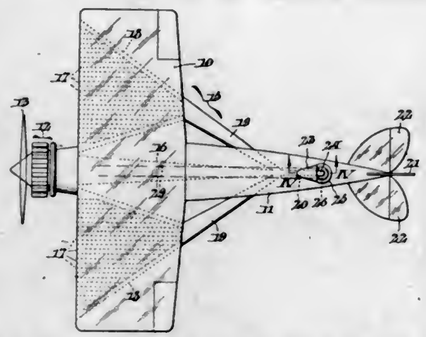


1,785,772. HASP. RALPH M. HALLAM and WALTER E. AMBERG, Chicago, Ill.; said Amberg assignor to said Hallam. Filed Apr. 30, 1927. Serial No. 187,726. 3 Claims. (Cl. 292—268.)

1. In a device of the character described, a hasp comprising a base plate, a securing plate having screw holes therein and pivoted to the inner face of said base plate, said base plate having an aperture therein, said aperture being in alignment with one of said screw holes for permitting securing means to project therethrough into a support to enable both of said plates to be firmly secured to the support when said base plate conceals said securing plate.

1,785,773. ELECTRIC-POWER CONTROL. IRA C. HANSON, Racine, Wis. Filed Apr. 15, 1926. Serial No. 102,236. 1 Claim. (Cl. 200—140.)

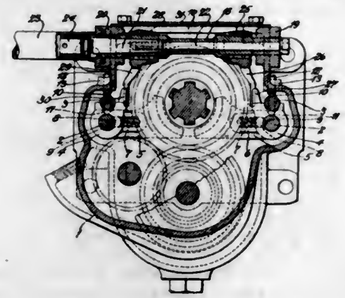
A thermostatic circuit controller, comprising a support of insulating material, a fixed contact member carried thereby, a lever pivotally mounted on said support and having a bifurcated outer end portion, adjustable screws extending through said bifurcated portion, a contact member carried by the inner end portion of said lever and engageable with said fixed contact member, a tubular bracket, a thermostatic disc carried by said bracket, a rod movably mounted within said bracket and projecting from the ends thereof, one end portion of said rod being supported by said thermostatic disc to be moved thereby,



and a plate fixed to the outer end of said rod and arranged for restricted movement between the adjustable screws in the bifurcated portion of said lever to move the lever in both directions upon contact with the screws.

1,785,774. PLASTIC HEAT-TREATED ALUMINUM ALLOY. NOAK VICTOR HYBINETTE, Wilmington, Del., assignor to Hybinette Patents Corporation, Jackson, Mich., a Corporation of Michigan. Filed May 18, 1929. Serial No. 364,330. 7 Claims. (Cl. 148—32.)

6. A highly ductile, fully heat-treated aluminum alloy commercially free from inter-crystalline corrosion, composed of from .50% to 1.0% zinc, .50% to 1.0% magnesium, .05% to .15% cadmium, and copper, nickel, cobalt, manganese, chromium, tungsten and molybdenum in quantities not exceeding .25% of each and in total not exceeding .50%.



1,785,775. AIRCRAFT. CARL H. IWANOWITZ, Souderton, Pa. Filed Mar. 5, 1929. Serial No. 344,119. 13 Claims. (Cl. 244—18.)

5. In aircraft, tubulose inductor means embodied in and open along the frontal edge of a wing plane operative, under head pressure incident to flight, to gather in air and at the same time to increase its velocity; and means whereby the high velocity air flowing through said tubulose means is utilized, by control of directional discharge, to assist flight of the craft.

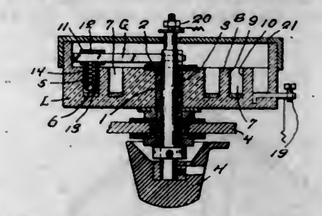
1,785,776. SPEED-CHANGING MECHANISM. ELMER G. KESLING, Bloomfield, Mo. Filed Sept. 27, 1928. Serial No. 308,702. 13 Claims. (Cl. 74—39.)

1. In speed changing mechanism, a gear case, gear shifting devices, a tubular element supporting parts of said devices, a shaft for imparting rocking and longitudinal movements to said tubular element, and a clamping

device connected to said shaft and having rotative adjustable connection with said tubular element securing said shaft in rigid connection with said tubular element.

1,785,777. PROCESS FOR PRODUCING VITREOUS ENAMELS. CHARLES J. KINZIE, Niagara Falls, N. Y., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y., a Corporation of Maine. Filed July 31, 1928. Serial No. 296,637. 11 Claims. (Cl. 106—36.2.)

1. In the preparation of a slip for vitreous enamels and glazes from mill liquor containing alkaline substances, the step which consists in treating said liquor with a salt of one of the metallic elements in Group IV, Subgroup A. of Mendelejeff's classification having a molecular weight below 100 to neutralize said alkaline substances and produce a hydrate precipitate of the element introduced as said salt.

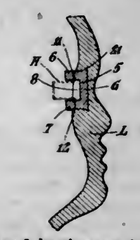


1,785,778. POCKETED WELDING, BRAZING, AND HARD-SOLDERING ROD. OTTMAR M. KREMBS, Glencoe, Ill. Filed Mar. 11, 1929. Serial No. 346,177. 4 Claims. (Cl. 219—8.)

1. A brazing, welding, or hard-soldering rod consisting of a metal rod having pockets formed in its peripheral surface which extend angularly into the rod so that a predetermined amount of flux or metal in powdered form will be retained in the pockets.

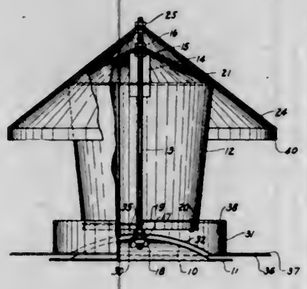
1,785,779. VARIABLE RESISTANCE. PHILIP LAUTER, New York, N. Y. Filed Nov. 10, 1928. Serial No. 318,562. 1 Claim. (Cl. 201—56.)

In a variable resistance device, in combination, a carrying base having an aperture therethrough, a shaft projecting through said aperture, an arm extending radially from said shaft adapted to be moved by said shaft rotatably about the surface of said base, said base having a groove in its surface extending in a spiral direction about said shaft, a length of resistance material arranged at the bottom of said groove extending longitudinally along the length of the groove and thus in a spiral direction about said shaft, a contact finger carried by said arm non-rotatably mounted thereon but slidably movable longitudinally thereof toward and away from the shaft, said contact finger consisting of a hollow tubular member arranged to extend laterally from the arm lengthwise into the groove so that the outer wall surfaces of said member have co-operative engagement with the walls of the groove to cause said member to follow the groove and slide along the arm during movement of the arm by the shaft, and a separate spring pressed contact forming element arranged in the hollow of said member in electrical connection therewith and projecting therefrom into engagement with said resistance material.



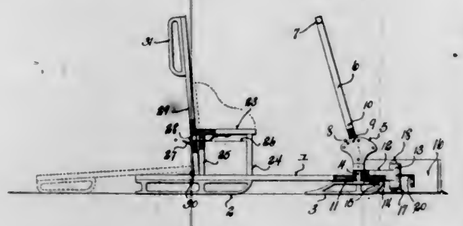
1,785,780. INDEX TAB AND METHOD. RALPH A. MAISH, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1928. Serial No. 301,641. 4 Claims. (Cl. 40—28.)

1. An index tab comprising a strip of flexible material gummed on one side and foldable into the shape of a U with its front and rear legs lying in closely spaced relationship and with the gummed surface inside, and a band of writing material held by the gum on the rear leg near the fold line, the front leg having a portion through which said band is visible and the margins of both legs extending beyond said band when the strip is folded so that the legs may be held by the gum to the opposite sides of a guide card or the like.



1,785,781. DOLL-HEAD STRUCTURE. SAMUEL MARCUS, Brooklyn, N. Y., assignor to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 15, 1927. Serial No. 238,365. 1 Claim. (Cl. 46—40.)

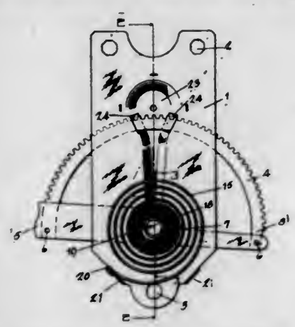
A molded doll head having an insert molded as a part thereof serving as anchoring means for a separate device,



said insert having a flaring portion embedded within the material of the doll head to prevent its separation from the doll head, and said insert being of a different material from the material of the doll head adapting it to receive attaching prongs of said separate device thrust thereinto.

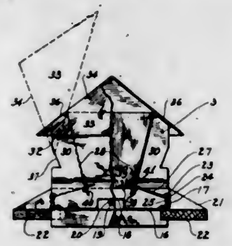
1,785,782. FEEDER. GEORGE T. MARKEY and JOHN B. OLSON, Fort Atkinson, Wis., assignors to James Manufacturing Company, Fort Atkinson, Wis. Filed Dec. 2, 1926. Serial No. 152,088. 15 Claims. (Cl. 119—53.)

1. The combination with a storage chamber having an opening in its bottom, a circular pan underneath said opening and having a diameter greater than the bottom portion of the storage chamber and a spherically rounded support for the central portion of the pan adapted to allow it to tilt in any direction and to hold the pan in feed regulating relation to the storage chamber.



1,785,783. TOY VEHICLE. JULIUS MOHR, Milwaukee, Wis. Filed Mar. 8, 1928. Serial No. 260,227. 1 Claim. (Cl. 280—16.)

A sled comprising a body portion having runners, a seat carried by the body portion, an extension board hinged to the body portion rearwardly of said seat, latching means carried by said seat for temporarily retaining said extension board in upright position, said extension board being adapted to rock downwardly and to project rearwardly behind said seat, said extension board being provided with a runner.

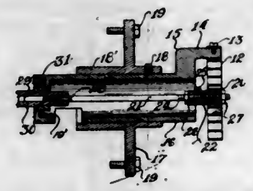


1,785,784. WINDOW REGULATOR. HUBERT A. MYERS, Toledo, Ohio, assignor to The Myers Regulator Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 10, 1927. Serial No. 160,080. 8 Claims. (Cl. 268—126.)

3. In a window regulator, an arm for raising and lowering the window, a supporting member, a pivot member connected to the arm and extending through the supporting member, a convolute spring having one end connected to the pivot member and the other end connected to the supporting member for securing the pivot member in

its pivotal relation to the supporting member, an arcuate strip having teeth formed along one edge thereof and secured at its ends to the arm.

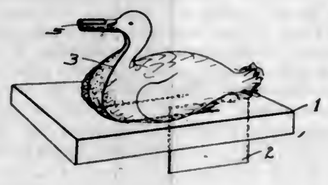
1,785,785. FEEDING APPARATUS. JOHN B. OLSON and GEORGE T. MARKEY, Fort Atkinson, Wis., assignors to James Manufacturing Company, Fort Atkinson, Wis. Filed Dec. 16, 1926. Serial No. 155,134. 3 Claims. (Cl. 119—55.)



1. A feeding apparatus comprising a storage chamber having a bottom outlet and supporting end walls, and a feeding pan underneath the outlet of the storage chamber and tiltingly supported by said end walls in feed controlling relation to said outlet, said feeding pan being provided with an upwardly extending rib having a flat table-like surface along the longitudinal center line of its bottom portion and in a supporting relation to the major portion of material tending to drop to the pan from the hopper and also having feeding fingers extending from the side walls of the pan through apertures in the storage chamber adjacent to its outlet, whereby material in the storage chamber is caused to pass through the outlet when the pan is tilted and is pushed laterally by said rib.

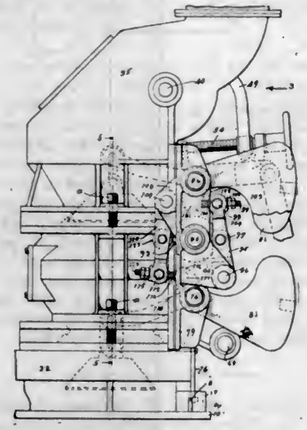
1,785,786. METHOD OF ROLLING AND ANNEALING SHEET METAL. ALEXANDER PATERSON, Buffalo, N. Y. Filed Mar. 26, 1928, Serial No. 264,960. Renewed May 14, 1930. 3 Claims. (Cl. 148—12.)

1. The method of treating sheet metal consisting in reducing the metal while at a temperature within the "blue short" zone and then annealing it at a temperature within the growth range.



1,785,787. THERMOSTATICALLY-OPERATED DEVICE. CHARLES L. RAYFIELD, Chicago, Ill., assignor to Rayfield Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1927. Serial No. 219,651. 5 Claims. (Cl. 297—16.)

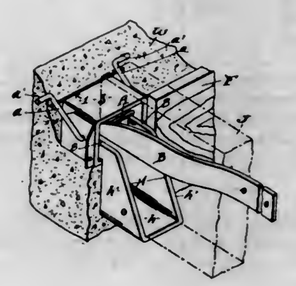
1. In a thermostatically operated device, the combination of a tubular member, a rotary member extending through said tubular member, a thermostat coil having its outer end secured to said tubular member and its inner end secured to said rotary member, a support for said tubular member comprising a sleeve in which said



tubular member is axially shiftable, said tubular member having an air inlet for the entrance of air to circulate through said member and said thermostat coil, said sleeve adjusting the area of said air inlet when said tubular member is shifted in said sleeve.

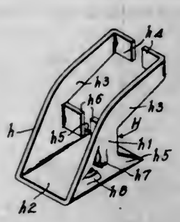
1,785,788. DECOY DUCK. WILFRED ROBINSON, Drawbridge, Calif. Filed Dec. 11, 1928. Serial No. 325,291. 3 Claims. (Cl. 43—3.)

1. A decoy support comprising a float, a single piece of wire bent to provide a two wire support for the breast, neck, and bill of a decoy bird, and means to secure the wire on said float.



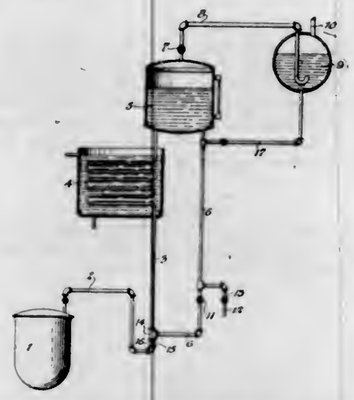
1,785,789. FEED MECHANISM FOR GAS PRODUCERS. JOHN F. ROGERS, Cleveland Heights, Ohio, assignor to The Wellman Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 1, 1927. Serial No. 209,769. 18 Claims. (Cl. 214—36.)

1. In apparatus for feeding material, a valve in the line of feed, mechanism for operating said valve comprising a cam and a cam follower operatively connected with said valve, a counter-balance weight, and a second cam interconnected with said first cam and mounted to move in timed relation therewith, said second cam being operatively connected with said counter-balance weight and timed to move said counter-balance weight from high to low position and back again while the said follower moves up the ascent side of said cam and down the descent side thereof.



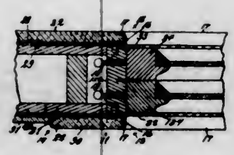
18. In a fuel feed for gas producers, a base and a casing spaced apart vertically, a bottom member for the casing interposed between the base and the casing and normally supporting the casing, and screws associated with said base and casing outside of said bottom member for raising and supporting the casing independently of the bottom member, whereby the bottom member may be slid out of position for repair or replacement.

1,785,790. COMBINATION JOIST HANGER AND TIE. FRANKLIN N. ROPP, Hollywood, Calif. Filed Aug. 14, 1928. Serial No. 299,468. 5 Claims. (Cl. 72—108.)



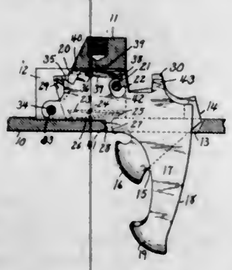
3. A combination joist hanger and tie comprising a socket member adapted to be anchored in a wall, a hanger detachably connected therewith, a joist carried in said hanger, and a bar attached to said joist and having a portion extending into and engaging said anchor so as to prevent the movement of the joist relative to said wall.

1,785,791. COMBINATION JOIST HANGER AND TIE. FRANKLIN N. ROPP, Hollywood, Calif. Filed Dec. 17, 1928. Serial No. 326,560. 8 Claims. (Cl. 72—108.)



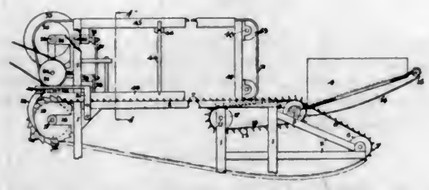
6. A device of the character described comprising a unitary hanger having portions extending into and imbedded in a wall, and a stirrup externally of said wall, a joist carried in said stirrup, a tie bar attached to said joist, and means for irremovably connecting said tie bar with an exposed side of said stirrup when the tie bar is attached to said joist.

1,785,792. GAS-TREATING APPARATUS. WILLIAM L. SPALDING, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 5, 1925. Serial No. 60,442. 8 Claims. (Cl. 261—76.)



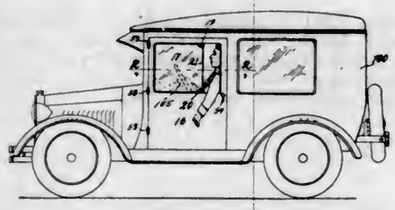
1. Gas treating apparatus comprising in combination a system for circulating liquid in a cyclic path, means for admitting hot gases into an upwardly circulating portion of liquid in said system to promote circulation, and means for cooling the upper part of said portion.

1,785,793. DOOR AND WINDOW CASING. JACK C. STARRIETT, Gallup, N. Mex. Filed Jan. 27, 1930. Serial No. 423,768. 8 Claims. (Cl. 72—98.)



1. A window casing including a frame having a groove therein, an inner mold plate secured to said frame to form the inner wall of a mold and having a flange secured in said groove, and an outer mold plate secured to said frame to form the outer wall of a mold that can be filled with plastic material to form a window casing.

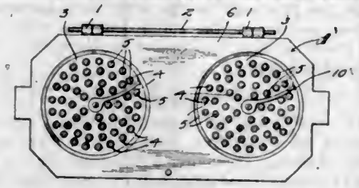
1,785,794. DOUBLE-BARRELED FIREARM. LOUIS STIENNON, New Haven, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation of Delaware. Filed Apr. 10, 1929. Serial No. 354,089. 5 Claims. (Cl. 42—41.)



1. A double-barreled firearm having two triggers, each controlling the firing-mechanism of one of the barrels thereof and each provided with a finger-piece; and guard-means comprising a pair of directly co-acting guard-abutments respectively carried by the said triggers in position to be inter-engaged one with the other by a relatively-slight initial manual movement of either one of the said triggers to automatically and positively restrain the other trigger against movement into its firing position.

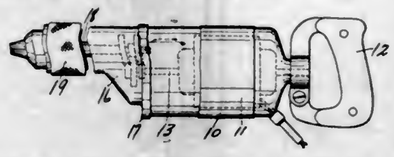
1,785,795. ASPARAGUS-CUTTING MACHINE. LOUIS D. STOPPEL, Isleton, Calif. Filed Apr. 29, 1927. Serial No. 187,543. 6 Claims. (Cl. 146—81.)

1. An asparagus cutting machine comprising, a plurality of stationary cutting blades, a plurality of endless chains arranged for conveying asparagus stems toward the blades, means for aligning the tips of the asparagus stems as the asparagus stems are being conveyed toward the cutting blades comprising a guide arranged adjacent the path of travel of the asparagus and mounted for movement toward and from the same, means for intermittently so moving said guide to strike the extreme ends of the asparagus, and means for lifting the asparagus stems from the chains and bringing them into contact with the blades.



1,785,796. SIGNAL WINDOW FOR AUTOMOBILE DOORS. CYRUS HENRY WALLACE, San Gabriel, Calif. Filed June 10, 1929. Serial No. 369,889. 5 Claims. (Cl. 296—44.)

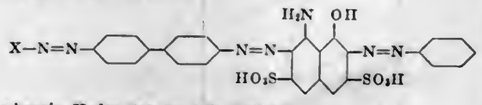
1. An improvement in a window including a frame having upper and lower channel irons connected by a vertically arranged channel bar so that one side of the frame is open, a main transparent pane secured in the channels of said irons and bar arranged to leave an elongated narrow space at the open side of said frame, hinges secured to said upper and lower channel irons, an elongated transparent panel secured to said hinges within the frame and arranged vertically so as to normally fill the narrow space in said frame and so it can be moved in an arc, and stops connected with said hinges for holding said panel in a number of prearranged positions in said arc for the purpose specified.



1,785,797. MOLD. HUGH W. WATSON, Seattle, Wash., assignor, by direct and mesne assignments, to Perwatco Manufacturing Co., Crete, Nebr., a Corporation of Nebraska. Filed June 9, 1928. Serial No. 284,105. 3 Claims. (Cl. 107—19.)

1. A mold of the class described comprising two sections adapted to be disposed one over the other, one of said sections being provided with a molding recess, the bottom wall of said recess having openings therethrough, the second section having upstanding pins, said pins extending through the openings in the first section and

through the molding recess when said sections are arranged one upon the other, a knife disposed over the bottom wall of the recess, means for rotating said knife, and means at the opposite side of the section movable with the knife to indicate the position of the knife.



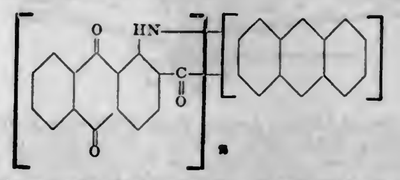
1,785,798. MOTOR-DRIVEN TOOL. THEOBALD C. WEISS, South Bend, Ind., assignor to Electric Sprayit Company, South Bend, Ind. Filed Apr. 20, 1929. Serial No. 356,868. 4 Claims. (Cl. 74—7.)

1. In a motor driven tool, the combination with a motor casing, a motor mounted in said casing, of a gear housing carried by the motor casing, a shaft journaled in said housing, and a gear train disposed in said housing and driven by said motor, one gear of said train being mounted on said shaft for rotation independent of and in the same direction as said shaft.

1,785,799. AZO COLORING MATTER. BYRON L. WEST, Hamburg, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 24, 1927. Serial No. 228,498. 11 Claims. (Cl. 260—78.)

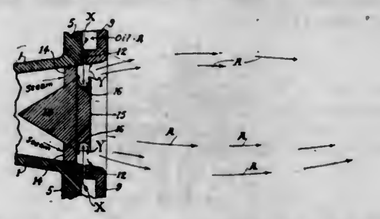
1. The process of producing an azo coloring matter, which comprises subjecting to hydrolytic decomposition a diazo-disazo body having in the free state the following probable formula:

wherein X denotes an acid radical.



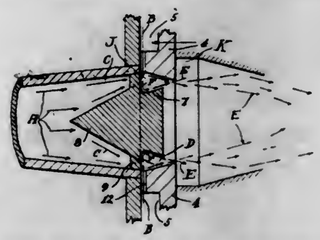
1,785,800. DOLL. ROSE O'NEILL WILSON and CALLISTA O'NEILL SCHULER, Saugatuck, Conn. Filed Sept. 20, 1927. Serial No. 220,713. 7 Claims. (Cl. 46—40.)

1. A cloth doll having a printed piece forming the face and having two pieces forming the remainder of the head with a vertical seam along the back, each of said two pieces having a dart in the lower edge at one side with a pucker at the top to form the ears, the front edges of said two pieces being stitched around the piece forming the face.



1,785,801. NEW BROWN VAT DYESTUFFS OF THE ANTHRAQUINONE SERIES. WERNER ZERWECK, Frankfort-on-the-Main-Fechenheim, Germany, assignor to General Aniline Works Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 3, 1929, Serial No. 352,316, and in Germany Apr. 2, 1928. 2 Claims. (Cl. 260—37.)

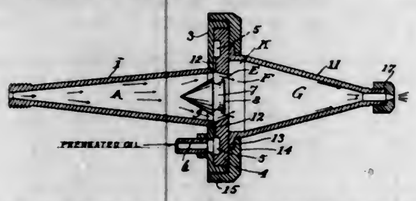
1. As new compounds vat dyestuffs corresponding probably to the general formula:



wherein n means the number 1 or 2 and the anthracene as well as the anthraquinone nuclei may contain further substituents, which dyestuffs are when dry brownish powders soluble in concentrated sulfuric acid with a brownish color, dyeing the vegetable fiber from the hydrosulfite vat bright brown shades of an excellent fastness especially to light and exposure.

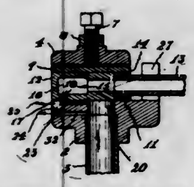
1,785,802. ATOMIZING JET NOZZLE. HENRY ADAMS, Plainfield, N. J. Filed Nov. 16, 1923. Serial No. 675,150. 17 Claims. (Cl. 158—77.)

1. In combination, a duct gradually tapering toward its inlet end; an abutment member in the discharge end of the duct comprising a conical portion pointing toward the inlet end and peripherally spaced lugs around the periphery of the conical portion extending to the wall of the duct to provide atomizing fluid passages; said member being provided forward of said lugs with an annular groove therearound and means for injecting fuel into said groove.



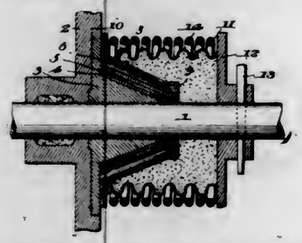
1,785,803. ATOMIZING MIXING NOZZLE. HENRY ADAMS, Plainfield, N. J. Filed Dec. 6, 1923. Serial No. 678,977. 12 Claims. (Cl. 158—77.)

12. An apparatus comprising means forming high velocity streams of atomizing fluid; structure means having



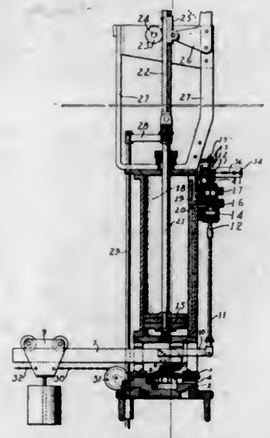
an annular groove thereabout having a rear face transverse to the streams, a forwardly flaring forward face and an intermediate inwardly curved abutment face merging into the forward and rear faces; means for directing fuel inwardly along the plane of said rear face, said forward face directing fuel into said streams.

1,785,804. PROCESS FOR OIL BURNING. HENRY ADAMS, Plainfield, N. J. Filed June 17, 1924. Serial No. 720,612. 8 Claims. (Cl. 158—117.5.)



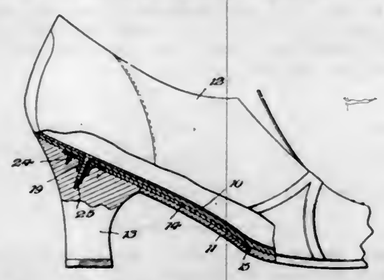
1. The oil burning process which consists in gradually expanding steam under pressure, compressing the expanding steam, wire-drawing the oil, atomizing the wire-drawn oil, causing the atomized wire-drawn oil to travel in a path which intersects the path of the steam discharged after said compression, compressing the oil and steam at the intersection of their paths for further atomizing the oil, mixing the oil and steam, expanding said mixture for thoroughly mixing the oil and steam, gradually compressing the thoroughly mixed oil and steam, and discharging and burning the mixture.

1,785,805. METHOD OF AND APPARATUS FOR ATOMIZING FUEL OIL. HENRY ADAMS, Plainfield, N. J. Filed Jan. 23, 1928. Serial No. 248,854. 25 Claims. (Cl. 299—140.)



8. A process comprising, projecting in a common direction high pressure fluid streams substantially limited to, and laterally extending in, a common plane slightly expanding the fluid; forming jets of fuel; atomizing the fuel of the jets and directing it into said pressure fluid along a line in said plane transverse to the path of the fluid; and compressing the fluid along said line.

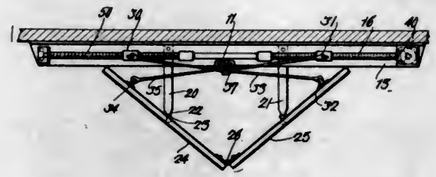
1,785,806. SEAL FOR SHAFT BEARINGS. ALBEON BEASLEY, Evansville, Ind., assignor of one-half to William Snirley Jaco, Vanderburg County, Ind.; Russell Coffman administrator of said William Shirley Jaco, deceased. Filed Aug. 7, 1928. Serial No. 298,027. 4 Claims. (Cl. 286—11.)



1. In a seal for shaft bearings, the combination with a shaft, of a bearing cone, a bearing thimble into which the bearing cone projects said thimble and cone being relatively rotatable, a housing connected to said thimble, a ring to which the housing is connected, an expansible and contractible shell connected to the ring, a collar connected to the shell and to the shaft, and an expansible coil spring bearing on the collar and the ring and encircling the said shell, and means for relatively rotating said thimble and cone.

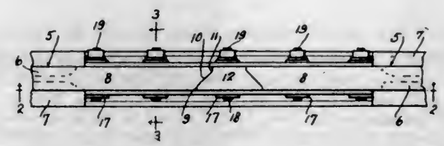
1,785,807. APPARATUS FOR PRESSURE CONTROL. THEODORE H. CARPENTER, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Aug. 3, 1927. Serial No. 210,332. 3 Claims. (Cl. 137—139.)

1. In a fluid operated regulating device controlled by a pilot valve, a stem for the pilot valve, and a Bourdon element communicating with a pulsating pressure and means arranged to translate its motion into rotative oscillations of the stem of the pilot valve.



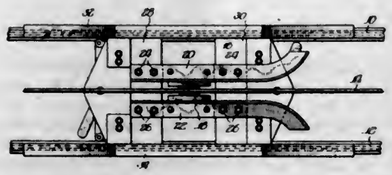
1,785,808. HEEL-ATTACHING DEVICE. LEONARDO CIPOLLINA, Gulfport, Miss. Filed Aug. 10, 1929. Serial No. 385,007. 2 Claims. (Cl. 36—76.)

1. In combination, a shoe, a heel, a metal shank having a portion thereof embedded in the sole of the shoe and extending beneath the heel portion thereof, an enlargement formed on said shank, said heel having a recess formed to receive said enlargement and a communicating groove to receive the shank, and attaching elements engaged through said enlargement with the material of the heel body.



1,785,809. COMBINATION SIGN AND AWNING. HARRY ROBERT DAVIS, Nashua, N. H. Filed Aug. 20, 1930. Serial No. 476,690. 6 Claims. (Cl. 156—42.)

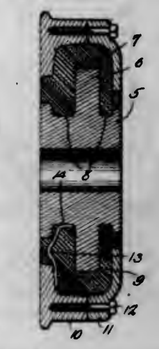
4. A combined sign and awning comprising two hingedly connected relatively flat members each of which is formed with a curved guide slot in its rear face, a single supporting arm for each member, a head upon each arm, each head operating in the guide slot of its respective member, and means for moving said members about their



respective supporting arm and cause said members to position themselves in the same angular plane or in a vertical plane at right angles to each other as and for the purpose set forth.

1,785,810. RAILROAD-TRACK JOINT. EDMOND DE GRACE, Detroit, Mich. Filed Apr. 15, 1930. Serial No. 444,474. 2 Claims. (Cl. 238—205.)

1. In a railroad track joint, a pair of rail sections disposed in end to end relationship and having a pair of spaced adjacent ends, said ends being of equal transverse thickness throughout their height and having their terminals beveled laterally so that faces formed by the terminals converge toward each other in one direction, a rail chair in which said ends are positioned, and a beveled insert block of equal thickness with said ends and positioned between the ends with faces abutting the terminal spaces of the said ends.

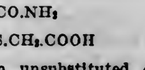


1,785,811. CABLE-RAISING DEVICE. CHARLES H. FUGLE, CHARLES H. OSTENBERG, ALBERT W. MAGLEIN, JOSEPH M. TRUDO, and ANDY NEWTON, Duluth, Minn. Filed Aug. 28, 1929. Serial No. 388,959. 6 Claims. (Cl. 104—197.)

1. A device for use in raising a cable to a point where it can be grasped by a cable car, comprising, in combination, a frame adapted to rest upon the track rails over which the car runs, a cable engaging instrument mounted on said frame, and means for releasably affixing the frame to the track rails.

1,785,812. WHEEL FOR RAILWAY ROLLING STOCK. WILLIAM GRIBBEN, Detroit, Mich. Filed Apr. 8, 1929. Serial No. 353,644. 3 Claims. (Cl. 295—11.)

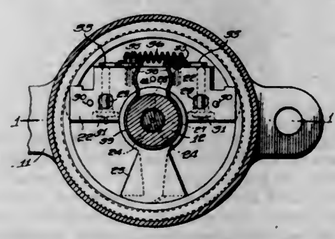
1. A wheel for railway rolling stock, comprising an inner section and an outer section, the inner section having a circumferential flange, the outer section embodying spaced flanges, said outer section being fitted over the



inner section, and a cushioning member contacting with the sides and edge of the flange of the inner section, and engaging the flanges of the outer section.

1,785,813. PROCESS OF PREPARING HYDROXYTHIONAPHTHENES. ERWIN HOFFA and FRITZ MÜLLER, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 2, 1928, Serial No. 297,102, and in Germany Aug. 17, 1927. 4 Claims. (Cl. 260—53.)

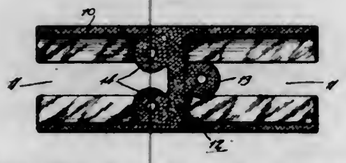
1. The process of preparing hydroxythionaphthenes which consists in saponifying a cyanoaryl-ortho-thioglycollic acid of the formula:



wherein R stands for an unsubstituted or substituted aromatic hydrocarbon residue, by the action of hydrogen peroxide in an alkaline solution so as to form the corresponding arylcarboxylic acid-amide-ortho-thioglycollic acid of the formula:

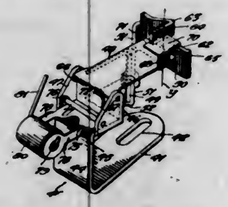
wherein R stands for an unsubstituted or substituted aromatic residue, and transforming the latter by the further action of an alkali into the hydroxythionaphthene.

1,785,814. VEHICLE SHOCK ABSORBER. ENOS H. KREIDER, Lancaster, Pa. Filed Feb. 5, 1929. Serial No. 337,641. 11 Claims. (Cl. 188—89.)



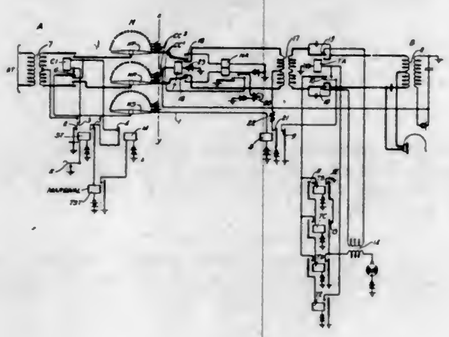
1. In a vehicle shock-absorber of the hydraulic type embodying a vibratory valveless piston and pressure chambers, a free-center mechanism, and means whereby after a change in the load on the vehicle-springs the free-center devices will by the vibration of the vehicle be automatically restored to normal function.

1,785,815. EQUIPMENT OR ATTACHMENT TO EXPEDITE HANDLING OF CARDS IN LARGE LOTS FOR INSPECTION OF SAME. DANIEL W. B. KURTZ, Jr., Columbia, Mo. Filed June 15, 1928. Serial No. 285,754. 6 Claims. (Cl. 129—16.)



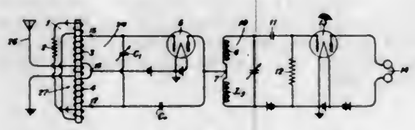
1. An attachment for card-handling boxes comprising a rectangular plate wider than the front-to-rear depth of the box with which it is to be used and having a centrally located area of transverse corrugations.

1,785,816. ELECTRIC INSULATOR. ROY T. LOBDELL, Newburgh, N. Y. Filed Mar. 12, 1930. Serial No. 435,191. 1 Claim. (Cl. 173—28.)



A strain insulator formed integrally of insulating material including a tubular body having a central transverse partition, an eye projecting from one side of the partition centrally thereof, and a pair of eyes projecting from the opposite side of the partition and spaced from the center thereof, said tubular body having an access slot extending longitudinally and from end to end thereof, said eyes being positioned in a plane radial to the axis of the body and at right angles to a similar radial plane passing through the longitudinal center line of the slot.

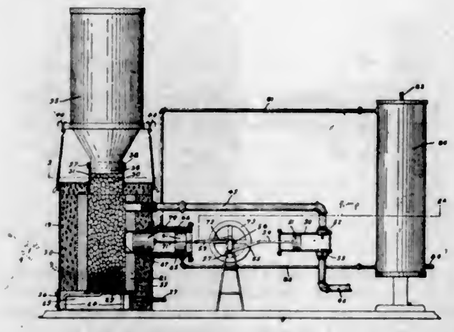
1,785,817. YARN CLEANER AND SLUB DETECTOR. WILLIAM MARCROFT, Cranston, and GEORGE N. TAYLOR, East Providence, R. I., assignors to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1927. Serial No. 225,549. 16 Claims. (Cl. 28—64.)



1. In a device of the type specified, the combination of a standard, a detector-element pivoted on said standard and having a yarn-engaging portion arranged parallel with the pivotal axis of said element and a second yarn-engaging portion disposed at substantially right-angles to its axis, said detector-element being normally movable by the engagement therewith of a slub or other enlargement on the yarn to permit the same to pass through the device, a yarn-rest on the standard having angular faces disposed in parallel spaced relation with respect to the yarn-engaging portions of the detector to provide crossing slits through which the yarn draws, and means to adjust the yarn-rest to alter the width of the slits.

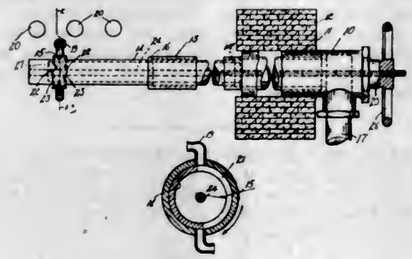
1,785,818. TELEPHONE SYSTEM. GEORGE H. PETERSON, Bloomfield, N. J., and WILLIAM A. RHODES, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 9, 1929. Serial No. 331,209. 2 Claims. (Cl. 179—27.)

1. In a selecting circuit a two-conductor line extending between two stations, switching apparatus contacts in each conductor of said line, said contacts having a high resistance film over their contact surfaces, a source of electrical current of sufficient magnitude to eliminate said contact resistance and means responsive to taking said line for use at one station for completing a circuit for said current source over said line conductors and contacts in parallel.



1,785,819. PREVENTION OF PARASITIC OSCILLATIONS. HAROLD C. SILENT, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 9, 1928. Serial No. 318,194. 9 Claims. (Cl. 175—359.)

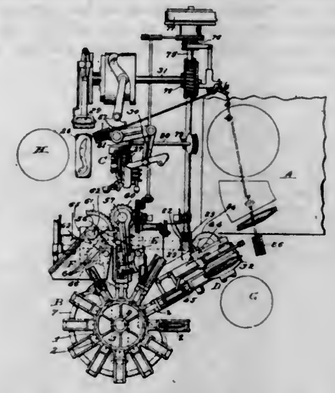
1. A transformer comprising a pair of inductively coupled principal windings, an auxiliary winding coupling the leakage flux of both said principal windings in such manner that equal and additive fluxes due to currents in the principal windings are ineffective in the auxiliary circuit but equal and opposed fluxes due to currents in the principal windings induce a resultant voltage in the auxiliary winding.



1,785,820. DOMESTIC GAS-GENERATING SYSTEM. HARRY F. SMITH, Dayton, Ohio, assignor to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed July 30, 1921. Serial No. 488,674. 9 Claims. (Cl. 48—63.)

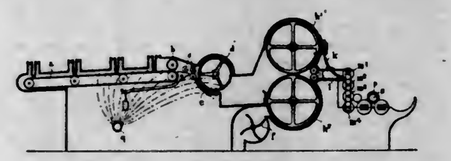
2. A domestic gas generating system comprising, in combination, a gas producer adapted to contain a fuel bed of ignited carbonaceous material; pumping means for causing air and moisture to pass through said fuel bed, to cause the generation of combustible gas, and to deliver said generated gas to a work device, or place of storage; and heat responsive means cooperating with said pumping

means and adapted to be operated by the heat energy generated within the gas producer for causing operation of said pumping means.



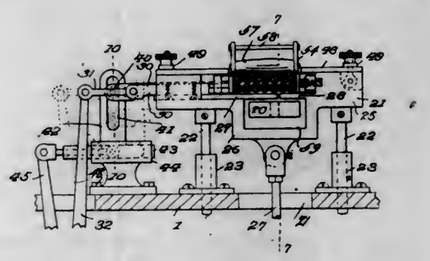
1,785,821. BOILER CLEANER. NORMAN L. SNOW, Detroit, Mich., assignor to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 29, 1925. Serial No. 40,424. 12 Claims. (Cl. 122—392.)

1. In a boiler cleaner, a relatively fixed element, a member rotatable on said element, and provided with a discharge nozzle, means for supplying a cleaning fluid to said nozzle, the nozzle being so arranged that the reaction of the cleaning fluid issuing from the same will impart a rotary movement to the member and means for imparting a shuttling movement to said member upon rotation of the same.



1,785,822. CIGAR MACHINE. GEORGE H. SNYDER, Brooklyn, N. Y., assignor to International Cigar Machinery Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 25, 1924, Serial No. 688,491. Renewed June 27, 1928. 47 Claims. (Cl. 131—5.)

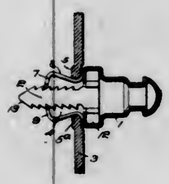
34. The combination with a series of traveling concentrators each having a movable section adapted to occupy a horizontal position at one point in the travel of the concentrators, of a reciprocatory carrier adapted to be positioned above each such section when in that position,



and a pair of trimming knives mounted on the carrier and operated by the movement thereof for cutting off the ends of the contained bunch.

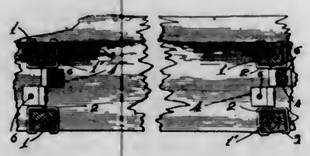
1,785,823. PROCESS OF OPENING AND PREPARING ARTIFICIAL STAPLE FIBER FOR SPINNING. MEINRAD F. THOMA, Fitchburg, Mass. Filed Feb. 8, 1929. Serial No. 338,561. 11 Claims. (Cl. 19—66.)

1. The yarns being spun from the artificial silk fiber before described, possessing a silky and soft feel and having a strength being about 25–40% higher than the strength of yarns spun from untreated artificial fibers.



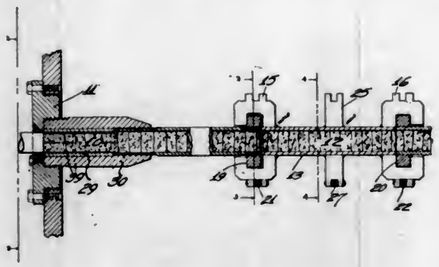
1,785,824. PACKING MACHINE. CESAR LEANDRO VALDES Y VALDES, Habana, Cuba. Filed Mar. 3, 1928. Serial No. 258,988. 9 Claims. (Cl. 226—5.)

1. A cigarette compression means for use in connection with cigarette packaging machines, comprising a compression box mounted for vertical movement, feeding means for introducing cigarettes into the compression box when said box is at the upper limit of movement, a plunger for ejecting the compressed cigarettes from the box when the box is at its downward limit of movement, compression plates operating within the box to engage



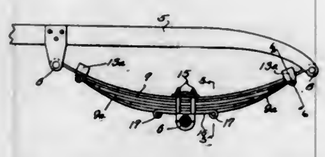
the sides of the cigarette mass, means operative during the downward movement of the box to actuate the compression plates relative to each other, and means operative during the upward movement of the box to provide an opening for the passage of the plunger to permit upward movement of the box while the plunger is in the advanced position.

1,785,825. FASTENING INSTALLATION. MOSES F. CARR, Lexington, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1926, Serial No. 81,871. Renewed May 24, 1929. 5 Claims. (Cl. 24—219.)



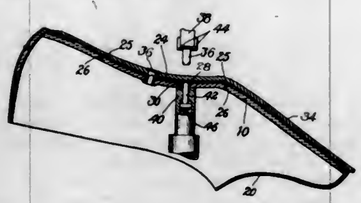
1. In a snap fastener installation, a support presenting an aperture, a contractible and expansible part entered into said aperture and a separable snap fastener element having means for cooperative separable engagement with and disengagement from another snap fastener element by movement toward and away from each other, said snap fastener element having an attaching portion for engagement with said contractible and expansible part to expand and lock it to said support by direct axial movement relative to the contractible and expansible part and interlocking means between the attaching portion and said part for holding said fastener element in position against said support.

1,785,826. PARTITION CONSTRUCTION. MARTIN A. CALLAGHAN, Burlingame, Calif. Filed Apr. 4, 1929, Serial No. 352,415. Renewed May 31, 1930. 8 Claims. (Cl. 189—34.)



1. A partition structure comprising a plurality of studs mounted in pairs; and a plurality of spacing clips mounted at intervals along each pair of studs, said clips each comprising a pair of oppositely facing members recessed at the ends to engage the studs and provided with extensions formed intermediate of the recessed ends and bent into embracing relation with the opposite clip member for securing said members in interlocking relation to rigidly hold the studs in spaced parallel relation.

1,785,827. FUEL-BRIQUETTE FORMING AND BAKING MACHINE. WILLIAM C. CARPENTER, San Francisco, Calif. Filed Feb. 14, 1928. Serial No. 254,237. 10 Claims. (Cl. 25—12.)



1. In a briquette machine, a forming die comprising a liner, a sectional housing enclosing said liner, reinforcing bands for retaining the sections of said housing in position around said liner and vents in the liner communicating with openings through said housing.

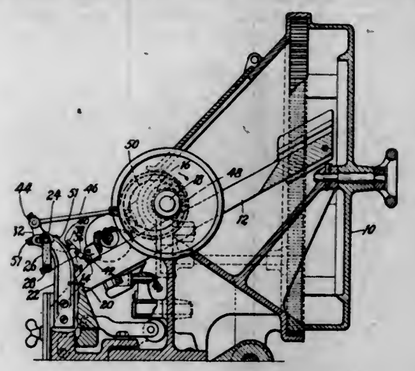
1,785,828. VEHICLE SPRING. CHARLES CHAMBERS, Jr., Flora, Ind. Filed Sept. 15, 1927. Serial No. 219,677. 5 Claims. (Cl. 267—48.)

1. In combination, a vehicle part, a vehicle spring secured thereto, an attaching element secured with the spring to said vehicle part, check springs pivotally connected with the attaching part, and underlying the extremities of the leaves of the vehicle spring, and means for attaching the outer extremities of the check spring to the vehicle springs.

1,785,829. ART OF MANUFACTURING SHOES. JOHN F. CROWLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 9, 1929. Serial No. 345,823. 4 Claims. (Cl. 12—142.)

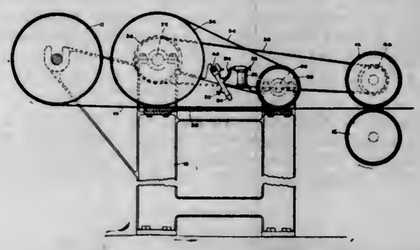
1. That improvement in the manufacture of shoes which consists in securing an insole to an upper, thereafter securing to the insole a shank stiffener having a fastener-receiving hole therein, inserting a hole forming tool in the hole in the shank stiffener and operating the tool to form a hole in the insole registering with the hole in the stiffener, laying an outsole, and passing a unitary fastener through the outsole and through the registering holes in the shank stiffener and the insole to secure together the outsole, the insole, and the shank stiffener.

1,785,830. SHINGLE AND METHOD OF MAKING SAME. WILLIAM C. DAVIS, Preston, Wash. Filed Apr. 15, 1929. Serial No. 355,292. 3 Claims. (Cl. 144—309.)



1. The method of forming shingles from a block of wood, which consists in initially slotting the block and then splitting the shingle off the block.

1,785,831. SURGICAL BANDAGE. MARJORIE C. EDMUNDSON, San Pedro, Calif. Filed Mar. 22, 1928. Serial No. 263,842. 2 Claims. (Cl. 128—268.)

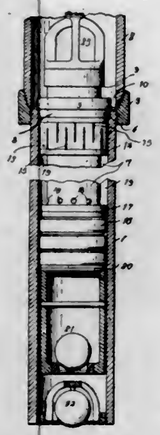


1. A multiple bandage in strip form comprising a plurality of gauze fabric sections arranged with their juxtaposed end edges in spaced relation, and strips of surgical tape extending across the gaps between the fabric sections and along the side edges of said fabric sections and having their adhesive surfaces secured to the said side edges of the fabric sections between the longitudinal centers and inner side edges of said strips, whereby the portions of tape extending across the gaps may be transversely severed to separate the gauze sections from each other.

1,785,832. FASTENING DISTRIBUTOR. WILLY FROMM, Frankfort-on-the-Main, Germany, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 23, 1928, Serial No. 280,107, and in Germany Oct. 18, 1927. 19 Claims. (Cl. 1—39.)

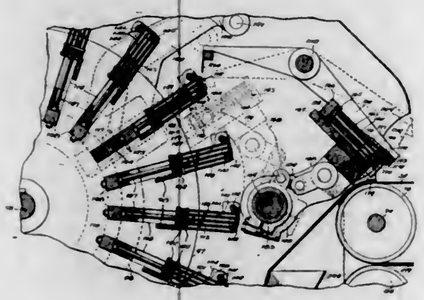
1. In a fastening-distributor, a raceway for fastenings, a fastening-reversing device co-operating therewith, and a clearing member acting upon the fastenings while they are under the influence of the reversing device.

1,785,833. PRINTING DEVICE. ALBERT J. KECK, Newport, Minn. Filed Nov. 15, 1928. Serial No. 319,580. 2 Claims. (Cl. 101—122.)



1. A printing device comprising a fixed horizontal abutment in engagement with the upper surface of which, sheet material to be printed is adapted to be fed, two sustaining rollers spaced from each other horizontally and positioned adjacent said supper surface, a stencil belt passing around said rollers so that the lower stretch of the belt is held in engagement with the portion of said sheet material which rests upon said upper surface, means for applying coloring material to said portion of the sheet material through openings in said belt, printing rollers beyond said fixed abutment between which the sheet material is passed, and mechanism for driving one of said sustaining rollers in synchronism with said printing rollers.

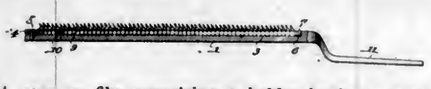
1,785,834. DEEP-WELL PUMP. MARTIN H. KILGORE, Beaumont, Tex. Filed July 23, 1928. Serial No. 294,612. 1 Claim. (Cl. 103—188.)



A pump including a working barrel, an upwardly opening standing valve in the lower portion of the barrel, a packing head constructed to bind in the upper end of the barrel, a tubular plunger reciprocable through the packing head and spaced from the barrel whereby an annular chamber will be formed between the barrel and the plunger, the packing head closing the upper end of said chamber, an upwardly opening valve carried by the

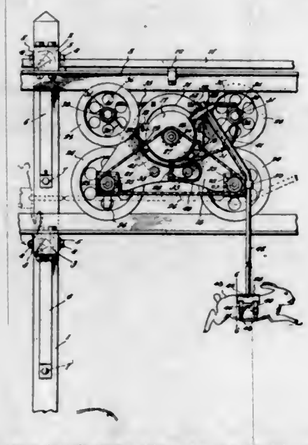
lower end of the plunger and controlling flow into the plunger, a stop ring and a collar secured on the plunger above the valve, and packing held on the plunger by and between the stop ring and collar and constituting the bottom of the annular chamber whereby said chamber will be shortened and elongated as the plunger reciprocates, there being ports through the plunger immediately above the collar whereby liquid may flow through the

plunger into the annular chamber on the down-stroke of the plunger to be compressed, returned through said ports and discharged from the plunger on the up-stroke of the plunger, and a cage at the upper end of the plunger, said cage having an external shoulder adapted to impinge upon the packing head to drive the same home and the collar being adapted to impinge against the head for withdrawing the same.



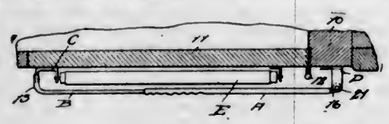
1,785,835. COATING APPARATUS. ELMO G. LANZI, Chicago, Ill., assignor to Bonus Candy Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 28, 1925. Serial No. 59,102. 23 Claims. (Cl. 94—4.)

1. In apparatus of the class described, a cage, means for advancing the cage, a vat disposed in the path of the cage, a conveyor belt, means for transferring treated articles from the cage to the belt, and means for advancing the belt in a series of steps some of which are longer than the rest.



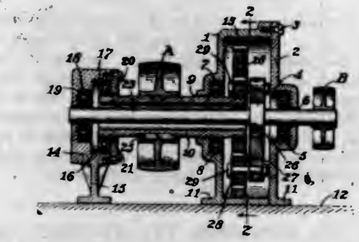
15. In apparatus of the kind described, the combination of means for forming coated clusters, a conveyor for receiving said clusters, means for conveying said clusters from said first mentioned means to the conveyor, and separate means for stripping the clusters from said first mentioned means and said second mentioned conveyor.

1,785,836. RASP OR FILE. VAINO EMIL LEHTO, Evansville, Ind. Filed Jan. 16, 1929. Serial No. 332,029. 1 Claim. (Cl. 29—79.)



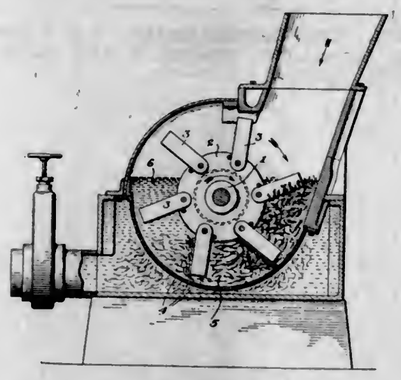
A rasp or file comprising a holder having a seat extending lengthwise thereof provided at its outer end with an attached abutment and at its inner end with a cross groove tapered from one end to its other end and opening out through both sides of the holder, removable teeth whose bodies are received in the seat and which are of lesser width than the cross groove so that their bodies may be inserted in said cross groove for introduction into the seat, or, for removal from said seat, and a removable wedge driven into said cross groove for holding the bodies of the teeth in the said seat, said wedge having its outer face lying below the teeth to prevent interference with the teeth when the rasp or file is in use and to prevent injury to the hands of the user.

1,785,837. OVERHEAD RABBIT CARRIER FOR DOG-RACING TRACKS. WARREN C. LE MIRE, Ancon, Canal Zone, Panama. Filed June 20, 1928. Serial No. 286,927. 11 Claims. (Cl. 272—4.)



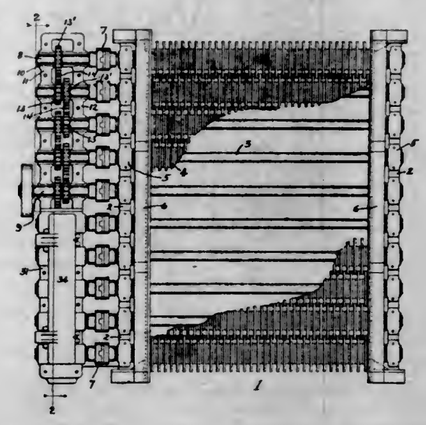
1. In a race track apparatus, an overhead track including upper and lower rails, a carriage between the rails having wheels engaging the rails, a motor carried by said carriage for propelling the same along the track, an arm pivotally connected with said carriage and normally disposed vertically, a lure carried by said arm at its lower end, the upper portion of the arm constituting a handle, a latch carried by said carriage to engage the handle and releasably hold the arm in a vertical position, and a second latch carried by said carriage to engage the arm when swung upwardly and retain the arm in an elevated position.

1,785,838. DRAPERY ROD. RODNEY N. MCCLURE, Inglewood, Calif. Filed Sept. 14, 1926. Serial No. 135,331. 3 Claims. (Cl. 156—22.)



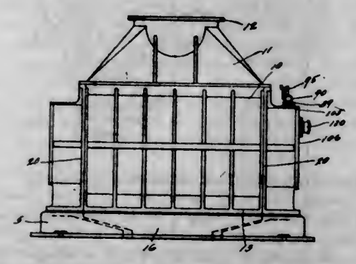
3. A device of the class described comprising a fixture for attachment to a window frame, a fixture for attachment to a hinged window sash, a rod for extension between said fixtures, means for hingedly connecting one end of said rod to one of said fixtures, and means for detachably connecting the other end of said rod to the other of said fixtures in fixed relation thereto, said rod consisting of telescoping sections, cooperative means on said sections for automatically forming yielding predetermined stops for the window as it swings open.

1,785,839. SPEED-CHANGING DEVICE. CONRAD L. MEISTER and CHARLES R. SUGG, Wilmington, N. C. Filed Dec. 5, 1929. Serial No. 411,850. 9 Claims. (Cl. 74—34.)



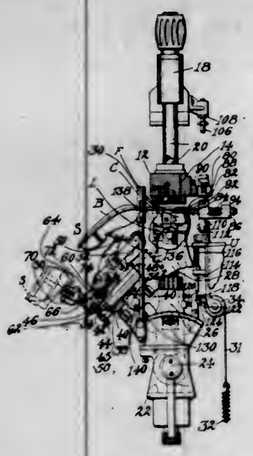
1. A speed changing device comprising a hollow shaft, a solid shaft extending therethrough, and independently supported in bearings located beyond the ends of the hollow shaft, a ring gear, sun gear, and planet gears, said sun gear, planets, and ring gear associated with said hollow shaft and said solid shaft, said ring gear held against movement and said solid shaft adapted to revolve at a different rate of speed within said hollow shaft.

1,785,840. PROCESS FOR PRODUCTION OF FIBERS FOR WALL BOARD AND SIMILAR STRUCTURES. TREADWAY B. MUNROE, Chicago, Ill., assignor to The Celotex Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 6, 1927. Serial No. 181,591. 18 Claims. (Cl. 92—6.)



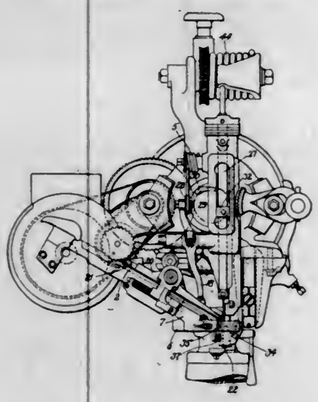
1. The process of preparing fibers for wall-board pulp which consists in subjecting the raw fibrous material to a cooking action in the presence of a suitable chemical produced from previous cooks and at a temperature and for a time sufficient to loosen the encrusting casing material of said fibers but insufficient to produce fibers suitable for paper making; freeing the fibers from their cementing tissues and said casing by hydraulic action under force; and recovering the fibers thus produced.

1,785,841. ROTARY GRIZZLY. ALBERT J. MYERS, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 3, 1925. Serial No. 41,420. 3 Claims. (Cl. 209—104.)



1. In a rotary grizzly structure, the combination with an inclined series of rotary screening roller shafts mounted for removal from the series independently of each other and respectively having rotary screening rollers fixed thereon for rotation therewith of an inclined series of counter-shafts, driving mechanism for said shafts separate from and independent of said rotary screening roller shafts, and separable connections between said counter-shafts and said rotary screening roller shafts; whereby the rotary screening rollers may be removed from and shifted to different locations in the grizzly structure by shifting of their respective rotary screening roller shafts without dismantling of the driving mechanism or altering the rate of rotation of the rotary screening rollers intended in the location in the said series to which they are shifted.

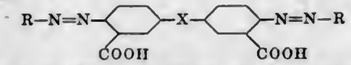
1,785,842. FLUID-HANDLING APPARATUS. ROBERT H. OWENS, Connersville, Ind., assignor to The P. H. & F. M. Roots Company, Connersville, Ind., a Corporation of Indiana. Filed July 31, 1926. Serial No. 126,317. 21 Claims. (Cl. 73—37.)



1. A fluid handling apparatus comprising a casing having a fluid passage therein, a rotor disposed in said passage and adapted to cooperate with the fluid therein, a supporting means, and a shaft extending from said supporting means for rotatably supporting said rotor, and means on said rotor surrounding said shaft in bearing relationship therewith.

1,785,843. SHOE MACHINE. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 11, 1925. Serial No. 36,388. 50 Claims. (Cl. 1—19.)

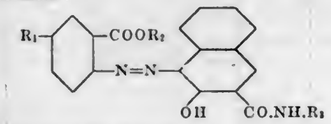
1. The combination with a shoe-support, of means arranged to grasp by pressure exerted upon the inside and outside opposite portions of the upper of a supported shoe, said means being movable to draw the rear of the upper over the counter-portion away from the shoe-bottom and toward the toe of the shoe.



1,785,844. FASTENING-INSERTING MACHINE. WILLIAM THOMAS BUCKINGHAM ROBERTS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 11, 1928, Serial No. 305,239, and in Great Britain Oct. 8, 1927. 10 Claims. (Cl. 1—18.)

1. A fastening inserting machine having, in combination, a raceway for loose fastenings, a driver, means for reciprocating the driver in a path adjacent to the end of the raceway to insert fastenings in a work piece presented to the machine constructed and arranged to cause the driver to move from a position clear of the raceway to a position opposite the end of the raceway thereby retaining the fastenings in the raceway and thereafter to complete its fastening inserting stroke, a separator movable in a path extending transversely of the direction of movement of the fastenings as they emerge from the raceway, and means for moving the separator in its path constructed and arranged to withdraw the separator from the raceway while the driver is maintained opposite the end of the raceway whereby a fastening is freed to pass the separator and to move into engagement with the driver by which it is retained in the raceway temporarily.

1,785,845. PROCESS FOR THE PRODUCTION OF AZO DYSTUFFS AND AZO DYESTUFFS OBTAINABLE THEREBY. RICHARD STUESSER, Cologne-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 11, 1927, Serial No. 205,041, and in Germany July 29, 1926. 5 Claims. (Cl. 260—70.)

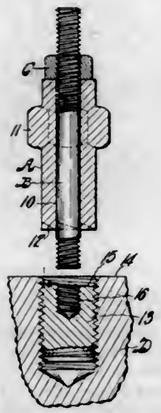


1. As new products, azo dyestuffs having the general formula

wherein R represents the residue of any coupling component containing in orthoposition to the azo group a substituent of the group comprising amino, aryl-amino, acyl-amino, hydroxyl and the desmotropis keto group, and X represents one of the groups azoxy and azo, which dyestuffs are generally soluble in water and in concentrated sulfuric acid, and yield on cotton orange to blue to black shades which may be rendered fast to washing and to light by after-treatment with heavy metal salts.

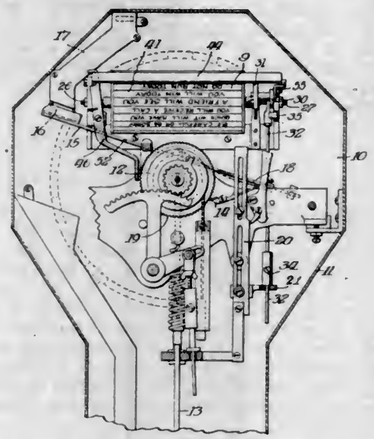
1,785,846. AZO DYESTUFFS AND MATERIAL DYED THEREWITH. KARL THIESS, Frankfort-on-the-Main-Hochst, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 26, 1929, Serial No. 388,628, and in Germany Sept. 18, 1928. 10 Claims. (Cl. 260—95.)

1. As new products, the compounds of the following general formula:



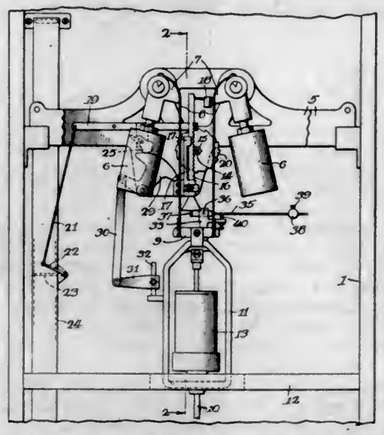
wherein

R_1 stands for a halogen atom,
R_2 for an alkyl group and
R_3 for a naphthyl group the hydrogen atoms of which which may be substituted or not,



dyeing red tints and being distinguished by their good fastness properties, particularly by their good fastness to light.

1,785,847. SCREW-MOVING MEANS. MARY C. VALENTINE, Cleveland, Ohio. Filed Dec. 31, 1928. Serial No. 329,620. 3 Claims. (Cl. 81—71.)

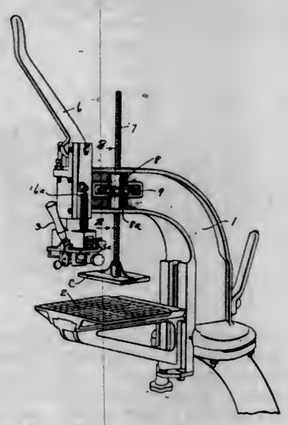


1. A screw moving means including a member fixable in a screw to be moved, a member rotatable and longitudinally movable on said fixable member and having teeth, and a member movable on said fixable member to move said member with teeth to imbed said teeth into material of said screw and to retain the same therein.

1,785,848. AMUSEMENT DEVICE. JOHN B. WATLING, Chicago, Ill., assignor to Thomas W. B. Watling, Chicago, Ill. Filed Mar. 19, 1925. Serial No. 16,628. 19 Claims. (Cl. 40—28.)

1. In a device of the class described, the combination with a coin controlled weighing scale and a casing having an opening therein, of a revoluble indicating cylinder within said casing opposite said opening, a shutter normally disposed in position opposite said opening to conceal said cylinder, means controlled by the coin control mechanism for moving the shutter into position to expose said cylinder, and weight actuated means normally restrained by the weighing mechanism and released thereby during the weighing operation for rotating said cylinder.

1,785,849. WEIGHING SCALE. THOMAS W. B. WATLING, Chicago, Ill. Filed May 28, 1928, Serial No. 281,016. Renewed Jan. 20, 1930. 12 Claims. (Cl. 265—62.)

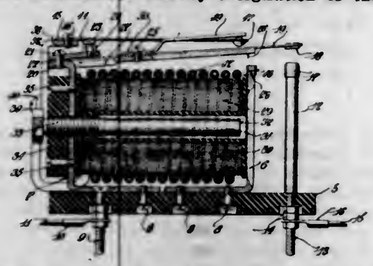


1. In a weighing scale, a vertically movable weight actuated rod, a weight indicator, a counterbalanced stop arm pivoted on said weight-actuated rod, and a vertically movable member connected to the indicator and engaging said stop arm to limit the forward movement of the indicator, substantially as described.

1,785,850. SPLICE BAR OR FISHPLATE. LAWRENCE S. WILBUR, Evanston, Ill. Filed July 22, 1929. Serial No. 380,239. 12 Claims. (Cl. 238—243.)

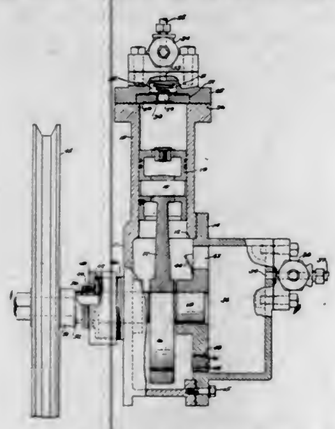
1. A splice bar or fish plate for connecting rails together, comprising a web having a head and a heel, with a flange integral with said heel, said heel and flange forming the base of the bar, said bar being so formed that in longitudinal vertical section through said web and head and heel the head is higher at the middle of the bar than at the ends thereof, while the bottom of the heel is also higher at the middle of the bar than at the ends thereof, thereby in effect providing a crowned or humped top and a recessed bottom, and whereby the bar is of greater fishing height at its middle than at the ends thereof, portions of the bar at the ends thereof being spaced outward further from the rail sides than a middle portion of the bar, when the bar is resting on the flanges of the rails.

1,785,851. CLAMP TO BE USED IN CONNECTION WITH EMBOSSING MACHINES. FRANK WILLIAMS, New York, N. Y., assignor to Simplex Gold Stamping Press Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1929. Serial No. 337,795. 3 Claims. (Cl. 101—3.)



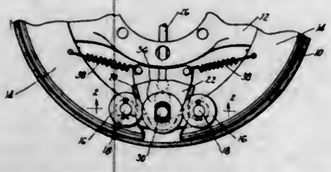
1. In an embossing machine having a table, a clamp adapted to clamp an object against said table, said clamp being connected to an externally threaded spindle, and nut means located in the frame of the machine and cooperating with said spindle, and adapted to force said clamp upwardly or downwardly, said clamp being non-symmetrical with respect to the axis of said spindle, said clamp being horizontally turnable with respect to said frame.

1,785,852. THERMOSTATICALLY-ACTUATED DEVICE. GUSTAV O. WILMS and ALBERT J. DAWE, Milwaukee, Wis., assignors to The Reliance Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 8, 1928. Serial No. 298,302. 11 Claims. (Cl. 175—335.)



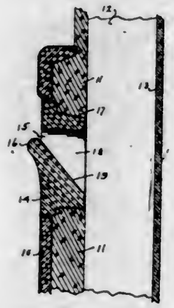
6. In a device of the character described, a transformer having a primary winding and a secondary winding, a thermally responsive member having its ends connected directly across the secondary winding to form a closed circuit therewith, a pole piece, a movably mount-

ed armature, and means normally maintaining the armature in a position spaced from the pole piece and beyond the active field thereof whereby energization of the pri-



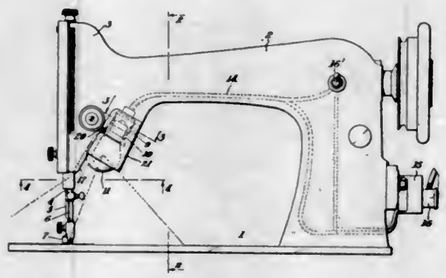
mary winding induces a current in the secondary circuit which flows through the thermally responsive member to deflect the same and move the armature within the field of the pole piece.

1,785,853. COMPRESSOR. AUGUST J. ASMUSSEN, Detroit, Mich., assignor to Diamond Tool & Engineering Company, a Corporation of Michigan. Filed June 4, 1928. Serial No. 282,654. 9 Claims. (Cl. 230—206.)



1. In a compressor for refrigerating systems, in combination with a crank case thereof, a container, a wall common to said container and said crank case, a wall of said container having a passage for introducing lubricant laden gasified refrigerant into said container, the first mentioned wall having a restricted opening connecting the lower portion of said container with said crank case, and said first mentioned wall having a larger opening connecting the upper portion of said container with said crank case.

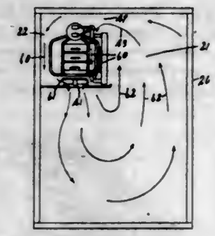
1,785,854. BRAKE-OPERATING MECHANISM. VINCENT BENDIX, Chicago, Ill., and DAVID L. GALLUP, South Bend, Ind., assignors to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1928. Serial No. 292,152. 7 Claims. (Cl. 188—78.)



1. A brake comprising, in combination with shoes having adjacent ends each provided with a pair of rollers on its opposite sides, a laminated operating wedge including a central stamping extending between the rollers of each of said ends and holding the shoe ends and the wedge in operative alinement, and side stampings permanently secured to opposite sides of the central stamping and formed on their edges with wedge surfaces engaging the four rollers, together with a thrust rod having a ball-and-socket engagement with said central stamping.

1,785,855. RAZOR-BLADE-DISPOSAL TILE. ROY CARLISLE, Indianapolis, Ind.; Rose A. Carlisle, administratrix of said Roy Carlisle, deceased, assignor, by direct and mesne assignments, to Razor Blade Tile, Incorporated. Filed May 9, 1927. Serial No. 189,783. 6 Claims. (Cl. 72—18.)

4. A wall tile unit having a face with matching edges therearound and a sharply upwardly inclined passage through the tile terminating in a narrow slit-like opening through the face side of the tile said opening having a lip immediately horizontally thereunder, and said passage expanding rapidly from said opening to its discharge at the rear.

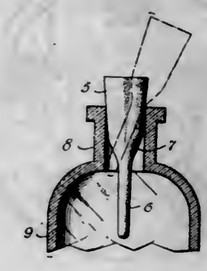


1,785,856. ELECTRICALLY-LIGHTED SEWING MACHINE. DANIEL H. CHASON, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 3, 1929. Serial No. 411,323. 5 Claims. (Cl. 240—2.)

1. A sewing machine having a goose-neck comprising an overhanging arm terminating in a needle-bar housing head having a downwardly inclined under wall, an electric lamp including socket and bulb members disposed under and closely adjacent said inclined under wall, and a trough-shaped reflector applied to said housing head, the under wall of said head and said trough-shaped reflector, taken together, constituting a complete circumferential enclosure for said lamp.

CARNEGIE LIBRARY OF ATLANTA

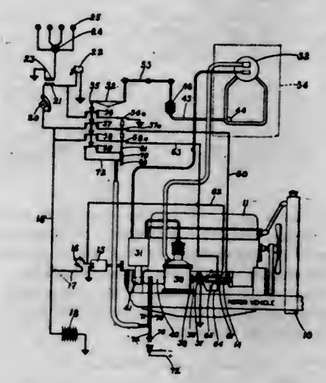
1,785,857. REFRIGERATING APPARATUS. RALPH H. CHILTON, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Nov. 18, 1926. Serial No. 149,107. 5 Claims. (Cl. 62—141.)



3. Refrigerating apparatus comprising a cabinet having a food chamber and a cooling chamber communicating with the food chamber; a cooling unit in the cooling chamber; and means for containing a liquid and providing for the circulation thereof, said means comprising a container chilled by the cooling unit, a container subjected to warmer air circulating in the food chamber, and ducts connecting the containers to provide for circulation of liquid between the containers and in which the second mentioned container provides a portion of the partition separating the chambers of the cabinet.

1,785,858. CHICKEN BATTERY. WARREN H. DAVIS, Nashua, N. H. Filed Jan. 20, 1928. Serial No. 248,086. 3 Claims. (Cl. 119—17.)

1. In a chicken cage, the combination of a panel, a feed trough adjacent to the panel, the panel having a series of upright spaced rods, and bars extending transversely to and secured to said rods; a slide having a series of upright spaced rods alternating with the rods of the panel, and bars extending transversely to and secured to the upright rods of the slide; the slide bars being in engagement with the front sides of the panel rods, and rods of the slide having upper and lower portions engaging the rear sides of the panel bars; the slide being adjustable to vary the spaces between the rods of the panel and the rods of the slide to allow heads of growing chicks to pass through the spaces to the trough and prevent their bodies from passing therethrough; and means to secure the slide in different positions of adjustment.

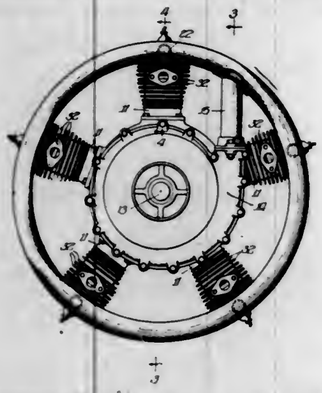


1,785,859. STOPPER FOR DILUTION BOTTLES. EDWARD ESCHER, Jr., Brooklyn, N. Y. Filed June 27, 1928. Serial No. 288,732. 1 Claim. (Cl. 215—247.)

A stopper for dilution bottles, consisting of a sealing body of tapering form differing from the interior shape of the bottle neck for which it is designed whereby said body fits said neck loosely, a solid stem of reduced diameter projecting from said body at one end and comprising an integral part thereof, said body and stem being made

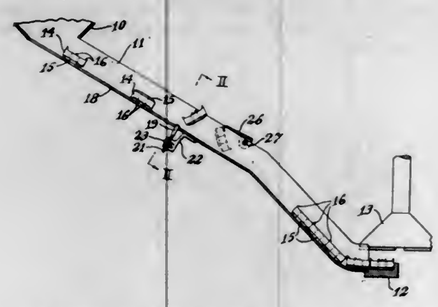
of relatively soft rubber, and an annular sloping shoulder extending between said stem and body and merging into both the stem and body along curved lines, said sloping shoulder constituting the inner end surface of the body.

1,785,860. REFRIGERATING APPARATUS. JOHN RALPH FEHR, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 31, 1928. Serial No. 266,288. 8 Claims. (Cl. 62—117.)



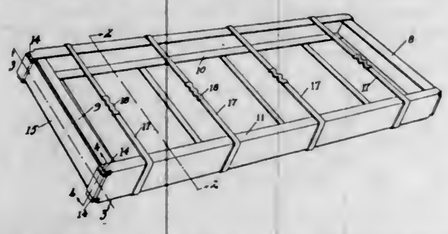
1. Refrigerating apparatus comprising in combination a motor vehicle, a motor for driving the vehicle, a refrigerating system carried by the vehicle and including a compressor, means for mechanically connecting the compressor to the vehicle motor, and means for operating the compressor from a source of energy independent of the vehicle.

1,785,861. AIR-COOLED INTERNAL-COMBUSTION ENGINE. HOWARD A. FLOGAUS, Detroit, Mich., assignor to Ralph L. Skinner, Detroit, Mich. Filed Oct. 26, 1927. Serial No. 228,741. 2 Claims. (Cl. 123—171.)



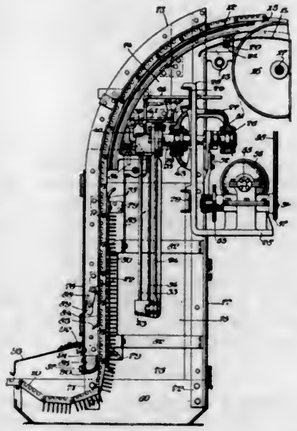
1. In an internal-combustion engine, the combination of an engine-cylinder and its head, the latter having a cooling air-jacket with admission and discharge ports, a carbureter and its connections to feed the fuel-mixture

to said cylinder, an air-blower operated by the engine, means to conduct the air from said blower to said air-



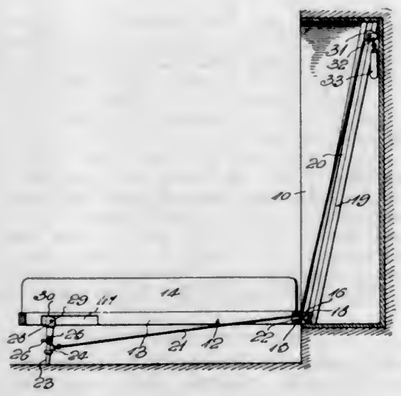
jacket admission-port, and means to convey the air from said jacket discharge-port to the air-intake of said carbureter.

1,785,862. AUTOMATIC FEED FOR BURRING MACHINES. JAMES A. FLOWERS, Birmingham, Ala. Filed Nov. 9, 1929. Serial No. 406,120. 10 Claims. (Cl. 10—162.)



1. In apparatus of the character described, an inclined chute down which articles are adapted to slide by gravity, and a tripper in the bottom of the chute positioned to engage downwardly projecting protuberances on said articles during their movement down the chute, and in response to the acquired momentum of the articles cause them to turn over in the chute.

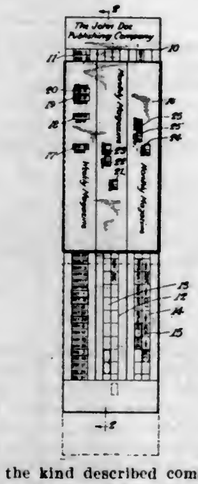
1,785,863. CRATE FOR METALLIC SHEETS. JONATHAN R. FREEZE, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Aug. 21, 1929. Serial No. 387,479. 5 Claims. (Cl. 206—60.)



1. In a metal crate, end channels, side channels adapted to cover the ends of the end channels, said side channels provided with lapels formed in the bases and lips thereof, the base lapels turned over to lie outside the end channels, the lip lapels turned over to form a tying abutment, and means for fastening said crate together by engaging opposed abutments.

1,785,864. MEANS FOR IMPREGNATING MATCH SPLINTS. CARL C. HAFERKAMP and WILLIAM J. ELDER, Oswego, N. Y., assignors to The Diamond Match Company, Chicago, a Corporation of Illinois. Filed Oct. 18, 1928. Serial No. 313,300. 9 Claims. (Cl. 91—45.)

1. The combination with a travelling carrier constructed and arranged to support rows of projecting match splints, and means for guiding a portion of the carrier in a substantially vertical path, of a spraying element mounted laterally of and discharging horizontally toward the path of the splints, said element including a pendant member having longitudinal solution and air ports and having also a nozzle in communication with the lower ends of said ports, means supporting said member above the nozzle to permit bodily movement of the member and nozzle transversely of said path, and means for actuating said member.



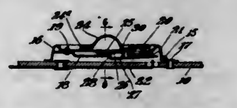
1,785,865. FOLDING BED OR COUCH. CHARLES H. HOUSE, Arkansas City, Kans. Filed Nov. 20, 1929. Serial No. 408,492. 3 Claims. (Cl. 5—147.)

1. The combination with upstanding guide means, of a bed element having one end engaging the guide means

to travel longitudinally of the same, a pulley supported near the upper end of the guide means, a flexible element passed about the pulley and extending longitudinally of the bed element and serving to raise the inner end of the bed element, a weight secured to the flexible element, and a folding leg pivotally mounted upon the outer end of the bed element and having the flexible element attached thereto, the arrangement being such that the flexible element serves to both raise the inner end of the bed element and automatically folds the legs when the adjacent end of the bed element is raised.

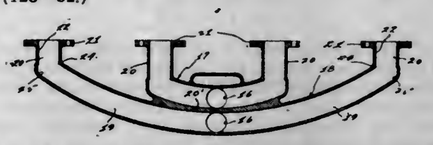
1,785,866. CHART FOR SUBMITTING ADVERTISING MATTER. HOWARD J. HUENE, Brooklyn, N. Y. Filed Dec. 2, 1927. Serial No. 237,150. 2 Claims. (Cl. 40—65.)

1. A chart of the kind described comprising a member having a plurality of series of dates thereon, all the dates of one series being adapted to serve alternatively as issue dates and as advertising-submission dates, a second member movable with respect to the first member, having indicia thereon so disposed that when one part of the index indicates an issue date the other parts will indicate dates for submitting advertisement, all nonpertinent dates adjacent those desired being hidden from the eye of the observer.



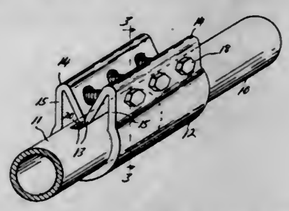
1,785,867. MAIL CHUTE. MARTIN KATZ, Brooklyn, N. Y. Filed Feb. 26, 1930. Serial No. 431,456. 7 Claims. (Cl. 193—8.)

1. In a glass receiving panel, a sash member having an inner face adapted to engage the outer marginal face of the glass, a resilient clamp member having a marginal side edge secured in interlocking relation with the inner face of said sash member, the remaining portion of said clamp member being bent to form a yielding stop engaging an edge of the glass and to fold over and engage the inner face thereof.



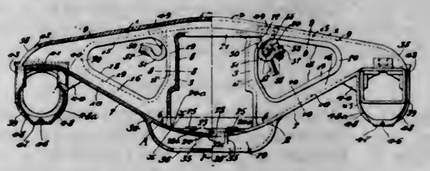
1,785,868. FLASH-LIGHT SWITCH. HARRY M. KORETZKY, Hoboken, N. J., assignor to Bright Star Battery Company, Hoboken, N. J., a Corporation of New York. Filed Apr. 2, 1927. Serial No. 180,377. 2 Claims. (Cl. 200—60.)

1. A switch mechanism for flash-lights comprising a housing having an aperture, a resilient contact member mounted in said housing and having offset portions, a button in said aperture for flexing said contact member, said contact member being capable of flexure independently of said button, a member for locking said button to



prevent flexure of said contact member thereby, said locking member being slidable and having a portion adapted to engage said contact member whereby movement of said locking member flexes said contact member into and maintains it in circuit closing position.

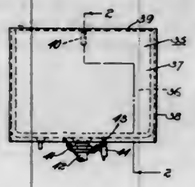
1,785,869. MANIFOLD. EARLE S. MACPHERSON, Detroit, Mich., assignor to Hupp Motor Car Corporation, Detroit, Mich., a Corporation of Virginia. Filed May 16, 1927. Serial No. 191,895. 7 Claims. (Cl. (123—52.)



1. In a manifold, a riser having a carburetor connection and a pair of branch conduits curved longitudinally and terminating in angularly extending straight ends, each conduit having an angular corner at the inner side of the juncture of the curved and straight portion and a rounded contour at the outer side thereof.

1,785,870. COUPLING. HENRY MARLES, Detroit, Mich., assignor to Gemmer Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 9, 1926. Serial No. 128,273. 3 Claims. (Cl. 287—118.)

1. In a coupling, the combination with a pair of axially aligned shafts, each having a longitudinally extending groove, of a sleeve embracing the end portions of said shafts, a member associated with said sleeve and inclined with respect to said shafts and rockable to engage said groove, and means for rocking said member.



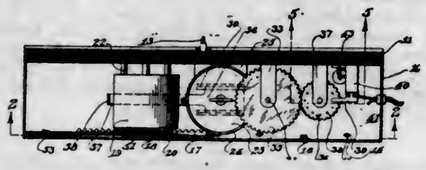
1,785,871. SIDE FRAME FOR CAR TRUCKS. MARK H. MARTIN, Reading Pa., assignor to Birdsboro Steel Foundry & Machine Company, Birdsboro, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1928. Serial No. 325,269. 21 Claims. (Cl. 105—205.)

1. A side frame comprising a compression member, a tension member, spaced bolster columns interposed be-

tween the said members the central portion of the said compression member being curved, the said members and the said bolster columns being of channel shape in cross section, and the webs of the said columns and members being thinner in the regions of their neutral axes than the marginal edge portions thereof.

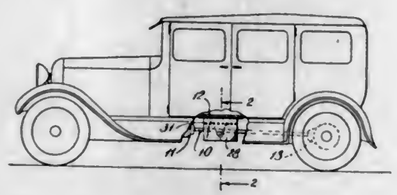
1,785,872. PROTECTIVE COVER FOR PLUMBING FIXTURES. JOHN H. MCCANN, Chicago, Ill. Filed Mar. 8, 1930. Serial No. 434,187. 7 Claims. (Cl. 4—68.)

1. In combination with a plumbing fixture including a body having an upwardly open cavity and laterally exposed surfaces extending in different directions from each other; a protective cover including a main portion dimensioned to serve as a closure for the cavity, and depending flanges adapted to enclose the lateral surfaces, a rigid tie member connected to the flanges and arranged for engaging the lower edges of the fixture, and locking means arranged to preclude unauthorized removal of the cover.



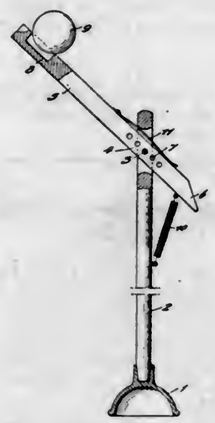
1,785,873. VACUUM CLEANER. EDWARD J. MULLER, Princeton, N. J. Filed Nov. 29, 1929. Serial No. 410,281. 2 Claims. (Cl. 15—246.)

2. A mop-cleaning attachment for vacuum cleaning devices comprising a receptacle, open at its top and substantially elliptical in horizontal cross section at its upper portion, said receptacle gradually decreasing downward in cross-sectional area and approaching tubular form in cross section, an integral tubular portion on the lower end of said receptacle adapted to connect with vacuum cleaning devices, and porous means in the elliptical portion of said receptacle for supporting a mop.



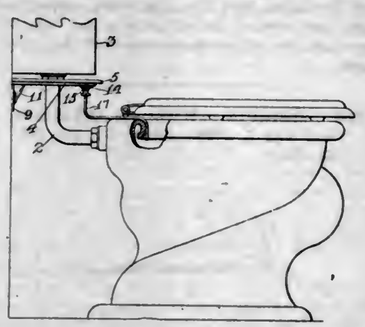
1,785,874. RECORDING INSTRUMENT. GEORGE PAXSON MURPHEY, Philadelphia, Pa. Filed June 17, 1927. Serial No. 199,449. 6 Claims. (Cl. 234—29.5.)

1. A recording instrument including a speed indicator having an oscillating pointer, a tip on the pointer, an insulator surrounding the tip, a terminal plate disposed in close proximity to the tip, a chart secured to the terminal, an induction coil having the ends of its secondary winding connected to the pointer and to the terminal re-



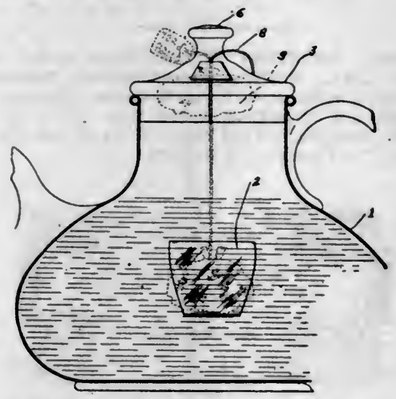
spectively, means for moving the terminal plate, and means for intermittently furnishing the induction coil with electrical current.

1,785,875. AUTOMOBILE THEFT ALARM. OTTO A. PELZ, Brooklyn, N. Y. Filed Apr. 26, 1930. Serial No. 447,530. 3 Claims. (Cl. 116—33.)



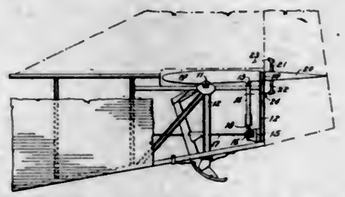
1. In a vehicle alarm for vehicles having a drive shaft extending beneath the floor of the vehicle, a striker flexibly secured to the drive shaft and rotating therewith, a lock mounted adjacent said rotary shaft, said lock having a slide bar, and a gong mounted on said bar, said bar being slidable to carry the gong into and out of the path of the striker on said rotary shaft.

1,785,876. CATAPULT. JOSEPH PILATES, New York, N. Y. Filed Oct. 3, 1928. Serial No. 310,063. 2 Claims. (Cl. 124—1.)



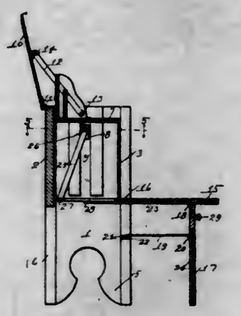
1. A catapult comprising an elongated member, a substantially horizontal throwing member pivotally and adjustably supported on said elongated member, yieldable operating means connecting said members and capable of imparting force thereto when operated, and means mounted on said elongated member whereby a discharged object may be caught therein.

1,785,877. DRIP PAN FOR TOILET FLUSH TANKS. NORBERT A. RUBNER, Milwaukee, Wis. Filed Jan. 8, 1930. Serial No. 419,407. 4 Claims. (Cl. 4—252.)



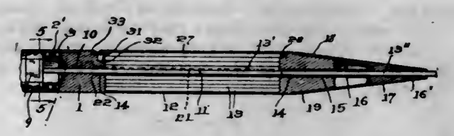
1. A device of the class described including a substantially U-shaped trough-like body, supporting brackets integral therewith and a drainage tube communicating with the through-like body at its intermediate portion.

1,785,878. TEAPOT. JOSEPH WILLIAM SCHACHTER, Brooklyn, N. Y. Filed Aug. 29, 1929. Serial No. 389,110. 3 Claims. (Cl. 53—3.)



1. A teapot having a cover provided with a radial slit, and a lid hinged to said cover and disposed in position to overlie said slit for the greater part of its length, said lid being adapted to grip a tea ball-suspending-cord between one edge of the lid and the inner end wall of the slit.

1,785,879. AIRPLANE CONTROL. WILLIAM B. STOUT, Detroit, Mich., assignor to Ford Motor Company, Highland Park, Mich. Original application filed July 11, 1925, Serial No. 42,944. Divided and this application filed Oct. 5, 1926. Serial No. 139,591. 1 Claim. (Cl. 244—29.)

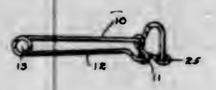


An airplane including a fuselage, a stabilizer, a frame forming a part of the former, a link member slidably mounted in said frame, said link member comprising a pair of spaced elements, a connecting member between the lower ends thereof, a screw extending from said connecting member, a nut upon said screw, means for maintaining said nut against shifting, means for turning said nut, a pivot member extending between the upper ends of said elements, said stabilizer being secured to said pivot element and a further pivot between said stabilizer and fuselage.

1,785,880. CABINET FOR TELEPHONES AND THE LIKE. JOHN E. STRONG, Grand Rapids, Mich. Filed Apr. 10, 1930. Serial No. 443,039. 5 Claims. (Cl. 312—165.)

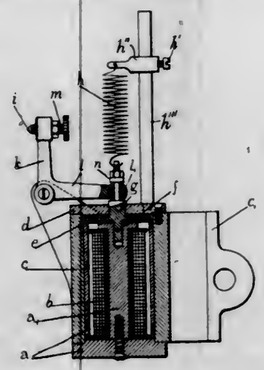
5. In a structure of the class described: an open-top cabinet; a closure therefor having a swinging movement thereon to open and to closed positions; a table having a vertical movement in the cabinet; a seat having a swinging movement on the cabinet to a horizontal position of use and to a vertical position; connections between the closure and table for lowering the table by the closing movement of the closure and vice versa; and connections between the seat and the table for raising the table by the movement of the seat to horizontal position and vice versa.

1,785,881. MECHANICAL PENCIL. RICHARD B. TAVENNER, Pasadena, Calif. Filed Aug. 10, 1929. Serial No. 384,973. 6 Claims. (Cl. 120—14.)



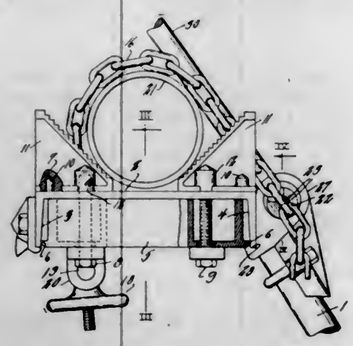
3. In a mechanical pencil, a tubular lead guide provided with a longitudinal opening in its side wall of sufficient size to permit passage of a lead therethrough, a magazine surrounding said lead guide and relatively rotatable with respect thereto, a lead storage chamber in said magazine and opening through the inner and outer faces thereof, said inner opening being movable into or out of registration with said opening in the lead guide by relative rotation of said magazine, and closure means movable to positions to respectively cover and uncover said outer opening.

1,785,882. DEVICE FOR LOCKING SCREEN DOORS AND THE LIKE. JAMES E. TAYLOR, Cleveland, Ohio. Filed Oct. 22, 1928. Serial No. 314,016. 4 Claims. (Cl. 292—106.)



1. A locking device comprising a strip of wire bent to provide two arms, a keeper slidable along the arms,

each of said arms having a notch therein adapted to be engaged by the keeper when the keeper is in locking

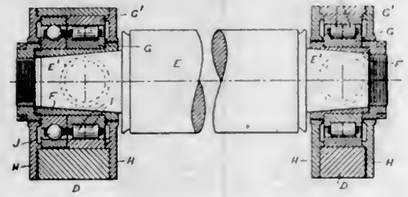


position, said notches being offset with relation to each other, whereby the keeper extends diagonally to the arms when in locked position.

1,785,883. APPARATUS FOR ENGRAVING PRINTING ROLLERS. ALBERT TEISSÈRE and JEAN TEISSÈRE, St.-Julien, Aube, France. Filed Nov. 20, 1928, Serial No. 320,722, and in France July 4, 1928. 4 Claims. (Cl. 33—18.)

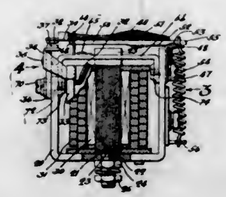
1. In apparatus for electro-magnetically engraving printing rollers: an engraving point and means for operating the same, comprising a pivoted bell-crank lever of light material carrying the engraving point on one arm, an armature in the form of a magnetic disc of very reduced mass actuating the other arm, and an electro-magnet in the form of a pot to operate said armature, the arrangement being such that the disc armature is received in said electro-magnet.

1,785,884. PIPE VISE. WILLIAM W. VOSPER, Toledo, Ohio, assignor to The Toledo Pipe Threading Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 3, 1927. Serial No. 223,626. 7 Claims. (Cl. 81—19.)



1. A bench type support embodying a channel, a reinforcement in the channel, jaws opposing the reinforcement and carried by the support on the opposite side of the channel from the reinforcement, a chain anchored with the reinforcement and having a free end extending therefrom to pass about an object for clamping the object toward the jaws, said free end being connectable to the support, and means for shortening the effective length of the chain for effecting clamping of the object toward the jaws.

1,785,885. HAIRPIN. HARRY M. AMSTRONG, Chicago, Ill. Filed May 7, 1929. Serial No. 361,123. 1 Claim. (Cl. 132—50.)

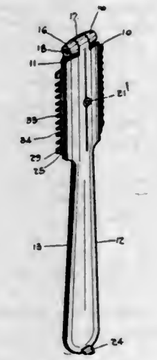


As a new product of manufacture, a hair pin constructed from a single length of material, the intermediate portion being formed with a cylindrical cross section for allowing maximum retensioning effects, the end portions being formed of flat rectangular cross section, said intermediate portion being bent upon itself to provide an expanding spring and to dispose said flat portion in spaced hair-gripping relationship, said flat portion constituting arms, and the free ends thereof being constructed to provide a resilient snap-clasp.

1,785,886. MOUNTING OF CALENDER ROLLS AND THE LIKE. GEOFFREY FOSTER BARRETT, Springfield, England, assignor to Norma-Hoffmann Bearings Corporation, a Corporation of New York. Filed Mar. 20, 1923, Serial No. 626,270, and in Great Britain Apr. 13, 1922. 10 Claims. (Cl. 308—72.)

1. A mounting for calender rolls and the like comprising a housing for the journal bearing at each end of a roll and means for simultaneously shifting the two housings of a roll in opposite lateral directions.

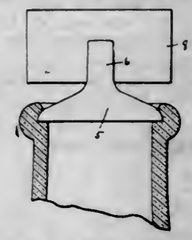
1,785,887. CIRCUIT INTERRUPTER. WILLIAM A. CHRYST, Dayton, Ohio, assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 18, 1927. Serial No. 234,111. 9 Claims. (Cl. 200—87.)



1. A circuit interrupter comprising a magnet frame supporting a core surrounded by a winding, an armature pivotally supported by the frame, interrupter contacts, one of which is actuated by the armature, a tension spring for urging the armature away from the core, and means for adjusting the tension of the spring and comprising a lever attached to one end of the spring and pivotally supported by the frame, means for turning the lever, and means for clamping the lever to the frame in adjusted position.

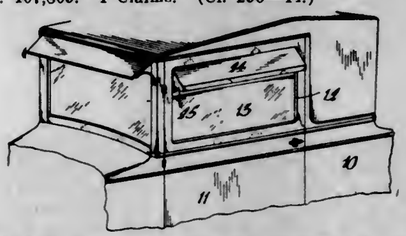
1,785,888. GLASS PURIFICATION. GEORGE C. COX, Raleigh, and HENRY K. MCINTYRE, deceased, Raleigh, N. C., by Edna Moore McIntyre, executrix, Raleigh, N. C., and John Gardiner McIntyre, New York, N. Y., and Malcolm McIntyre, Cranford, N. J., executors. Filed Oct. 5, 1926, Serial No. 139,751. Renewed May 8, 1930. 2 Claims. (Cl. 204—19.)

1. The process of purifying glass which comprises the maintaining of glass stock electrolyte at an optimum temperature by the generation of heat within the electrolyte, and the passing of direct current through the electrolyte, thereby depositing reduced metal at the cathode.



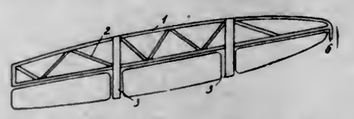
1,785,889. SAFETY RAZOR. JOHN CURRIE, Barrington, Huntingdon, Quebec, Canada. Filed July 7, 1928. Serial No. 290,979. 1 Claim. (Cl. 30—12.)

In a device of the kind described, a pair of handles each having an end portion, with a bevelled back terminating in a hinge lug, said lugs being pivotally connected by a retaining hinge pin, one of said handles having recesses in its inner surface towards the hinge portion and the other of said handles having bosses on its inner surface to correspond with the recesses of the other, said handles having bevelled outer surfaces, a guard plate and a skim plate having orifices and inserted between the handles and engaging with the recesses and bosses of the handles and adapted to receive a blade between them, and a screw inserted through one of the handle recesses and through the orifices of the guard and stiffening plate and threaded into one of the bosses of the other handle.



1,785,890. BOTTLE CLOSURE. LEO F. DALTON, Terre Haute, Ind. Filed Apr. 22, 1929. Serial No. 357,055. 4 Claims. (Cl. 215—51.)

4. In a bottle closure of the class described, a thickened disk-shaped cap of yieldable and flexible material with an extension rising therefrom adapted to be received within and completely cover the bottle, said extension having therein a slit for the reception of a card, the upper surface of the cap being convexed and adapted

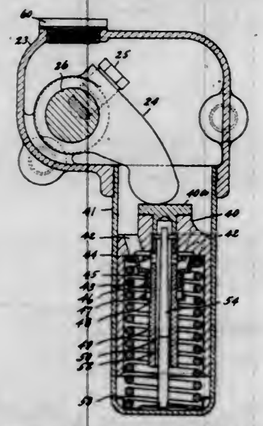


to receive advertising matter, said extension being cylindrical and having a slit vertically and diametrically disposed with respect thereto for the reception of a card.

1,785,891. VENTILATOR FOR AUTOMOBILES. FRED W. DANAT, Buffalo, N. Y. Filed Nov. 18, 1929. Serial No. 407,809. 4 Claims. (Cl. 296—44.)

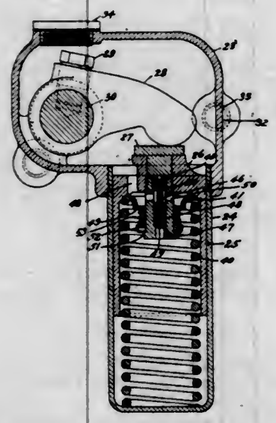
1. A ventilator for automobiles, comprising a vented panel adapted for insertion between the window frame and the opposing top edge of the sliding window thereof, said panel having attaching flanges at its top and sides for engagement with the window-receiving grooves of the frame, means at the lower edge of the panel for gripping the top edge of the sliding window, and members projecting from the upper and lower edges of said panel in spaced overlying relation thereto and on opposite sides thereof.

1,785,892. STUB WING OF FLYING BOATS. CLAUDE DORNIER, Friedrichshafen - on - the - Bodensee, Germany, assignor of one-half to the Firm Dornier-Metallbauten G. m. b. H., Friedrichshafen-on-the-Bodensee, Germany. Filed May 11, 1929, Serial No. 362,377, and in Germany May 14, 1928. 5 Claims. (Cl. 244—2.)



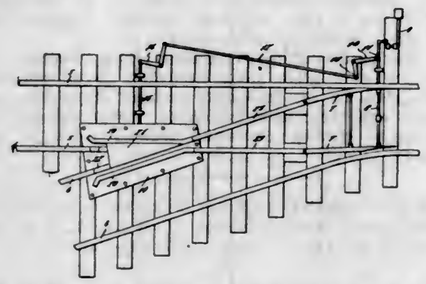
1. A stub wing for flying machines and an elastic protective body covering part of the bottom side of such stub wing.

1,785,893. REBOUND CHECK. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 2, 1926. Serial No. 99,371. 3 Claims. (Cl. 267—8.)



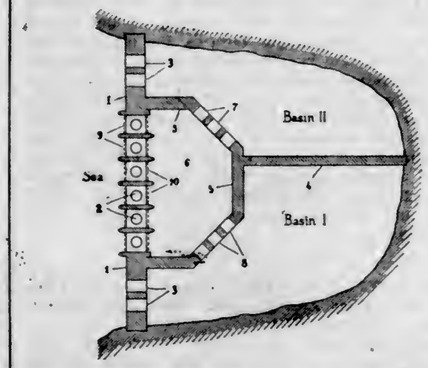
2. A rebound check for controlling the movement of two relatively movable members, comprising in combination, a casing providing a fluid reservoir, secured to one of said members; an oscillatable part supported by said casing; means for connecting said part to the other of said members; a closed end cylinder attached to the casing and communicating therewith; a piston in the cylinder, adapted to be operated in the one direction by

the oscillatable part, said piston having a fluid passage in its head portion providing communication between the interior of the cylinder and the casing; a valve in the piston providing for the substantially free flow of fluid through the piston head passage when the piston is moved away from the closed end of the cylinder; a fluid conduit carried by the piston head for by-passing fluid around the check valve when the piston is moved toward the



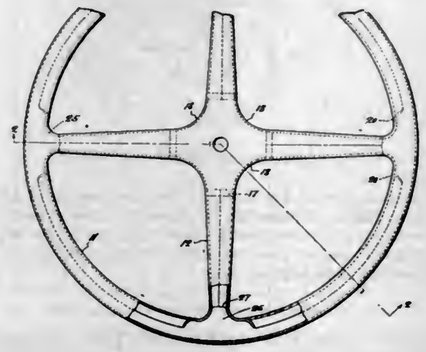
closed end of the cylinder; a mounting disc in the cylinder engaging the closed end thereof, said mounting disc carrying a metering pin which extends coaxially into the fluid conduit; and a spring interposed between the valve in the piston and the mounting disc, for maintaining said valve and disc in their proper positions on the piston and cylinder end respectively, said spring being adapted to move the piston in the direction away from the closed end of the cylinder.

1,785,894. SHOCK ABSORBER. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 28, 1926. Serial No. 112,266. 3 Claims. (Cl. 267—8.)



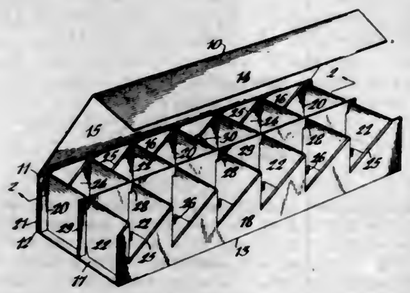
1. A shock absorber comprising, in combination, a main lever whose motion in one direction is to be checked, a cylinder for containing a liquid, a bracket for supporting the cylinder, a piston within the cylinder, an operating member for positively moving the piston according to the movement of said lever, a duct through the piston providing for the relatively free flow of liquid, a check valve for preventing the flow of liquid through said duct when the piston moves in one direction, a duct member carried by the piston for by-passing said check valve, said duct member slidably supporting said check valve, a plunger valve within the duct and cooperating therewith to provide a flow-resisting passage of substantially constant dimensions for different positions of the plunger valve, and a spring for maintaining the plunger valve upon a valve seat provided by the duct in order to prevent liquid flow through said passage until a certain liquid pressure has been reached.

1,785,895. SWITCH-OPERATED FROG. WILLIAM A. ENGLAND, Davy, W. Va. Filed Feb. 26, 1930. Serial No. 431,519. 1 Claim. (Cl. 246—385.)



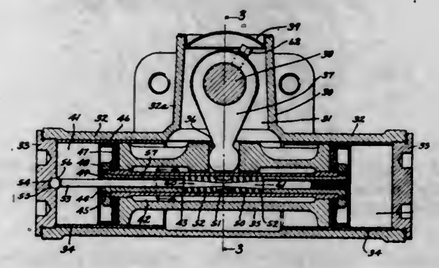
A railway frog comprising a base plate having a pair of spaced slots elongated transversely of the plate and a pair of integrally formed rail members extending longitudinally of the plate and adjacent relatively opposite ends of the slots, said rail members being angularly disposed to converge toward one end of the plate to provide a triangular space therebetween, a pair of relatively short longitudinally extending rail members disposed oppositely between the divergent ends of the angularly disposed rail members in relatively spaced relation, a triangular frog block disposed in the triangular space between said rail members and slidable transversely of the plate, a relatively small slide plate of triangular shape disposed against the under side of said base plate and crosswise thereof with its base bridging the said slots and its apex pointed laterally of the base plate for connection with an operating rod, said slide plate having an opening in each corner, and headed fasteners extending upwardly through the corner opening in the base of the slide plate and threadedly engaged with said frog block.

1,785,896. METHOD OF UTILIZING THE TIDES FOR POWER PURPOSES. ANDRÉ DEFOUR, Peronne, France. Filed Aug. 13, 1926. Serial No. 129,069. 2 Claims. (Cl. 61—20.)



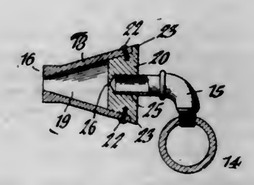
1. A method of utilizing the tides for power purposes consisting in permitting water to flow between the sea and two connected basins at different levels, utilizing the flow of water from the sea to the basin at lower level and from the basin at lower level to the sea for development of power and utilizing flow of water from the basin at higher level to the sea for development of power during all times that water flowing between the basin at lower level and the sea is idle.

1,785,897. ONE-PIECE RIM AND SPIDER STEERING WHEEL. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 30, 1928. Serial No. 274,051. 4 Claims. (Cl. 74—33.)



1. A steering wheel having the rim and spokes thereof stamped from a single piece of sheet metal, comprising: a complete tubular rim bent up from flat sheet metal and having a butt joint therein extending around its under side, integral box section spokes radiating from said rim and having a butt joint extending along their under sides, the under side of said rim having a projecting tongue portion where each spoke adjoins said rim which tongues are bent radially inward to close the open outer end of said box section spokes.

1,785,898. EGG CARTON. EDWARD EVERETT HALE, Buffalo, N. Y. Filed Feb. 2, 1929. Serial No. 337,135. 10 Claims. (Cl. 229—29.)

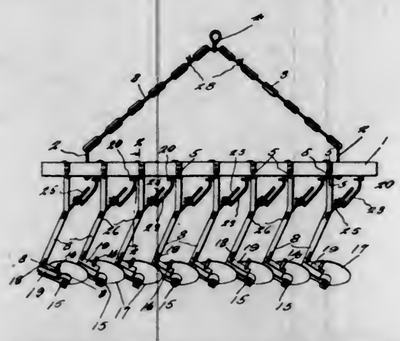


1. A collapsible carton formed from a blank which is cut and creased to provide a bottom, sides, and transverse partitions between the sides connected therewith by folds, the top and bottom edges of the partitions having complemental notches and tongues formed by slitting the same, said notches and tongues interlocking with one another in the collapsed position of the carton and the tongues engaging the bottom of the latter in its unfolded position.

1,785,899. DOUBLE-ACTING SHOCK ABSORBER. GEORGE E. A. HALLETT, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 21, 1928. Serial No. 279,479. 13 Claims. (Cl. 188—88.)

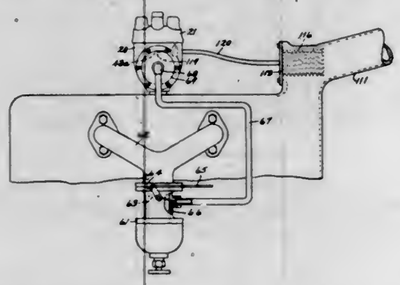
1. A shock absorber comprising in combination, a casing presenting a fluid chamber, a plunger in said casing having provision permitting the passage of fluid in both directions therethrough, and metering means in said plunger for controlling the flow of fluid in both directions therethrough, said metering means including a stationary member supported by the casing and a cooperating member movably supported in the plunger.

1,785,900. FURNACE BURNER. FRANK X. HAMBERGER, Buffalo, N. Y. Filed Aug. 8, 1928. Serial No. 298,291. 2 Claims. (Cl. 158—99.)



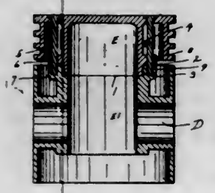
2. A gas burner of the character described, comprising a burner-body containing a forwardly-converging mixing chamber of a smooth uniform taper having an air inlet at its larger end and a mixture outlet at its smaller end, the larger end of said burner-body having a pair of notches therein, and a detachable bridge-bar arranged transversely of the burner-body and having projections at its ends engaging said notches, said bar being adapted for attachment to a gas pipe and containing an orifice for admitting gas to the mixing chamber.

1,785,901. CULTIVATOR. GEORGE HARDIE, Condon, Oreg. Filed Sept. 5, 1929. Serial No. 390,517. 4 Claims. (Cl. 55—30.)



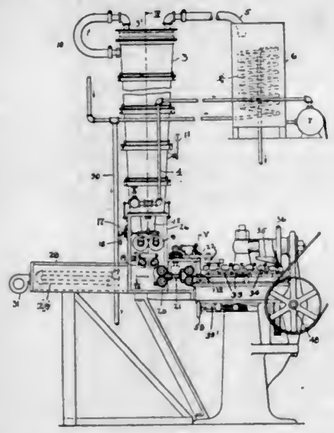
1. An agricultural implement of the character described comprising an elongated beam, a plurality of drawbars pivotally connected to said beam in spaced relation, a rotatable earth working element mounted on the free

end of each of the drawbars, and means connected to each of the drawbars at a point remote from the beam



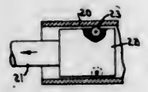
and to said beam for shifting said drawbars in a horizontal plane and for maintaining the same in their adjusted positions.

1,785,902. IGNITION TIMER. FREDERICK J. HARDMAN, Dayton, Ohio, assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 5, 1928. Serial No. 290,319. 8 Claims. (Cl. 123—117.)



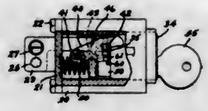
1. Ignition apparatus for internal combustion engines comprising, in combination, a circuit interrupter operated by the engine, and means responsive to engine temperature and to engine speed for varying the time relation between the cycle of engine operations and the cycle of interrupter operations.

1,785,903. PISTON. GLEN P. HEINER, Salt Lake City, Utah. Filed Mar. 18, 1929. Serial No. 347,795. 1 Claim. (Cl. 74—108.)



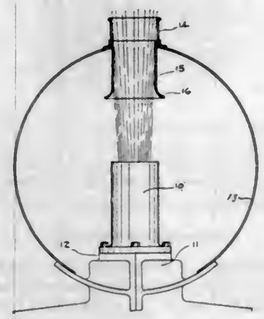
In a removable head piston the combination of a cylindrical skirt having a centrally located vertically split cylindrical member formed therein; a piston head having a centrally located vertically split cylindrical member formed therein; threads on the engaging ends of the two cylindrical members; aligned lugs formed on the outer sides thereof; and bolts adapted to be passed through the top of the piston head and skirt together.

1,785,904. CANDY MOLDING. ROBERT W. HOMPE, Cleveland, Ohio. Filed Apr. 29, 1927. Serial No. 187,592. 9 Claims. (Cl. 107—4.)



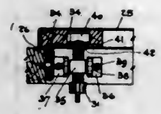
1. In a candy-molding machine, the combination of a die press comprising a plurality of dies adapted to enter corresponding die cavities, and a cutter for each die to sever the stock therefor, each of said cutters being movable with respect to said die cavities.

1,785,905. TOOL FOR SCARIFYING THE INTERIOR OF TUBING. EDWARD P. KERRUISH, Cleveland Heights, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 26, 1926. Serial No. 131,669. 6 Claims. (Cl. 80—1.)



2. A tool for internally scarifying tubular members comprising a shank and a body member carrying cutting teeth, the diameter of said member measured to the external surface of said teeth being slightly greater than the internal diameter of the member to be scarified.

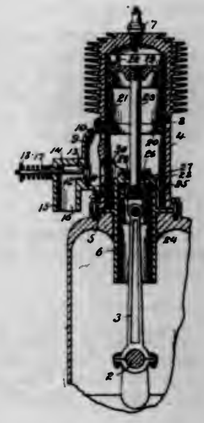
1,785,906. LOCK SWITCH. ALBERT E. KOFFER, Dayton, Ohio, assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 21, 1927. Serial No. 207,335. 8 Claims. (Cl. 200—44.)



1. A lock switch comprising a cylindrical tubular case, a cover for one end of the case, switch contacts within the case supported by the cover, a controller slidable axially within the case, said controller carrying means for permitting the contacts to complete an electric circuit or for causing the circuit to be interrupted according as the controller moves to a position farthest from the end cover or nearest thereto, respectively, a spring for urging the controller away from the end cover, a latch plate provided by the case, a latch finger movably supported within the case for engaging the latch plate for maintaining the controller in circuit-open position, and key operated means carried by the controller for tripping the latch.

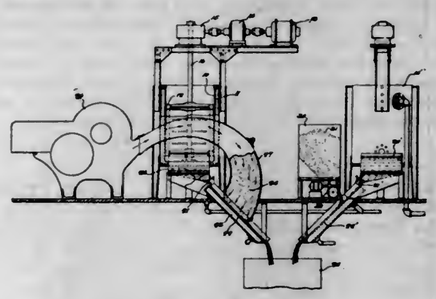
1,785,907. LOCOMOTIVE EXHAUST-STEAM NOZZLE. ARMAND LYMBURNER, Verdun, Quebec, Canada, assignor of one-half to Joseph J. Driscoll, Chicago, Ill. Filed Nov. 30, 1927, Serial No. 236,759. Renewed May 21, 1930. 1 Claim. (Cl. 230—96.)

In a locomotive exhaust steam nozzle, a smoke box, an exhaust manifold for the steam vertically extending into and supporting said smoke box and having an outlet at the upper end, a tubular steam exhaust nozzle projecting upwardly from said manifold and secured thereto around said outlet, a post rigidly secured to said manifold and extending centrally and vertically to the upper end of said nozzle and carrying on its reduced upper end a flaring block cooperating with the cylindrical wall of the nozzle in concentrating the steam discharge within gradually enlarging circles and a stack of approximately even diameter to said nozzle forming an outlet from said smoke box in vertical alignment with said nozzle.



1,785,908. PANEL ROOF FOR CLOSED CARS. EDWARD BOSWELL MALCOLM, Montreal, Quebec, Canada. Filed July 30, 1928. Serial No. 296,320. 1 Claim. (Cl. 296—137.)

A panel roof for closed cars, comprising a closure riding on rails on either side of a roof opening and therebeyond and having corner recesses and slotted plates covering said recesses, corner angle brackets secured to the roof, screw clamps pivotally secured to said angle brackets in a threaded sleeve swinging to and away from said slotted plates and having gripping plates on the ends thereof and rubber packing cooperating with said clamps in maintaining a tight closure.

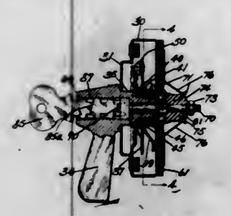


1,785,909. EXPLOSIVE ENGINE. WENDELL R. MCKINNEY, Kansas City, Mo., assignor of one-half to Berr E. Post, Kansas City, Mo. Filed Dec. 5, 1928. Serial No. 323,960. 3 Claims. (Cl. 123—74.)

3. In an explosive engine, a cylinder having a closed end comprising a cross head guide extending into said cylinder and having in its upper end a recess, a plate fastened to said guide and closing said recess, said plate and the bottom of said recess forming unyielding seats, a piston head reciprocative in said cylinder and having a skirt encircling and closely spaced from said guide when said piston head is at the end of its power stroke, a cross head reciprocative on said guide, a piston rod reciprocative through holes provided respectively in said guide and said plate, and a packing collar tightly and slidably fitted on said rod in said recess and reciprocative with said piston rod to positions in which it will alternately bear against

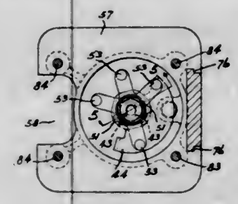
said seats, said packing collar having less thickness and less diameter than the depth and diameter respectively of said recess, said packing collar having one or more internal annular peripheral oil receiving grooves.

1,785,910. METHOD OF MIXING COTTON FIBER AND BITUMINOUS MATERIALS. CARL P. NELLIS and ARTHUR H. FLOWER, Dayton, Ohio, assignors to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 30, 1928. Serial No. 274,016. 6 Claims. (Cl. 106—31.)



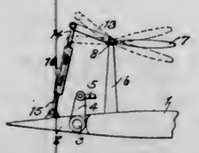
1. A process of forming a moldable plastic compound of bituminous material, fibrous material, and a finely divided filler material comprising: melting a lower melting point bituminous material, separately melting a higher melting point bituminous material, passing said first molten material in a relatively flat stream into a container and simultaneously distributing fibrous material upon said flat stream, passing said second molten material in a relatively flat stream into said container and simultaneously adding finely divided filler into said stream, and then kneading the combined materials to form a substantially homogeneous mixture.

1,785,911. ELECTRIC SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 1, 1924. Serial No. 703,557. 11 Claims. (Cl. 200—168.)



1. In an electric switch having a movable contact carrying member, a yieldable detent supported on said movable

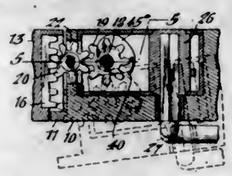
member and movable therewith, a switch housing formed of pressed sheet metal and housing said movable member, a wall of said housing having corrugations formed therein



from the sheet metal to form recesses for said detent whereby said movable member is located in any one of a plurality of positions.

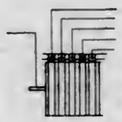
1,785,912. ELECTRIC SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor to General Motors Corporation, a Corporation of Delaware. Filed Aug. 12, 1924. Serial No. 731,691. 5 Claims. (Cl. 200—168.)

1. A circuit controlling device for motor vehicles, including a steering wheel secured to one end of a tubular steering column; a housing in which the other end of the steering column is journalled, said housing enclosing the steering gear, and having an apertured arm extending therefrom, split so as to be contractible; a switch including a housing provided with a shank adapted to extend into the said apertured arm; and means on said arm for contracting it to grip the shank tightly.



1,785,913. STEERING AIRCRAFT. ALBERT PRESSER, Friedrichshafen-on-the-Bodensee, Germany, assignor to the Firm Dornier-Metallbauten, G. m. b. H., Friedrichshafen-on-the-Bodensee, Germany. Filed July 6, 1928, Serial No. 290,778, and in Germany Feb. 15, 1928. 8 Claims. (Cl. 244—29.)

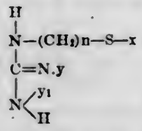
1. Flying machine comprising a wing, a rudder pivotally connected with said wing, a movable auxiliary surface, means connecting said surface with said wing, and with said rudder, respectively, and means for varying the length of one of said connecting means.



1,785,914. DOOR LATCH. PETER S. RIEL, Buffalo, N. Y. Filed Nov. 8, 1927. Serial No. 231,904. 20 Claims. (Cl. 292—280.)

1. In a door latch, the combination with a door and its frame, of toothed latching elements applied to the door and to the frame for rolling contact one over the other, and means for effecting the automatic operation of one of

said elements relative to the other to fully close the door after the same has been moved to a predetermined partially closed position.

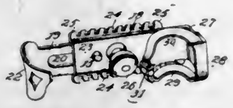


1,785,915. SOUND-REPRODUCING INSTRUMENT. FRANK MORSE ROBB, Belleville, Ontario, Canada. Filed Sept. 29, 1927. Serial No. 222,806. 1 Claim. (Cl. 179—100.2.)

In a sound reproducing instrument, a plurality of rotatable records suitably driven and formed of conducting material with undulatory grooves representing a plurality of musical scale tones, a plurality of electrodes in set positions in relation to said grooves and adapted to vary a current in agreement with the varying distances of the undulations from the electrodes during the rotation of the records, switches operated by key stop or pedal and electrical circuits individual to said switches and records commonly oscillated and developing the sound emanating from said variations through electrical translating devices.

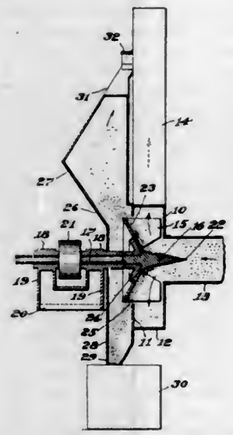
1,785,916. SULPHUR CONTAINING GUANIDINE DERIVATIVES AND PROCESS OF MAKING SAME. HERBERT SCHOTTE, Berlin-Wilmersdorf, Germany, assignor to Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Aug. 8, 1927, Serial No. 211,619, and in Germany Aug. 4, 1926. 4 Claims. (Cl. 260—125.)

1. As a new composition of matter, the sulphur-containing guanidine derivatives having the general formula



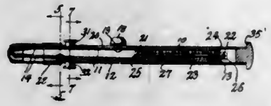
in which n is a whole number x may be either hydrogen or the complex of atoms illustrated by the part of the above formula to the left of the sulphur atom, and y and y_1 either hydrogen or acyl radicals, such compounds being adapted to be oxidized and being non-resistive against concentrated alkaline solutions and incapable of being distilled.

1,785,917. RECIPROCATING-ACTION SAFETY RAZOR. JACOB H. SCHUSTER, St. Louis, Mo. Filed Oct. 28, 1929. Serial No. 402,840. 4 Claims. (Cl. 30—12.)



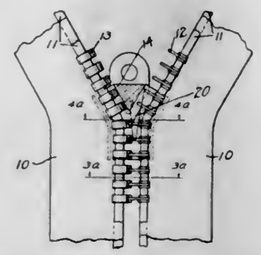
1. A reciprocating razor comprising a base member, a center post and a lug formed thereon, the under surface

of said base member provided with parallel curvilinear grooves, a razor blade positioned on the base member and supported by the post and stud, a slotted sliding member positioned on the razor blade and guided by the post and stud, an upturned finger grip formed on the end of said



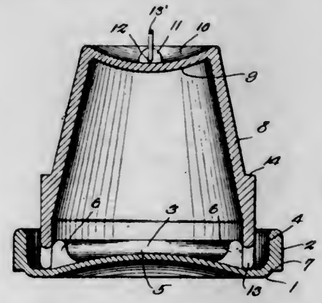
sliding member, a top member positioned over the sliding member, its side edges bent downwardly and formed into teeth, an adjustable loop member formed on the top member, and a lock nut positioned on the post for holding the parts in assembled position, substantially as specified.

1,785,918. COMBINED FAN AND CLASSIFIER. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Sept. 13, 1928. Serial No. 305,648. 8 Claims. (Cl. 183—77.)



1. A combined fan and classifier comprising in combination, a fan casing having an air inlet opening formed in its front wall to receive material laden air and having a material discharge opening adjacent its rear wall and an air discharge opening, a fan supported to rotate within the casing and provided with fan blades and a tapered core having an outwardly flaring annular flange that extends rearwardly through said rear wall and constructed so that the heavier particles sucked into the casing with the air will strike against the outwardly flaring flange and travel along the same toward the material discharge opening while the air from which the heavier materials are removed is forced by the fan through said air discharge opening, and a collecting receptacle communicating with the fan casing to receive the heavier materials discharged from the fan casing.

1,785,919. TWEEZERS. CHARLES W. STICKEL and WILLIAM R. TUTTLE, Rochester, N. Y. Filed Dec. 6, 1928, Serial No. 324,080. Renewed May 13, 1930. 14 Claims. (Cl. 128—354.)



1. A tweezers comprising a support, a pair of jaws mounted for forward and backward movement on said support, spring means for moving said jaws backwardly, and manually releasable detent means for holding said jaws in a forward position on said support.

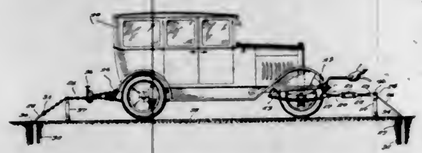
1,785,920. SEPARABLE FASTENER. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Original application filed Feb. 14, 1925, Serial No. 9,087, and in Canada Feb. 6, 1926. Divided and this application filed Mar. 9, 1928. Serial No. 260,493. 6 Claims. (Cl. 24—205.)

1. A slide type fastener comprising a pair of stringers having a plurality of pairs of opposed locking members, one member of each pair having flat flanges and the other member of each pair having resilient projections flexed toward each other with free ends bent substantially at right angles to grip opposite edges of said flanges, and means on said flanges to prevent longitudinal separation of said members.

1,785,921. POULTRY FOUNT. WALTER W. THOMPSON and EDELBERT RUSSELL, Macomb, Ill. Filed Nov. 4, 1929. Serial No. 404,742. 2 Claims. (Cl. 119—77.)

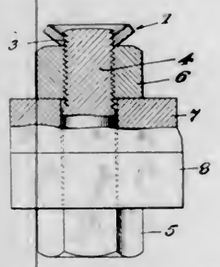
1. A device of the class described including a pottery base having elevated concentric inner and outer portions forming an annular trough therebetween, there being a recess at the lowest part of the inner portion draining downwardly into the trough, a pottery container for liquid adapted to receive and fit snugly upon the inner upstanding portion of the base, said container having a recess in its edge movable about the inner upstanding portion and into and out of register with the recess in said portion.

1,785,922. METHOD OF MAKING CLOTH STENCILS FOR MULTICOLOR WORK. ROGER TULL, Los Angeles, Calif., assignor to Western Lthograph Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 11, 1928. Serial No. 253,764. 1 Claim. (Cl. 101—129.)



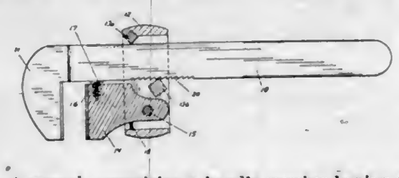
The method of making cloth stencils for multi-color work consisting in making a photographic positive plate

and negative plate from the colored original that is to be reproduced, making photographic prints on sensitized bolting cloth from the positive and negative plates, blocking out on the print from the positive plate an area that is to be impervious to paint and that corresponds to one



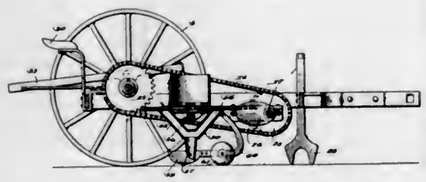
of the colors that photographed dark on the positive plate, and blocking out on the print from the negative plate an area that is to be impervious to paint and that corresponds to one of the colors that photographed dark on the negative plate.

1,785,923. STRAIN-APPLYING DEVICE FOR METALLIC MATERIAL. PERCY WADE, Washington, D. C., assignor to The Weldit Company, Washington, D. C. Filed Nov. 1, 1929. Serial No. 404,158. 3 Claims. (Cl. 153—32.)



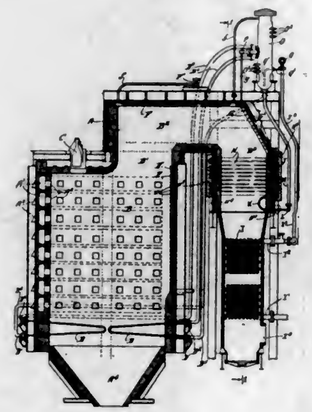
1. A device of the character described comprising a clevis member adapted to be removably secured to a distorted portion of the frame of an automobile, means for restraining the movement of the automobile, means for anchoring said member, a member interposed between said clevis member and said anchoring means and connected to the latter, means connecting said clevis member and the interposed member whereby a strain may be applied to said distorted portions and means adapted to position the last-named means whereby the strain is exerted in a plane parallel to the horizontal plane of said frame.

1,785,924. MECHANICAL LOCK AND LOCKING METHOD. WYLIE G. WILSON, Elizabeth, N. J., assignor to Wilson Rings Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 18, 1928. Serial No. 326,795. 8 Claims. (Cl. 151—30.)



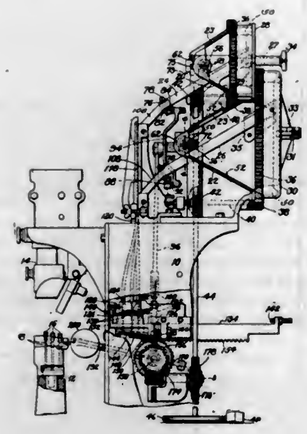
5. A clamping member comprising a deformable body formed with a central aperture, the material of the body adjacent the aperture being in the form of a frustum of a cone so shaped that if cross-sections are taken on a succession of planes above the threaded aperture and parallel to the base of the frustum, each cross-section will form a circle, the wall of the aperture being cut with screw threads for cooperation with the screw threads of a bolt, the member being adapted to be clamped on the bolt by flattening the body to thereby constrict the aperture and cause the member to grip the bolt.

1,785,925. WRENCH. JAMES C. BAKER, Lincoln, Nebr., assignor of one-third to R. L. Davis, Sr., and one-third to A. J. Ohler, Lincoln, Nebr. Filed Apr. 30, 1929. Serial No. 359,291. 2 Claims. (Cl. 81—97.)



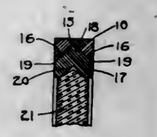
1. A wrench comprising a handle member having a fixed jaw on its outer end, a slotted bar loosely mounted across the handle member, a fixed dog in the back of the bar opposite the rear edge of the handle member, a second fixed dog in the front of the bar opposite the forward edge of the handle member, said dogs being offset relative to the length of the bar and spaced apart a distance to free the bar for slidable adjustment lengthwise on the handle member when the front end of the bar is canted toward the fixed jaw and to bind the dogs against the respective rear and forward edges of the handle member when the bar is swung at its front end away from the fixed jaw, a movable jaw yieldably mounted on the forward end of the bar opposite the fixed jaw, the movable jaw having a shank pivotally mounted in the front end of the bar and extending forwardly therefrom, a spring in the forward end of the bar between the latter and the forward edge of the shank for yieldably urging the movable jaw toward the forward edge of the handle member, and a spring pressed headed pin carried at the inner edge of the movable jaw for slidable engagement against the forward edge of the handle member to normally urge the movable jaw outwardly against said first spring and yieldably maintain the bar in locked position.

1,785,926. SEED PLANTER. LANDON BATCHELOR, Lawrenceburg, Ind. Filed July 8, 1929. Serial No. 376,787. 6 Claims. (Cl. 111—34.)



1. In a seed planter an axle, wheels on said axle, a frame supported by said axle, a cam carrying shaft mounted to rotate in said frame, a driving connection between the axle and said shaft, a seed hopper having a slide way in its under surface, a discharge spout located beneath said hopper, a seed drop slide mounted to travel in said slide way, and comprising a plate having apertures to alternately register with the hopper and the discharge spout, said plate having longitudinally slotted brackets for the passage therethrough of the cam shaft and a bifurcated portion to receive a cam, with rollers at the ends of said portion against which the periphery of the cam engages to reciprocate the drop slide on the revolving of the wheels.

1,785,927. HIGH-PRESSURE BOILER. JOHN E. BELL, Brooklyn, N. Y.; Lola R. Bell executrix of said John E. Bell, deceased. Filed Apr. 16, 1924. Serial No. 706,851. 17 Claims. (Cl. 122—235.)

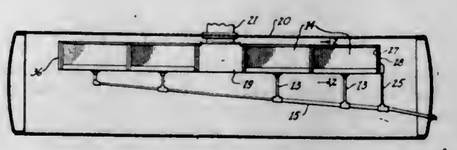


1. Steam generating apparatus comprising a chamber, a bank of horizontally disposed water tubes located in said chamber, a steam and water space, means connecting said tubes and space in a circulating system through which water passes downward from said space to tubes at the bottom of said bank, and thence upward through tubes located at successively higher levels, and thence back to said space through vertically disposed tubular elements located in the upper portion of said chamber, and means for passing heating gases into the upper end of said chamber and thence downwardly over the tubes.

1,785,928. NAILING MACHINE. JOHN M. BENJAMIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 24, 1924. Serial No. 745,684. 16 Claims. (Cl. 1—32.)

1. In a nailing machine, nailing mechanism, a nail-distributor having a movable discharge device, movable means for transferring nails from the distributor to the nailing mechanism, power mechanism, and means driven independently of each other by the power mechanism for moving respectively the discharge device and transferring means.

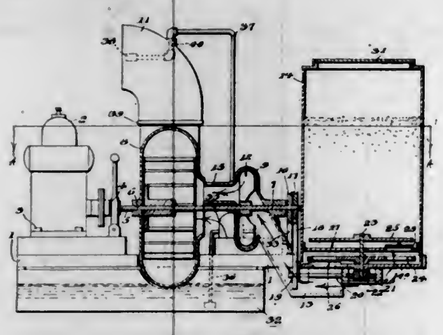
1,785,929. OPHTHALMIC MOUNTING. SAMUEL E. BOUCHARD, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 8, 1928. Serial No. 317,988. 2 Claims. (Cl. 88—47.)



1. An ophthalmic mounting comprising in combination a metallic rim having a groove on its inner circumference, a flat, annular shoulder portion on said inner circumference on each side of said groove, a non-metallic rim having a circumferential projection and a flat, annular shoulder portion on each side of said projection, said projection being seated in said groove and the shoulder portions on said metallic rim being in contact with the shoulder portions on said non-metallic rim.

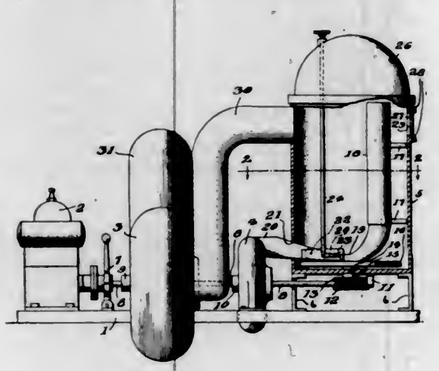
1,785,930. RESINOUS COMPOSITION AND PROCESS OF MAKING SAME. THEODORE F. BRADLEY, Westfield, N. J., assignor to Ellis-Foster Company, Montclair, N. J., a Corporation of New Jersey. Filed June 5, 1925. Serial No. 35,264. 31 Claims. (Cl. 260—8.)

6. A process which comprises heating a mixture of glycerol, phthalic anhydride and castor oil to a temperature greater than 200° C., and not above 300° C.



20. A resinous composition made by simultaneously chemically combining a polybasic acid, a monobasic acid, a polyhydric alcohol and a glyceride of a hydroxylated fatty acid having an acid number not substantially over 30 and which is both miscible and compatible with nitrocellulose.

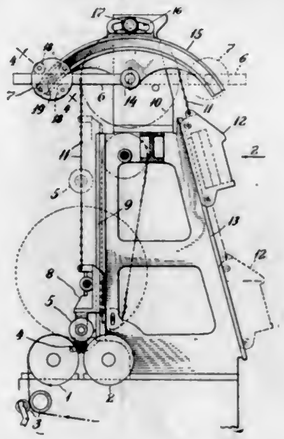
1,785,931. FLUID SEPARATOR. GRANT D. BRADSHAW, Pittsburgh, Pa., assignor to Blaw-Knox Company, Blawnox, Pa., a Corporation of New Jersey. Filed Aug. 8, 1927. Serial No. 211,286. 6 Claims. (Cl. 183—111.)



1. A fluid separator comprising a water chamber, a drain pipe communicating with said chamber, an end plate mounted in one end of the separator and having two openings therethrough communicating with said chamber, a second end plate having a forked passageway therein, said second plate being fixed to said first mentioned plate with the branches of the forked passage communicating with the respective openings, and means providing communication between said drain pipe and said forked passageway.

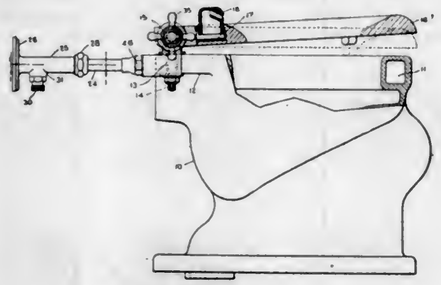
1,785,932. DUSTING AND SPRAYING MACHINE. ARTHUR J. BROWN, New York, N. Y., and RICHARD R. EZDORF, Washington, D. C. Filed July 20, 1929. Serial No. 379,795. 5 Claims. (Cl. 43—148.)

1. A spraying machine in which a powder is mixed with air, the mixture passed through an auxiliary fan and thence through an exhaust fan to a point of discharge and at said latter point injecting a liquid into the mixture.



1,785,933. DUSTING MACHINE. ARTHUR J. BROWN, New York, N. Y., and RICHARD R. EZDORF, Washington, D. C. Filed July 20, 1929. Serial No. 379,799½. 6 Claims. (Cl. 43—148.)

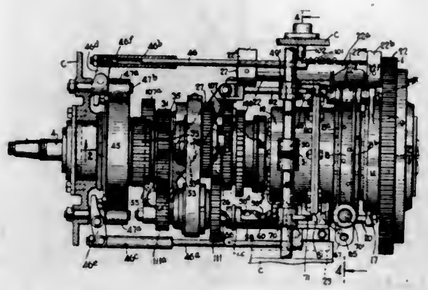
1. In a dusting machine, a powder container, means in the bottom of the container for moving powder in a predetermined plane, fluid means for removing the powder from the upper surface of said first named means, a pipe for conducting the powder and fluid into the upper section of the container and means for extracting the fluid and powder from the container and discharging the same onto the area being treated.



1,785,934. COUNTERWEIGHTING DEVICE FOR WINDING MACHINES. JAMES A. CAMERON, Brooklyn, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 18, 1928. Serial No. 313,277. 15 Claims. (Cl. 242—66.)

1. In a winding machine, a member upwardly displaceable by accumulation of wound material, and counterweighting means for said member including: a pivoted arm, means to turn said arm on its pivot in response to

the displacement of the member, a weight on the arm and means to move the weight lengthwise of the arm in response to the turning movement of the arm.



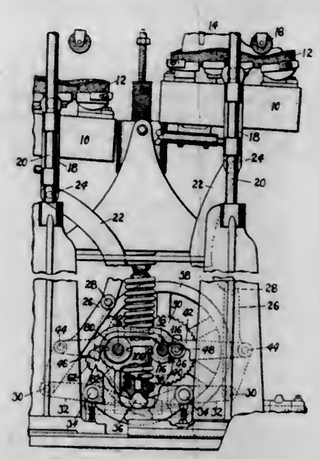
1,785,935. VALVE AND SEAT COMBINATION FOR BIDET CONTROL. CESARE C. CAMPUS, Santa Monica, Calif. Filed Jan. 25, 1929. Serial No. 335,011. 10 Claims. (Cl. 4—7.)

2. In a bidet apparatus and the like. a discharge nozzle, a supply conduit, the said nozzle and conduit being connected and rockable to and from positions for the use and non-use of the nozzle, valve means for controlling the admission of water to the said supply conduit, a valve, and means for normally maintaining the said valve against its seat and holding the said nozzle and supply conduit in a non-use position of the nozzle and by which means the said valve is opened when the nozzle is in position for use, whereby the nozzle must be in position for use while in such position the said valve means must be operated to effect a flow of water to the said nozzle.

1,785,936. VARIABLE-SPEED TRANSMISSION. HARRY A. COLE, New York, N. Y., assignor to Cole Service Plan, Inc., a Corporation of New York. Filed May 13, 1930. Serial No. 451,914. 15 Claims. (Cl. 74—34.)

1. A planetary speed transmission system for a shaft having gear means located thereon, comprising a driving shaft, a plurality of planetary shafts mounted on said driving shaft so that said planetary shafts rotate in unison with said shaft, planetary gears mounted upon said planetary shafts, and in continuous mesh with said gear means, said planetary shafts having additional gears mounted thereon, a plurality of sleeves concentrically mounted upon said driving shaft and upon each other and having teeth which are in continuous mesh with said

additional gears, and a control sleeve mounted for longitudinal movement with respect to said driving shaft, said sleeve being adapted to selectively and individually interlock with a plurality of said sleeves and to also simultaneously interlock with a plurality of said sleeves.

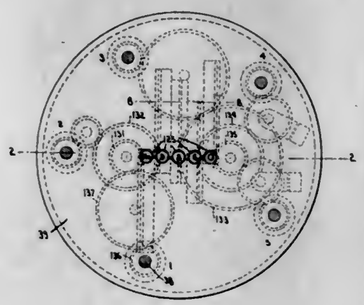


1,785,937. PILE FABRIC AND METHOD OF MAKING THE SAME. MELVILLE G. CURTIS, Cynwyd, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 22, 1927. Serial No. 235,060. 12 Claims. (Cl. 28—1.)

1. The method of making pile fabric which comprises utilizing the backing of a pile fabric as a matrix to position and hold the fibres of the pile, embedding the tips of the pile in an adherent material adapted for solidification into a backing, and splitting the pile to form a plurality of fabrics.

1,785,938. SHOE-PRESSING MACHINE. ALSON H. DAVIS, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 8, 1929. Serial No. 398,251. 7 Claims. (Cl. 12—36.)

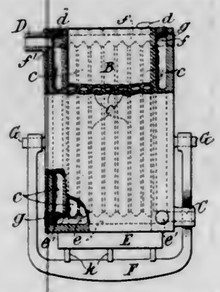
1. In a machine of the class described, the combination with mechanism for applying pressure to the bottoms of shoes, and power-driven means including a friction clutch for operating said mechanism to apply the pressure, of a clutch-controlling member movable in different directions respectively to start the machine and to stop it with a shoe under pressure, means for moving said member to stop the machine comprising a resilient device so constructed and arranged as to yield initially upon engagement with said member prior to its normal action to stop the machine and to assume finally by its resiliency a position out of the path of starting movement of the member, and means for insuring against movement of the clutch-



controlling member by said device until the pressure-applying mechanism has arrived substantially in its normal stopping position.

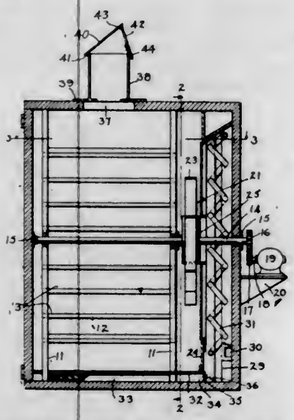
1,785,939. BATTERY-PLATE BUILDING. HENRY P. DODGE, Toledo, Ohio, assignor to Luthy Battery Equipment Company, San Antonio, Tex., a Corporation of Texas. Filed May 11, 1925. Serial No. 29,620. 5 Claims. (Cl. 136—27.)

1. In the production of a uniformly porous secondary battery plate filler, grinding of exhausted lead battery plates by directly subdividing said unmelted plates, making a paste directly from said plate grindings, forcing said paste into a battery plate skeleton, and the creation of voids in the plates by charging.



1,785,940. RAILROAD CODE-TRANSMITTING DEVICE. STANTON ENNES, Cleveland, Ohio. Filed Dec. 22, 1924. Serial No. 757,364. 2 Claims. (Cl. 177—380.)

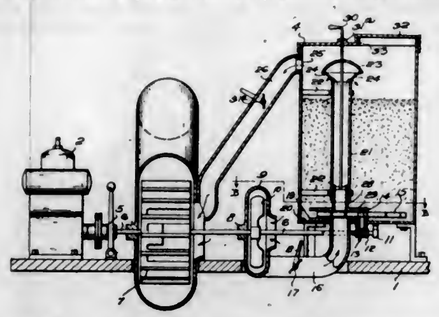
1. In a device of the character described, the combination with a casing of a rotatable contact maker, a plurality of cylinders mounted in the circuitous path thereof, each said cylinders being adjustable and having a plurality of code indented segments adapted to engage said contact maker to transmit signals, indicating means corresponding to each said cylinders and having indicia thereon relating to the several code indentations of the segments, a series of contiguous sight apertures in said casing through which said indicia are visible and indi-



vidual adjusting means for each cylinder, said last named means being externally accessible and having means adapted to adjust the relation of said indicating means with respect to its corresponding cylinder.

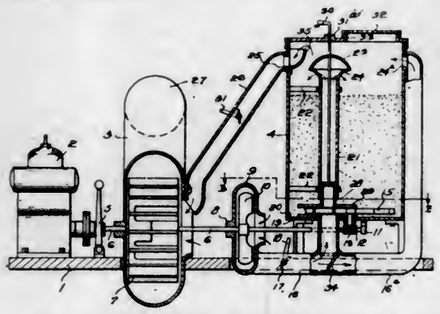
1,785,941. MOLD FOR CASTING METALS. WILLIAM F. EPPENSTEINER, Rahway, N. J., assignor, by mesne assignments, to The American Metal Company, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1929. Serial No. 344,672. 3 Claims. (Cl. 22—177.)

1. An integral weldless mold comprising solid walls enclosing a parallel casting cavity open at both ends, and having parallel passages through such walls, and with a water inlet and outlet communicating with said passages, whereby cooling water may be circulated through such passages to cool the mold.



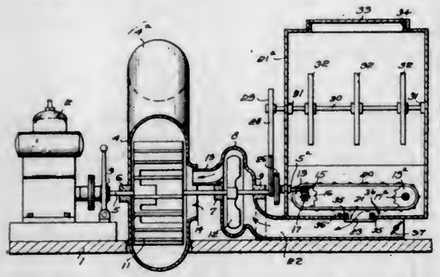
1,785,942. INCUBATOR. PETER J. ETTELDORF, Quincy, Ill. Filed Oct. 21, 1926. Serial No. 143,268. 9 Claims. (Cl. 119—35.)

1. In an incubator comprising a compartment and trays for eggs therein, a source of heat, and means including an impeller and a baffle with blades each radiating from a common center, said baffle coacting with said impeller through the pitch of said blades and direction of impeller rotation to cause air heated by said source to be drawn through said baffle to enter said compartment for affecting the eggs in said trays and prevented from passage through said baffle to leave said compartment.



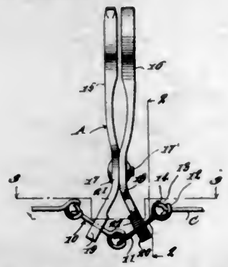
1,785,943. AGRICULTURAL DUSTING MACHINE. RICHARD R. EZDORF, Washington, D. C., and ARTHUR J. BROWN, New York, N. Y. Filed Feb. 6, 1929. Serial No. 337,771. 6 Claims. (Cl. 43—148.)

1. In a dusting machine, a material container, means for introducing predetermined quantities of air into the lower extremity of the container, means in the container adjacent the point of the introduction of said air for mixing therewith predetermined quantities of pulverulent



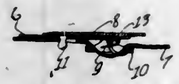
material, means whereby the mixture is conveyed into a separation chamber in the upper section of the container, a discharge port in said chamber and means for discharging the mixture from the container.

1,785,944. BROADCAST DUSTER. RICHARD R. EZDORF, Washington, D. C., and ARTHUR J. BROWN, New York, N. Y. Filed Feb. 6, 1929. Serial No. 337,772. 4 Claims. (Cl. 43—148.)



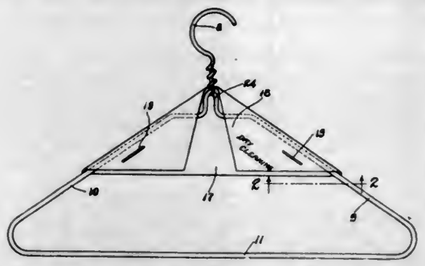
1. In a dusting machine, a material container, means for simultaneously introducing air into the lower and upper sectors of the container.

1,785,945. DUAL FAN-DUSTING MACHINE. RICHARD R. EZDORF, Washington, D. C., and ARTHUR J. BROWN, New York, N. Y. Filed Mar. 7, 1929. Serial No. 345,211. 3 Claims. (Cl. 43—148.)



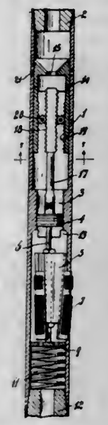
1. In a dusting machine the combination of an exhaust fan, a suction fan adapted to discharge into the intake side of said exhaust fan, means for controlling the intensity of suction into said second named fan, a material container, and means for controllably discharging materials from the container into the suction area of said second named fan.

1,785,946. CHAIN PLIERS. FRANK F. FOX, Fedora, S. Dak. Filed Feb. 16, 1929. Serial No. 340,568. 2 Claims. (Cl. 29—86.2.)



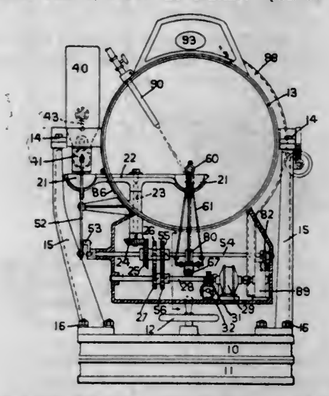
1. A tool for assembling or taking apart a sprocket chain of the type, wherein the adjacent links are moved in angular relation relative to one another to aline the body portion of one link with a slot in the hinge barrel of the adjacent link, said tool comprising a pair of pivotally connected handles, and jaws carried by the forward ends of the handles in advance of the pivot point thereof arranged on opposite sides of the longitudinal center of the tool and out of alinement with one another on opposite sides of a line at right angles to the pivot point of the handles so as to engage a pair of adjacent links on opposite sides of the pivot point thereof, the inner faces of the jaws being serrated for engagement with said links.

1,785,947. FASTENING MEANS FOR BELTS. RALPH S. FOWLER, San Francisco, Calif. Filed Dec. 26, 1928. Serial No. 328,483. 1 Claim. (Cl. 241—8.)



In a device of the character described, a belt having a buckle secured to one end thereof and having a bar upon its rear side, a plate secured to the opposite end of said belt, said plate being in a plane parallel to the end of the belt to which it is attached, said plate having a curved hook formed integral therewith and adapted to engage said bar and a stud secured to said plate and projecting through both ends of the belt for the purpose specified.

1,785,948. ADVERTISING DEVICE. FRANK J. GARRETY, Cincinnati, Ohio. Filed Jan. 18, 1928. Serial No. 247,564. 7 Claims. (Cl. 40—20.)

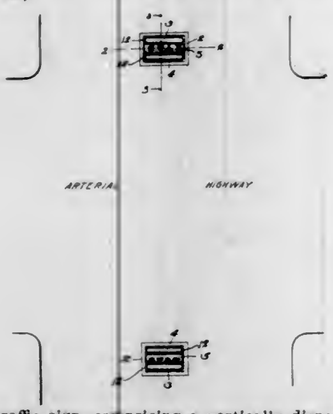


1. The combination of a garment hanger having downwardly and outwardly divergent arms, a quadrilateral sheet of material turned upon itself whereby to provide a substantially triangular advertising panel and a pair of flaps comprising auxiliary advertising panels, said flaps being foldable over the arms of the hanger and means to secure the flaps to the triangular panel whereby to retain the sheet in position upon the hanger.

1,785,949. HYDRAULIC EXPANDING UNDERREAMER. WILLIS C. GEORGE, Long Beach, Calif. Filed Dec. 5, 1928. Serial No. 323,912. 9 Claims. (Cl. 255—74.)

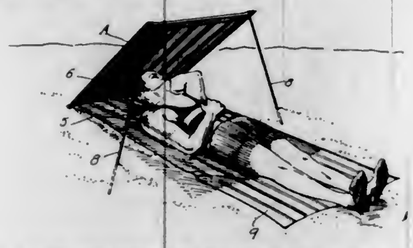
1. A hydraulic expanding reamer comprising a barrel, a plurality of cutters mounted in said barrel, hydraulic means operably connected to said cutters and adapted to expand the same, and spring means urging the cutters into contracted position, and hydraulically actuated means connected to said cutters and adapted to contract said cutters.

1,785,950. SEARCHLIGHT. ETTORE F. GIANNATTASIO, New York, N. Y. Filed Oct. 6, 1927, Serial No. 224,301. Renewed Jan. 6, 1930. 15 Claims. (Cl. 67—31.)



12. In a searchlight, a plurality of cups for containing combustible material, means for alternately rotating said cups through the wall of said light and maintaining said cups stationary, means for filling said cups with combustible material while stationary, electrical means for igniting said material while said cup is stationary, and means for moving said cup to material dumping position as said cup is passed through said wall.

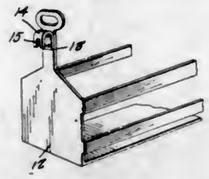
1,785,951. MANUFACTURE OF TRIARYL PHOSPHATES. WILFRID GIBSON, CHARLES ROYSTON HENSHAW, and JOSEPH BARON PAYMAN, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, London, England. Filed Sept. 7, 1929, Serial No. 391,108, and in Great Britain Sept. 27, 1928. 2 Claims. (Cl. 260—98.)



1. The process of manufacturing triaryl phosphates which comprises reacting on a phenolic body with phosphorus oxychloride in presence of dimethylaniline.

1,785,952. SAFETY STOP SIGN. HARVEY D. GRIGGS and JOHN B. SUBIRA, San Antonio, Tex., assignors of one-half to Charles A. Smith, San Antonio, Tex. Filed Oct. 19, 1929. Serial No. 400,858. 3 Claims. (Cl. 40—125.)

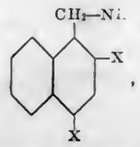
1. A traffic sign, comprising a vertically disposed housing adapted to be sunk flush with a roadway, a pair of parallel spaced apart guide rollers secured to the upper marginal edge portion of said housing and rotatably mounted therein and lying in the horizontal plane of said roadway, a vertical yieldable trip member mounted between said guide rollers to project normally above the surface of said roadway and to telescope with said housing, said trip member being yieldably mounted so as to sink to the level of said roadway when depressed by the load of a passing vehicle and having traffic-directing indicia thereon.



1,785,953. BEACH REST AND SUNSHADE. GEORGE HANAN, Brooklyn, N. Y. Filed Jan. 30, 1929. Serial No. 336,166. 2 Claims. (Cl. 5—344.)

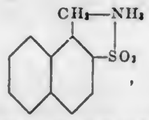
1. A combined beach rest and sun shade of the character described comprising a substantially rectangular skeleton frame including a substantially U-shaped member having eyes on its opposite end and a rod disposed through the eyes and extending outwardly therefrom, heads on the opposite ends of the rod, supporting arms loosely connected to the opposite end portion of the rod intermediate the heads and the eyes, and a single length of fabric having an intermediate portion looped around the closed end portion of the U-shaped member and stitched together, one end portion of the fabric extending over the frame and being looped around the rod and stitched together in a manner to provide a sun shade and the opposite end portion of the fabric adapted to extend outwardly beneath the sun shade in a manner to constitute a mat.

1,785,954. DISPENSING REFRIGERATOR. FREDERICK S. HAYES, Meridian, Miss. Filed June 26, 1929. Serial No. 373,867. 1 Claim. (Cl. 312—36.)



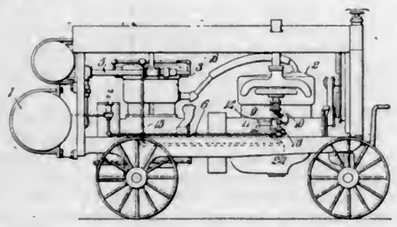
In refrigerating and dispensing apparatus of the class described, a casing, circular members mounted for rotation upon opposite side walls of the casing, means for imparting rotary motion to said members, in unison, an annular series of studs projecting from the inner face of each member, the studs of the two members being correspondingly spaced, trays to contain the products to be refrigerated, a handle member extending upwardly from

each end of each tray, and a suspension member associated with each handle member and comprising an attaching portion secured to the respective handle member and a portion connected with the attaching portion by a bend and spaced with respect to said portion and provided with a notch in its free end for engagement with a respective one of said studs.



1,785,955. 1-ω-AMINOMETHYL-NAPHTHALENE SULPHONIC ACIDS. WILHELM HERZBERG, Berlin-Wilmersdorf, and HANS LANGE, Dessau in Anhalt, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 17, 1929, Serial No. 414,815, and in Germany Mar. 24, 1927. 2 Claims. (Cl. 260—129.)

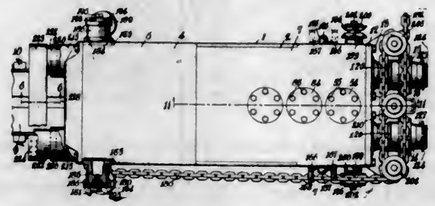
1. The new 1-ω-aminomethyl-naphthalene-sulphonic acids which in the state of free acids correspond to the general formula



at least one X standing for SO_3H, colorless compounds, forming sodium salts easily soluble in water.

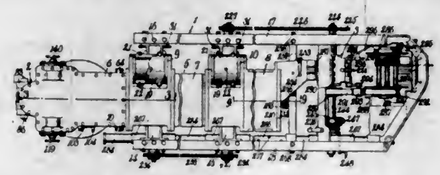
2. The new 1-ω-aminomethyl-naphthalene-2-sulphonic acid which in the state of the inner salt corresponds to the formula

forming colorless crystals sparingly soluble in water, the sodium salt being easily soluble in water.



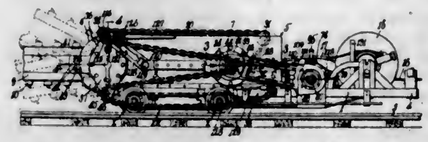
1,785,956. CONTROLLING MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 27, 1927. Serial No. 242,922. 16 Claims. (Cl. 230—3.)

2. The combination with a compressor and an internal combustion driving engine therefor, of controlling means



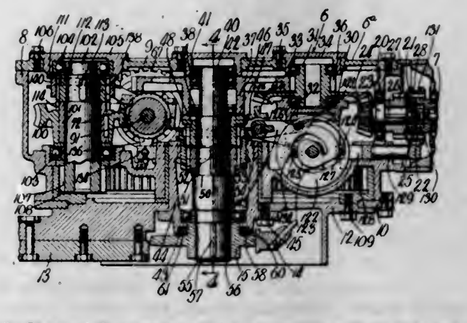
for said engine comprising a cylinder, a piston therein, means controlled by compressor discharge pressure for supplying fluid to said cylinder, a throttle for said engine, operative connections between said throttle and said piston, a manually operable control for said throttle, and a one way motion transmitting connection between said manual control and said throttle.

1,785,957. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 14, 1925, Serial No. 15,615. Renewed June 29, 1929. 175 Claims. (Cl. 262—30.)



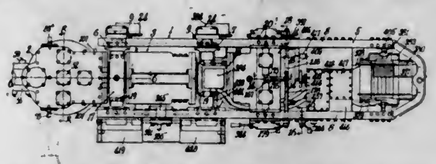
1. In a mining machine, a driving motor, and feeding means driven from the rear end thereof including a feed operating member rotatable on an axis extending longitudinally of the machine and adapted to cooperate directly with flexible feeding means, and power transmission means connected with said feed operating member including a worm gear disposed coaxially with said member.

1,785,958. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 2, 1926. Serial No. 99,264. 82 Claims. (Cl. 262—28.)



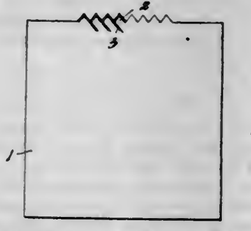
44. In a mining machine, supporting means, a machine body thereon hinged to swing about an axis extending longitudinally of said supporting means and offset from the longitudinal axis of said body, a motor carried by said body, cutting mechanism carried by said machine body, means driven by said motor for swinging said body about its hinge to vary the position of said cutting mechanism.

1,785,959. MINING APPARATUS. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 13, 1926, Serial No. 101,816. Renewed June 18, 1929. 63 Claims. (Cl. 262—28.)



1. In a mining apparatus, a wheeled truck, cutting mechanism thereon including a relatively movable cutter bar and a motor, means driven by said motor including gearing providing a substantial speed reduction and, driven by said gearing, a common transmission element for driving the wheels of said truck at a cutting speed in opposite directions without reversal of said motor and for moving said cutter bar relative to said truck at a cutting speed, and separate members engaging said transmission element, one of said members constituting a driving member for the truck wheels while the other member constitutes a member for moving said cutter bar.

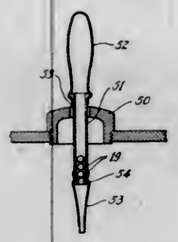
1,785,960. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 17, 1926. Serial No. 109,740. 28 Claims. (Cl. 262—28.)



1. In a mining machine, the combination with a swingable cutter chain carrying cutter bar, of a cutter chain controlling clutch, a cutter bar swing controlling clutch, and a common control for said clutches.

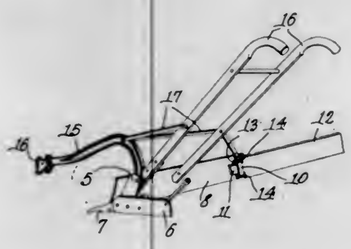
1,785,961. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Sept. 24, 1926. Serial No. 137,600. 177 Claims. (Cl. 262—28.)

116. In a mining machine, a wheeled support, a machine body rotatably mounted thereon, a cutter carrying head carried by said body, a motor in said body, and mechanisms driven by said motor for elevating and tilting said body, for rotating said body, and for driving the wheels of said support including selectively operative coaxial fast and slow speed worm gears through which all of said mechanisms are driven.



1,785,962. HANDKERCHIEF. WALLACE O. LINE, Cleveland, Ohio. Filed Jan. 24, 1930. Serial No. 423,147. 2 Claims. (Cl. 2—278.)

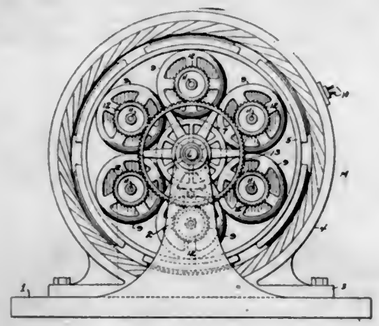
1. As a new article of manufacture, a pocket ornament formed of a single layer of fabric and provided at one



edge thereof with a series of corner-like shaped projections having lines extending from the bases of said projections onto the body portion of the fabric, each line being substantially in alignment with an edge of a projection to simulate overlapping of the corner portions of a handkerchief when folded.

1,785,963. ELECTRIC STORAGE BATTERY. CHARLES E. LINEBARGER, Chicago, Ill. Filed Dec. 19, 1925. Serial No. 76,375. 2 Claims. (Cl. 136—182.)

1. The combination of an electric storage battery and liquid density indicating means, said battery having a vent cap with an opening in its upper wall, said indicating means being slidably mounted in said opening and extending downwardly to a point below the normal liquid level in said battery, a hydrometric unit in said tube beneath said opening, and means for reducing the air pressure in said indicating means.

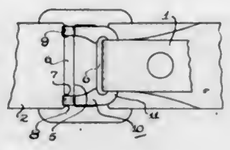


1,785,964. PLOW. WILLIAM H. MADDEN, Mount Pleasant, Tex. Filed Sept. 18, 1929. Serial No. 393,505. 1 Claim. (Cl. 97—134.)

A plow including a plow stock, an elongated moldboard secured adjacent to the plow stock, a strap extending rearwardly from the moldboard, an auxiliary moldboard having an extension at one end thereof, said extension defining shoulders to engage the strap, and a securing pin extended through the extension and engaging the strap to cooperate with the shoulders in holding the auxiliary moldboard in position.

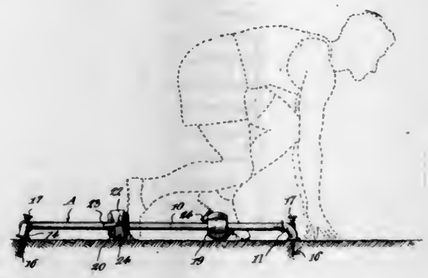
1,785,965. MOTOR GENERATOR. GEORGE D. MAJOR, Cumberland, Md. Filed Feb. 1, 1929. Serial No. 336,879. 3 Claims. (Cl. 171—123.)

1. A device of the class described comprising an electric motor including a stator and a direct current field rotor, a plurality of direct current generators mounted within the confines of the rotor, means for rotating the armatures of the generators as they revolve with the rotor, said generators being connected in parallel with each other and in series with the coils of the rotor and means



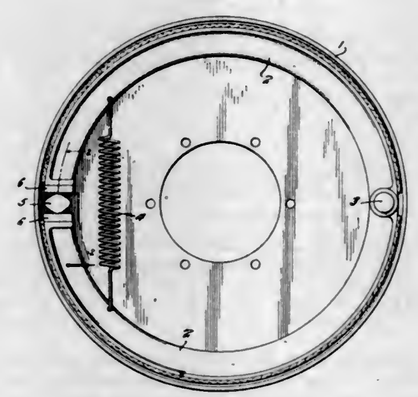
for conducting the current, after the same has passed through the coils, to a device to be supplied with current and then conducting the current back to the generators.

1,785,966. LEATHER AND METHOD OF PRODUCING THE SAME. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Filed July 25, 1927. Serial No. 208,413. 3 Claims. (Cl. 149—4.)



2. The method of producing a leather surface which comprises stretching the hide in one direction during the tanning operations to cause the major portion of the fibres of the hide to arrange themselves in such direction, and combing the surface of the leather in such general direction to cut the transverse surface fibres and release the surface fibres to project in the direction of the combing.

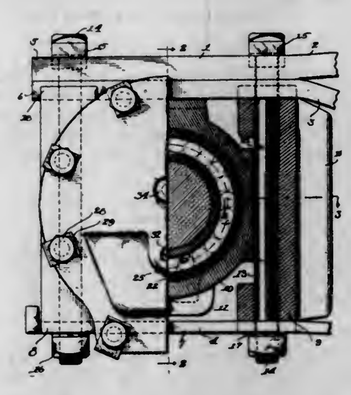
1,785,967. BELT FOR PERSONAL WEAR. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 30, 1929. Serial No. 336,240. 2 Claims. (Cl. 241—8.)



1. In combination with a belt having one end reduced, a buckle comprising a front plate having three slots arranged side by side, the outside slots being of uniform width and being symmetrically arranged with reference to the opposite sides of the front plate, the ends of the two outside slots projecting beyond the ends of the central slot, and the other belt end being passed through the two butside slots to lie in front of the central slot, said front plate having two bars separating the slots, one of said bars having portions offset rearwardly from the plate, and a belt attaching member having two arms bent about the offset portions of the said bar, said belt attaching member extending behind the front plate toward the other bar and having a bar about which the reduced end of the belt is looped, the width of the attaching member being less than the length of either one of the slots of the front plate so that the attaching member and the reduced end of the belt are covered by the other end of the belt.

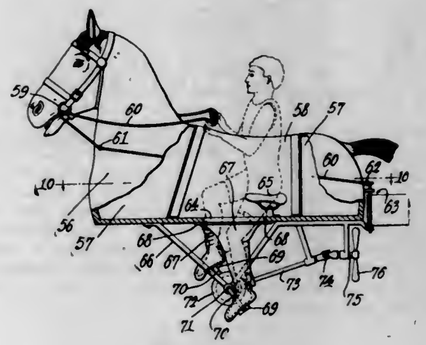
1,785,968. SPRINT STARTING APPLIANCE. JOHN P. NICHOLSON and JOHN W. MCALLISTER, Notre Dame, Ind.; said McAllister assignor to said Nicholson. Filed Feb. 23, 1929. Serial No. 342,113. 10 Claims. (Cl. 272—59.)

1. A sprint starting device for track meets comprising a single central support, and foot holds carried by and projecting laterally from the opposite sides of the support.



1,785,969. BRAKE-SHOE STRUCTURE. RAYMOND J. NORTON, Washington, D. C., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Dec. 7, 1928. Serial No. 324,361. 10 Claims. (Cl. 188—78.)

3. A brake shoe comprising a circumferential braking flange and an inherently lubricated cam plate associated therewith.

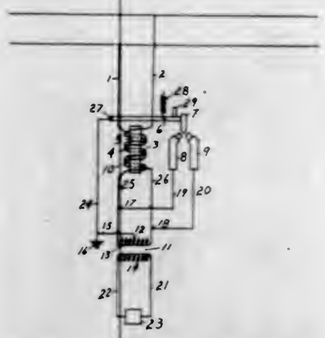


1,785,970. RAILWAY TRUCK. CHARLES P. NOSER, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed June 24, 1926. Serial No. 118,289. 16 Claims. (Cl. 105—223.)

1. In a railway truck, in combination, a side frame having upper and lower end extensions, a journal box positioned between said extensions, pedestal means spacing said extensions to allow clearance therebetween with respect to the box and notched to accommodate side portions thereof, and through bolts joining said extensions and pedestal means, said box being provided with flanges embracing said pedestal means with sufficient clearance to allow relative motion of the box with respect thereto, at

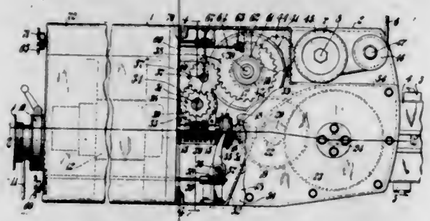
least one of the engaging surfaces at the top of the box and the upper side frame extension being curved to permit rocking movement therebetween.

1,785,971. MAN-POWER HORSE BOAT. CHRISTOPHER D. O'CONNOR, Santa Barbara, Mexico. Filed Apr. 2, 1928. Serial No. 266,665. 2 Claims. (Cl. 9—18.)



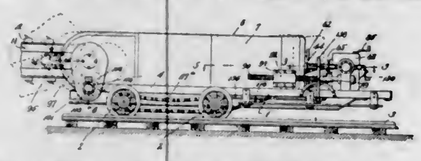
1. A boat including a hull in the form of a draft animal provided with a head having a mouth carrying a bit, a steering mechanism on the hull, and yoke lines accessible to an occupant of the hull, the yoke lines being carried forwardly to the bit, to simultate a bridle, and thence aft to the steering mechanism, the yoke lines being operatively connected to the steering mechanism for the control thereof.

1,785,972. COMMUNICATION SYSTEM. RALPH WILLOUGHBY OSBORNE, Toronto, Ontario, Canada. Filed Oct. 16, 1929, Serial No. 400,087, and in Canada Aug. 6, 1928. 3 Claims. (Cl. 179—78.)



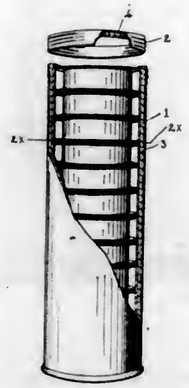
1. A communication system comprising transmission line conductors, a translating device relatively connected thereto, a winding extending between the transmission line conductors and having a neutral point connected to ground thus providing a path for draining extraneous current in the said communication system to ground, and an electromagnetic means serially connected in the said path and

adapted to operate automatically suitably arranged contacts for connecting to ground, both extremities of the said winding having a neutral point, when extraneous



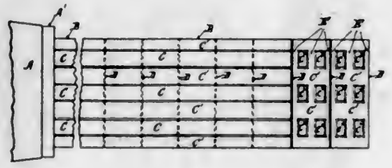
current in the communication system exceeds a predetermined degree and for disconnecting both extremities of the said winding from ground when the extraneous current subsides.

1,785,973. MINING MACHINE. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 8, 1925. Serial No. 42,284. 43 Claims. (Cl. 262—30.)



1. In a mining machine, a horizontally disposed motor having a casing slidable directly on the mine bottom during operation of the machine, feeding means for the machine comprising a variable speed device disposed on a vertical axis and driven from the forward end of said motor, and cutting mechanism driven by said motor including a horizontal plane cutter bar disposed in planes adjacent the mine floor, the top plane surface of said bar lying in a horizontal plane intersecting said motor and said variable speed device.

1,785,974. MINING APPARATUS. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 9, 1926. Serial No. 140,578. 41 Claims. (Cl. 262—28.)

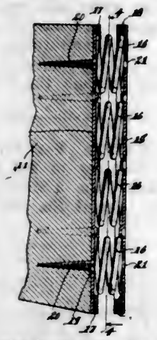


1. In a mining apparatus, a wheeled truck frame, a machine body slidably guided on said frame and having mounted thereon a pivoted cutter bar carrying an orbitally movable cutter chain, and means including a pivotal connection between said cutter bar and said truck frame and lying wholly outside of said cutter chain orbit for swinging said bar about its pivot including mechanism for moving the machine body longitudinally relative to said truck frame to effect bar swing.

1,785,975. HUMIDOR FOR INKED RIBBONS. LELAND A. PHILLIPS, Rochester, N. Y. Filed July 27, 1926. Serial No. 125,295. 3 Claims. (Cl. 206—1.)

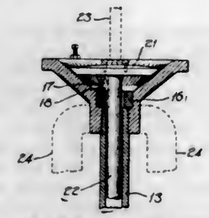
1. In a humidor for inked ribbons, the combination of a box, a cover for said box, a removable absorbent lining adapted to be placed within said box, a waterproof coating on one side of said lining and means impregnated into said absorbent lining to constantly keep the air moist within said box.

1,785,976. VERTICAL FIBER GROOVED-LUG PAVING BRICK. JACOB NESSLY PORTER, East Liverpool, Ohio, assignor to The Globe Brick Company, East Liverpool, Ohio, a Corporation of West Virginia. Filed Feb. 7, 1928. Serial No. 252,571. 1 Claim. (Cl. 94—14.)



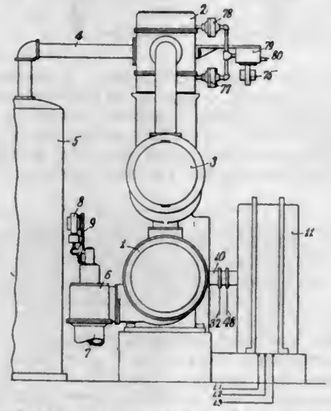
A brick for use in pavements, comprising a substantially rectangular body portion having wear resisting and tractive wire cut upper and lower faces and having relatively smooth and uninterrupted flat edge and end faces, said body portion having across one only of said edge faces spaced apart broad ribs and the brick adapted to be laid with said ribs abutting the opposite flat edge face of a like prior laid brick to provide vertical grout filler receiving passages between the ribs and adjacent bricks when laid and hold the adjacent bricks from longitudinal relative movement, and said ribs having spaced depressions extending thereacross and opening into the vertical passages to admit free horizontal flowing of the filler to anchor adjacent bricks against relative vertical displacement.

1,785,977. SHOCK ABSORBER FOR GUNS. SAMUEL R. PRUYN, Chicago, Ill. Filed Feb. 7, 1929. Serial No. 338,261. 4 Claims. (Cl. 42—74.)



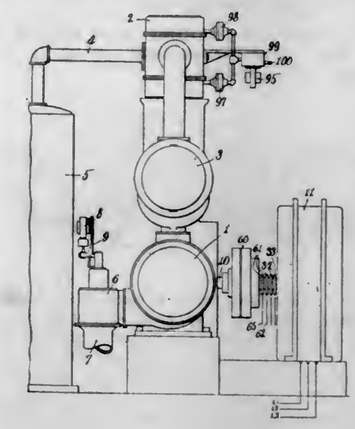
1. The herein described shock absorber for guns and the like, comprising an inner and an outer plate in normally spaced relation to each other, said plates having

relatively low inwardly extended marginal stiffening flanges, the inner plate having provision for its attach-



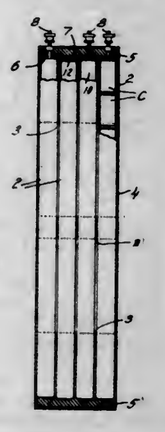
ment directly to the butt end of a gun stock, and interposed spring elements yieldably connecting said inner and outer plates.

1,785,978. CUTTER TOOL. JOSEPH QUINN, Brooklyn, N. Y. Filed Dec. 13, 1928. Serial No. 325,718. 2 Claims. (Cl. 90—12.5.)



1. A tool of the class described comprising a substantially conical solid wall body, the peripheral edge of said body having a radially projecting flat circumferential flange, the inner and outer surfaces of said body having cutter teeth formed therein, the central portion of said body terminating in a projecting tubular collar, the peripheral walls of which are angular in form, and the bore of said collar being threaded and terminating at its inner end in an enlarged angular socket.

1,785,979. AUTOMATIC COMPRESSOR-CONTROL SYSTEM. JOHN W. SANFORD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 14, 1927, Serial No. 233,223. Renewed Apr. 4, 1930. 25 Claims. (Cl. 230—4.)

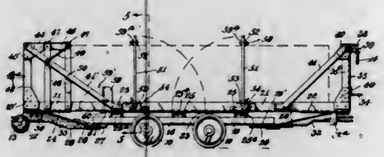


1. In combination, a compressor, a synchronous motor for driving the same, electrically actuated unloading means for said compressor, and means for controlling both the synchronizing of said motor and the loading of said compressor, said controlling means causing the flow of current simultaneously to the field of said motor and to said unloading means.

1,785,980. AUTOMATIC COMPRESSOR-CONTROL SYSTEM. JOHN W. SANFORD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 16, 1927, Serial No. 233,695. Renewed Mar. 12, 1930. 17 Claims. (Cl. 230—4.)

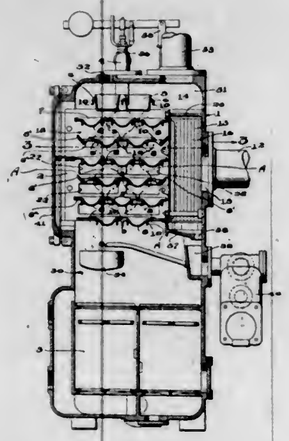
1. In an automatic compressor control system, a compressor, a driving motor therefor, clutch means for connecting the motor and compressor, means for automatically controlling the clutch means to connect the compressor and motor only after the latter has reached substantially its normal operating speed, unloading devices for said compressor, and means for maintaining the same in unloading position for a predetermined length of time after the clutch meana have been applied.

1,785,981. BATTERY. WALTER B. SCHULTE, Madison, Wis., assignor to Burgess Battery Company, a Corporation of Wisconsin. Filed May 28, 1928. Serial No. 281,007. 13 Claims. (Cl. 136—108.)



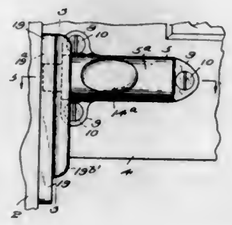
1. A high voltage dry battery comprising a carton, a plurality of elongated cylindrical battery units disposed in parallel relation within said carton, each of said units

comprising a plurality of electrically connected cells, means for electrically connecting said units in series whereby a considerable difference in voltage exists between adjacent units and means comprising a plurality of strips of liquid-repellent insulating material extending between said units and maintaining said units in spaced relation.



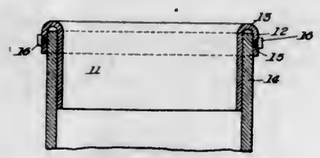
5. A cylindrical battery unit comprising a plurality of cylindrical dry cells arranged in end-to-end relation, means for electrically connecting said dry cells in series, insulating washers disposed between adjacent cells, and a tube of water repellent insulating material surrounding said cells.

1,785,982. MATERIAL CARRIER. JOHN WILLIAM SCOTT, Bisbee, Ariz. Filed Oct. 26, 1926. Serial No. 144,273. 13 Claims. (Cl. 105—364.)



1. A car for handling material comprising a body, two axles secured below the body, each axle being nearer the middle than an end of the car, a plurality of rolling wheels on each axle, for normally supporting the car in horizontal position, a third axle secured near one end of the car, said third axle being mounted in fixed relation to the body, a plurality of rolling tilting wheels concentrically mounted on the third axle, the parts being so arranged that the rolling wheels on the first-mentioned two axles extend a greater distance from the body than the tilting wheels on the third axle, the peripheries of said tilting wheels extending below the end of the car.

1,785,983. FEED-WATER HEATER. JOSEPH H. SEBALD, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 1, 1929. Serial No. 351,676. 10 Claims. (Cl. 261—114.)

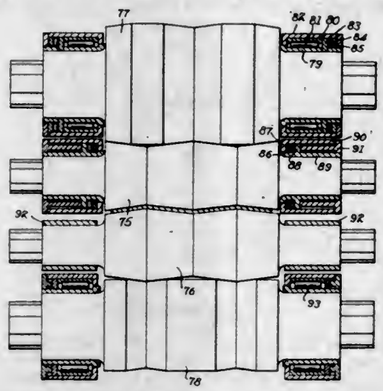


1. In a feed water heater, a casing, a plurality of pans arranged in tiers within the casing and having the pans in each row placed staggeredly with respect to the pans in adjacent rows, said pans having their sides downturned and serrated along their edges whereby the water will flow through the casing in a plurality of small interrupted streams, said casing having a steam inlet remote from and opposed to the water inlet whereby steam will flow in continuous sinuous streams through the casing counter to the water flow therethrough, and means for permitting augmenting of the quantity of steam at spaced points during its travel through the casing.

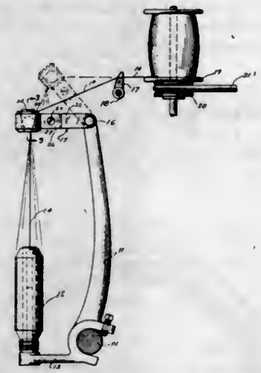
1,785,984. SAFETY DEVICE. VALENTINE SEITZ, Cleveland Heights, Ohio, assignor to The Cleveland Clinic Foundation, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 30, 1929. Serial No. 389,471. 3 Claims. (Cl. 70—14.)

2. In a safety device for a window, the combination of a casing mounted on the window sash and having a barrel, a bolt slidable therein, means for sliding the bolt into operating position and into retracted position within said barrel, said means including a removable operating member, and a keeper member mounted on the frame of the window and comprising an abutment arranged in the path of movement of said bolt when the latter is in operating position and a guard extending toward the end of the sash carrying said casing in a plane parallel to the path of movement of the bolt, and a flange carried by the guard extending laterally beyond the plane of the outer end of said casing.

1,785,985. PROTECTOR. PETER J. SHRUM, Monaca Heights, Pa., assignor to Pittsburgh Screw and Bolt Corporation, a Corporation of Pennsylvania. Filed Jan. 20, 1928. Serial No. 248,129. 7 Claims. (Cl. 137—91.)



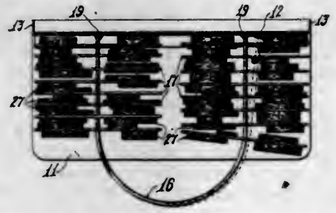
1. A thread protector comprising a cylindrical member adapted to surround a pipe to be protected, an uninterrupted integral cylindrical member adapted to lie within said pipe, a curved wall joining said inner and outer members and threaded means extending through the inner member for engaging the inner surface of said pipe.



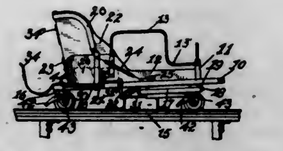
1,785,986. METHOD OF AND APPARATUS FOR ROLLING SHEET METAL. JAMES RAMSEY SPEER, Trappe, Md., and FREDELLIA H. MOYER, Pittsburgh, Pa. Filed July 6, 1928. Serial No. 290,734. 18 Claims. (Cl. 29—18.)

15. The continuous method of rolling sheet metal, comprising reducing a blank singly in a series of continuous roll passes each having a plurality of corrugations the same in number but of successively less depth and greater spread, spreading the blank between said successive continuous roll passes to cause its corrugations to correspond

in spread with those of the pass it enters, matching a plurality of such blanks in a nested pack, reducing the matched pack in a series of continuous roll passes each having the same number of corrugations as the first-mentioned passes, and maintaining the single blank and pack in alignment in the continuous roll passes by engagement of the corrugations of the blank and pack with those of the passes.



1,785,987. YARN-TENSIONING DEVICE. WALTER CLYDE STEWART, Gastonia, N. C., assignor to Emanuel Frohman, Gastonia, N. C. Filed June 5, 1929. Serial No. 368,628. 1 Claim. (Cl. 242—45.)

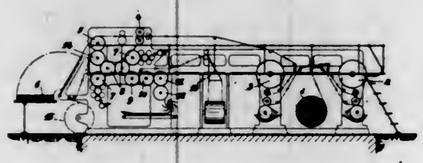


A tensioning device having a funnel shaped passageway with a ball member in said passageway, and means for adjusting the tension of thread which is adapted to be passed therethrough.

1,785,988. DISPLAY AND INDEX RACK. EDWIN A. SUTCLIFFE, Oak Park, Ill., assignor to Victor Manufacturing & Gasket Co., a Corporation of Illinois. Filed Apr. 22, 1929. Serial No. 357,171. 2 Claims. (Cl. 211—57.)

1. A rack for displaying washers, comprising a base and a back board and having, in combination, a pair of sockets on said back board, a resilient arcuate shaped guide rod having its ends bent to form right angles, a flattened surface on one side of each of said bent ends forming a pair of oppositely disposed shoulders thereon, said shoulders abutting the top and bottom edge of their respective sockets to maintain the arcuate guide rod detachably secured therein.

1,785,989. CAR FOR AMUSEMENT RIDES. HARRY G. TRAVER, Beaver Falls, Pa. Original application filed Mar. 19, 1925, Serial No. 16,831, now Patent No. 1,713,793, dated May 21, 1929. Divided and this application filed Oct. 7, 1927. Serial No. 224,535. 7 Claims. (Cl. 104—85.)

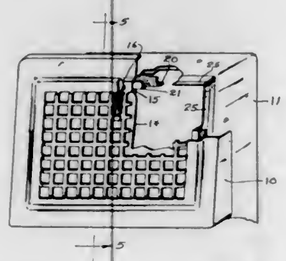


1. In a passenger car for amusement rides, a body arranged with a seat, a back rest for the seat adapted to be tilted rearward and normally urged to back supporting position and releasable means to retain the back rest in back supporting position, and adapted to be released to permit the seat back to be tilted backward and a passenger in the car to assume a backward reclining position.

1,785,990. SAND BOTTOM FOR PUMPS AND BAILERS. RALPH B. WELSH, Burkburnett, Tex., assignor of ten per cent to Chester D. Rubel, twenty-four per cent to Lester D. Mowrey, and one-fourth to J. H. Coggins, Wichita Falls, Tex. Filed Jan. 31, 1928. Serial No. 250,850. 2 Claims. (Cl. 166—19.)

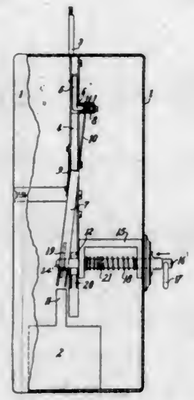
1. A sand mixing bottom for sand pumps and bailers comprising a tubular body formed to provide a pair of spaced diametrically opposed depending prongs, said prongs being substantially of a convex-concavo cross section and each of said prongs having their marginal edges beveled to form cutters, and a mixing rib disposed intermediate the lower ends of the prongs and their points of connection with the tubular body, said mixing rib extending across the space between the prongs and having its ends connected to the prongs intermediate the cutting edges of the latter.

1,785,991. ROTARY PRINTING MACHINE FOR COMBINED INTAGLIO AND RELIEF PRINTING. OTTMAR WILHELM, Augsburg, Germany, assignor to The Firm Maschinenfabrik Augsburg-Nuernberg, Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed Aug. 23, 1928, Serial No. 301,535, and in Germany Aug. 24, 1927. 2 Claims. (Cl. 101—157.)



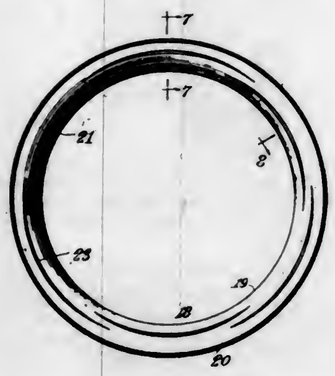
1. A rotary printing machine combined intaglio and relief printing, comprising an intaglio printing device including a collecting cylinder associated with a sheet delivery, and a relief printing device including printing cylinders, said collecting cylinder being operatively associated with said printing cylinders so as to permit alternatively operation of said collecting cylinder as such or as a feed-cylinder for forwarding cut paper-sheets to said relief printing device.

1,785,992. RECOVERY OF FLUORSPAR FROM ORES THEREOF. JOHN CHARLES WILLIAMS, Westport, Conn., and OMER WATSON GREEMAN, Marion, Ky., assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 26, 1928. Serial No. 308,576. 13 Claims. (Cl. 209—166.)



1. In a process of froth-flotation for the concentration of fluorspar values from fluorspar ore containing substantial amounts of calcite, the steps comprising removing the major portion of the slimes, and frothing a pulp, containing the deslimed ore, with oleic acid and a modifying agent adapted to decrease the calcite-lifting properties of the froth.

1,785,993. HOT-AIR-REGISTER CONSTRUCTION. GEORGE S. AUER, Cleveland, Ohio. Filed Oct. 10, 1928. Serial No. 311,591. 2 Claims. (Cl. 98—114.)

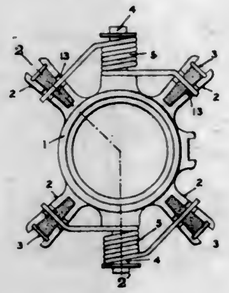


1. In combination, a register having an opening therein, a box associated therewith, coacting flanges on the register and box respectively, some of the flanges having an overhanging lip, there being strips of flexible material associated with the flanges, one edge of each strip extending into the overhanging lip of the associated flange and said strips providing an air tight connection between the register and box.

1,785,994. COIN-COLLECTING APPARATUS. MICHELE AUTERI, Milan, Italy, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Nov. 11, 1926, Serial No. 147,687, and in Italy Apr. 5, 1926. 8 Claims. (Cl. 194—16.)

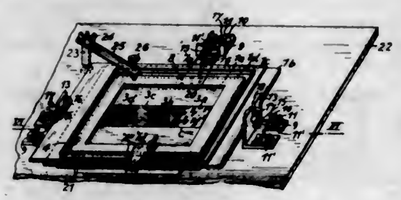
1. In a pay-station coin box, a stationary coin chute, a collecting receptacle, a refund receptacle, said stationary chute terminating in a movable chute for directing an inserted coin either into said collecting receptacle or into said refund receptacle, a plunger for arresting said coin and for moving said movable chute through the medium of said coin, a set of contact springs for performing electrical switching operations, and means on said movable chute for controlling said springs.

1,785,995. WHEEL FELLY. FREDERICK WILLIAM BAKER, Stourbridge, England, assignor to Trinity Wheel Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1928. Serial No. 249,795. 6 Claims. (Cl. 301—96.)



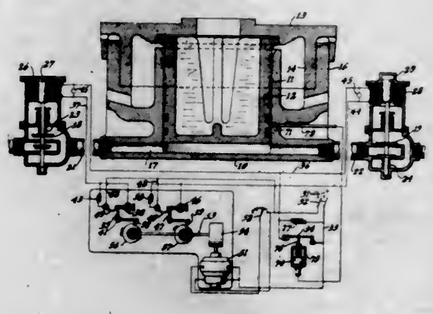
4. A wheel felly having in its sides inner and outer weakened portions with the said inner and outer weakened portions in stagered relation.

1,785,996. BRUSH HOLDER. PAUL W. BAKER, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 26, 1929. Serial No. 335,165. 4 Claims. (Cl. 171—324.)



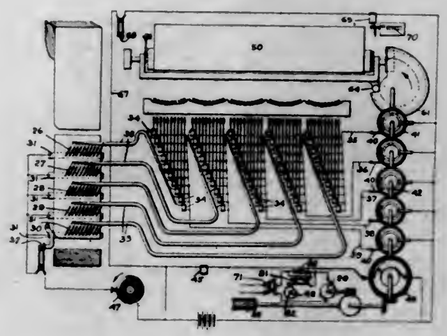
1. In a dynamo electric machine, the combination with a brush holder provided with brush guide slots and brushes

therein, of a resilient brush follower having one end bearing on one of a pair of brushes and the other end bearing



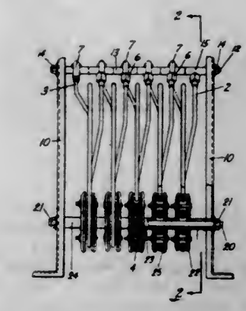
on the other brush, and a pivot support for said follower intermediate its ends whereby the pressure on one brush will be proportional to the pressure on the other brush.

1,785,997. METHOD OF SECURING ACCURATE COLOR VALUES IN COLOR PRINTING AND COLOR PHOTOGRAPHY. CARL BLECHER, Berlin-Dahlem, Germany. Filed July 28, 1925, Serial No. 46,668, and in Germany Aug. 20, 1924. 5 Claims. (Cl. 95—2.)



1. A method for securing accurate color values in color printing and color photography, characterized by the feature that for the colored part images to be placed together intermediate images are made in the respective colors on thin films stretched on frames.

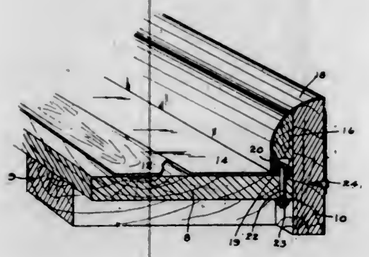
1,785,998. JARRING MACHINE. EDWARD B. BROOKE, Birmingham, Ala. Filed Mar. 15, 1930. Serial No. 436,111. 10 Claims. (Cl. 121—14.)



1. In a pressure operated jarring machine, the combination of a cylinder, valves for admitting and exhausting fluid under pressure to and from the cylinder, electro-magnetic means for operating the valves, a cam shaft, cams on the shaft for controlling the electro-magnetic means, adjustable means for varying tae controlling surfaces of the cams, and means for driving the cam shaft.

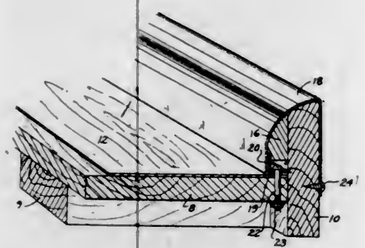
1,785,999. RECORD-CONTROLLED PRINTING MECHANISM. JAMES W. BRYCE, Bloomfield, N. J., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed June 6, 1928. Serial No. 283,149. 11 Claims. (Cl. 197—20.)

1. A record controlled apparatus including a plurality of sets of sensing means adapted for cooperation with perforated cards which are movable transversely of the columns thereof, a plurality of typewriter type sets of printing devices each comprising a group of type bars and each coordinated with a set of sensing means and controlled thereby, means for feeding the cards column by column to the multiple sets of sensing means, and means for effecting printing operations of the various type bars in the sets under the control of the said sensing means.



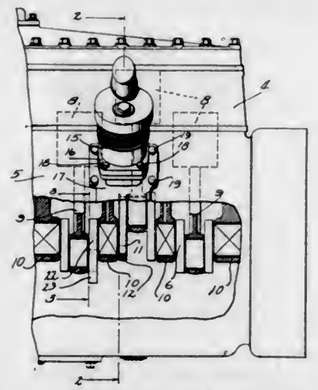
1,786,000. CONDENSER UNIT FOR MECHANICAL REFRIGERATORS. HARRY W. BUNDY, Detroit, Mich., assignor, by mesne assignments, to Bundy Tubing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 7, 1928. Serial No. 245,071. 7 Claims. (Cl. 257—36.)

1. A condenser unit for mechanical refrigeration apparatus or the like comprising, a plurality of spiral coils of tubing, said coils being arranged side by side with their



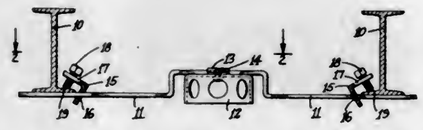
adjacent ends connected, a standard at each end of this unit and means connecting the standards also supporting the coils in one unit.

1,786,001. PLATE MOUNTING. LLOYD V. CASTO, Detroit, Mich., assignor to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Filed Sept. 10, 1927. Serial No. 218,743. 6 Claims. (Cl. 101—383.)



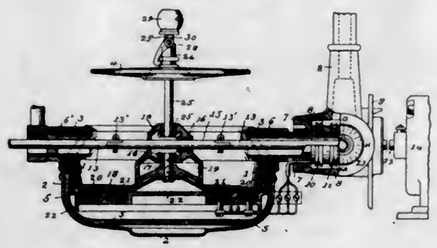
1. In combination a mounting for a relatively thin intaglio plate, comprising a flat supporting medium, said supporting medium being wider than the width of the plate to be supported, pigment retaining rails extending longitudinally of and attached to the plate supporting medium and filler strips disposed to fit between the longitudinal edges of the plate and said rails, the filler strips being of the same thickness as the thickness of the plate to be supported whereby a uniform surface is presented for the application of ink to the entire width of the plate.

1,786,002. PLATE MOUNTING. LLOYD V. CASTO, Detroit, Mich., assignor to Oxford Varnish Corporation, a Corporation of Michigan. Original application filed Sept. 10, 1927, Serial No. 218,743, and in Australia Sept. 6, 1928. Divided and this application filed Nov. 5, 1929. Serial No. 405,009. 8 Claims. (Cl. 101—383.)



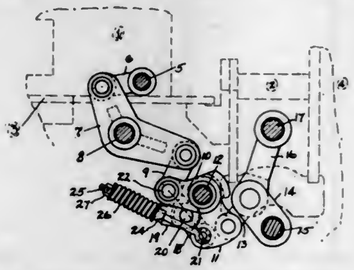
1. In a mounting for thin metallic plates, the combination of a plate supporting medium constructed of seasoned wood and adapted to have an engraved plate mounted thereon, the mounting having a flange construction along the longitudinal edges thereof, the flange construction including a metallic covering attached to the flange construction along the outer faces of the flange construction and having a concealed attachment to the plate supporting medium, said metallic covering of the flange construction also comprising part of a clamping means for securing a plate to the supporting medium.

1,786,003. COMPRESSOR DRIVE. NIELS A. CHRISTENSEN, Cleveland, Ohio. Filed Mar. 15, 1929. Serial No 347,221. 4 Claims. (Cl. 123—2.)



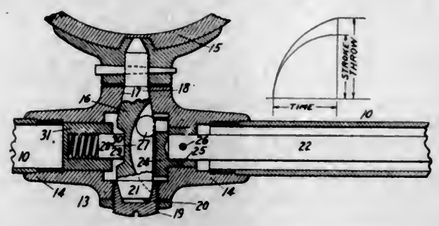
1. In an automotive engine, the combination with the engine frame, of a compressor cylinder mounted on said frame, a piston working in said cylinder, and means for driving said piston direct from the engine crank shaft comprising an eccentric formed on one of the crank cheeks of the crank of one of the power pistons.

1,786,004. CLAMP FOR CROSSBARS. MARTIN M. CLAYTON, Baden, Pa., assignor to National Electric Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 30, 1929. Serial No. 336,199. 4 Claims. (Cl. 248—32.)



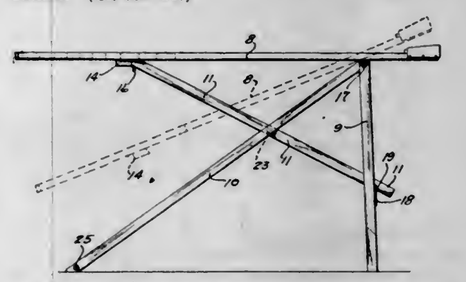
1. A fastening and clamping means for securing outlet box carrying bars to I beams or the like, comprising a clamping member with an opening therethrough to slidably receive a bar to be clamped and provided with a toe portion adapted to project over a flange of an I beam or the like and carrying a set screw which is laterally offset with respect to the opening in the clamping member and adapted to be tightened upon the flange whereby the clamping means is tipped and secured to the bar and whereby the bar is secured to the I beam or the like.

1,786,005. STIRRING MECHANISM FOR CORN-POPPING APPARATUS. CHARLES CRETORS, Chicago, Ill. Original application filed Dec. 12, 1927, Serial No. 239,449. Divided and this application filed Sept. 3, 1929. Serial No. 389,899. 4 Claims. (Cl. 53—4.)



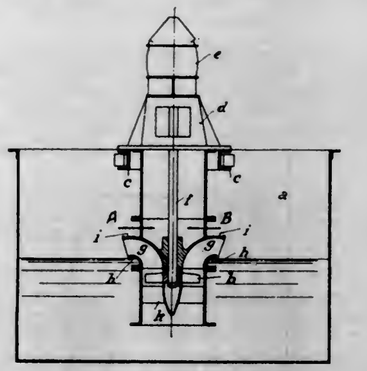
1. In corn popping apparatus in which the popping pan is of an open top reversible form and journalled by a radially extending tubular sleeve in a stationary side supporting upright, the combination of a stirring means adapted for central location in a popping pan, and an associated operating mechanism, the same comprising a non-revoluble hollow casing formed with horizontal and vertical bearings, a radially arranged shaft journalled in the horizontal bearing of said casing and having an extension adapted for central passage through the tubular journal sleeve of a popping pan and operative connection with a power source, a secondary shaft journalled in a vertical bearing of said casing, the carrying hub of the stirrer means having fixed attachment to said vertical shaft, and angle gear wheels operatively connecting said shafts together.

1,786,006. SAFETY DEVICE. WILLIAM W. CRILEY, Cleveland, Ohio, assignor to The Ajax Manufacturing Company, Euclid, Ohio, a Corporation of Ohio. Filed May 7, 1927. Serial No. 189,504. 6 Claims. (Cl. 74—48.)



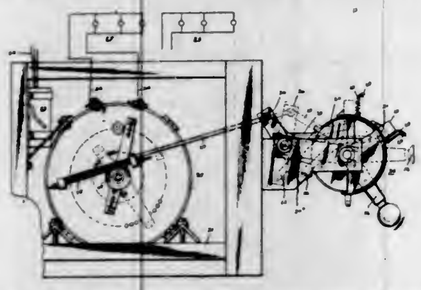
1. In a device of the character described, the combination of pivotally connected thrust members, reciprocating means for imparting motion therethrough, and an auxiliary connection between said members allowing yielding compensatively on abnormal resistance, said connection including pivoted toggle links and a spring yoke extending across one said toggle link to the other.

1,786,007. OPERATING MECHANISM FOR DIRIGIBLE HEADLIGHTS. CHARLES M. CRONKHITE, Glendale, Calif., assignor to Pilot Ray Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed June 27, 1928. Serial No. 288,665. 6 Claims. (Cl. 74—14.)



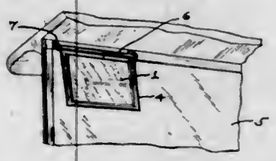
1. In a mechanism of the character described, a tubular structure adapted to be mounted on a supporting structure, a housing carried by said tubular structure, a spindle journaled in said housing and having contact surfaces extending lengthwise thereof and spaced apart, said spindle having means for connecting the same with a device to be operated, a shaft rotatably mounted in said tubular structure and having means for connecting the same with operating mechanism, a member mounted in said housing, connected with said shaft for rotation therewith and having a part extending between said contact surfaces, said spindle having a flattened surface, and a spring pressed plunger mounted in said housing and engaging said flattened surface to hold said spindle normally against movement.

1,786,008. FOLDING IRONING TABLE. CHARLES DANIELSON, Minneapolis, Minn., assignor to Hall Nelson Manufacturing Company, Minneapolis, Minn., a Partnership consisting of Charles A. Hall and E. G. Nelson. Filed Jan. 14, 1928. Serial No. 246,714. 6 Claims. (Cl. 68—10.)



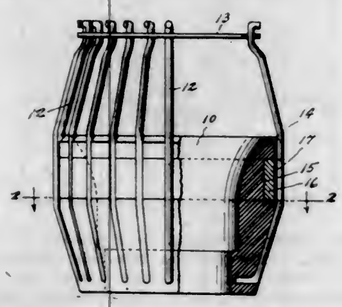
1. A folding ironing table comprising a board, a pair of upright legs loosely pivoted to one end of the board and an oblique leg pivoted to the same end of the board for supporting one end thereof, all of said legs being arranged to be folded onto the board, a brace in the form of a toggle lever connecting the upright legs and arranged to straighten by a downward movement of the knee of the toggle and spread the oblique legs into operative positions and when buckled to draw the upright legs toward each other, stop means for limiting the straightening movement of said toggle, and a strut intermediately pivoted to the oblique leg with one of its ends supporting the other end of the board and with its other end resting on the top of the brace as a support and holding the brace against buckling movement, said board being provided with a stop shoulder with which the board-supporting end of the strut engages for holding said strut against endwise movement away from the upright legs, said strut having a notch into which the brace extends for holding the upright legs against pivotal movement.

1,786,009. APPARATUS FOR MIXING LIQUIDS. FRIEDRICH DUWE, Mainz-Kastel, Germany, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Nuremberg, Bavaria, Germany, a Corporation of Germany. Filed May 28, 1929, Serial No. 366,715, and in Germany June 13, 1928. 4 Claims. (Cl. 259—97.)



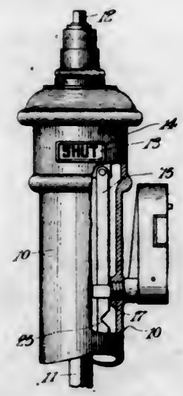
1. In a mixing apparatus, the combination with a container and a screw-propeller rotatably disposed therein about a vertical axis, of a casing surrounding said propeller, and a plurality of discharge nozzles provided on said casing being arranged in a circle around said casing and curved in a radial plane relative to said container so as to discharge the liquid in fan-shape upon the level of the liquid in said container.

1,786,010. CONTROL DEVICE. HARRISON J. L. FRANK, Detroit, Mich., assignor to Bulldog Electric Products Company, Detroit, Mich., a Corporation of West Virginia. Filed Oct. 19, 1925. Serial No. 63,375. 9 Claims. (Cl. 175—312.)



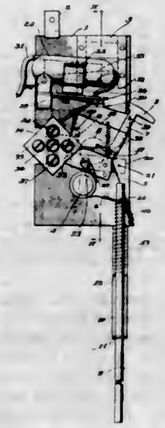
1. A control device for a rheostat comprising a member movable to decrease the rheostat resistance, a member movable to increase the rheostat resistance, a lever for moving a pre-selected one of said members, means to determine at what point in the operation of the lever said pre-selected member begins its movement, and means to determine at what point in the operation of the lever said member shall stop.

1,786,011. GLARE SHIELD. PHILIP J. GROENENSTEIN, Cleveland, Ohio. Filed Nov. 29, 1926. Serial No. 151,336. 5 Claims. (Cl. 296—97.)



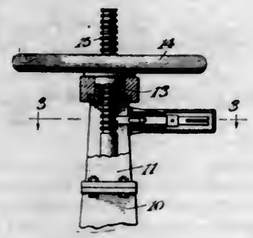
5. In a glare screen the combination of a composite sheet of flexible material formed of a plurality of sheets of transparent material, one of said sheets being of the full area of the screen, and another of said sheets being of lesser area than said first-mentioned sheet, and integrally united therewith.

1,786,012. ELASTIC RECIPROCATING MEMBER. SAMUEL A. GUIBERSON, Jr., Los Angeles, Calif., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Jan. 20. 1928. Serial No. 248,219. 3 Claims. (Cl. 74—109.)



1. As a sub-combination in a radially expanding elastic fluid lifting member having spaced vertical grooves, a replaceable annulus adapted to be seated circumferentially in the outer surface of said member and having spaced vertical grooves in its outer surface adapted to aline with the grooves of the lifting member for receiving reinforcing wires.

1,786,013. SUPERVISORY MECHANISM. PHILIP H. HASELTON, East Orange, N. J., and MALCOLM A. JENCKES, Providence, R. I., assignors to Detex Watchclock Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1927. Serial No. 236,151. 6 Claims. (Cl. 234—37.)



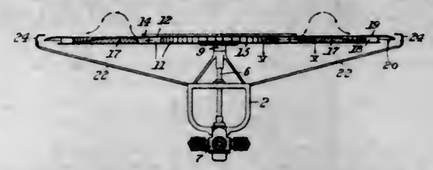
1. A supervisory mechanism for use in conjunction with a valve provided with a casing enclosing a stem for controlling the position of a valve gate comprising, a housing, a recording key pivotally mounted within said housing, said recording key being capable of swinging in an arc about its pivot from a position in which the working end of the recording key is inaccessible within said housing to a position of accessibility of the working end of the recording key from outside of said housing, a rod having connections with the stem, said rod being enclosed within the casing, and means adapted to coact with said rod and with said key for maintaining said key within said housing when said rod is in predetermined position.

1,786,014. COIN-CONTROLLED MECHANISM. GUSTAV F. HOCHRIEM, Chicago, Ill. Filed Apr. 13, 1928. Serial No. 269,643. 8 Claims. (Cl. 194—61.)

1. A coin controlled mechanism comprising a base, an oscillating arm on said base, a rod arranged to move said arm in one direction, a spring to move said arm in opposite direction, a stop for said arm comprising a plate pivoted to said base, said plate having a notch therein, a pin on said arm arranged to engage said notch, a cam on said plate, a lever pivoted to the back side of said base having a pin thereon projecting through an aperture in said base, a spring secured to said lever to maintain same in normal position, a coin chute arranged to deposit a coin on said arm and said pin, said arm on oscillation arranged to move said coin against the cam on the plate to raise the stop out of the path of the pin on said arm and depress said pin and lever for escape of said coin, a head on said arm arranged to close said coin chute when said arm is moved by said rod, and yielding connections between the rod and the oscillating arm.

1,786,015. SUPERVISORY MECHANISM. IRA W. KNIGHT, Providence, R. I., assignor to Detex Watchclock Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1927. Serial No. 236,152. 8 Claims. (Cl. 234—37.)

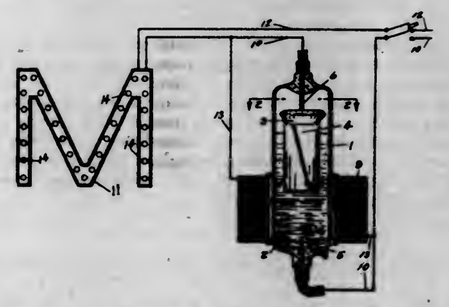
1. A supervisory mechanism comprising, in combination, a recording key, a bracket for supporting said recording key, and means mounted adjacent said recording key and adapted to be positioned in respect to said recording key to prevent operation thereof without changing the position of the key relative to said supporting bracket.



1,786,016. METHOD FOR THE PRODUCTION OF HIGH-PURITY ABRASIVE MATERIALS. JACOB S. MASIN and HAROLD E. WHITE, Anniston, Ala., assignors, by mesne assignments, to Swann Research, Inc., Birmingham, Ala., a Corporation of Alabama. Filed May 9, 1927. Serial No. 190,131. 7 Claims. (Cl. 23—143.)

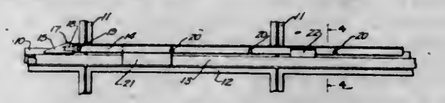
1. A process for the direct production of high purity crystals of aluminous oxide from bauxite, which consists in smelting the bauxite in the presence of sufficient carbon to produce an acid-decomposable matrix in which the crystals of high purity crystalline aluminous oxide are formed, dissolving the matrix in a bath containing dilute sulphuric acid, and separating the crystals therefrom.

2. A process for the production of a high purity abrasive material, which consists in furnacing a charge of bauxite with an excess of carbon to reduce substantially all the oxides of silicon, iron, titanium and a small percentage of alumina present in the bauxite, then cooling said fused mass and forming a high purity crystalline alumina imbedded in a matrix of acid-decomposable character, said character being the result of the excess of said carbon in the charge, then crushing and separating undesirable portions of the fused mass, and then subjecting said crushed material to the dissolving action of a bath of dilute sulphuric and hydrofluoric acids.



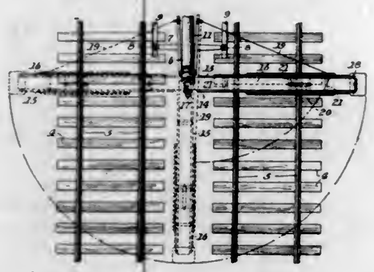
1,786,017. HELICOPTER. GEORGE MATTA, Braddock, Pa. Filed Aug. 8, 1928. Serial No. 298,258. 8 Claims. (Cl. 244—19.)

1. A helicopter comprising a fuselage, an engine carried thereby, a lifting unit mounted above the fuselage and comprising a circular lifting vane and a plurality of fan blades disposed internally and externally of and



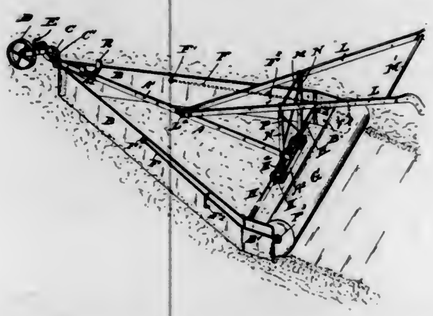
concentrically with said vane for directing air against the lifting vane, and means for connecting the engine to the lifting unit.

1,786,018. DELAYED-ACTION MERCURY-TUBE SWITCH. IRA E. MCCABE, Chicago, Ill. Filed May 28, 1928. Serial No. 281,028. 2 Claims. (Cl. 200—90.)



1. A delayed action mercury tube switch comprising a glass tube containing a body of mercury and an insulating container having a cylindrical bore with an open top therein containing mercury normally floating upon the main body of mercury and isolating the smaller body therefrom, a lead in wire in contact with the main body of mercury, a lead in wire normally out of contact with the main body and in contact with the isolated body of mercury termintaing in a piston like electrode in the container bore, and means to cause the open top of the container to submerge and emerge in the main body of mercury to make and break an electrical contact between the lead in wires, the rate of movement being determined by the size of the piston like electrode.

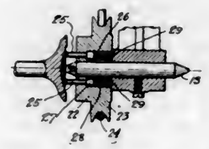
1,786,019. WINDOW-SASH FASTENER. CHARLES J. MCINTOSH, Milwaukee, Wis., assignor to Federal Steel Sash Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Oct. 30, 1926. Serial No. 145,246. 3 Claims. (Cl. 292—265.)



3. In a device of the character described, the combination with a fixed sash frame and a movable ventilator sash section, of a push bar having connection with said ventilator section for movement in planes at an angle to and parallel to the plane of said ventilator section and movable to engage the fixed sash frame to hold said ventilator section in open position, a fastening member engageable with said bar and mounted upon said ventilator section and spaced from said connection, and a strike-plate mounted on the sash frame between said connection and said locking member and exerting a tension upon said bar between its points of connection with said ventilator section when closed whereby to hold said ventilator section in weathering contact with said fixed sash frame.

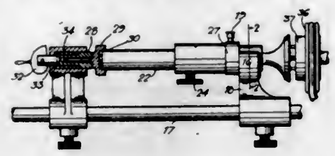
1,786,020. CONVEYING APPARATUS. JAMES B. MCWILLIAMS, Pittsburgh, Pa., assignor to Railway Maintenance Corporation, Aspinwall, Pa., a Corporation of Pennsylvania. Filed Dec. 3, 1928. Serial No. 323,287. 19 Claims. (Cl. 198—104.)

1. Conveying apparatus, comprising conveying means pivotally movable with respect to a receiving station for conveying material in different directions therefrom, driving means operable in the same direction regardless of the direction of the conveying means, and means connected with the conveying means and selectively cooperable with the driving means upon pivotal movement of the conveying means for conveying material away from the receiving station.



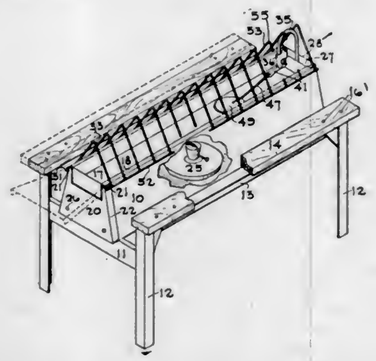
1,786,021. MACHINE FOR LAYING PAPER MULCH. RAPHAEL METTETAL, Plymouth, Mich. Filed Jan. 29, 1930. Serial No. 424,361. 6 Claims. (Cl. 47—9.)

1. A machine for unrolling and laying mulching paper comprising a frame; a pair of shield-scraper members secured at their forward ends to the frame, and extending rearwardly in spaced wedge-shaped relation to each other, whereby they are adapted for scraping a relatively thin layer of surface soil to each side of the machine and to automatically deposit same upon the marginal edges of a mulching paper; and means for holding a roll of mulching paper at the rear of said shield-scraper members, the roll being in contact with the surface of the soil, whereby as the machine is driven in a forward direction, the mulching paper is unrolled upon the ground and its marginal edges covered by the soil delivered at the rear of the scraper-shield members due to the passage of the machine.



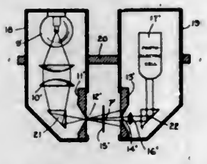
1,786,022. DRIVING HEAD FOR SMALL LATHES. HARRY G. MILLER, Denver, Colo. Filed Apr. 27, 1927. Serial No. 186,951. Renewed June 13, 1930. 7 Claims. (Cl. 82—1.)

1. A driving head of the described class comprising a body portion, a set of work engaging pins resiliently socketed in the body portion at equal distances from the central axis and an independently acting carrier resiliently supported from the head and independently movable along



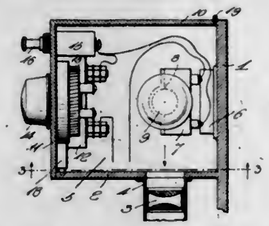
said pins, the carrier being provided with work engaging projections at distances from the central axis different from those of said pins whereby to engage work which is not engageable by said pins for work rotating purposes.

1,786,023. VALVE-CENTERING DEVICE. HARRY G. MILLER, Denver, Colo. Filed Apr. 27, 1927. Serial No. 186,952. 9 Claims. (Cl. 51—105.)



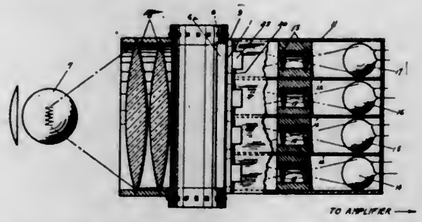
2. In a grinding machine carriage provided with head and tail stock members for engaging stemmed valves, a centering mounting for the valve stems provided with a non-rotative bearing member near one end in which such mounting is journalled, said bearing member having means for anchoring engagement with a steady rest on the carriage, said mounting having a portion for engagement with a tail stock centering pin and another portion adapted for thrust bearing engagement with the non-rotative bearing member.

1,786,024. POULTRY WATERER. JOHN B. OLSON, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Filed July 18, 1928. Serial No. 293,645. 8 Claims. (Cl. 119—73.)



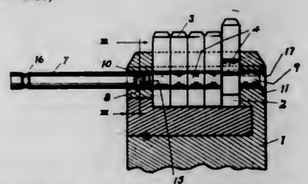
1. A poultry waterer comprising the combination with a supporting frame, of an elongated housing, a trough shaped tank capping the housing and spaced from one end thereof to form an outlet flue, the upper portion of the housing being otherwise substantially closed against the escape of heated air and gases, a heater within the housing and water supply connections for the tank extending vertically through said flue and overhanging the tank adjacent thereto.

1,786,025. OPTICAL SYSTEM FOR REPRODUCING SOUND RECORDS. FREEMAN H. OWENS, New York, N. Y. Filed June 25, 1924. Serial No. 722,355. 8 Claims. (Cl. 179—1003.)



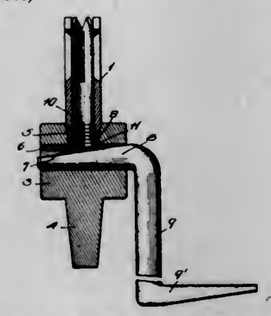
1. An optical system for reproducing photographic sound records comprising means for producing a converging beam of light, a gate having a slit located substantially at the focus of the light beam, the beam diverging from said slit for illuminating a sound record spaced in advance of said gate, and a second gate arranged in advance of the first gate immediately adjacent said sound record and spaced therefrom a distance substantially equal to the distance between said sound record and said first mentioned gate, the said second gate having a slit located in the diverging light beam effective for producing from said light beam a beam of light of reduced divergence for sound reproducing action on said record.

1,786,026. TALKING-PICTURE APPARATUS. FREEMAN H. OWENS, New York, N. Y. Filed June 13, 1927. Serial No. 198,648. 3 Claims. (Cl. 88—24.)



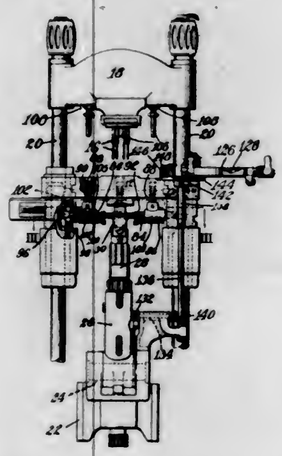
1. A lamp housing for talking picture projecting machines comprising a box like structure having a plurality of side walls two of which are integrally connected and hingedly attached to a third side permitting two complete sides of said structure to be swingingly moved together with respect to the other sides for easy access to the inside of the housing, an adjustable support for a light source, a lens system at one side of said lamp housing to which said light source is aligned and electrical instruments carried by one of the integrally connected side walls of said box like structure for governing and observing the operation of said light source.

1,786,027. APPARATUS FOR REPRODUCING PHOTOGRAPHIC SOUND RECORDS. FREEMAN H. OWENS, New York, N. Y. Filed July 13, 1927. Serial No. 205,442. 3 Claims. (Cl. 179—100.3.)



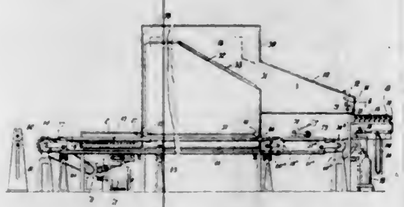
1. In a device for the reproduction of sound records the combination comprising a strip of film bearing a plurality of sound records, a light source for said records, independent photo electric cells for each of said sound records, a slit member through which the light rays from said source pass from said sound records to said photoelectric cells and means for independently controlling the amount of light passing through each record to its photo electric cell, said means comprising a plate past which said film moves and provided with an opening for each record in alignment with said slit member, and shutter members for adjusting the size of each opening.

1,786,028. STAMPING HEAD. OSCAR M. PANNIER, Pittsburgh, Pa., assignor to Pannier Bros. Stamp Company, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 19, 1929. Serial No. 372,096. 1 Claim. (Cl. 101—28.)



A stamping head comprising a body having a type receiving recess therein and a groove in a side of the body extending longitudinally of the recess, a locking bar arranged to lie in the groove in the side wall of the body and having a circumferential groove adjacent both ends thereof, type insertable in said recess and formed to engage said locking bar, and a spring pressed member housed in an end wall of the body and arranged to alternatively engage the circumferential grooves adjacent the ends of the locking bar to detain the locking member in adjusted position longitudinally of the body of the stamping head, said spring pressed member being so arranged in the body of the stamping head and in circumferential grooves so disposed adjacent the ends of the locking bar that the locking bar is detained in locking position by engagement of the spring pressed member in one of said grooves and may be held in outward position beyond the recess in the body of the stamping head without completely removing it from the stamping head by engagement with the other of said grooves.

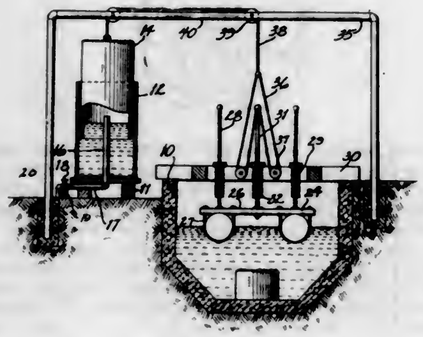
1,786,029. TOOL HOLDER. JOHN H. PHILLIPS, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 751,896. 3 Claims. (Cl. 279—103.)



1. In a device of the kind described and in combination, a tool holder arranged for attachment to a cooperating part and provided with a tapered tool-receiving recess, said holder provided with an opening extending transversely therethrough disposed to intercept said recess, and a crank-shaped tool-removing member insertable through said opening and rotatable therein, said tool-removing member provided with a flat cam face at one side thereof and rounded over at the edges.

1,786,030. ART OF SHOEMAKING. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed June 11, 1925, Serial No. 36,388. Divided and this application filed Feb. 4, 1930. Serial No. 425,879. 8 Claims. (Cl. 12—142.)

1. The method of applying counters to shoes, which consists in associating a counter with a shoe-upper, providing an adhesive between the counter and upper, and exerting tension upon the front of the upper to draw the rear into engagement with the counter.



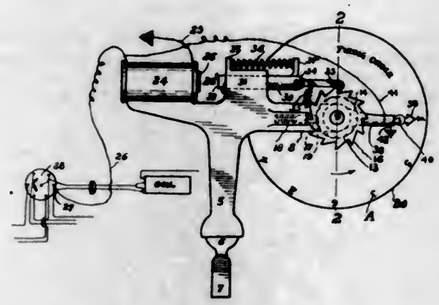
1,786,031. APPARATUS FOR DYEING, COLORING, AND COATING. LESTER C. SCOTT, Brooklyn, N. Y., assignor, by mesne assignments, to Two-Tone Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1926. Serial No. 100,046. 11 Claims. (Cl. 8—18.)

1. A dyeing or coloring apparatus comprising a dye chamber, a tenter frame mechanism in said dye chamber including a plurality of pin clips, and means for cleaning said clips.

1,786,032. SEWAGE-DISPOSAL-PLANT PUMP. THOMAS B. SIMS, Cleburne, Tex., assignor to L. J. Wardlaw, Tarrant County, Tex. Filed Aug. 13, 1928. Serial No. 299,276. 3 Claims. (Cl. 230—80.)

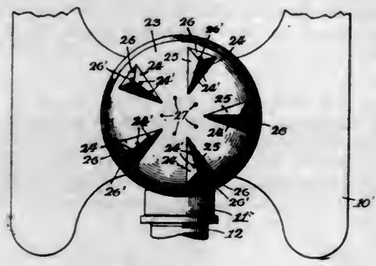
1. In a pump, a pair of containers each holding water, domes telescoping into the containers and having their lower ends immersed in the water, gas pipes in each container extending above the water therein, a pair of floats operating in unison, means connecting one float to raise one of the domes in a descending movement of the float, means connecting the other float to raise the other dome in an ascending movement of the float, whereby one dome is raised and the other dome is lowered when the floats are raised together and lowered together, gas suction

pipes including check valves connected with the gas pipes, and gas discharge pipes connected with the gas pipes and including check valves.



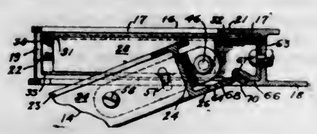
1,786,033. ADVERTISING DEVICE. LE ROY W. SMITH, St. Louis County, Mo., assignor to The Mirror Display Co., Inc., St. Louis, Mo., a Corporation of Missouri. Filed May 4, 1928. Serial No. 275,006. 1 Claim. (Cl. 40—132.)

An advertising device comprising base and side frame members having two spaced grooves therein; a frame top member having an elongated opening therethrough communicating with said grooves; a mirror panel having its lower and side edges seated in one of said grooves; an advertising display element having its lower and side edges seated in the other groove and including two glass panes, and an interposed sheet of translucent material; and means securing together the upper edges of said panes and forming a finger-piece for withdrawing said panes through said opening in said frame upper member.



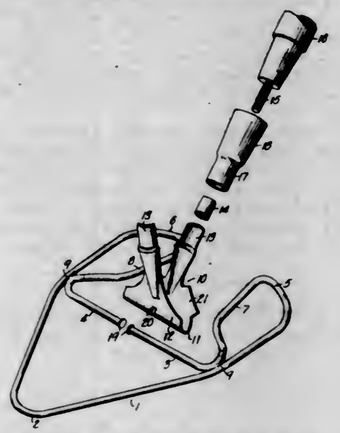
1,786,034. INDICATOR FOR INTERNAL-COMBUSTION ENGINES. FREDRICK WILLIAM SMITH, Niagara Falls, Ontario, Canada. Filed June 21, 1929, Serial No. 372,791, and in Canada June 5, 1929. 11 Claims. (Cl. 177—311.)

2. An indicator of the class described comprising a rotatably mounted dial having indicia denoting the firing order of an internal combustion engine, indicating means coacting with said indicia, and electro-mechanical means for electrical connection to the ignition system of the



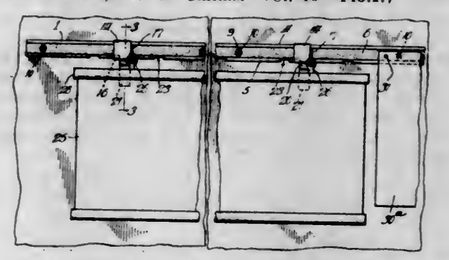
engine and so adapted that as the crankshaft is turned said dial will be intermittently operated so as to successively bring its indicia into register with the indicating means.

1,786,035. SPRINKLER. WILLIAM STEININGER, Berwyn, Ill., assignor to W. D. Allen Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 28, 1928. Serial No. 281,209. 4 Claims. (Cl. 299—69.)



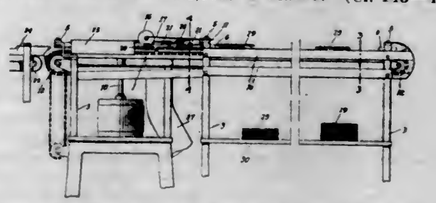
1. In a sprinkler of the type described, a hollow rotary sprinkler head having an exteriorly convex top wall formed with spaced radially disposed hollow ridges each formed with two side walls and an outer end wall, one side wall and the outer end wall of each ridge being perforated.

1,786,036. SASH MOUNTING. JAMES ADAMS STEWART, Oakland, Calif., assignor to Management and Finance Corporation of California, San Francisco, Calif., a Corporation of California. Filed June 7, 1928. Serial No. 283,547. 13 Claims. (Cl. 16—179.)



1. In a supporting means for a sash, a guideway, an elongated shoe slidably engaged with and arranged for movement transversely of said guideway and having the sash pivoted thereto adjacent an end thereof, and means yieldingly urging said shoe in a reverse direction transversely of said guideway.

1,786,037. MOP HEAD. HERBERT M. STURGIS, Kansas City, Mo., assignor, by mesne assignments, to Leigh Hunt, Kansas City, Mo. Filed June 17, 1929. Serial No. 371,507. 3 Claims. (Cl. 15—229.)



1. In a mop head, a frame including aligning, transverse pivot bars terminating in spaced relation and a slotted handle shank pivotally mounted on said bars, the bars having end flanges freely rotative in the shank slot for limiting transverse movement of the shank.

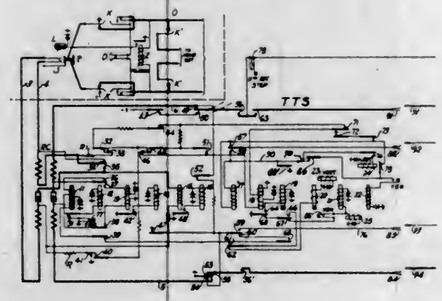
1,786,038. APPARATUS FOR MAP DISPLAY. FRANK H. SWANSON, Chicago, Ill., assignor to A. J. Nystrom & Co., a Corporation of Illinois. Filed Oct. 7, 1927. Serial No. 224,650. 10 Claims. (Cl. 40—145.1.)

1. As an article of manufacture, a slidable suspension clip comprising a body portion having inwardly turned flanges adapted to receive and ride upon a supporting member, a hook connected to said body portion adapted to support a map, chart, and the like, and a downwardly extending lateral extension formed integral with said body portion adapted to serve as a fender for maintaining the chart supported by the hook away from the wall.

1,786,039. SLAT-EDGING MACHINE. JOHN J. SYLVA, Stockton, Calif., assignor to California Cedar Products Company, Stockton, Calif., a Corporation. Filed Apr. 9, 1928. Serial No. 268,466. 5 Claims. (Cl. 143—49.)

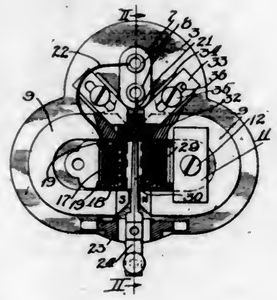
1. A slat edging machine including a plurality of separate slots of different depths, to receive slats therein ini-

tially projecting above the tops of the slots, said slots being formed by lower side bars, upper gage bars transversely alined therewith and spaced therefrom and flooring plates between the side bars at different levels in the respective slots, endless elements disposed to the sides of the slot structure, cross members secured to the elements at intervals and extending across all the slots in the space between the upper and lower side bars, and a horizontal saw extending across the slots above the upper bars and toward which the upper runs of the elements are adapted to move.



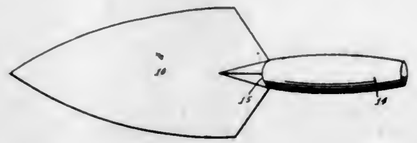
2. A slat edging machine including a plurality of slots to receive slats therein, a saw associated with the slots to cut off the portions of all the slats in the different slots which project above the saw, and means for feeding the slats toward the saw including members extending across all the slots to simultaneously engage the back edges of all the slats intermediate their top and bottom edges.

1,786,040. SCREEN MOUNTING. WILLIAM HENRY TAYLOR, Des Moines, Iowa. Filed Mar. 24, 1930. Serial No. 438,447. 7 Claims. (Cl. 156—14.)



4. For use with a window frame having locking lug openings, a screen frame having perforated lugs, clamping bolts extending through said lugs, and locking lugs on said clamping bolts and adapted to coact with said locking lug openings.

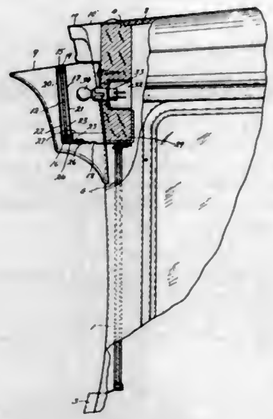
1,786,041. AUTOMATIC TOLL-SERVICE TRUNKING SYSTEM. VICTOR S. THARP, Elmhurst, and JOHN WICKS, Oak Park, Ill., assignors to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Oct. 10, 1927. Serial No. 225,063. Renewed Mar. 21, 1930. 24 Claims. (Cl. 179—27.)



1. In a telephone system, two automatic switches, means for successively operating said switches to extend a connection, a double wound relay in the first switch, means for continuously energizing said relay over a local circuit including one of its windings responsive to the seizure of and during the operation of the first switch, means for energizing said relay over its other winding over a circuit extending to the second switch at the completion of the operation of the first switch, means including said local circuit for maintaining said relay energized during the operation of the second switch, means in the second switch for opening said second circuit at the completion of the operation of the second switch, and a signal controlled by said relay.

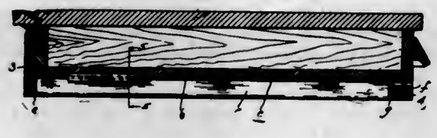
1,786,042. ELECTRIC PICK-UP DEVICE. EDWARD TOMAN, Chicago, Ill., assignor to E. Toman & Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 23, 1929. Serial No. 394,429. 15 Claims. (Cl. 179—100.41.)

1. In an electrical pick-up, a support, complementary permanent magnets connected to the support and defining arms having confronting pole faces, each of said magnets having poles of opposite polarity, a coil between the arms of the magnets, a vibratable armature extending through said coil and disposed between the pole faces of the magnets, and a stylus bar operatively associated with the armature.



1,786,043. HANDLE FOR TROWELS. JESSE B. TROUTNER, Marshalltown, Iowa, assignor to Marshalltown Trowel Company, Marshalltown, Iowa. Filed July 12, 1927. Serial No. 205,148. 1 Claim. (Cl. 306—44.)

An improved trowel comprising a blade, a tang formed integral with the blade and extended upwardly and rearwardly, a handle formed of moldable material and molded to cover the rearwardly extending portion and the upper end of the upwardly extending portion of said tang, the lower end of the downwardly extending portion of said handle being tapered to the diameter of the adjacent tang portion, whereby the handle will be held rigidly against rotatable and longitudinal movement of the rearwardly extending portion, and whereby the upwardly extending portion of the tang will be covered by said molded portion to protect the operator's hand from engagement with the tang, and to provide means whereby the tang and the adjoining handle portion may be easily and quickly cleaned.

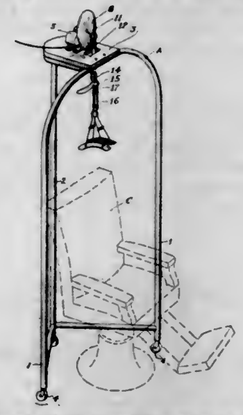


1,786,044. VEHICLE FRONT-END ASSEMBLY. FRANK RUSSELL VALPEY, Royal Oak, Mich., assignor to Graham-Paige Motors Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 23, 1929. Serial No. 416,134. 8 Claims. (Cl. 40—130.)

7. In a vehicle body front end construction, the combination with a windshield header and a windshield suspended from said header, of a bridge secured between said windshield and header and projecting forwardly therefrom, a sunshield secured to said header adjacent the upper edge thereof and projecting forwardly therefrom,

and a sheet of transparent material secured between said bridge and sunshield in substantially parallel relation to said header.

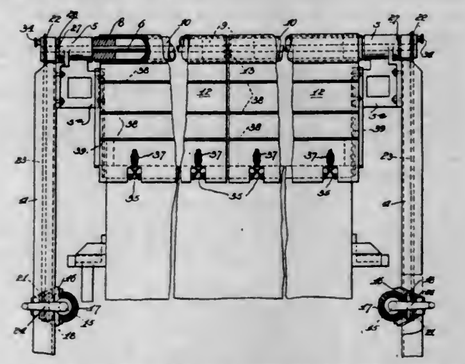
1,786,045. DRAWER GUIDE. FRITZ VOGT, Portland, Oreg. Filed Sept. 27, 1928. Serial No. 308,616. 2 Claims. (Cl. 45—77.)



1. In a structure having a drawer, a drawer-guide comprising a one-piece metal sheet formed U-shaped in cross-section, with the upper extremities of the legs bent outward at right angles to provide lateral guide-flanges, the said legs having substantial height, the opposite ends of the legs having portions longitudinally slitted, and such portions being bent to project laterally, to provide ears adapted for being fastened to the interior faces of the frame-bars of the structure, with the end portions of the drawer guide above said ears, extending over and supported by said frame-bars, whereby to brace the latter, in combination with a drawer provided on its underside with guide-means cooperating with said drawer guide.

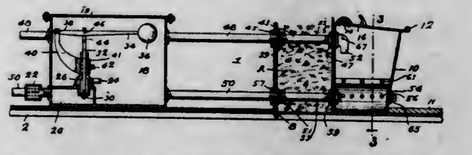
1,786,046. EXPLOSIVE. CHARLES H. WATERS, Olympia, Wash., assignor to Dumor National Chemical Company, Lacey, Wash., a Corporation of Washington. Filed Mar. 26, 1927. Serial No. 178,812. 2 Claims. (Cl. 52—13.)

1. An explosive containing a chlorate, liquid mononitrotoluol about three parts, and liquid dinitrotoluol about eleven parts.



1,786,047. MECHANICAL HAIR GLAND AND NERVE AGITATOR. ALBERT R. WILCOX, Dodge City, Kans. Filed Oct. 14, 1929. Serial No. 399,610. 3 Claims. (Cl. 128—24.)

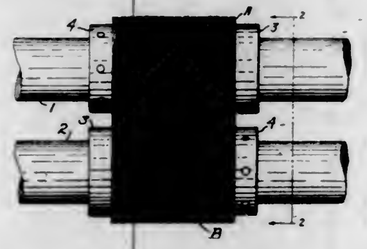
1. In a mechanical hair gland and nerve agitator, a pair of arcuate jaws and a resilient yoke to carry the jaws, and means to clamp the jaws together, an elastic pendent supporting means for the yoke, and a rotatably



arranged disc to which the elastic means is attached, and means to rotate the disc, as a reciprocating means for the jaws.

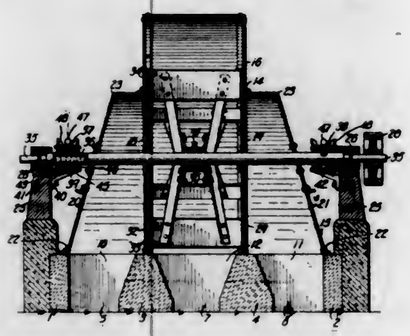
1,786,048. FLEXIBLE COVER FOR DUMPING BODIES. LEROY E. WILLIAMS, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Jan. 11, 1928. Serial No. 245,844. 4 Claims. (Cl. 296—98.)

1. A cover for a vehicle body comprising a shaft mounted to extend longitudinally over the load-carrying space of the body, brackets in which said shaft is supported, a roller loosely mounted on the shaft and a flexible cover secured to the roller extensible over the load-carrying space, together with means for rotating the roller to wind said cover thereon comprising a sleeve loose on the shaft and connected to said roller, said sleeve extending through one of the brackets and journaled therein, and gearing connected for driving the sleeve to rotate the roller.



1,786,049. STOCK WATERER. MILTON G. ZOELLER, Falls City, Nebr. Filed July 12, 1929. Serial No. 377,699. 5 Claims. (Cl. 119—73.)

1. A portable watering apparatus of the character described consisting of a main tank, a trough located close

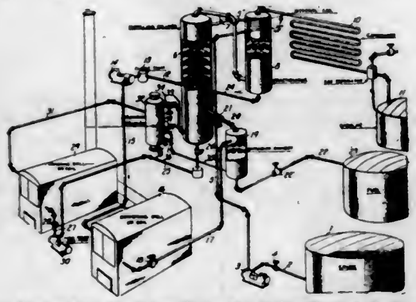


to said tank, an auxiliary tank located within said main tank, an inlet chamber in said auxiliary tank, a float-controlled valve for admitting water from said inlet chamber to the auxiliary tank, and pipe connections between the trough and said auxiliary tank.

1,786,050. ROTARY SPIRAL SLITTING CUTTER. FRED C. AREY, Oak Park, Ill.; assignor to John W. Gleason, Pittsburgh, Pa.; Frank W. Bora, New York, N. Y.; William F. Freudenreich, Kenilworth, Ill.; Frederick H. Chetlain, Chicago, Ill.; and himself, trustees. Filed July 28, 1927. Serial No. 208,917. 3 Claims. (Cl. 164—6.6.)

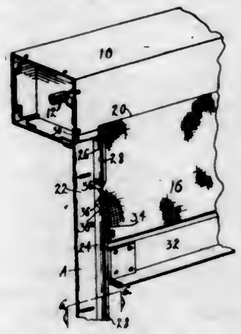
1. In a rotary slitting cutter, an arbor, a plurality of collars slidably fitted upon the arbor and each keyed thereto to prevent relative rotary movements between the collars and the arbor, said collars having a series of registering openings extending through the same parallel to the long axis of the arbor and spaced at equal distances apart from each other, cutter units abutting against the arbor alternating with the collars and having openings registering with the aforesaid openings, and long pins extending through the openings in the collars and in the cutter units to lock the collars and cutter units together and index the cutter elements of said units.

1,786,051. FAN. WARD T. BARKER, Kansas City, Mo. Filed Feb. 1, 1928. Serial No. 251,044. 5 Claims. (Cl. 230—209.)



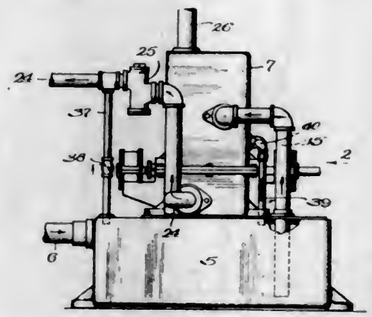
1. A fan of the character described including a housing having side intake and peripheral discharge ports, hoods at the sides of the housing for directing flow to said intake ports, bearing exterior to and spaced from said hoods, a hollow shaft journalled in said bearings and projected through the hoods and housing, and having ports between the hoods and bearings, a fan on said shaft within the housing, and manifolds on the ported portions of said shaft for effecting circulation of cooling medium through the shaft.

1,786,052. CURTAIN FIXTURE. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1930. Serial No. 454,248. 8 Claims. (Cl. 156—20.)



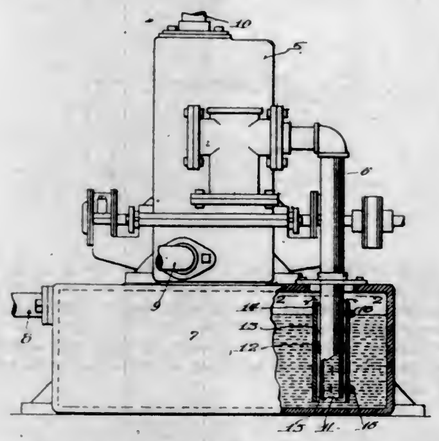
1. A cord guide for a draw-cord curtain fixture, comprising a frame formed with parallel sides telescopable within an end of a hollow curtain rod, a guide sheave journaled between said sides, and a laterally projecting stop member on one of said sides adapted to abut against an end of the rod.

1,786,053. METHOD OF AND APPARATUS FOR TREATING HYDROCARBON OILS. JOHN W. COAST, Jr., Tulsa, and GORDON T. GRANGER, Okmulgee, Okla. Filed Dec. 11, 1926. Serial No. 154,139. 14 Claims. (Cl. 196—58.)



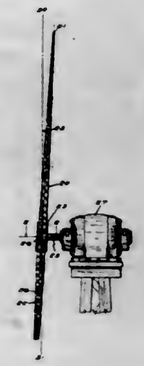
8. The method of continuously skimming and cracking hydrocarbons which comprises preheating a stream of charging stock in a reflux condenser and thereby vaporizing the lightest fraction from the stream, continuing the skimming operation by forcing the unvaporized oil through a skimming still without substantially cracking the constituents of said oil, subjecting the resultant vapors to reflux condensation in said reflux condenser, forcing the reflux condensate through a cracking still under pressure so as to crack the said reflux condensate, vaporizing the cracked condensate, subjecting the cracked vapors to reflux condensation, and adding the cracked reflux condensate to reflux condensate produced in said skimming operation.

1,786,054. ROLLER-SCREEN STRUCTURE. HARRY DIXSON, Pella, Iowa, assignor to Rolscreen Company, Pella, Iowa. Filed Feb. 19, 1927. Serial No. 169,554. 2 Claims. (Cl. 156—39.)



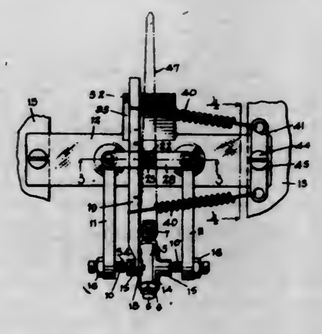
1. In a structure of the class described, a guide track having an attaching flange, a tubular portion provided with a slot opening away from the flange, said guide track being provided at a point spaced from its ends with a notch extending from the slot substantially into the tubular portion and having its upper side edge arranged at an angle to horizontal.

1,786,055. VACUUM CONDENSATION PUMP. AUGUSTUS C. DURDIN, Jr., Chicago, Ill. Filed Dec. 12, 1928. Serial No. 325,588. 15 Claims. (Cl. 103—5.)



1. In a vacuum condensation pump, the combination of a reservoir into which water, air and other condensates are delivered, said reservoir being open to the outer atmosphere, a water pump for discharging water from said reservoir, a discharge pipe leading from said water pump, and a normally closed pressure operated valve device in said discharge pipe capable of opening solely in response to pressure by said water pump in excess of a predetermined low pressure.

1,786,056. PUMPING APPARATUS. AUGUSTUS C. DURDIN, Jr., Chicago, Ill. Filed July 12, 1929. Serial No. 377,648. 3 Claims. (Cl. 103—7.)

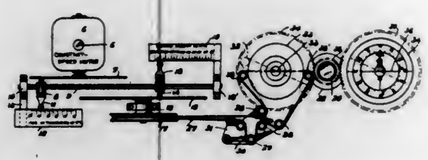


1. In pumping apparatus, the combination of a closed receiver for liquid and other fluids, a vacuum pumping element thereabove, an inlet pipe leading from the lower part of said receiver to the pumping element, a conduit for other fluids, said conduit being contained entirely within said receiver and surrounding the lower end of said inlet pipe and forming an annular air channel around said inlet pipe, said conduit being in open communication with the upper part of the receiver and opening directly to the inlet end of the inlet pipe.

1,786,057. TURBINE. ELISHA N. FALES, Dayton, Ohio. Filed July 14, 1924. Serial No. 725,894. 21 Claims. (Cl. 170—162.)

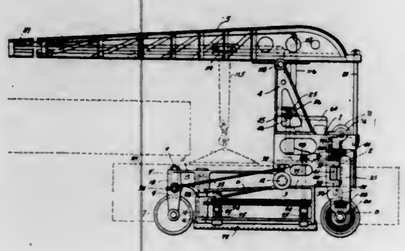
1. In a wind driven apparatus of the character described, a shaft, a two bladed propeller mounted thereon for revolution about the axis of said shaft, said propeller being mounted for movement at right angles relative to the axis of said shaft and the longitudinal axis of the blades and having such unsymmetrical distribution of its mass and form with relation to the axis of said shaft as to automatically counter-balance variously changing aerodynamic forces upon the propeller, which are unsymmetrically distributed relative to the axis of said shaft.

1,786,058. INDICATOR FOR WEIGHING SCALES. FRANK C. FISHER, Toledo, Ohio. Filed July 17, 1930. Serial No. 468,651. 5 Claims. (Cl. 116—129.)



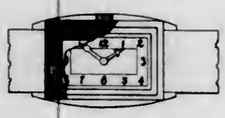
1. In an indicator, an actuating member, a rack, an adjustable lever interconnecting the actuating member and the rack, one end of the rack supported by the lever, a bracket having a rounded edge for slidably supporting the other end of the rack, a pinion operated by the rack, and a pair of tension springs connected to the rack at points substantially equi-distant on opposite sides of the axis of the pinion, and means for subjecting the springs to a tension to press the rack against the pinion.

1,786,059. AERONAUTICAL INDICATOR. WILLIAM FRASER, Arvida, Quebec, Canada. Filed Apr. 12, 1929. Serial No. 354,536. 2 Claims. (Cl. 33—46.5.)



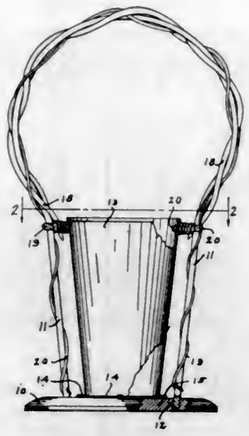
1. An aeronautical indicator of the class described comprising a downwardly directed telescope having a ro-

tary eye-piece, a pair of pulleys disposed on diametrically opposite sides of said eye-piece, a stationary support situated laterally of said telescope, a series of pulleys mounted on said support, a rotatably mounted sheave wheel,



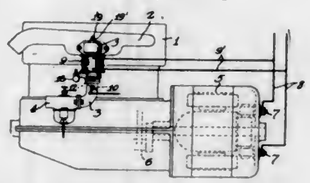
an endless thread trained over all of the aforesaid pulleys and said sheave wheel, said thread having a portion of its length diametrically extending through said telescope eye-piece, and means for driving said sheave wheel and varying its speed.

1,786,060. LUMBER CARRIER. FREDERICK G. GREAVES and SERN P. WATT, Seattle, Wash. Filed Aug. 29, 1927. Serial No. 216,244. 1 Claim. (Cl. 212—141.)



In a lumber carrier of the character described, opposite side frames, a pair of vertical screws rotatably mounted in each side frame, and a pair of angle bars for engaging beneath the opposite side edges of a load, each of said bars having lugs thereon through which the screws extend, means for rotating all of the said screws in unison to raise or to lower the angle bars.

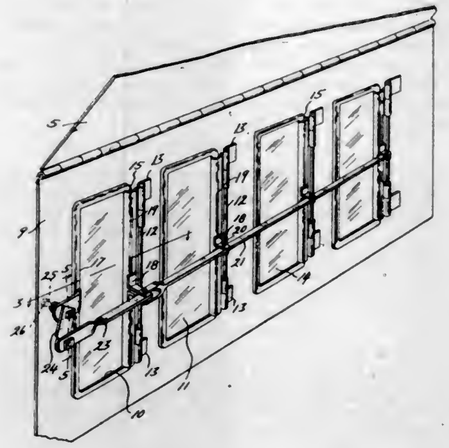
1,786,061. WATCHCASE. OSCAR GRUBER, St. Paul, Minn. Filed Nov. 30, 1928. Serial No. 322,775. 7 Claims. (Cl. 58—105.)



1. In a watch case having a removable casing, a removable ring secured thereto, said ring having a plurality of spacedly disposed apertures therein, an inner casing having a time indicating mechanism secured therein, said inner casing having a plurality of recesses in said inner casing disposed opposite the apertures in said ring, and resilient means in each of said apertures and the oppositely disposed recesses.

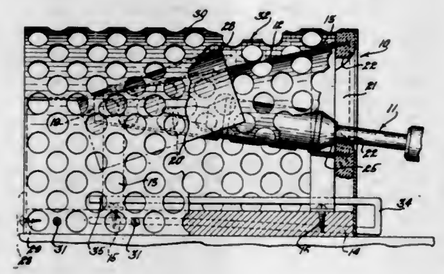
1,786,062. FLOWER BASKET. FRED P. GRUENHOLZ and ANDREW A. GRUENHOLZ, Terre Haute, Ind. Filed July 15, 1929. Serial No. 378,251. 6 Claims. (Cl. 47—41.)

4. In a flower basket, a base, a water receptacle resting on the base, a flange extending from the lower end of the receptacle and secured to the base, a handle secured to said receptacle near its upper end and tie pieces wrapped about the handle and laced through holes in the receptacle.



1,786,063. VOLTAGE REGULATOR FOR INTERNAL COMBUSTION ENGINE-DRIVEN ELECTRIC GENERATORS. HAROLD D. GUMPPER, Detroit, Mich. Filed Aug. 2, 1929. Serial No. 383,104. 6 Claims. (Cl. 290—40.)

1. In combination with a gas engine having an intake pipe and a generator driven by said engine, a solenoid surrounding the intake pipe of said engine and connected across said generator, a core slidable in said pipe and within said solenoid, and a valve in said pipe and connected to said core to be closed on attraction of said core by said solenoid.

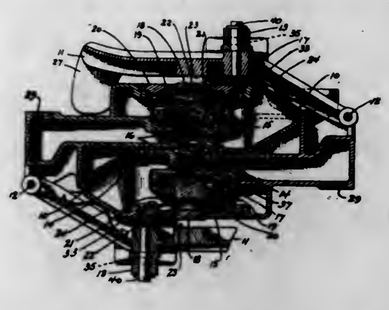


1,786,064. VENTILATOR SYSTEM. MATT HAPPONE, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed May 6, 1929. Serial No. 360,903. 1 Claim. (Cl. 180—69.)

In combination, an automobile hood having a series of vent openings therein, closures for said openings, a bracket secured to said hood, actuating means for said closures including a rod upon the inner side of said hood connected to said closures, an operating member upon the outer side of said hood, an operating connection between said rod and operating member including a part extending through said hood and bracket, and yieldable means

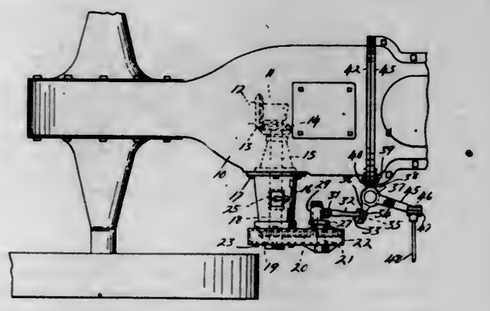
associated with said bracket for yieldingly retaining said part in adjusted position and preventing said part from rattling.

1,786,065. HOLDER FOR HEATED DEVICES. HARRY TOMAS HEIMBERGER, Riverside, and EMERSON PUGH, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1927. Serial No. 236,627. 11 Claims. (Cl. 257—263.)



1. In a holder for heated devices, a supporting means, means for preventing accidental displacement of the heated device from the supporting means, a guard having an enlarged opening in its periphery, and means for deflecting heated air from said heated device away from the major portion of the guard and toward the opening in the guard.

1,786,066. TRAIN-PIPE COUPLER. EDWARD O. HERMANN, Mill Valley, Calif., assignor to Cobb Connector Company, Los Angeles, Calif., a Corporation of Arizona. Filed Sept. 12, 1928. Serial No. 305,461. 5 Claims. (Cl. 285—24.)

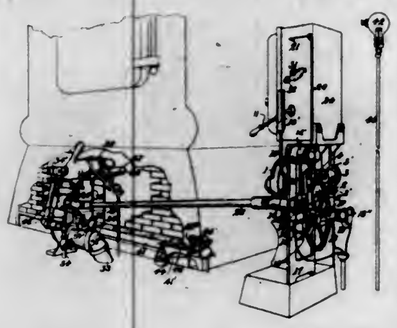


1. In a train pipe coupler, the combination of a pair of cooperating couplers comprising interlocking heads having ports in their engaging faces adapted to align when the couplers are in operation, a chamber formed in each of said heads opposite said ports and communicating with the interior thereof, a non-metallic diaphragm arranged in said chamber and exposed on one side to fluid pressure

when said heads are coupled, and a plunger movably mounted adjacent said diaphragm and actuated thereby,

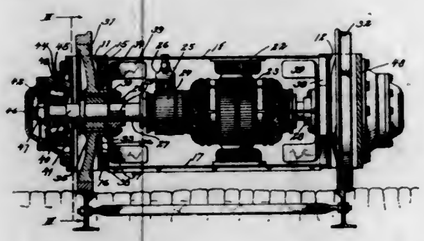
said plunger engaging a part of the cooperating coupler head to press said heads with their aligned ports into sealed engagement.

1,786,067. DRIVING ATTACHMENT FOR TRACTORS. JOSEPH E. HORSTE, Detroit, Mich., assignor to Detroit Harvester Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 30, 1928. Serial No. 274,073. 2 Claims. (Cl. 74—7.)



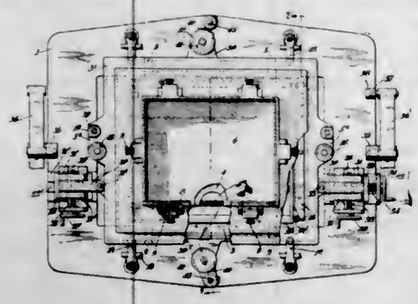
1. A power take-off attachment for tractors including a housing attachable to a part of the tractor, parallel shafts in the housing, one of said shafts constituting the driving shaft of the attachment, the other shaft constituting the driven shaft of the attachment, gearing in the housing operatively connecting said shafts, a gear carried by the driving shaft at one end thereof and engageable directly with the power take-off gear of the tractor, a bracket attachable to another part of the tractor, a bell crank lever having a pivot in the bracket in a plane at substantially right angles to the driven shaft, an eccentric at one end of the driven shaft, a link terminally connected to the eccentric and to one end of the lever, and a pitman terminally connected to the other end of the lever.

1,786,068. BURNER CONTROL. BENJAMIN W. HURD, San Francisco, Calif., assignor to Turbine Fuel Oil Burner Co., San Francisco, Calif., a Corporation of Nevada. Filed July 1, 1924. Serial No. 723,532. 13 Claims. (Cl. 158—28.)



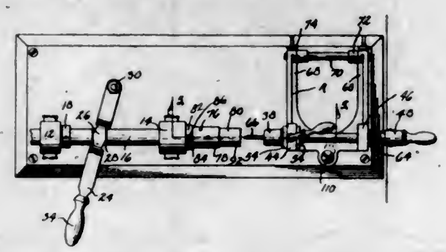
1. An operating and control mechanism for hydrocarbon fuel burners of the class wherein the burner is movable into and out of firing position, and a power driven mechanism supplies air to the burner; comprising an oscillating means having connection for moving said burner, a rotary power supply means, a connecting means between said rotary power supply means and said oscillating means

for operating said oscillating means in the rotation of the power supply means, means operated by said power sup-



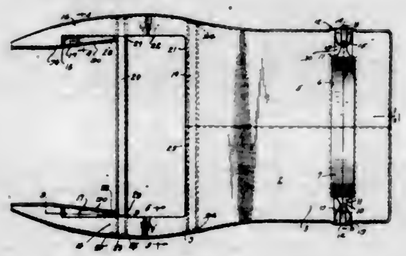
ply means controlling the operation of said air supply means, and means automatically controlling said power supply means in a predetermined manner.

1,786,069. ELECTRIC MOTOR TRUCK. REED E. JACOBS, Berkeley, Calif. Filed Nov. 15, 1926. Serial No. 148,438. 19 Claims. (Cl. 105—57.)



1. An electric motor truck, comprising a main frame, wheels constituting a running gear for said truck, said wheels being independently mounted upon the outer sides of the main frame, separable motor structures interposed between complementary wheels, and means for coupling the motor structures between said complementary wheels to produce driving rotation thereof.

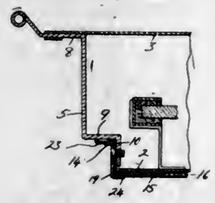
1,786,070. APPARATUS FOR MAKING REGISTERED PRINTS. HARRY C. JONES, New York, N. Y. Filed Apr. 21, 1926. Serial No. 103,462. 6 Claims. (Cl. 95—73.)



3. In an apparatus for registering prints, a holding base frame, posts on the base, a lower frame that rests on the posts, clamping means on the lower frame for securing a plate by its margins, means for adjusting the lower frame laterally in all directions and which will cause the replacing of the frame after removal in the exact position to which it was adjusted before removal, an upper frame superposed on the lower frame, means carried by the upper frame for clamping a plate thereon by its margins in proximity to the said plate on the lower frame, means for adjusting the upper frame vertically, and means on the base for securing the upper frame in adjusted positions.

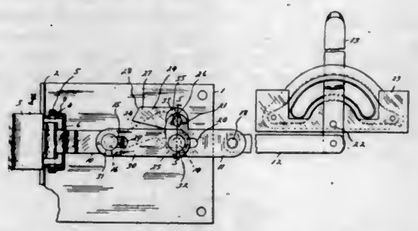
1,786,071. SAW-SETTING DEVICE. HARRY H. KNOTT, Washington, Iowa, assignor to American Pearl Button Company, Washington, Iowa. Filed Mar. 5, 1929. Serial No. 344,272. 8 Claims. (Cl. 76—58.)

1. A tubular saw setting device comprising means for supporting a tubular saw and for moving it longitudinally of its axis, a roller of substantially the same external diameter as the interior diameter of said saw and adapted to be received in said saw, said roller having lugs for setting a portion of the teeth of said saw, a second roller cooperatively associated therewith for setting the remaining portion of said teeth and means to rotate the saw while the teeth thereof are being set.



1,786,072. SILL CONSTRUCTION. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 10, 1924. Serial No. 749,018. 12 Claims. (Cl. 296—28.)

4. In a vehicle body, the combination with a sheet metal sill having a depending flange, and a depressed portion for receiving floor boards, of a reinforcing cross bar having flanges secured to the flange aforesaid, a stiffening flange at one edge of said cross bar, and a stiffening flange projecting from the depressed portion of the sill member secured to the stiffening flange of said cross bar.

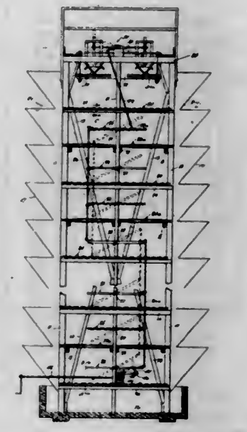


12. In a vehicle body, a sill member having a depending flange and a depressed portion for receiving floor boards, said depressed portion having a depending flange terminating in a horizontal flange, and an inverted channel-shaped cross bar having a horizontal flange secured to the horizontal flange aforesaid and having a vertical flange secured to the depending flange of said sill member.

1,786,073. TRIMMING HOLDER. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 14, 1926. Serial No. 115,980. 3 Claims. (Cl. 45—138.)

1. In a door the combination with a panel having a lateral flange and a pillar having a marginal flange provided with a lateral portion secured to the flange of the panel, of a finish strip consisting of a central intermediate portion secured to the lateral flange of the panel, a flange extending from one edge thereof and cooperating therewith for concealing the joint between the panel flange and lateral portion of the pillar and a second flange extending from the other edge of the central portion and cooperating with a portion of the panel for holding a trimming for the door.

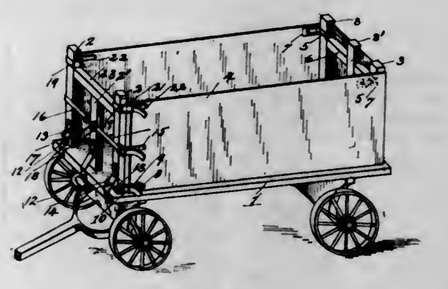
1,786,074. REMOTE CONTROL MECHANISM FOR DOOR LATCHES. WILLIAM MARSHALL and PAUL CAMENER, Detroit, Mich., assignors to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 22, 1926. Serial No. 156,432. 21 Claims. (Cl. 292—227.)



1. In a latch, the combination with a latch bolt, and means for retracting said bolt including links connected to the bolt and operable independently of each other for retracting said bolt, of means for actuating one of said links, and means for dogging the other of said links including means movable into the path of the first mentioned link and operable by the actuating means aforesaid.

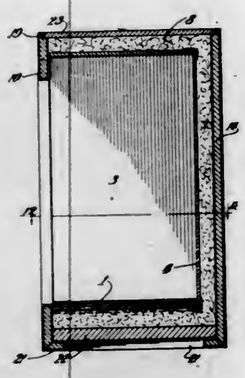
1,786,075. METHOD OF RECLAIMING OR IMPROVING GUM EXUDATES. CHARLES MARTELL, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 6, 1925. Serial No. 28,511. 14 Claims. (Cl. 18—49.)

1. A method of reclaiming an inferior unvulcanized gum exudate, which consists in treating the gum exudate in the presence of a relatively small quantity of latex until a quantity of the gum in the latex has been absorbed by the gum exudate.



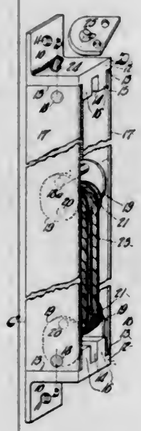
1,786,076. ATMOSPHERIC COOLING TOWER. GUY T. MARTIN, Los Angeles, Calif., assignor to Fluor Construction Co., Los Angeles, Calif., a Corporation of California. Filed July 2, 1928. Serial No. 290,005. 14 Claims. (Cl. 261—113.)

1. In an atmospheric cooling tower having an interior cooling chamber through which air currents are adapted to pass, a liquid distributing system associated with the chamber and having delivery means whereby liquid is discharged so as to fall through said chamber, valve means operable to control the discharge of liquid from



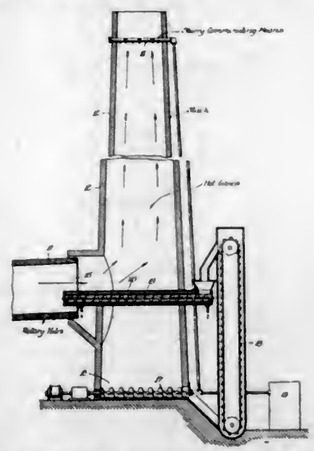
said system, means operable to control the passage of air currents through said chamber, and unitary means for simultaneously operating said valve means and said air passage control means.

1,786,077. ATTACHABLE WALL FOR PLATFORM STATION TRUCKS. WALTER A. MCCULLOUGH, Alliance, Ohio. Filed Sept. 23, 1927. Serial No. 221,445. 1 Claim. (Cl. 296—1.)



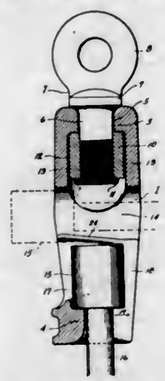
In a flexible and extensible wall for a standard station truck, in combination, a platform, vertical front and rear corner posts, angle braces connecting the platform with said front posts and horizontal transverse end bars connecting the posts at the ends of said platform, of a flexible wall passed around the sides and rear ends of said posts, elongated loops secured adjacent to the upper rear edges of said wall and passed over said rear posts, and slidably movable thereover and resting upon said rear horizontal bar, adjustable loops attached to the upper edges of said wall adjacent to the front edges thereof, said front loops being passed around the front corner posts of said truck and resting upon said front horizontal bar, an intermediate fastening means comprising an adjustable divided strap centrally connecting the end edges of said wall and a hook and edge connection between said strap members, and fastening means for the lower front edges of said wall comprising adjustable straps secured to said wall and angular hooks engaged with said angle braces for said front corner posts.

1,786,078. REFRIGERATOR STRUCTURE AND METHOD OF MAKING THE SAME. GEORGE R. MEYERCORD, Chicago, Ill., assignor to The Vitrolite Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Nov. 22, 1926. Serial No. 150,121. 5 Claims. (Cl. 217—3.)



1. An article of manufacture in the form of a crock for a refrigerator comprising a box-like part open on one side and composed of five slabs cemented together, pieces of reticulated metal fitted over the corners between said slabs and cemented thereto, and a unitary shell of heat-insulating material fitting over the said box-like part and leaving the open side exposed.

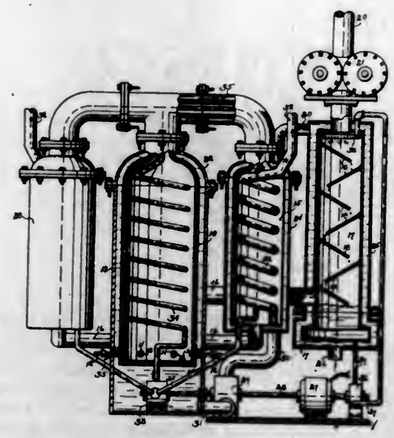
1,786,079. BALANCING APPARATUS. FERDINAND MIELKE, Cleveland, Ohio. Filed May 16, 1927, Serial No. 191,572. Renewed May 28, 1930. 2 Claims. (Cl. 16—197.)



1. A balancing apparatus including a frame composed of a plurality of parts two of which are heads located on the ends of the frame and cages and sheaves and rope means and a spring therefor within the frame, each of said heads having a pair of inwardly extending ears to form a slot therein, an axle extending through one end of said frame and through said ears in said head thereon and through a portion of one of said cages extending into said slots in said head on said one end of the frame and holding all of the frame parts together at this one end, and an axle extending through the other end of said frame and through said ears in said head thereon and holding all of the frame parts together at this other end and serving as an anchor for one end of said spring.

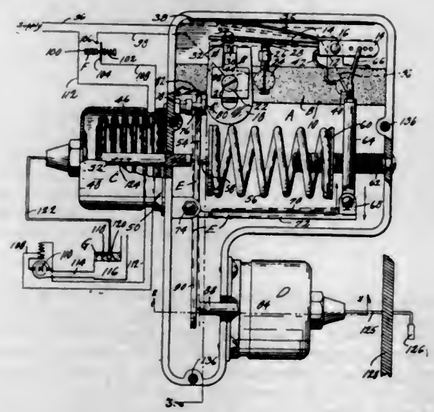
1,786,080. CEMENT MANUFACTURE. RAY C. NEWHOUSE, Wilmette, Ill. Filed Aug. 13, 1927. Serial No. 212,772. 2 Claims. (Cl. 222—7.)

1. In combination, a rotary cement kiln, a vertical stack for receiving the hot gases from the kiln, into which the open end of the kiln extends, means for introducing a slurry of cementitious material in finely divided form into the upper portion of the stack, means in the lower part of the stack for collecting the dried material and means for conveying this material to, and introducing it into, the open end of the rotary kiln.



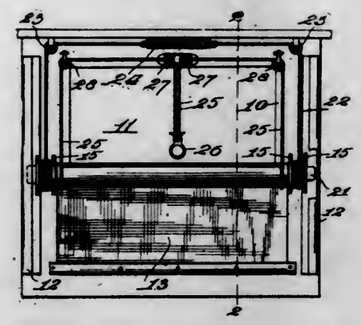
1,786,081. SWIVEL BUTT HOOK. WALTER H. NOURSE, Portland, Oreg., assignor to Electric Steel Foundry Co., Portland, Oreg., a Corporation of Oregon. Filed May 7, 1928. Serial No. 275,774. 3 Claims. (Cl. 24—123.)

1. A device of the character described, comprising a hook body provided in one end wall with an opening, a swivel having a shank portion rotatably fitted in the opening, a collar formed about the shank to engage the end of the hook to limit inward movement of the shank, a nut threaded onto the inner end of the shank for engaging the hook wall to prevent outward movement of the shank and an eyelet formed on the outer end of the shank for connection with a hauling means.



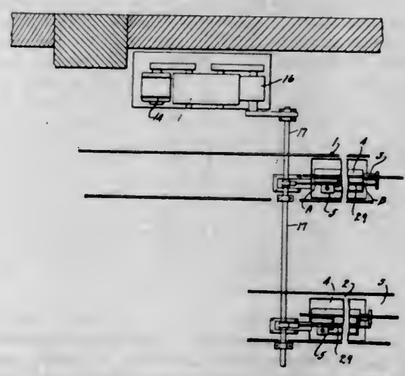
1,786,082. HIGH-THERMAL-EFFICIENCY FURNACE. WALTER T. PALMER, Des Moines, Iowa, assignor of one-half to Olof Olson, Des Moines, Iowa. Filed Nov. 21, 1928. Serial No. 320,943. 6 Claims. (Cl. 122—33.)

4. In a device of the class described, a primary combustion chamber, a secondary combustion chamber, a pipe for passing gases from the top of said primary combustion chamber to the top of said secondary combustion chamber, a means for producing hot gases at the lower portion of said first combustion chamber, a water jacket around each of said combustion chambers and said pipe and communicating with each other, a coiled pipe inside said secondary combustion chamber having one of its ends communicating with the water jacket around that particular chamber and its other end designed to lead to a radiator system or like, a pump, a tube leading from



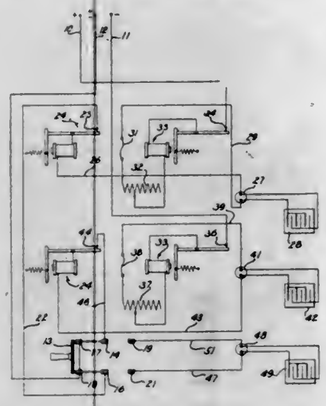
the exhaust port of said pump and formed into a coil inside said primary combustion chamber, a second tube communicating with the free end of said first tube extending and passing into said coiled pipe from which it emerges and makes communication with the intake port of said pump; said pump designed to circulate a fluid through said tubes, and a second pump having its intake port in communication with the return pipe from the radiator system or like and its exhaust port in communication with the inside of the water jacket around said primary combustion chamber.

1,786,083. AUTOMATIC TEMPERATURE-CONTROLLING DEVICE. ALBERT PENN, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a Corporation of Iowa. Filed May 21, 1928. Serial No. 279,327. 2 Claims. (Cl. 236—91.)



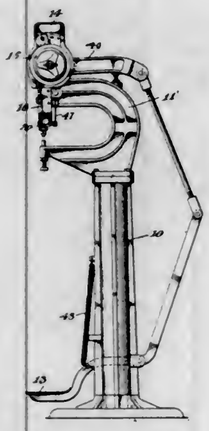
1. In a device of the class described, a casing, a control arm therein, means for pivoting said control arm with respect to said casing and intermediate the ends of the control arm, a pair of temperature responsive means on opposite sides of both the control arm and the pivoting means, said temperature responsive means being responsive to temperature changes within a heat producing device and of outside atmosphere respectively.

1,786,084. PORCH CURTAIN. GEORGE A. PHINN, Pasadena, Calif. Filed Jan. 12, 1926, Serial No. 80,790. Renewed Oct. 10, 1928. 2 Claims. (Cl. 156—27.)



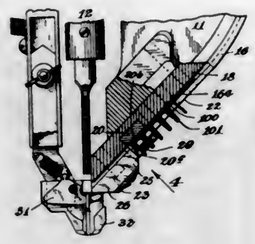
1. In a device of the character described, a curtain member, a pole on which the curtain is rolled, pulleys on the ends of the pole, pulleys supported above the curtain, flexible members secured to the first mentioned pulleys and adapted to be wound thereon, said flexible members adapted to pass over said second mentioned pulleys, yielding means connecting with the ends of said flexible members to hold the curtain in tension, and a flexible operating member having one end secured to the pole and adapted to be wound around the curtain on the pole in a direction reverse to the winding of said first mentioned flexible members on their pulleys.

1,786,085. CONTROL MECHANISM FOR CONVEYERS. NORMAN H. PREBLE, Detroit, Mich., assignor to The Cecil R. Lambert Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 11, 1926. Serial No. 80,664. 4 Claims. (Cl. 198—135.)



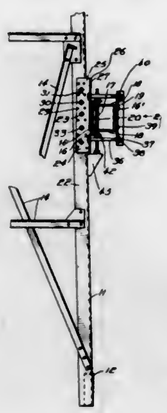
1. The combination of a plunger reciprocably mounted within a cylinder and operated by a fluid under pressure for advancing a conveyer with a step by step movement, a valve controlling the passage of the fluid to and from said cylinder, a cam for actuating said valve and means for driving said cam at different rates of speed.

1,786,086. SYSTEM FOR CHARGING STORAGE BATTERIES. AMOS DURBIN PRITCHARD, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1928. Serial No. 320,323. 4 Claims. (Cl. 171—314.)



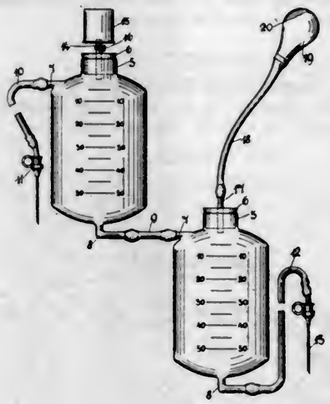
1. In a system for charging storage batteries, a three-wire direct current circuit including positive, neutral and negative mains, a plurality of battery connectors arranged therein, and selectively operable means for connecting one of the battery connectors between the neutral and one of the other mains or a plurality of the connectors in series between the positive and negative mains.

1,786,087. FASTENER-SETTING MACHINE. THEODORE PUCAR, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 15, 1929. Serial No. 355,238. 12 Claims. (Cl. 1—3.1.)



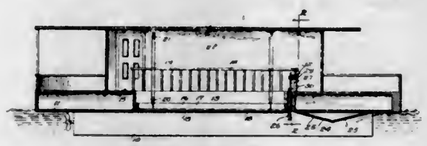
1. A fastener-setting machine comprising a head having upper and lower horizontal branches; an anvil mounted on the lower horizontal branch; a driving plunger mounted on the upper horizontal branch; a fastener-receiving device for receiving double pronged staple-like fasteners; a guideway adapted to guide the fasteners from the fastener-receiving device with a line passing through both prongs of a fastener parallel to the guideway, said line being perpendicular to each of the fastener prongs; a slide adapted to carry the fasteners to the driving position with said line transverse to the guideway; and means for turning the fasteners and transferring them from the guideway to the slide.

1,786,088. FEEDING DEVICE FOR PRONGED FASTENERS. THEODORE PUCAR, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y., a Corporation of New York. Filed May 18, 1929. Serial No. 364,036. 14 Claims. (Cl. 1—3.1.)



1. Mechanism for feeding and turning two-pronged staples of character described, comprising a guide in which the staples descend by gravity with their heads in alignment and their prongs aligned with the guide axis, a feed slide moving perpendicularly to the guide, a finger thereon adapted to enter between staple prongs, another finger on the slide adapted to operate on a lower staple prong, and a member on the slide adapted to have supporting contact under a staple head.

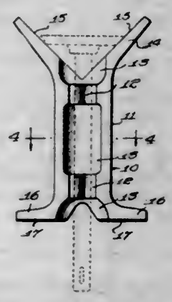
1,786,089. INTERCHANGEABLE DRAW-WORKS GIRT. WILFRED D. SAWYER, Long Beach, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 8, 1929. Serial No. 353,398. 17 Claims. (Cl. 189—20.)



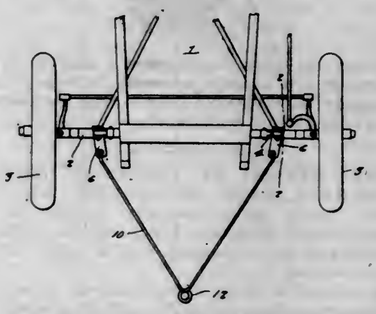
2. In a girt construction, the combination of: a leg; a girt adapted to be secured to said leg; an intermediate member secured to said leg, said intermediate member providing a contacting face, and said intermediate member being adjustable relative to said leg so that said contacting face may be moved toward or from said leg; clamp means for clamping said girt against said contacting face; and jack means positioned adjacent said leg, said jack means being associated with said girt so as to raise or lower same when said jack means is operated.

1,786,090. APPARATUS FOR BLOOD TRANSFUSION. PAUL SCHMIDT and FRANCIS V. MALLOY, Chicago, Ill. Filed Aug. 3, 1928, Serial No. 297,282. Renewed Oct. 22, 1930. 1 Claim. (Cl. 128—214.)

In a device of the class described, a pair of vessels, each vessel having a central opening in its top, an intake tube at the upper end of each vessel an outlet tube in the bottom of each vessel, the two vessels arranged at different levels, the outlet tube of one of said vessels being approximately at the same level with the intake tube of the other vessel, means for connecting said outlet tube with said intake tube, means communicating with the interior of the lower vessel through the central opening therein for creating a pressure in said vessel, a stopper for the central opening in the upper vessel, a tube extending through said stopper into said vessel, and a container supported by the upper end of said tube and being in communication with the interior of said tube.



1,786,091. BOAT FOR SUBMARINE INSPECTION. FRANK I. STILES, Miami, Fla. Filed Apr. 23, 1929. Serial No. 357,513. 5 Claims. (Cl. 114—66.)



1. In a boat of the character described, spaced pontoons, a hull structure mounted thereon and formed with a well between the pontoons, an observation window mounted within the well, and a transverse partition member vertically movably mounted at the forward end of the window for deflecting downwardly any water tending to enter at the forward end of the window.

1,786,092. VALVE-TESTING GAUGE. JOHN STUTIKA, West Pullman, Ill. Filed Dec. 21, 1927. Serial No. 241,613. 1 Claim. (Cl. 33—180.)

A device of the character described comprising an elongated unitary body having a substantially V-shaped groove extending throughout the greater portion of its length, a pair of spaced substantially V-shaped relatively deep guides formed in portions of said body upstanding from said groove, said guides each having plane faces intersecting in a line common to both, and a pair of relatively long arms projecting from one end of said body and having faces of material width disposed diametrically opposite each other, the line of intersection of the faces of said guides forming substantially a right angle with the line of intersection of the faces of said arms.

1,786,093. TOWING HITCH. ELDA SWICK, Clinton, Nebr. Filed Mar. 28, 1930. Serial No. 439,658. 1 Claim. (Cl. 280—33.44.)

A towing hitch of the character described comprising a pair of coupling brackets adapted for disposition across a vehicle axle between the spring perches mounted thereon and said axle and in a manner to project forwardly therefrom in converging relation to each other, said brackets having openings in their end portions for the passage of the perch bolts, integral down turned lips formed on the rear ends of the brackets for abutting engagement with the rear side of the axle, said lips disposed diagonally with respect to the brackets, the brackets being further provided with openings in their forward end portions, a substantially V-shaped draw bar, integral hooks on the opposite ends of the draw bar for detachable engagement through the openings in the forward portions of the brackets for detachably securing the draw bar thereto, and an integral loop bent upon itself and formed on the intermediate portion of the draw bar constituting means for connecting the same to a draft vehicle.

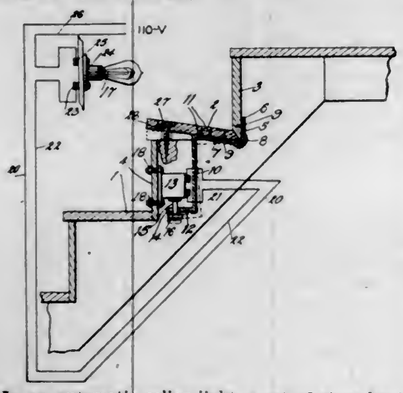
1,786,094. MANUFACTURE OF PHENYLMERCURIC ACETATE. CARL TAUBE, Leverkusen-on-the-Rhine, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 1, 1929, Serial No. 382,839, and in Germany Aug. 8, 1928. 3 Claims. (Cl. 260—13.)

1. The process which comprises boiling mercury acetate for several hours in benzene to which such a quantity of a high-boiling inert organic solvent of a boiling point of at least 150° C. has been added that the boiling point of the mixture is raised to about 120–140° C.

1,786,095. PROCESS OF EXTRACTING VITAMIN A FROM FISH OILS AND THE LIKE. KATSUMI TAKAHASHI, Aza, Shibuya-Machi, Toyotama-Gori, Japan, assignor to Zaidan Hojin Rikagaku Kenkyujo, Tokyo, Japan. Filed May 2, 1923, Serial No. 636,261, and in Japan Feb. 10, 1923. 6 Claims. (Cl. 167—81.)

1. The process of extracting vitamin A from fish oils containing the same which comprises treating the fish oil with an alcoholic solution of an alkali metal hydroxide to saponify the oil and convert the fatty acid constituents of the fish oil into alkali metal soaps, treating the alcoholic vitamin and soap mixture so obtained with an alcoholic solution of an akaline earth metal chloride to precipitate insoluble alkaline earth metal soaps and filtering the insoluble soaps from the alcoholic solution of vitamin A.

1,786,096. MEANS FOR SCRAPING OFF WOODEN SURFACES. SEBASTIAN THIELMANN, Berlin, Germany, assignor to Nomanu Elektrische Apparate G. m. b. H., Berlin-Halensee, Germany, a Corporation of Germany. Filed Mar. 30, 1929, Serial No. 351,298, and in Germany Sept. 1, 1928. 2 Claims. (Cl. 144—115.)

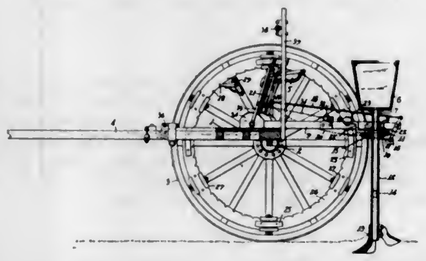


1. A scraping device consisting of a plurality of polygonal loops of wire joined together in the form of a helix, said loops having their sides along at least one side of said helix provided with a scraping edge.

1,786,097. METHOD OF PRODUCING BICALCIUM PHOSPHATE FROM SULPHUROUS SOLUTIONS. ERICH THILO, Berlin, Germany, assignor to Adolf Heicke, Berlin, Germany. Filed Sept. 24, 1929, Serial No. 394,016, and in Germany Feb. 11, 1928. 3 Claims. (Cl. 23—109.)

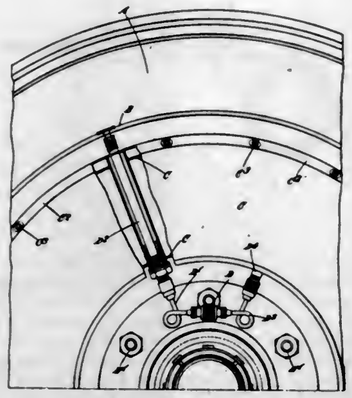
1. In a method of producing bicalcium phosphate by dissolving tricalcium phosphate-containing material in watery sulphurous acid, adding a strong mineral acid to the solution and expelling sulphurous acid therefrom, the step which consists in expelling the sulphurous acid from the solution by contacting it at ordinary temperature with a permanent gas which does not react either with sulphurous acid or with calcium salts.

1,786,098. TREAD SWITCH. GEORGE THON, Philadelphia, Pa. Filed May 23, 1928. Serial No. 279,950. 2 Claims. (Cl. 200—86.)



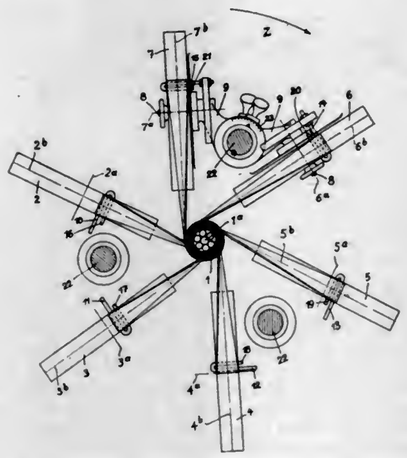
1. In an automatic cellar light, a set of steps having a movable tread, the rear portion of which and the lower edge of an adjacent rise having abutting bevels to limit the tread in its forward movement, a single piece spring hinge connecting said tread and said rise, thereby tensioning the tread, a switch having a pull member, and an angular bracket depending from the tread and operatively connecting with the pull member to actuate the switch when the tread is depressed.

1,786,099. BRAKE-LINING STRETCHER. JOHN B. TRIPP, Jr., Trenton, N. J. Filed Feb. 6, 1929. Serial No. 337,906. 4 Claims. (Cl. 29—84.)



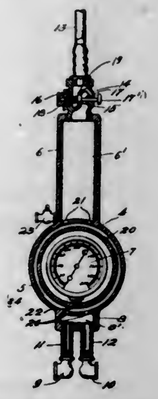
1. In a stretcher for brake linings, a plate having members adapted to be anchored to one end of a lining of brake shoe while one end of the brake lining is secured to said shoe, an extension of said plate adapted to be anchored to a stationary member, the said brake shoe being adapted to have its end remote from that to which the brake lining is anchored oscillate on said member in cooperative relation to the said member to which the extension of the plate is anchored, whereby the said brake shoe may be pivotally supported at one end while its lining is being stretched.

1,786,100. SEED PLANTER. JOSEPH WARD, Huntington, W. Va., assignor of one-tenth to J. E. Miller, Huntington, W. Va. Filed May 6, 1929. Serial No. 360,747. 5 Claims. (Cl. 111—18.)



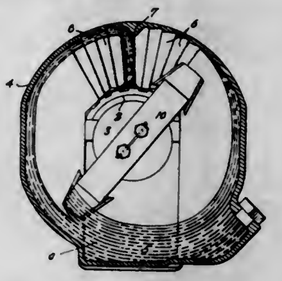
1. A seed planter comprising seed and fertilizer bins arranged in a single transverse row, discharge spouts therefor, and a single valve member for delivering seed and fertilizer from said bins into said spouts, the fertilizer spouts being connected to the seed spouts.

1,786,101. PNEUMATIC TIRE AND WHEEL. CHARLES KINGSTON WELCH, Coventry, England; Annie Gertrude Welch and Roland Welch administrators of said Charles K. Welch, deceased. Filed May 7, 1923, Serial No. 637,347, and in Great Britain May 17, 1922. 8 Claims. (Cl. 152—29.)



1. A pneumatic tire having in combination a container, a conduit communicating with said container and adapted to be attached to and to communicate with the interior of the tire, and a flow restrictor in said conduit so arranged that air may pass more readily from the tire to the container, than from the container to the tire.

1,786,102. MACHINE FOR WINDING OR COVERING CABLES OR THE LIKE WITH TAPE OR STRIP MATERIAL. PAUL WIEGHARDT and KASIMIR SCHROTT, Magdeburg, Germany, assignors to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Mar. 5, 1927, Serial No. 173,152, and in Germany Mar. 6, 1926. 9 Claims. (Cl. 117—47.)

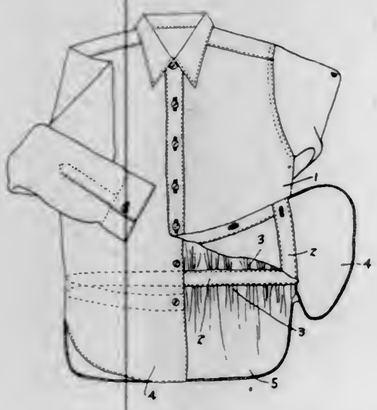


1. A machine for winding cables or the like with strip material, comprising a winding frame, axles on said winding frame at right angles to the axis of the cable, and spools rotatably mounted on said axles, the midplanes of said spools, which are perpendicular to the axes of the spools, being substantially tangent to the cable at the winding-on points.

1,786,103. AIR-SERVICE CONTROL AND REGISTER FOR PNEUMATIC TIRES. ARCHIE M. BAIRD and FRED J. PARTRIDGE, Topeka, Kans.; Mary L. Baird, administratrix of said Archie M. Baird, deceased, assignor to Baird Pneumatic Register Company, Topeka, Kans., a Corporation. Filed Nov. 23, 1927. Serial No. 235,292. 1 Claim. (Cl. 152—11.5.)

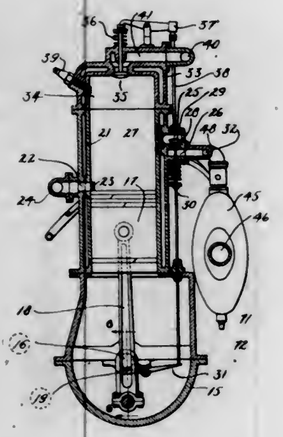
The combination of an inflating device having a connecting chuck, a dial type pressure gauge, a control valve mechanism and connecting air passages, of a gauge supporting portion comprising a body having a thickness greater than the gauge and having a cylindrical opening therethrough sufficiently larger than the gauge so that said gauge may be revolved for attachment or detachment, one of the air passages extending through said body around the gauge and having a connection to the gauge.

1,786,104. AUTOMATICALLY-LUBRICATING JOURNAL BOX. MAX F. BAUR, Geneva, Switzerland, assignor to Isothermos Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1928, Serial No. 317,909, and in Switzerland Sept. 28, 1928. 2 Claims. (Cl. 308—86.)



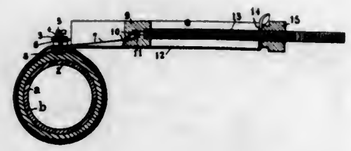
2. In a journal box, the combination of an axle having a lubricant distributing member thereon, and means for directing lubricant onto the bearing, said means comprising an inclined top wall of the box having a plurality of lubricant guiding and directing ribs formed thereon, and a lubricant precipitating rib having a horizontal dripping edge extending across the top of the box and located in the path of lubricant thrown from said lubricant distributing member.

1,786,105. STAY-DOWN SHIRT. JOSEPH H. CLARK, Berkeley, Calif. Filed Sept. 18, 1928. Serial No. 306,651. 1 Claim. (Cl. 2—115.)



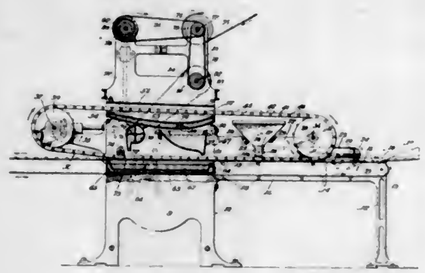
A stay-down shirt having a two-piece elastic band secured to the shirt at the waist, the pieces extending from

the front of the shirt being spaced a slight distance from each other at the back, the portions of the back of the



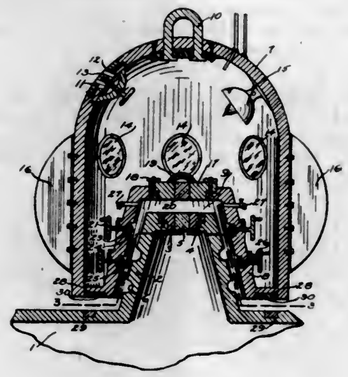
shirt secured to the two pieces having gathers therein, and adjustable means for securing the rear ends of the bands together.

1,786,106. TWO-CYCLE INTERNAL-COMBUSTION ENGINE AND SUPERCHARGING DEVICE. MURRELL H. CRIMMINS, Los Angeles, Calif. Continuation of application Serial No. 115,740, filed June 14, 1926. This application filed Jan. 30, 1929. Serial No. 336,512. 6 Claims. (Cl. 123—67.)



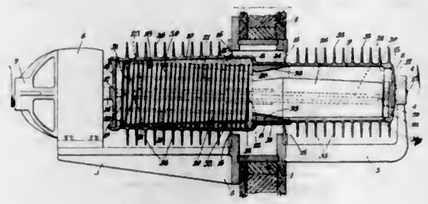
1. The combination, with the piston cylinder of a two-cycle internal combustion engine; of an air chamber adjacent to said cylinder at the side thereof at approximately the middle point of the combined combustion and cylinder spaces, when the piston is in its lowermost position, there being a series of airducts leading from said chamber through the wall of said cylinder, said air ducts as they pass from said chamber to said cylinder diverging sufficiently to direct air under pressure at an upward inclination and at a downward inclination into every part of the space occupied by the consumed gases, means to supply compressed air to said chamber under pressure, and means timed to supply and cut off the compressed air as required.

1,786,107. CLAMPING COLLAR. VLADIMIR ANTOINE DE VULITCH, Paris, France. Filed Apr. 29, 1929, Serial No. 359,104, and in France June 29, 1928. 2 Claims. (Cl. 24—19.)



1. A clamping collar for the attachment of tubular bodies including a flexible metallic band passing about the tubular body and having its inner and outer ends overlapped, a loop member receiving the flexible band, the inner end of said band being bent back over one side of the loop member, and adjustable means coacting with the opposite side of the loop member for gripping the outer end portion of the flexible band to secure the latter in position, said means acting to exert pressure also on the inner end of the band to secure the latter in position on the first mentioned side of the loop member.

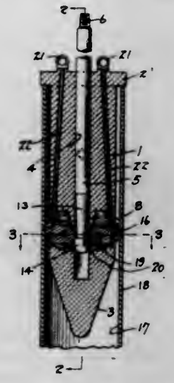
1,786,108. CLUSTER ENROBING MACHINE. WALTER C. DRURY, Fulton, Ill. Filed Dec. 29, 1926. Serial No. 157,756. 13 Claims. (Cl. 107—1.)



13. In a machine of the class described, an endless conveyor, means for supplying fillers to the conveyor, means for aligning the fillers in rows transversely of the conveyor, an endless chain of mold bars adapted to engage the conveyor over the rows of aligned fillers thereon and travel therewith, means for supplying nuts to the fillers, means for checking the discharge of nuts intermittently, means associating the filler aligning means and nut discharge control means to secure their operation in predetermined sequence with respect to the mold bars, means for supplying a coating to the nuts and fillers in the molds, means for blowing any excess of coating through the molds and conveyor, means for returning such excess of coating to the main supply, and common means for ejecting the coated nuts and fillers from the molds and changing the course of the chain of mold bars to separate same from the conveyor substantially as specified.

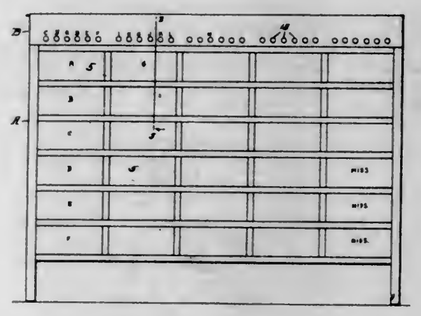
1,786,109. SUBMARINE RESCUING DEVICE. RUBIE EDWARDS, Fort Slocum, N. Y. Filed Apr. 22, 1929. Serial No. 357,237. 6 Claims. (Cl. 61—69.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. Means for securing a rescue vessel to a submerged ship comprising a tapered projecting passage-way on said ship and a corresponding re-entrant portion on the rescue vessel, said projecting passage-way having grooves and said re-entrant portion having apertures and locking means mounted in said apertures for entering said grooves.

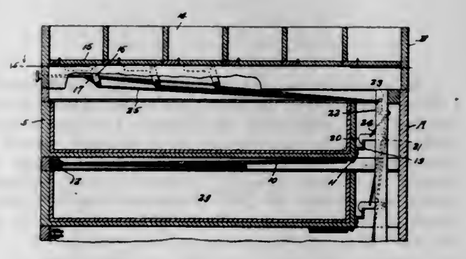


1,786,110. REFRIGERATING APPARATUS. THOMAS M. GUNN, Brooklyn, N. Y., assignor of one-sixth to Gorham Crosby, Glen Ridge, N. J. Filed Apr. 23, 1924. Serial No. 708,345. 21 Claims. (Cl. 62—115.)

1. Refrigerating apparatus having in combination a rotary casing in one part of which a refrigerating medium is compressed and in another part of which the refrigerating medium is permitted to expand to effect refrigeration, said casing being sealed to the outside atmosphere but having communication between its said parts for the refrigerating medium, a body of liquid in the compressor part, said liquid lying against the outer walls of said compressor part, said walls being fixed with respect to the refrigerating part, a rotary compressor member in the compressor part cooperating with said liquid to compress the refrigerating medium, the axis of said compressor member being slightly displaced from the axis of said rotating casing.

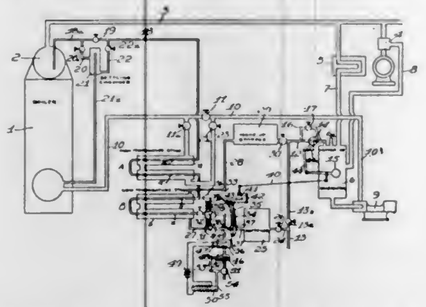


1,786,111. FISHING TOOL. CHARLES P. HARRIS, Oakland, Calif. Filed Feb. 13, 1928. Serial No. 254,085. 5 Claims. (Cl. 294—94.)



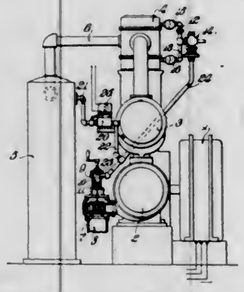
1. A fishing tool comprising a cylindrical-shaped body having an annular outwardly-extending flange at one end and a conical-shaped portion at the other, a lifting stem slidably mounted in said body and having a shoulder fashioned therein, spring actuated catches carried by said body for engaging with said shoulder, and jaws

carried by said body and being engageable by said shoulder, when said stem is moved into a predetermined position.



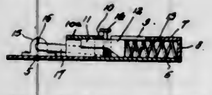
1,786,112. FILING CABINET. LESLIE J. HART, Valdosta, Ga., assignor of one-fourth to Claudia Johnson, Valdosta, Ga. Filed Sept. 4, 1928. Serial No. 303,888. 3 Claims. (Cl. 45—2.)

3. A cabinet of the class described including a pair of sections, one of said sections being provided with a pocket having a tiltable bottom, a bell crank mounted in said one section and adjacent the tiltable bottom, a drawer in the other section, spring means urging the drawer to an open position, catch means to hold the drawer in a closed position, a bell crank, a link connecting the last mentioned bell crank with the catch means, a link connecting the two bell crank means together, and means for actuating the first bell crank.



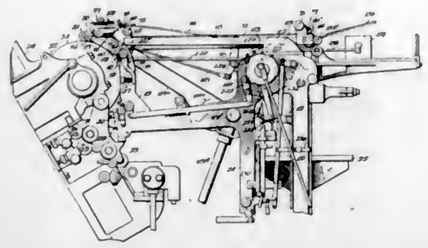
1,786,113. PROCESS AND MEANS FOR PURIFYING BOILER WATER. ROY O. HENSZEY, Oconomowoc, Wis. Filed Nov. 8, 1926. Serial No. 147,122. 41 Claims. (Cl. 122—1.)

29. The process of maintaining boiler water at a low degree of concentration which consists in blowing off water from the boiler, adding make-up water to the boiler, and regulating the amount of water blown off so that it is increased or decreased in proportion to the increase or decrease in the amount of make-up water added.



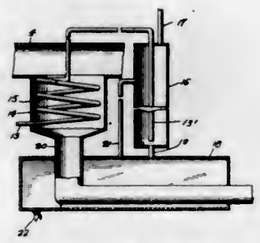
30. A boiler provided with a blow-off system means for delivering condensate to the boiler means for delivering make-up water to the boiler, and means for mechanically regulating the amount of water blown off through said system so that it is increased or decreased in substantial accordance with the increase or decrease in the amount of make-up water added to the boiler.

1,786,114. COMPRESSOR SYSTEM. WILLIAM E. HUGHES, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 18, 1928. Serial No. 326,807. 22 Claims. (Cl. 230—4,)



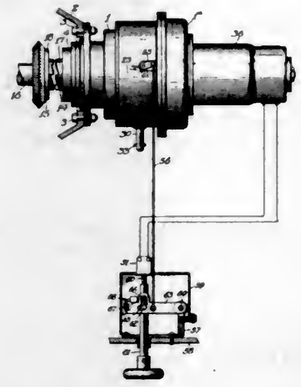
1. In a compressor controlling system, a compressor, a motor for driving the same, means for automatically stopping said compressor in response to receiver tank pressure whenever the receiver tank pressure reaches a predetermined desired maximum value, said means including a receiver pressure actuated circuit breaking switch, an unloader for said compressor, and controlling means for said unloader automatically operative to effect unloading before stopping of said compressor.

1,786,115. FASTENER. FERDINAND L. JENSEN, Kildare, N. Y. Filed Nov. 22, 1929. Serial No. 409,023. 2 Claims. (Cl. 24—201.)



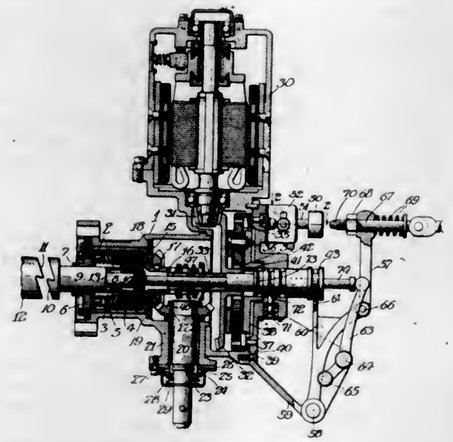
1. A fastener of the character described comprising a pair of plate sections, a loop on each of the said sections, for registry with each other, a barrel on one of the sections having an open end in spaced relation to the corresponding loop, a bolt slidable in the barrel and through the loop on one plate section and into the loop on the other plate section, and a bail swingably mounted on the other section and adapted to have its bight portion engage under the bolt in the space between the loop and open end of the barrel on said one section when the bolt is in projected position.

1,786,116. PRINTING PRESS. WILLIAM M. KELLY, Westfield, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 10, 1926. Serial No. 153,990. 36 Claims. (Cl. 101—250.)



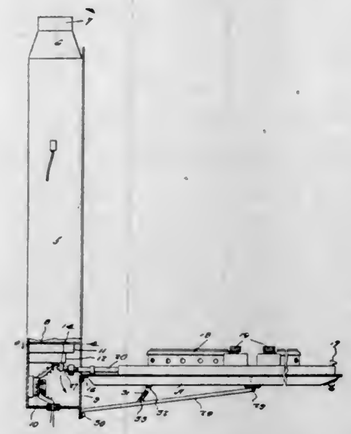
1. In combination with a bed and oscillating cylinder press, means to grip the delivery margin of a sheet on the cylinder when the cylinder nears the end of the printing stroke and hold the same during the reverse rotation of the cylinder, and means to release the first means at about the beginning of the next printing stroke.

1,786,117. OIL VAPORIZER. RUDOLPH KROLLAGE, McGregor, Tex. Filed Aug. 29, 1927. Serial No. 216,252. 1 Claim. (Cl. 48—102.)



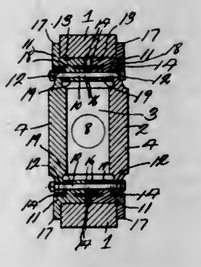
In oil vaporizing apparatus, a crude oil supply tank, an intake manifold and an exhaust gas manifold, the said exhaust manifold having an enlargement, a primary oil separator and vaporizer, a crude oil conduit connected with the crude oil tank and having a coil within the enlargement in the exhaust manifold whereby exhaust gases heat the said crude oil, said crude oil conduit passing vertically downward through the top of the primary separator and having a depending portion extending through a greater part of the length of the separator, a second oil separator and vaporizer surrounding a portion of the exhaust manifold to receive heat therefrom, a conduit connecting the primary and secondary separators and causing residual fuel oil to pass to the secondary separator to be vaporized, therein, a second conduit connecting the two separators to cause vaporized oils to be returned to the primary separator, and a conduit extending from the primary separator to the intake manifold and connected to the primary separator above the lower end of the depending portion of the crude oil conduit, whereby vaporized oils from both separators are conveyed to the intake manifold.

1,786,118. ENGINE STARTER. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Feb. 19, 1926. Serial No. 89,454. 17 Claims. (Cl. 189—192.02.)



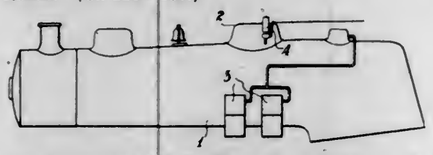
1. An engine starter apparatus including a drive having a driving member adapted to be moved to engage and crank a member of the engine to be started, an inertia member operatively connected to said drive, an electric motor adapted to actuate said inertia member, an electrical circuit and switch for the motor, and combined means for controlling the switch and for so moving the driving member.

1,786,119. ENGINE STARTER. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Oct. 6, 1926. Serial No. 139,778. 18 Claims. (Cl. 189—192.02.)



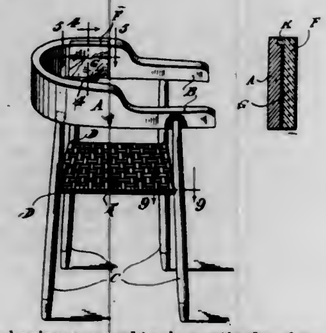
1. An engine starter including a drive having a driving member adapted to be moved longitudinally to engage and rotated to crank a member of the engine to be started, an electric motor and its switch, means for drivingly connecting said motor and driving member including a hollow shaft and a single means for dissimultaneously operating the driving member and the switch, said means including a longitudinally movable rod in axial alinement and cooperating with the driving member and extending through said hollow shaft.

1,786,120. COOKING OUTFIT. THORNTON LEWIS LYMAN, Dartmouth, Mass. Filed Nov. 12, 1928. Serial No. 318,988. 1 Claim. (Cl. 219—19.)



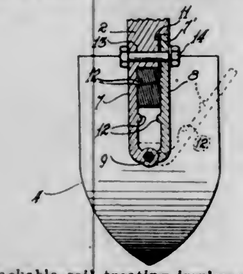
An apparatus of the class described including a casing, a door hingedly mounted on the casing, electric burners on the door, and means for closing a switch when the door is open and opening the switch when the door is closed, and individual switches for the burner, props for holding the door in a horizontal open position, said props being hingedly mounted to the door and having offset ends receivable in keepers on the bottom of the casing, braces pivotally engaged with the door and having pin and slot connections with the props, the door including an inner wall and an outer wall with sheets of heat insulating material secured to the inner surfaces thereof, a supplemental wall mounted on the inside of the door in spaced relation thereto for supporting the burner, and electrical conductors confined between the supplemental wall and the inner faces of the door.

1,786,121. CROSSHEAD. JOHN O. MCARTHUR, Casper, Wyo. Filed Feb. 9, 1927, Serial No. 166,886. Renewed May 13, 1930. 3 Claims. (Cl. 308—3.)



3. The combination with an adjustable crosshead having shoes formed from sections slidably mounted on crosshead guides, said shoe sections being detachably connected to crosshead plates, said crosshead plates being disposed in angularly shaped channels in the outer sides of the shoe sections, of liners disposed between the shoe sections, said liners being angularly shaped in vertical transverse cross section and having one of their flanges disposed in channels in registering the inner sides of the shoe sections, said angularly shaped liners being receivable in the angularly shaped channels in the outer sides of the shoe sections and held firmly in said shoe sections.

1,786,122. LOCOMOTIVE WHISTLE. CHARLES THORNTON MCELVANEY, JR., and EDWARD PAUL GOLDING, Dallas, Tex. Filed Apr. 28, 1930. Serial No. 447,872. 2 Claims. (Cl. 116—137.)

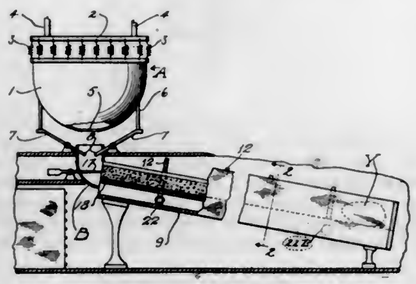


1. A locomotive whistle disposed on a locomotive at the front of the latter and over the smoke arch and protruding ahead of the locomotive; a substantially frustoconical reflector in association with the whistle, the whistle being mounted inside the reflector, both reflector and whistle being inclined downwardly toward the ground in front of the locomotive; said reflector having an opening at its rear end and an annular lip formed adjacent the opening, the opening and the lip formation permitting some of the sound waves to travel backwardly over the train when the whistle is sounded, the maximum amount of the sound waves being projected forward in front of the locomotive, due to the reflector.

1,786,123. NOVELTY CHAIR. WILLIAM B. MURPHY, Crandall, Tex. Filed Mar. 25, 1929. Serial No. 349,531. 1 Claim. (Cl. 40—63.)

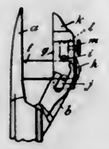
A chair having a curved back, mortised to form a vertical recess having dove-tailed walls, a glass block having its edges beveled to fit the said walls, and having its outer surface shaped to conform to the configuration of the back, a picture interposed between the said glass block and the recessed surface, and coacting means on said block and said recessed back respectively for holding the block in vertical position, said coacting means including a horizontal rib along the upper edge of the glass block serving as a stop, cooperating with a shoulder formed in the chair back.

1,786,124. DETACHABLE CULTIVATOR SWEEP. WILLIAM B. MURPHY, Crandall, Tex. Filed Dec. 26, 1929. Serial No. 416,525. 4 Claims. (Cl. 97—198.)



3. A detachable soil treating implement for connection to the standard of a cultivator, said implement including a lug on the rear side of its shank, said lug being tapered and provided with grooves; an element having downwardly-directed parts spaced from one another and grooves formed in spaced relation on the inner sides thereof; one of said parts being swingably-engaged with the other, whereby said lug on the implement and said lugs on the downwardly-directed parts are interlocked to connect the implement with the standard.

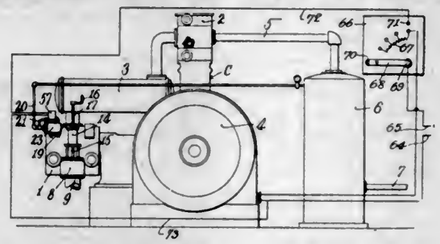
1,786,125. FUNGICIDE AND INSECTICIDE. WALTER C. O'KANE, Durham, N. H. Filed May 18, 1927. Serial No. 192,483. 7 Claims. (Cl. 167—16.)



6. A fungicide and insecticide consisting of a pyrethrum-impregnated hydrocarbon white oil carrying a colloidal copper material.

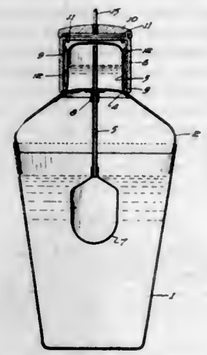
1,786,126. CHICKEN NEST. ALFRED E. PRARAT, Gridley, Calif. Filed Oct. 10, 1928. Serial No. 311,693. 5 Claims. (Cl. 119—48.)

1. A hen's nest having an opening in the bottom thereof, yielding means supporting said nest and permitting a downward movement thereof when the nest supports a hen, means actuated by the downward movement of said nest for temporarily closing the opening, and an inclined egg receiving member communicating with the opening, partitions carried by said egg receiving member for separating each egg from all other eggs, and electrically controlled means put into operation by an egg leaving the nest for successively dropping said partitions.



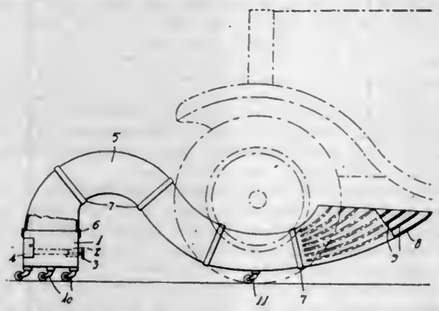
1,786,127. CROWN-SLITTING PLIERS. CHARLOS RADÓ, Budapest, Hungary. Filed July 11, 1927, Serial No. 204,991, and in Hungary Aug. 7, 1926. 1 Claim. (Cl. 32—10.)

In crown slitting pliers a pressure arm, a stripping knife fixed loosely on said pressure arm, a bar guide onto which said pressure arm is drawn, a supporting branch, said bar guide starting from said supporting branch and connected with the stripping knife, pivots projecting on both sides, and a groove in the pressure arm, said pivots projecting into said groove.



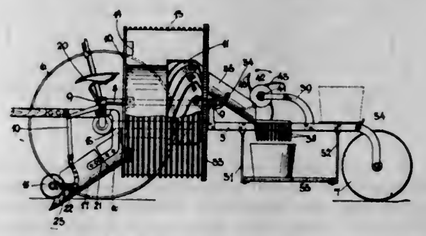
1,786,128. COMPRESSOR-CONTROLLING MECHANISM. JOHN W. SANFORD, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 17, 1928. Serial No. 262,520. 16 Claims. (Cl. 230—4.)

1. In an automatic compressor control system, an electric motor for driving the same, a pressure responsive pilot valve for controlling loading and unloading of said compressor during normal operation in response to variations in discharge pressure while the compressor is running continuously, a controlling device for said motor, and



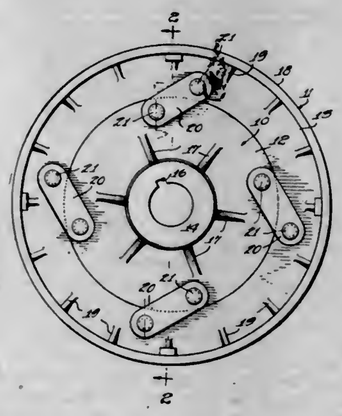
means controlled thereby for actuating said pilot valve to unloaded position and holding the same in such position until the motor reaches substantially normal operating speed.

1,786,129. LIQUID MIXING AND COOLING DEVICE. WILLIAM C. SANFORD, JR., Cerro De Pasco, Peru. Filed Jan. 28, 1930. Serial No. 423,989. 7 Claims. (Cl. 62—120.)



1. A liquid mixing and cooling device, comprising a cup-shaped vessel, a telescoping cover therefor including a sealed reservoir, a tube supported by said cover having an open end extending into said sealed reservoir and a lower end extending below the cover and terminating in a lower sealed reservoir, a heating device adjacent said upper reservoir, and a refrigerant adapted to circulate between the reservoirs.

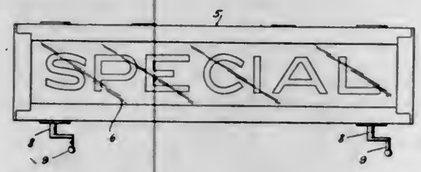
1,786,130. HEATER FOR AUTOMOBILE ENGINES. WALTER SCHOENFELD, St. Paul, Minn. Filed Dec. 17, 1928. Serial No. 326,612. 2 Claims. (Cl. 126—96.)



1. A heater for automobile engines comprising a movable source of heat, an upwardly-arched pipe connecting with the source of heat, an inversely, arched pipe forming a continuation of the firstnamed pipe for fitting beneath the axle of the automobile and having an open free end portion adapted to fit beneath the crank case of the automobile, and supporting means below said inversely-arched pipe acting as a fulcrum when the handle is lifted whereby to lower the open end of the secondnamed pipe to pass the same beneath the axle of the automobile.

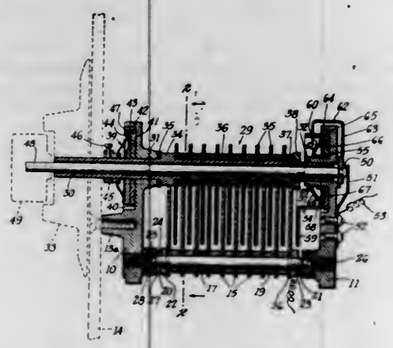
1,786,131. POTATO-HARVESTING MACHINE. WILHELM SCHULZE, Michigan City, Ind. Filed Apr. 27, 1928. Serial No. 273,250. 1 Claim. (Cl. 55—58.)

In a device of the class described, a chute consisting of a relatively stationary rear portion and an adjustable forepart, the latter being adapted to dig potatoes out of the ground, a revolving drum, spaced apart rings forming the circumference of the drum, a guide drum arranged in said first mentioned drum and revolving therewith, dividing plates extending from the guide drum to said rings and dividing the space between said rings and said drum into a plurality of compartments adapted to receive potatoes, means on said guide drum for guiding the potatoes out of said first drum, an inclined chute, a plurality of bars forming the bottom of said chute and extending longitudinally thereof, said chute being arranged to receive the potatoes from the revolving drum, a second revolving drum, a plurality of claws on said drum and adapted to reach from below between the bars forming the bottom of the inclined chute, a second inclined chute extending at right angles to the first mentioned chute, and a receptacle positioned underneath and at the end of said chute.



1,786,132. BRAKE DRUM. WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Apr. 5, 1928. Serial No. 267,653. 9 Claims. (Cl. 188—218.)

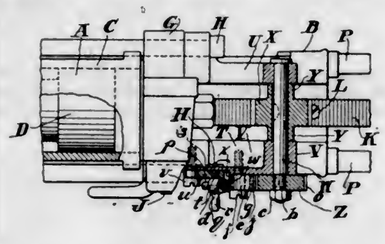
1. A device of the character described comprising a pair of concentric rotatable elements, one of said elements



being provided with a face adapted to be engaged by a friction element and adapted to partake of expansion and contraction independently of the other element, said elements being adapted to partake of limited relative rotation upon said expansion and contraction, and means for connecting said elements together to rotate as a unit.

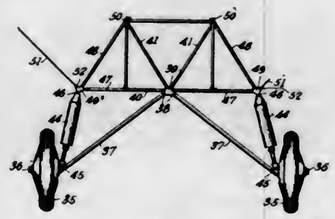
1,786,133. CHANGEABLE EXHIBITOR. CLARENCE SEFFENS and JOHN R. ROBINSON, Parkersburg, W. Va. Filed Aug. 7, 1928. Serial No. 298,009. 2 Claims. (Cl. 40—86.)

1. In a changeable exhibitor, a casing having an open front and including top and bottom walls, a transparent panel closing said open front, spacing strips secured to the top and bottom walls engaging the inner face of said transparent panel, a second transparent panel arranged in rear of the first mentioned panel and engaging said strips and terminating short of the ends of the first referred to panel, said strip and said panels defining a longitudinally extending guideway, illuminating elements arranged within said casing, vertically disposed rollers mounted for rotation within said casing adjacent the opposite ends of said casing, means for rotating said rollers, an exhibitor belt traversing said rollers, said belt being movable in said guideway and said belt having indicia characters formed thereon, said indicia characters being formed of transparent material.



1,786,134. ELECTRIC CONDENSER. LOUIS E. SHAW, East Orange, N. J., assignor, by mesne assignments, to Dejur-Amsco Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,269. 15 Claims. (Cl. 175—41.5.)

11. In an electric condenser, the combination of a frame, a hollow main shaft journalled at one end in said frame, a vernier shaft journalled in the bore of the main shaft and projecting therefrom beyond the frame, a vernier plate journalled on the frame, a U-arm secured by one of its legs to the projected end of the vernier shaft and connected by its other leg to the vernier to rotate the same and a spring bearing on the end of the vernier shaft to hold the same in place, said spring constituting an electric contact for conveying electric energy to the vernier plate.



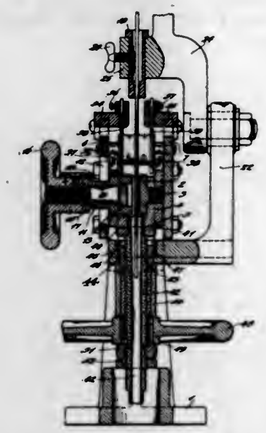
15. A variable air condenser comprising a rotor plate set, end supporting plates therefor, a stator plate set and means supporting the stator plate set on the end supporting plates, the said means consisting of a plurality of insulators carried by the end plates and carrying the stator plate set, the said end plates, stator plate set and insulators being provided with integral inter-engaging means effective for locking the stator plate set in supported position.

1,786,135. FEEDING DEVICE FOR PERCUSSIVE MOTORS. WILLIAM A. SMITH, Sr., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 11, 1930. Serial No. 434,958. 7 Claims. (Cl. 255—45.)

1. In a feeding device, the combination with a motor and a support whereon said motor is slidably mounted, a reciprocatory hammer piston in the motor imparting jars thereto tending to move the motor longitudinally of the support, of recoil resistance means operatively associated with the motor and the support and comprising a rack and a gear meshing with the rack, and stop means for controlling the direction of rotation of the gear to enable the motor to be advanced and retracted with respect to the support by the piston.

1,786,136. AIRPLANE. LLOYD STEARMAN, Wichita, Kans., assignor to The Stearman Aircraft Company, Inc., Wichita, Kans., a Corporation of Kansas. Filed May 6, 1929. Serial No. 360,766. 8 Claims. (Cl. 244—2.)

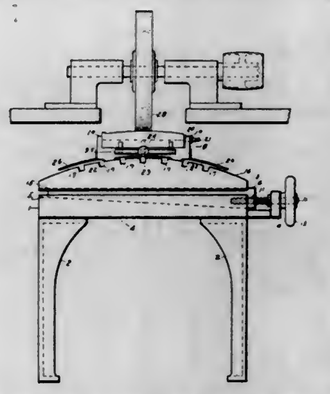
1. In aircraft construction, a frame, struts extending outwardly from the sides of the frame at the bottom portion of the same, braces angled to carry vertical and horizontal loads on said outstanding struts and extending from the outer ends of said struts to the frame, landing gear attached to said outstanding struts and including shock struts pivoted at their upper ends to said outstanding struts, braces connecting the lower ends of said shock struts with the central portion of the frame and internal trusses within the frame between said central portion of the frame and points where the braces of the outstanding structs are connected with the frame.



8. In aircraft, a fuselage frame, landing gear struts projecting substantially horizontally from the lower portion of said fuselage frame, angled braces extending from the outer ends of said horizontally projecting struts to the fuselage frame, wing braces anchored to the outer ends of said horizontally projecting struts and landing gear means connected with the outer ends of said horizontally projecting struts and with the lower central portion of the fuselage frame.

1,786,137. HOSE SUPPORTER. HENRY J. STUART, New Haven, Conn., assignor to The Bassett Metal Goods Company, Inc., Derby, Conn., a Corporation of Connecticut. Filed Nov. 5, 1929. Serial No. 404,894. 15 Claims. (Cl. 24—245.)

1. In a garter clasp having a button strap and a gripping loop to cooperate therewith, a button on said strap comprising a base-plate mounted on the strap, a post supported by said base-plate, and a resilient collet mounted around said post, said collet having a head portion, and a shank footing on said base plate, the bottom of said shank having a hollowed part to provide annular external walls of reduced mass at points which receive the embrace of said gripping loop, whereby the resiliency of the collet at the latter points is increased.

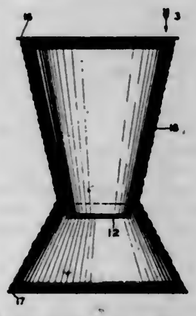


1,786,138. WIRE-TESTING MACHINE. CHARLES C. SUNDERLAND, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Sept. 17, 1928. Serial No. 306,525. 8 Claims. (Cl. 265—13.)

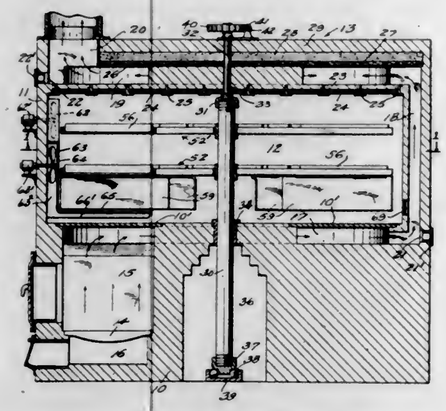
1. In a bending test machine and in combination, means for holding a specimen for test, means for bending said specimen, a bending mandrel, trunnions therefor, mounting members for said trunnions having inclined slots and means for adjusting said trunnions in said slots.

1,786,139. RAILWAY JOURNAL-WEDGE-GRINDING DEVICE. CHARLES TAGGART, Detroit, Mich. Filed Apr. 29, 1927. Serial No. 187,473. 8 Claims. (Cl. 51—231.)

1. A grinding device adapted for grinding curved surfaces on journal wedge blocks, to be used in combination with a grinding wheel, comprising a base block having suitable means for supporting same, a detachable base plate mounted thereon, said detachable base plate being provided with an upper curved surface, a carriage block slidably mounted upon the curved surface of the detachable base block and so designed as to allow free movement thereof in a direction parallel to the elements of the curved surface, means attached to the carriage block for guiding said carriage along the surface of the detachable base in various parallel paths thereon, said carriage block is designed to receive and retain a journal wedge block therein.

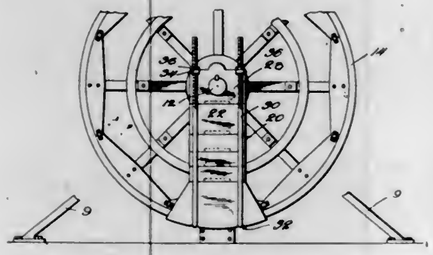


1,786,140. MILK-BOTTLE CAP. LILLIAN TOWY, Inglewood, Calif. Filed Nov. 7, 1928. Serial No. 317,753. 5 Claims. (Cl. 215—51.)



2. A milk bottle cap comprising a flat disc of paper or similar material weakened for folding purposes upon a transversely extending line, and a tab for removing the disc, said tab being formed integral with the disc and normally being disposed in the plane thereof, said tab being adapted to remain permanently connected to the disc adjacent said weakened line.

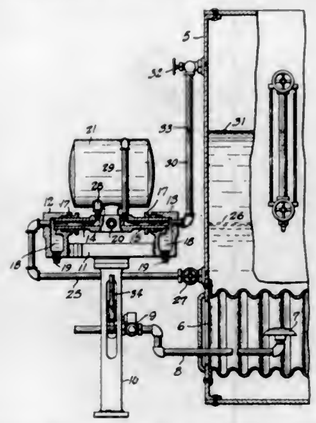
1,786,141. FLOWER BASKET. GEORGE L. WILSON, Alhambra, Calif. Filed May 9, 1928. Serial No. 276,382. 2 Claims. (Cl. 47—41.)



1. A flower vase comprising a frusto-conical sheet metal base and inverted frusto-conical sheet metal receptacle secured within the open top of said base and flaring upwards therefrom, and a woven wicker covering encasing and closely fitting said base and receptacle.

1,786,142. BAKING OVEN. CHARLES A. WYMAN, Auburn, Wash. Filed May 10, 1927. Serial No. 190,197. 5 Claims. (Cl. 107—60.)

1. In a baking oven of the character described, having a baking chamber, a furnace located below the chamber, a metal wall located above the furnace and serving to partition the latter from said chamber, a rotary shelf provided in the chamber and adapted to revolve about said wall, a horizontal baffle located between said wall and the rotary shelf, a fan located at one side of the chamber, a conduit extending from the space between said wall and the baffle to the fan, and means to drive the fan to effect the withdrawal of hot air from said space and its delivery diametrically of the chamber and above the shelf.



1,786,143. COUNTERBALANCE. CHARLES H. BERGQUIST, Okmulgee, Okla., assignor of one-half to Emery A. Locke, Okmulgee, Okla. Filed May 16, 1929. Serial No. 363,694. 6 Claims. (Cl. 74—71.)

1. In a counterbalance for use in connection with band wheel assemblies, an attaching block having means whereby the same may be secured in a relatively permanent manner to a band wheel shaft, a weighted body associated with said attaching block, a pair of U-shaped members having bight portions engaged with the outer portion of said weighter body and having arms at opposite sides of the body, and means associated with said arms to raise the body into pressure engagement with said attaching member and to lower the body to a position at rest beneath the attaching block.

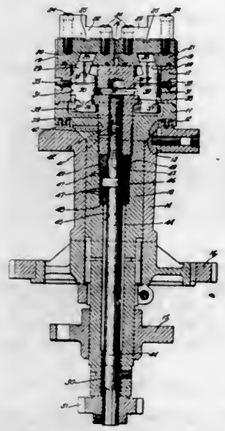
1,786,144. SAFETY DEVICE FOR BOILERS. WERNER BEUTEL, Bridgeport, Conn., assignor of one-half to Robert Bohm, Bridgeport, Conn. Filed Feb. 28, 1928. Serial No. 257,738. 11 Claims. (Cl. 122—505.)

2. In a safety device for steam boilers having a heating means, a tank mounted for movement located above the low water level and below the normal water level in the boiler, means for shifting said tank when it is empty, a connection from the lower part of the tank to the lower part of the boiler, a connection from the tank to the

boiler above the normal water level and extending between these points to the low water level, and means controlled by movement of said tank for controlling said heating means.

1,786,145. SUPPORT. BURWELL BOYKIN, Jr., Beaumont, Tex. Filed May 6, 1927. Serial No. 189,275. 1 Claim. (Cl. 189—16.)

A jack post including a steel body of H-beam construction adapted to stand at an angle from the vertical, a lower metal bracket including a plate to engage the upper side of a derrick sill, two upwardly extending arms transversely of said plate and adapted to straddle the central web of said H-beam, means to secure said arms to said web, a pair of downwardly extending connected plates on said bracket to engage the side of the derrick sill, a reenforcing web between said plates, and a bolt to connect said bracket to said sill.

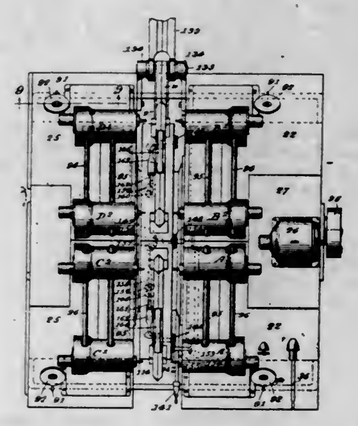


1,786,146. BASE TO HOLD NOZZLES AND SUPPLY PIPES. FRANK P. BUCKLEIN, Los Angeles, Calif. Filed Sept. 20, 1928. Serial No. 307,091. 1 Claim. (Cl. 299—105.)

In a bottle washing machine or the like, a plurality of nozzle bases rigidly secured to a supporting structure having hollow interiors, nozzles mounted on said bases and in communication with said interiors, one of said nozzle bases having a supply pipe supplying fluid to its interior, a distributing pipe detachably fastened to the sides of the nozzle bases, said distributing pipe being

in communication with the interior of the mentioned nozzle base to receive finid therefrom and convey it to the interior of the adjacent nozzle bases, whereby the distributing pipe may be detached from the nozzle bases, cleaned and replaced without disturbing the positions of the nozzles.

1,786,147. CHUCK. DUDLEY B. BULLARD, Southport, Conn., assignor to The Bullard Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 15, 1927. Serial No. 161,319. 3 Claims. (Cl. 279—121.)

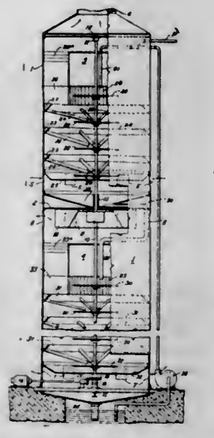


1. In a chucking device, a rotary work table, chuck jaws carried thereby, plungers having cam means connected to said jaws and adapted to have reciprocatory movement in parallel relation to the axis of rotation of said table, and actuating means engaging recesses in said plungers disposed coaxially to said table and adapted by movement in one or the other directions to impart opening and closing movements to said chuck jaws, said cam connection of jaws and plungers adapting them for reversed positioning in the table.

1,786,148. STATION-TYPE DRILLING AND TAPPING MACHINE. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 22, 1928. Serial No. 327,914. 32 Claims. (Cl. 29—38.)

1. In a machine of the class described, spaced apart frames, a rotatable work carrier mounted between the frames and having a series of work tables, means for indexing the carrier to move the work from one station to another for their respective operations, a series of tool heads arranged upon the front side of the machine on opposite sides of the carrier adapted for aligned drilling operations in opposite faces of the work, a series of tool heads arranged upon the rear side of the machine on opposite sides of the carrier adapted for aligned tapping

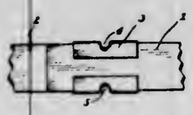
operations in opposite sides of the work when the latter has been moved from the front station to the rear, a drive shaft for each series of tool heads, a feed shaft



for each series of tool heads, and a variable speed feed works for each series of tool heads for providing variable speeds and feeds therefor.

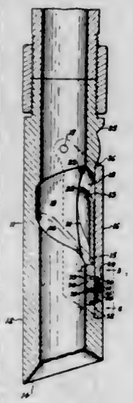
1,786,149. RECLAIMED RUBBER. CHARLES H. CAMPBELL, Pittsburgh, Pa., assignor, by mesne assignments, to Peter Cooper Corporations, Wilmington, Del., a Corporation of Delaware. Filed Aug. 9, 1929. Serial No. 384,806. 2 Claims. (Cl. 18—52.)

1. Reclaimed rubber obtained from rubber scrap by a devulcanizing process having a hydrolytic action, in which the rubber scrap from which the reclaimed rubber is obtained has been subjected to the action of cleavage products obtained from tanned leather during the process of devulcanization of the rubber scrap from which the reclaim is made.



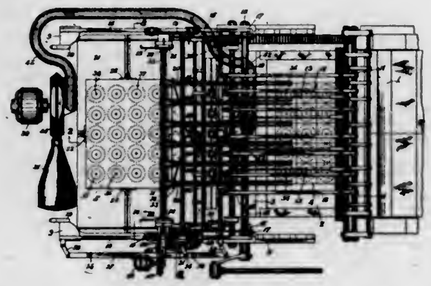
1,786,150. APPARATUS FOR PURIFYING GASES. SAMUEL C. CUTLER, Murray Hill, N. J. Filed Oct. 22, 1926. Serial No. 143,390. 7 Claims. (Cl. 261—89.)

1. A device of the character described, comprising, in combination, a casing, a partition dividing said casing



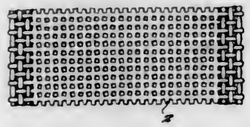
into two chambers, an air inlet and outlet for each of said chambers, a spraying device including a plurality of atomizing disks in each of said chambers, means for conducting fluid from the upper chamber to be atomized by the disks in the lower chamber, a sump in one of said chambers for collecting the sprayed liquid, and means for conducting liquid from said sump to the spraying device in said other chamber.

1,786,151. BOX-STRAP SEAL. OTIS L. DAVIS, Warren, Ohio, assignor to Brainard Steel Corporation, Warren, Ohio, a Corporation of Ohio. Filed Nov. 2, 1929. Serial No. 404,355. 3 Claims. (Cl. 24—23.)



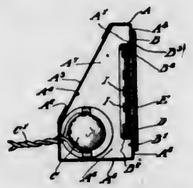
1. A strap seal comprising overlapped metal strap-ends and a sleeve embracing their edges, a portion of the edges of the straps being swaged inwardly to provide indentations therein and laterally displaced shoulders projecting from each side thereof, the portion of the sleeve adjacent to said swaged portions of said strap edges being deformed to conform with the contour thereof, whereby the said shoulders are positively interlocked with the deformed portion of the sleeve.

1,786,152. BAILING TOOL AND SAMPLE TAKER. JOSEPH F. DORNACHER, Massillon, Ohio. Filed June 23, 1928. Serial No. 287,666. 10 Claims. (Cl. 166—19.)



1. A tool for bailing and the like, including a tubular member having walls forming a continuous unobstructed passage-way from end to end thereof, there being an enlargement in the passage-way intermediate and spaced from the ends thereof, and a downwardly concave oval spoon shaped closure member pivotally mounted in the walls adjacent the enlargement for movement within the enlargement, the closure member being adapted to be swung to one position within the enlargement for entirely closing off the continuous passage-way and to another position within the enlargement permitting free passage of material being bailed along the passage-way.

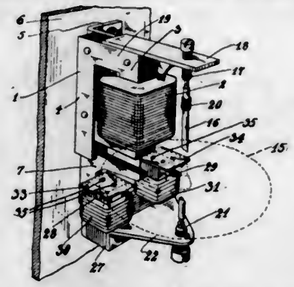
1,786,153. APPLIANCE FOR OPERATING UPON SHEETS. JAMES E. DOYLE, Cleveland, Ohio. Filed Aug. 25, 1927. Serial No. 215,362. 12 Claims. (Cl. 164—99.)



11. In combination, a cylinder, a platen, mechanism for causing a rolling contact therebetween, dies carried by the platen for severing a portion from a sheet, mechanism for conveying the sheet from said cylinder and suction means for removing the severed portion during its conveyance by said mechanism.

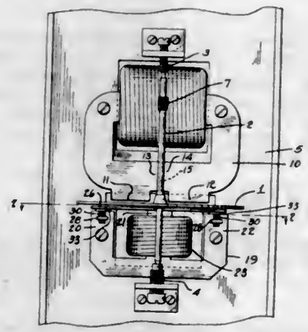
1,786,154. RADIOTUBE. WILBUR B. DRIVER, East Orange, N. J. Filed June 27, 1929. Serial No. 374,049. 2 Claims. (Cl. 250—27.5.)

2. A plate for a radio vacuum tube of wire mesh, the wires of said mesh in substantially the same plane, the surfaces of said mesh being smooth, the free edges of said wire mesh having a substantially solid metallic selvedge integral with the wires in the same plane as the wire mesh.



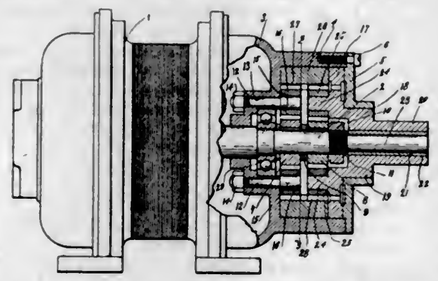
1,786,155. SIGN. PETER A. FARRELL. Brooklyn, N. Y. Filed May 6, 1929. Serial No. 360,623. 3 Claims. (Cl. 40—133.)

1. A sign comprising a translucent opalescent back plate, a sheet of thin colored gelatin, a translucent sheet of different color from that of said sheet of gelatin, and a front plate of transparent material, said translucent sheet having characters formed therein by removing a portion thereof, and means for holding said sheets firmly between said plates.



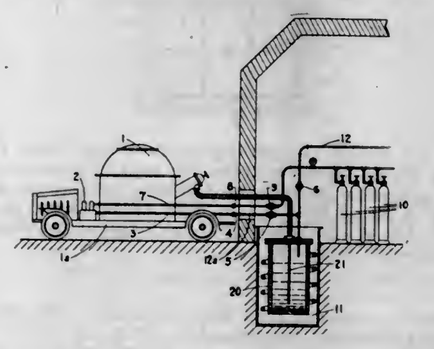
1,786,156. INDUCTION METER. HANS FRÖHLICH and WERNER ZINGG, Zug Switzerland, assignors to Landis & Gyr, A.-G., a Joint-Stock Company of Switzerland, Zug, Switzerland. Filed July 19, 1928, Serial No. 293,939, and in Switzerland Sept. 9, 1927. 3 Claims. (Cl. 171—264.)

1. An induction meter including in combination a meter disc, magnetic driving means therefor including pole enlarging devices comprising plates of magnetic material of greater area than the end face of the magnet pole pieces,



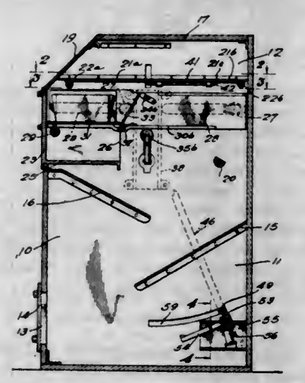
secured to and completely overlying the end faces of the pole pieces and extending beyond the outside edges of adjacent pole pieces and away from each other.

1,786,157. INDUCTION METER. HANS FRÖHLICH, Zug, Switzerland, assignor to Landis & Gyr., A.-G., a Joint-Stock Company of Switzerland, Zug, Switzerland. Filed Apr. 17, 1928, Serial No. 270,666, and in Switzerland Apr. 25, 1927. 3 Claims. (Cl. 171—264.)



1. An induction meter including in combination a meter disc, driving means therefor including pressure and current magnet and a shunt plate surrounding and spaced from one pole piece of the current magnet core and overlying and secured to another pole piece of the current magnet core, the pressure magnet being so positioned relative to the shunt plate that the plate forms a counter-pole for the pressure-magnet.

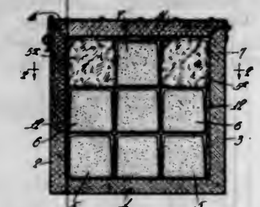
1,786,158. REDUCTION GEARING. CHARLIE L. HAWES, Ashtabula, Ohio. Filed Dec. 1, 1927. Serial No. 236,897. 4 Claims. (Cl. 74—34.)



1. A power transmission unit comprising a housing, a shaft journalled in said housing, pinions of unequal pitch diameters fixed on said shaft, a pinion mounted in said housing for rotation about a fixed axis and meshing with one of said shaft pinions, a disk provided with a cylindrical projection from one face thereof, said projection being journalled in said housing and upon said shaft, a pinion carried by said disk in mesh with the other of said shaft pinions, said disk and housing pinions having unequal pitch diameters and an internal annular gear having its periphery journalled in the internal surface of said housing in mesh with said fixed pinion and with said disk pinion, said disk having its peripheral portion located between said housing and said annular gear and maintaining said annular gear in longitudinal position in said housing.

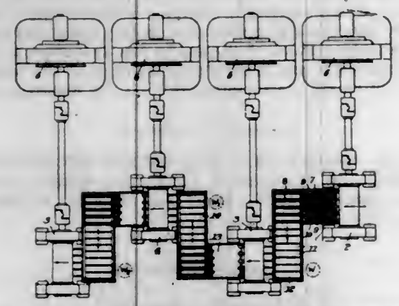
1,786,159. TRANSFERRING LIQUEFIED GASES. CHRISTIAN WILHELM PAUL HEYLANDT, Berlin-Lankwitz, Germany. Filed Feb. 9, 1929, Serial No. 338,653, and in Germany Feb. 16, 1928. 3 Claims. (Cl. 62—1.)

1. The process of supplying gases at a predetermined pressure, which consists in charging a closed vessel with liquefied gas, vaporizing the liquid in said vessel and causing the major portion of the gas to flow therefrom at the desired pressure, and mechanically drawing off the residue from said vessel and compressing it to the required pressure.



1,786,160. MONEY TRAY AND SAFETY RECEPTACLE THEREFOR. CHARLES T. JAMES, Los Angeles, Calif. Filed Apr. 24, 1929. Serial No. 357,870. 6 Claims. (Cl. 109—1.)

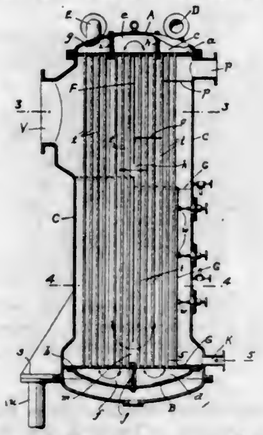
1. In a device of the character described, the combination of a safe receptacle having a chute for passage of articles thereinto; a slidable article retaining tray at the inlet of said chute, supports carrying rollers for said tray to ride upon, said tray being pivotally mounted so as to be disposable in article dumping position and to de-



liver articles to said chute, said supports being retractable to enable said tray to move to dumping position, said tray tending to swing to dumping position, a trigger mechanism to normally hold said supports with said tray in article retaining position and operable to enable retraction of said supports and release said tray whereby to dump the articles into said chute and thence into said receptacle.

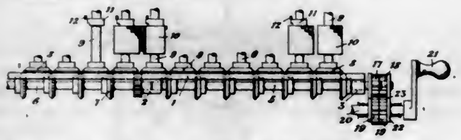
1,786,161. STORAGE AND TRANSPORTATION OF SOLID CARBON DIOXIDE. CHARLES L. JONES, Pittsburgh, Pa., and JOHN D. SMALL, Douglaston, N. Y., assignors to Dryice Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 6, 1929. Serial No. 353,238. 21 Claims. (Cl. 62—91.5.)

1. The method of protecting blocks of solid carbon dioxide which includes enclosing the same in a container and protecting the same by additional solid carbon dioxide in such a state of subdivision and so located that most of it will evaporate before the shapes of the blocks are seriously impaired.



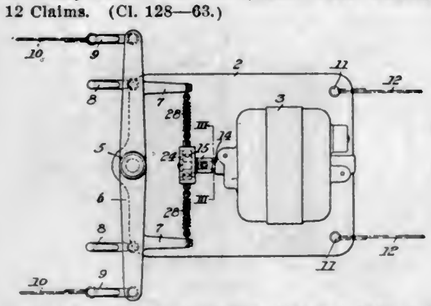
1,786,162. APPARATUS FOR ROLLING SHEETS. JULIAN KENNEDY, Pittsburgh, Pa. Filed Jan. 19, 1929. Serial No. 333,634. 7 Claims. (Cl. 29—17.)

7. Apparatus for rolling sheets comprising a plurality of stands, the stands being laterally offset relative to one another, and tables extending between the stands, a table comprising a portion lying at the exit side of a stand and extending in the direction of travel of material as it leaves such stand, and a second portion extending at substantially right angles thereto, said second portion terminating in a stop whereby the material may be squared, the tables being so positioned and arranged that a workman standing alongside a table may engage material thereon and feed it into a stand.



1,786,163. CONDENSER FOR MIXED VAPORS. GOTTDANK L. KOTHNY, Strafford, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 6, 1925. Serial No. 41,732. 11 Claims. (Cl. 257—223.)

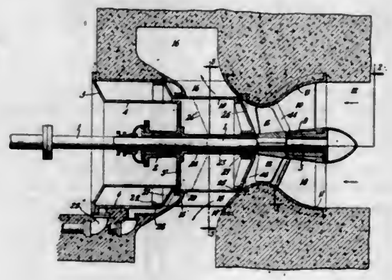
1. Apparatus for condensing a vapor mixture comprising a single shell, tube structure therein conducting cooling medium, vertically disposed baffle structure having a passage for condensate at its lower end and a passage for vapors intermediate its upper and lower ends, a vapor inlet on one side of said baffle structure, baffle structure disposed between said tube structure and said shell and



over whose upper end flows the condensate flowing through said first named passage, and an outlet through which condensate flowing over said second baffle structure is discharged.

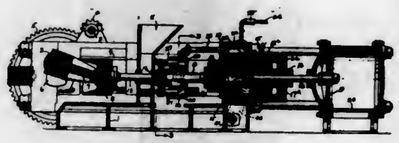
1,786,164. DRIVE FOR THE STEPPED DRUMS OF CALCULATING MACHINES. AUGUST KOTTMANN, Sommerda, Germany, assignor to the Firm Rheinische Metallwaaren und Maschinenfabrik Sömmerda Aktiengesellschaft, Sommerda, Germany. Filed Nov. 23, 1926, Serial No. 150,331, and in Germany Dec. 10, 1925. 4 Claims. (Cl. 235—81.)

3. In a calculating machine, the combination of a plurality of stepped drums, tens transfer mechanism for at least some of said drums, a rotatable drive shaft, and drive connections between said drive shaft and the drums for rotating the latter, the drive connections being in such phase relation to each other that each drum will lag the drums of lower denomination for so many tooth pitches as such last-mentioned drums contain tens transfer teeth.



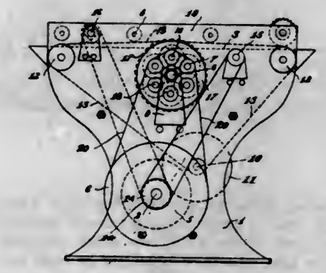
1,786,165. MECHANICAL EXERCISING DEVICE. HARRY E. MCCOY, Pittsburgh, Pa., assignor to McDowell Manufacturing Company, Millvale, Pa., a Corporation of Pennsylvania. Filed Feb. 8, 1929. Serial No. 338,415. 12 Claims. (Cl. 128—63.)

7. In a mechanical exercising device, a base, a lever mounted on the base for oscillation in a horizontal plane,



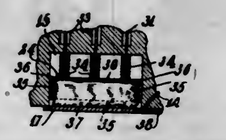
a power driven eccentric, an enclosing member in which the eccentric operates, and a flexible universal connection between said member and said lever for transmitting motion from the eccentric to the lever in a horizontal plane only.

1,786,166. HYDRAULIC TURBINE. LEWIS FERRY MOODY, Philadelphia, Pa. Original application filed June 28, 1918, Serial No. 242,391. Divided and this application filed Mar. 31, 1923. Serial No. 629,105. 40 Claims. (Cl. 253—154.)



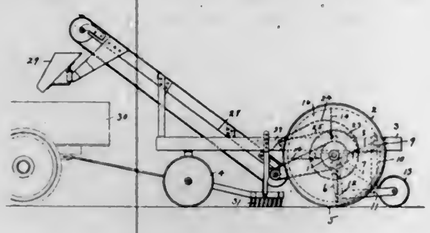
1. In a hydraulic turbine an axially directed contracting intake passage having vanes therein to impart a whirl to the entering flow, a runner coaxial with and in said passage receiving said flow and having a substantially axial discharge located at the smallest diameter of said passage, which contracts down to a point substantially adjacent said runner, and a spreading draft tube adapted to decelerate the runner discharge between inner and outer surfaces of revolution.

1,786,167. BRIQUETTING MACHINE. ALOIS K. NOWAK, Chicago, Ill., and RICHARD W. DINZL, Philadelphia, Pa., assignors to Alois K. Nowak, Chicago, Ill., and Frank H. Smith, Akron, Ohio. Filed Sept. 2, 1927. Serial No. 217,070. 7 Claims. (Cl. 25—56.)



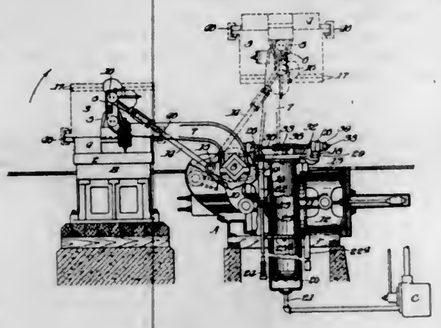
1. In a briquetting press, a supporting frame, an open ended tubular mold casing, a thrust receiving plunger extending into one end of the mold casing, a pressure applying plunger movable into and out of the opposite end of said mold casing, said mold casing and plungers being aligned axially and each mounted for axial movement in the frame, mechanical means for continuously reciprocating said pressure plunger with a stroke of predetermined length, actuating means operating in timed relation to the stroke of the pressure plunger to shift the mold casing from material receiving position in which it projects beyond the end of the thrust plunger to a position in which the thrust plunger extends through the casing to eject a molded briquette, and differential cushioning means for yieldably resisting movements of the mold casing and thrust plunger in the direction of the pressure stroke of the pressure plunger, said cushioning means permitting movement of the mold casing under an end thrust relatively light as compared to the end thrust required to move the thrust plunger, whereby the thrust plunger is advanced in the mold casing during compression of a briquette and the actuating means for the mold casing is protected against excessive stresses.

1,786,168. MULTIPLE-SAW WOODWORKING MACHINE. FREDERICK WILLIAM PATTON, Victoria, British Columbia, Canada. Filed Aug. 24, 1926. Serial No. 131,267. 1 Claim. (Cl. 143—47.)



In a multiple-saw wood-working device for the production of plaster-board the combination comprising, a framework carrying a horizontal saw table with a main shaft transversely below it, a double flange member secured to said shaft and carrying a plurality of bearings whose axes are parallel with and symmetrically disposed around the axis of said shaft sprockets on the periphery of one of said flanges and means for rotating said flange member by a driving chain engaging said sprockets, spindles secured to circular saws and revolvable in said bearings, belt pulleys secured to said spindles at each end thereof, a driving belt engaging simultaneously a plurality of adjacent pulleys, the said spindles being so disposed that the projected peripheries of saws on adjacent spindles intersect thereby producing an inter-spaced or break-joint effect in the disposition of the cuts made by the said saws in the plaster-board.

1,786,169. SAFETY PARACHUTE DEVICE FOR AEROPLANES. VINCENZO PELLEGRINO, Rye, N. Y. Filed Mar. 15, 1929. Serial No. 347,227. 4 Claims. (Cl. 244—21.)

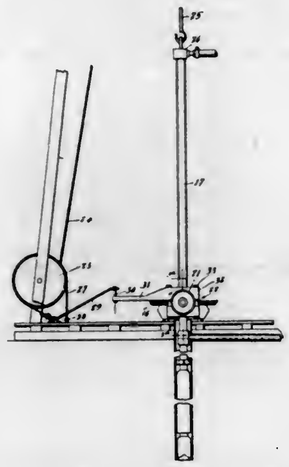


1. In an aeroplane, wings formed with parachute storage chambers, doors normally closing the chambers, latches for holding the doors closed, ejecting means within each chamber for ejecting a parachute automatically upon the opening of the door, and a means for disengaging the latches, said ejecting means consisting of platforms arranged to move within the chambers and urged outwardly by springs and arrested in fully extended positions by stop arms, and side members pivoted on the platforms and urged outwards by springs so as to assume positions in the same plane as the platforms in the extended position of the platforms.

1,786,170. STONE-GATHERING MACHINE. OTIS F. REITER, Baltimore, Md., assignor to The Farmers Stone Picking Machine Company, a Corporation of Maryland. Filed July 5, 1928, Serial No. 290,450. Renewed May 16, 1930. 2 Claims. (Cl. 55—17.)

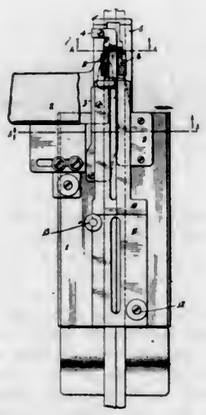
1. In a stone gatherer, a rotatable axle, a wheel on each end of said axle, a series of raker teeth operatively supported rearward of the axle, two disks mounted on said axle between said wheels, a plurality of bars each having its ends projecting through said disks, a cam mounted on one end of each of said bars and having a slot therein, a number of springs each having one end connected to one of said cam slots and their opposite ends secured to said disk, a series of lifting teeth carried by said bars and a series of conveyor bars upon which the lifting teeth discharge, said conveyor bars being downwardly inclined at their front ends to allow the stones to fall therefrom.

1,786,171. MOLDING MACHINE. ROBERT F. RINGLE, Zellenople, Pa. Filed May 29, 1929. Serial No. 366,864. 9 Claims. (Cl. 22—45.)



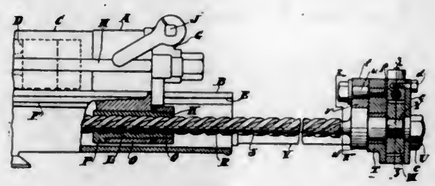
1. In a bumping machine, the combination of a flask support, means for raising and turning the flask support, and a flask supporting equalizing table having a pair of independently adjustable vertically cushioned supporting rails.

1,786,172. MERCURY DERIVATIVE OF TETRA-IODO-FLUORESCEIN. LOUIS M. ROEO, Worcester, Mass., assignor to Brewer & Company, Incorporated, Worcester, Mass. Filed Nov. 11, 1927. Serial No. 232,703. 2 Claims. (Cl. 260—13.)



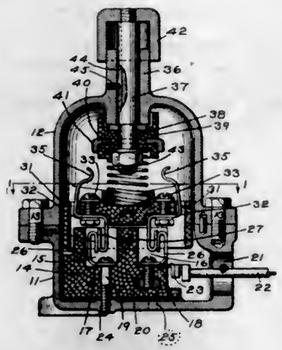
1. The herein described novel products having germicidal therapeutic properties comprising a neutral stable alkali-metal salt of the mono-mercury derivative of tetra-iodo-fluorescein without any excess of alkali.

1,786,173. DRILLING APPARATUS. CHARLES C. SCHARPENBERG, Bakersfield, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Apr. 17, 1926. Serial No. 102,623. 10 Claims. (Cl. 255—4.)



1. In hydraulic drilling apparatus, the combination of a drill stem carrying a drill bit, a motor operating to rotate said bit in one direction and rotate the drill stem in the other direction, and variable means for yieldingly resisting the rotation of the drill stem to regulate the rotation of the drill bit.

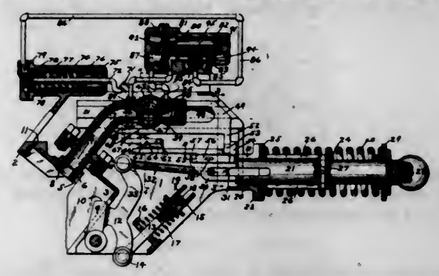
1,786,174. SEWING-MACHINE GUIDE FOR HOOK TAPE. DAVID SILBERMAN, New York, N. Y. Filed May 1, 1929. Serial No. 359,438. 3 Claims. (Cl. 112—136.)



1. A sewing machine guiding device for hook tape comprising a thin tongue over which the hook bills are adapted to ride to the sewing point and extending past the sewing point and a second, co-operating tongue above and partly overlying the hook tongue adapted to engage the rear ends of the hook bills to force them against the hook tongue.

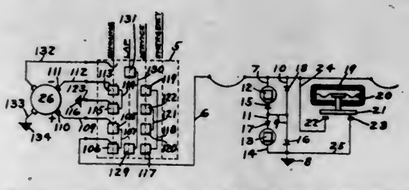
1,786,175. FEEDING DEVICE FOR PERCUSSIVE MOTORS. WILLIAM A. SMITH, Sr., Easton, Pa., and JOSEPH I. HULSHIZER, Stewartsville, N. J., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 30, 1930. Serial No. 424,617. 8 Claims. (Cl. 255—45.)

1. In a feeding device, the combination with a motor and a support whereon said motor is slidably mounted, a reciprocatory hammer piston in the motor imparting jars thereto tending to move the motor longitudinally of the support, of recoil resistance means operatively connected to the motor and the support and comprising a pair of members in threaded engagement with each other and one of which members is adapted to be rotated by the motor upon movement thereof on the support, and stop means for selectively controlling the direction of rotation of the rotatable member to enable the motor to be advanced and retracted with respect to the support by the piston.



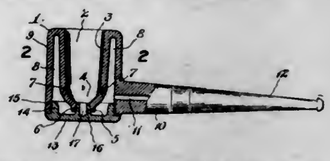
1,786,176. ELECTRIC-SWITCH DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 7, 1928. Serial No. 304,606. 1 Claim. (Cl. 200—51.)

An electric switch comprising a base, a pair of terminals mounted in said base, a contact member fixed to each terminal and projecting upwardly therefrom, a cap detachably bolted to the base, a pair of contact members mounted in the cap, each of said cap contact members having a depending limb for engaging with a base contact member when the cap is fixed to the base and an upwardly projecting limb, a plunger mounted in the cap and carrying a collar for electrically connecting the upstanding limbs of the cap contact members, and a spring mounted in the cap and bearing against the plunger to normally maintain said collar out of engagement with said upstanding limbs.



1,786,177. BRAKE-PIPE CUT-OFF VALVE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 7, 1928. Serial No. 304,608. 2 Claims. (Cl. 284—12.)

1. The combination with a train pipe coupling having a head provided with a train pipe passage, a valve rotatably mounted in the passage, means operated by a predetermined movement of the coupling head relative to the car

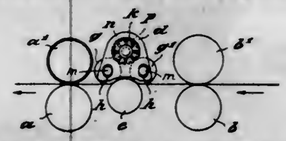


for rotating the valve to partially open the passage, and means actuated by the pressure of fluid flowing past the valve for rotating the valve to fully open the passage.

1,786,178. ELECTROPNEUMATIC BRAKE. THOMAS H. THOMAS, Edgewood, and JOHN N. GOOD, Wilmerding, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1929. Serial No. 341,603. 10 Claims. (Cl. 303—20.)

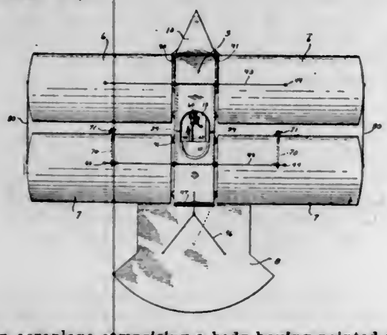
1. An electro-pneumatic brake having a single train wire, means for supplying either direct or alternating current to the train wire, magnet valve devices connected to said train wire and controlled according to the direction of current in said wire for controlling the service application and release of the brakes, and an electropneumatically actuated switch mechanism for short circuiting said magnet valve devices for effecting an emergency application of the brakes.

1,786,179. SMOKING PIPE. HERMAN J. TRENKAMP, Cleveland Heights, Ohio. Filed June 11, 1928. Serial No. 284,338. 4 Claims. (Cl. 131—12.)



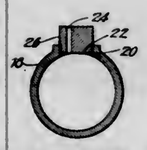
1. A smoking pipe fashioned with two spaced annular bowl-forming walls, the lower end of each wall defining a round opening, a stem communicating through the outer wall, said inner wall being fashioned with a plurality of draft ducts downwardly inclined in an outward direction to afford communication with the space between said walls and a single detachable closure including projections one of which is fitted within each of said wall-defined openings.

1,786,180. DRAWING FRAME WITH PASSAGES FOR USE ON SPINNING MACHINES. JOHANNES VON TAUMBACH, Dusseldorf-Oberkassel, Germany. Filed Mar. 2, 1929, Serial No. 344,086, and in Germany Aug. 23, 1928. 3 Claims. (Cl. 19—130.)



1. For use in a drawing apparatus for spinning machines, a nipper movably mounted above a drawing cylinder in-

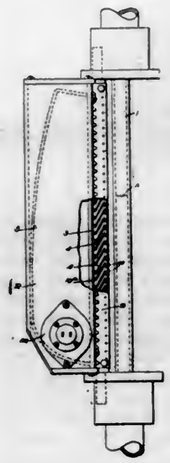
cluding a pressure jaw for bearing on the yarn said pressure jaw presenting pressure surfaces, for co-operating with said drawing cylinder, comprising freely mounted



rollers provided with frictional peripheral surfaces and interdriving means between said rollers, substantially as and for the purposes hereinbefore set forth.

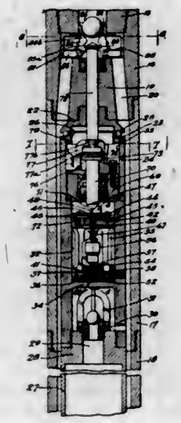
1,786,181. AEROPLANE. JERRY S. WALKER, Seminole, Okla., assignor of five forty-eighths to James B. Allen, one-twelfth to Claud A. Wilson, one-twelfth to Emmett C. Wilson, one-twelfth to Edd T. Mayes, one-twelfth to Edward C. Kelley, one twenty-fourth to Samuel S. Green, and one forty-eighth to Ted Morgan, Seminole, Okla. Filed Dec. 18, 1928. Serial No. 326,799. 8 Claims. (Cl. 244—12.)

1. An aeroplane comprising a body having pointed front and rear ends, sets of wings mounted in tandem to project laterally from opposite sides of the body, said wings being pivotally mounted to tilt about an axis transversely of the body, and a relatively large sustaining tail pivotally mounted above the rear end portion of the body.



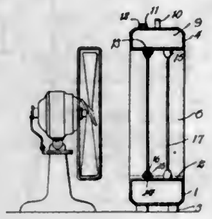
1,786,182. SOOT BLOWER. LOUIS C. WHITON, Jr., and JEP C. HARDIGG, New York, N. Y., assignors to Prat-Daniel Corporation, New York, N. Y., a Corporation of New York. Filed July 30, 1926. Serial No. 125,902. 2 Claims. (Cl. 257—1.)

1. The combination with a heat exchanger having a multiplicity of spaced cells, of a blower comprising a pipe having a number of substantially circular openings therein in approximately alignment with said cells, and adjustable nozzles journalled in said openings and having outlet ports eccentric thereto so that said ports can be accurately aligned with said cells by partially rotating the nozzles relatively to said pipe.



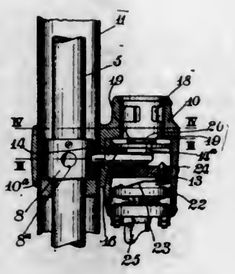
1,786,183. GAUGE-GLASS ILLUMINATOR. CLARENCE E. WILSON, Concord, Mass., assignor to National Company, Inc., Malden, Mass., a Corporation of Massachusetts. Filed Mar. 1, 1929. Serial No. 343,682. 11 Claims. (Cl. 240—2.)

1. A liquid column illuminator comprising a housing having an opening in one side facing a gauge glass containing the column of liquid, a source of light located within the housing adjacent to one end thereof, a parabolic reflector within and extending substantially the entire length of the housing, said reflector being shaped to



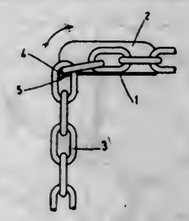
receive rays of light from said source of light and to reflect them at an angle toward and through said opening in the housing, thereby to strike the meniscus at the top of the column of liquid clearly to indicate the location of the meniscus with relation to the gauge glass.

1,786,184. INCLINOMETER. CLAY G. WOODMANSEE, Los Angeles, Calif., assignor of one-half to Lincoln Drilling Company, Los Angeles, Calif., a Corporation of California. Filed May 15, 1929. Serial No. 363,134. 7 Claims. (Cl. 33—205.)



1. An instrument for determining the direction of holes, comprising a cage, a compass having a normally free needle to indicate orientation, locking means to hold said needle in positon, a supporting frame mounted for longitudinal movement in said cage, an elongated pendulous body supported in said supporting frame and normally free at one end, an abutment in said cage for the free end of said body and arranged to be normally free of and to be engaged by the free end of said body upon movement of said supporting frame to engagement of said body with said abutment and thereby to hold said pendulous body in indicating position, and a connection between said abutment and said locking means to actuate the latter and to hold said needle in indicating position when said supporting frame is held in indicating positibn.

1,786,185. AIR COOLER. VIRGIL WRIGHT, Dallas, Tex. Filed Nov. 16, 1928. Serial No. 319,935. 5 Claims. (Cl. 261—103.)



1. An air cooler including upper and lower tanks provided at corresponding ends thereof with a double wall supporting said tanks in spaced relation and defining a passage for returning a liquid from a lower tank to the upper tank when the cooler is inverted, an air passage being defined between the tanks, and wicks extending between the tanks for conducting liquid from the upper tank to the lower tank whereby the wicks will be moistened for cooling air currents flowing about said wicks.

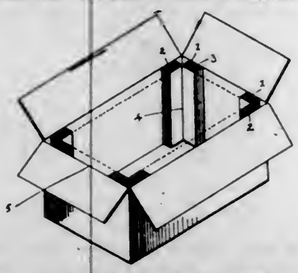
1,786,186. STEERING-SHAFT LOCK. FRED E. BAUERMEISTER, Columbus, Ohio. Filed Apr. 19, 1928. Serial No. 271,325. 2 Claims. (Cl. 70—127.)

1. Means for locking a steering shaft contained within the steering post of a motor vehicle comprising a lock case, a locking mechanism therein including a key thrown bolt, a block provided with a transverse perforation supporting the bolt, said bolt adapted to engage the steering post at its inner end to lock the same, means for clamping said case to the steering post, a firing circuit for said motor vehicle extending into said case, said circuit including a circuit closing spring carrying a pin, the latter extending through the perforation of the block to be directly actuated by the outer end of the bolt to move said spring to circuit closing position when the bolt is thrown from locking position.

1,786,187. ADJUSTABLE CLASP. DOLORES DE PLANDOLIT Y BORDAS, Barcelona, Spain. Filed Aug. 24, 1928, Serial No. 301,917, and in Spain Sept. 1, 1927. 1 Claim. (Cl. 24—116.)

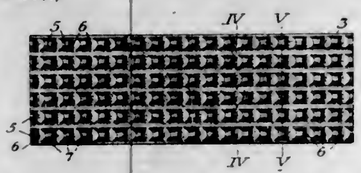
A clasp of the character described, comprising a flat bottom plate having a portion at one end thereof curved out of the plane of the remainder of the plate, said curved portion being provided with a centrally disposed slot, and a pair of side walls disposed at right angles to the flat portion of the bottom plate.

1,786,188. METHOD AND APPARATUS FOR STRETCHING FABRICS. ARNOLD BOSSHARD, Arbon, Switzerland, assignor to Sir James Farmer Norton & Company Limited, Lancashire, England, a British Company. Filed July 7, 1928, Serial No. 290,961, and in Germany Feb. 3, 1928. 6 Claims. (Cl. 26—63.)



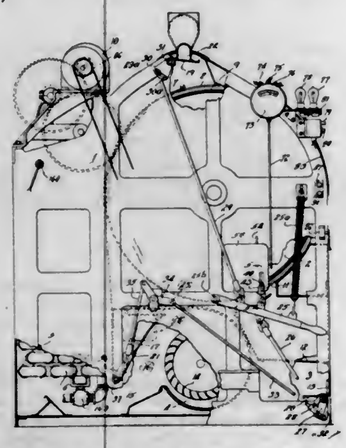
1. A breadth stretching device for fabrics comprising a curved axle, a plurality of roller segments of different diameters rotatively mounted on the axle for progressing a web of fabric forwardly while stretching it in breadth, the diameters of said segments increasing progressively toward the lateral edges of the web of fabric whereby the roller segments are adapted to progress the web forwardly with substantially equal velocity at all points along the roller, and means for rotating said segments together.

1,786,189. CORNER-CUSHION-PAD PACKING DEVICE. WILBER E. BOWERSOCK, Rochester, N. Y., assignor to Rochester Folding Box Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 15, 1928. Serial No. 319,516. 3 Claims. (Cl. 229—14.)



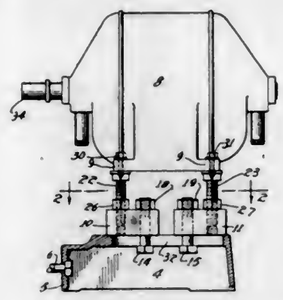
1. A packing device having two sections each consisting of a cushion pad made up of a series of layers of paper products, the sections being joined together by the top layer which extends across and is attached to both sections, said top layer acting as a hinge for the two sections, said packing device being adapted to be placed

in the corner of a box on the inside of the box with one section bearing against one side of the box and the other section bearing against the adjacent side of the box said sections being located between the top connecting layer and the box, said sections being placed on each



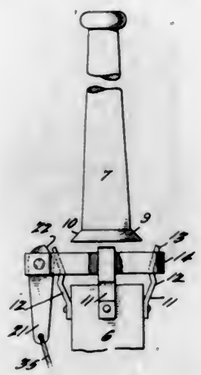
side of the corner line of the box with an air space between them, the device being interposed between the contents of the box and the corner of the box and being adapted to be inserted in the corner of the box after the contents of the box has been placed in the box.

1,786,190. FRICTION SURFACE. HERMAN F. BUSCH, Millvale, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1926. Serial No. 105,200. 5 Claims. (Cl. 130—307.)



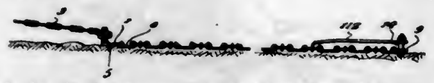
1. A compressed artificial cork body having a plurality of integral projections thereon forming an irregular frictional surface, the planes of compression of the cork granules being at an angle to the working surface at the top of the projections.

1,786,191. CONTROLLING MECHANISM FOR DRYING TUMBLERS. EMIL J. CARROLL, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Jan. 12, 1925. Serial No. 1,915. 18 Claims. (Cl. 34—5.)



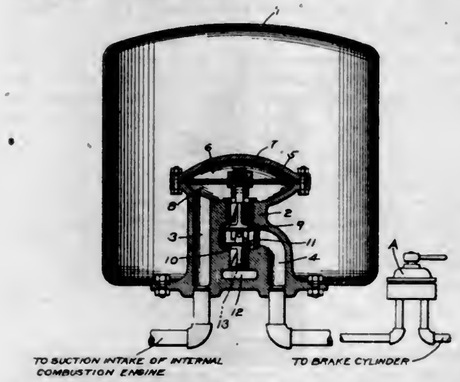
1. Apparatus of the character described comprising a chamber for the material to be treated, shiftable means enabling first hot air and then cold air to be passed over the material to be treated, and means sensitive to the temperature of said air current for first shifting said means at one temperature and producing a signal at another temperature of the air current.

1,786,192. SUPPORT FOR ELECTRIC MOTORS. OTTO CULLMAN, Chicago, Ill. Filed Oct. 15, 1928. Serial No. 312,569. 1 Claim. (Cl. 248—15.)



In a support for electric motors, a base having a table thereto and said table provided with slots, blocks on said table and bolts extending through said slots and blocks, nuts on said bolts, in combination with bolts extending into corresponding screw threaded holes in said blocks, nuts on said last named bolts, a motor casing mounted on the upper ends of said last named bolts, and additional bolts extending through apertures in the foot members of said motor casing and into corresponding screw threaded holes in the upper ends of said last named bolts.

1,786,193. AEROPLANE-CONTROL DEVICE. MCCLELLAN DAVIS, Portland, Oreg. Filed Sept. 4, 1928. Serial No. 303,783. 4 Claims. (Cl. 244—29.)

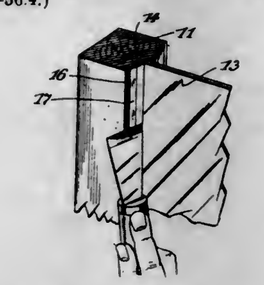


1. A dual control for aeroplanes, including connected joy sticks, one of said sticks being made in separable sections, clamping fingers carried by one of the sections and adapted to engage and interfit with the other section, said fingers being inherently tensioned to move to a positon to release such other section, a ring adapted for contraction and expansion, said ring encircling the fingers, and means whereby the ring may be constructed to move the fingers into clamping cooperation with the other stick section.

1,786,194. HARROW. DEAN D. DICKINSON, Ayr, N. Dak. Filed July 6, 1929. Serial No. 376,432. 2 Claims. (Cl. 55—32.)

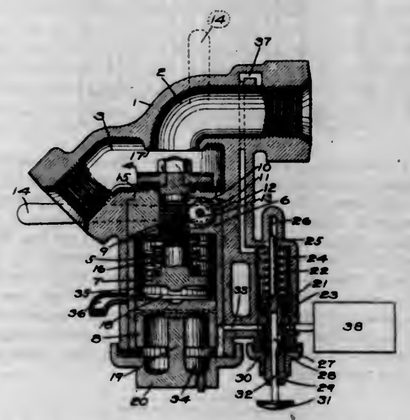
1. An implement of the character specified comprising front and rear bars, a flexible member between and connecting said bars and consisting of interlooped rings and links, bars rigidly connected at their front ends to certain elements of the flexible member and extending rearwardly over the flexible member and having loose connection at their rear ends with the said rear bar.

1,786,195. POWER BRAKING APPARATUS. JULES MARIE JOSEPH DORMOY, Paris, France, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 31, 1928, Serial No. 316,289, and in Great Britain Nov. 26, 1927. 4 Claims. (Cl. 303—31.)



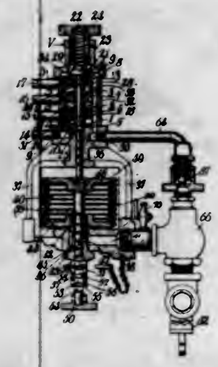
1. In a power braking apparatus, the combination with a vacuum source, of a reservoir communicating with said source, a brake supply pipe, and means subject to the opposing pressures of the reservoir and the vacuum source for controlling communication from said vacuum source and from said reservoir to said brake supply pipe.

1,786,196. METHOD AND APPARATUS FOR DETERMINING THE LOCATION OF WATER STRATA IN WELLS. GEORGE H. ENNIS, Long Beach, Calif., assignor of one-half to Robert V. Funk, Anaheim, Calif. Filed Jan. 9, 1926, Serial No. 80,160. Renewed Dec. 28, 1929. 10 Claims. (Cl. 234—1.5.)



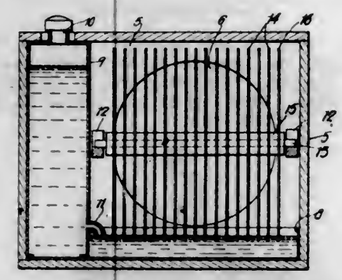
1. The method of locating water bearing strata in a well, comprising: disolving an ionizable chemical in the water in said well; lowering plates into said solution of a character to form a voltaic cell when disposed in said solution; moving said plates through said solution while held in spaced relation; and recording the potential difference between said plates during said movement.

1,786,197. FRAME. ALBERT ENTENMAN, Brooklyn, N. Y. Filed June 3, 1927. Serial No. 196,172. 1 Claim. (Cl. 20—56.4.)



A frame to receive and mount therein a transparent panel, the frame having an inside peripheral shoulder against which the panel rests and being provided with an inside peripheral groove adjoining the shoulder and situated between the shoulder and one face of the frame, the panel when in engagement with the shoulder projecting into one side of the groove with its edges spaced from the inner end of the groove, the frame also having an inwardly-extending bead between the groove and said face and forming the side of the groove adjacent the shoulder, the inner edge of said bead being bevelled all around the frame at such an angle that when a tool is laid against said edge it will make contact with the surface of the panel at a point which is flush with the inside of the frame so that the groove may be filled with a plastic retaining substance which can be worked into place by the tool so that said substance does not extend beyond the inside of the frame.

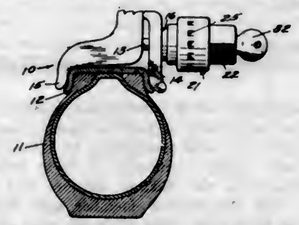
1,786,198. ANGLE-COCK DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 23, 1927. Serial No. 207,845. 8 Claims. (Cl. 303—86.)



1. A train pipe angle cock device having a conduit for the flow of fluid under pressure, means for controlling communication through said conduit, and means operable upon the operation of the first mentioned means for indicating visibly the degree of control of the communication through said conduit.

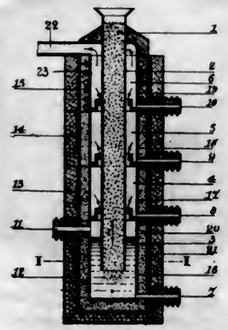
1,786,199. VALVE MECHANISM. ALEXANDER D. FERGUSON, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Original application filed Aug. 11, 1922, Serial No. 581,253. Divided and this application filed Mar. 26, 1926. Serial No. 97,711. 13 Claims. (Cl. 137—153.)

1. In combination, a source of pressure fluid provided with a pop valve, a plurality of coaxially disposed valve seats in common communication with said source, a separate discharge passage leading from each of said valve seats, a plurality of coaxially disposed valves cooperating with said seats to control flow of pressure fluid to said passages, and operating means for said several valves adapted to serially open the same including a pressure fluid motor actuated by fluid delivered from said source through said pop valve.



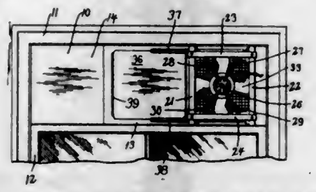
1,786,200. VENTILATING APPARATUS. CHARLES FERGUSON, Ellis Island, N. Y. Filed May 8, 1929. Serial No. 361,355. 1 Claim. (Cl. 183—24.)

In a ventilating apparatus of the character described, a housing having air passage at its opposite ends, a fan at one end thereof for driving air through the housing, a transversely extending shaft mounted for rotation in the housing, a series of absorbent discs mounted on the shaft in spaced relation, means for supplying water to the absorbent discs and a series of foraminous discs mounted on the shaft intermediate the absorbent discs and in spaced relation thereto, and foraminous discs constituting lateral supporting means for preventing excessive sagging or bending of the absorbent discs after the latter are saturated with water.



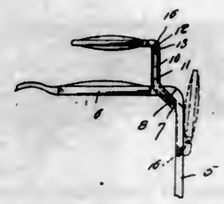
1,786,201. LOCKABLE BOLT NUT. ROBERT W. FISHBACK, Los Angeles, Calif. Filed Mar. 6, 1929. Serial No. 344,852. 8 Claims. (Cl. 70—122.)

1. A device of the nature disclosed, comprising: a nut member; an operating member, said members having companion clutch means and said operating member being freely rotatable on said nut member and adapted for



axial translation thereon to coengage said companion clutch means for unitary rotation of both members; and locking means for preventing such axial translation.

1,786,202. APPARATUS FOR HIGH-TEMPERATURE TREATMENT OF ORES AND OTHER SUBSTANCES. MARCEL FOURMENT, Paris, France. Filed Dec. 22, 1926, Serial No. 156,425, and in France Feb. 2, 1926. 3 Claims. (Cl. 266—1.5.)

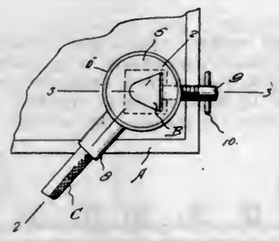


3. Apparatus suitable for volatilizing substances including metals of different boiling points, which comprises a vertical crucible divided into compartments by collecting parts carried on the inner walls of the crucible, located at different heights in the crucible, a substantially vertical feed pipe for introducing material to be treated, into the bottom part of said crucible, said feed pipe extending through the several compartments in said crucible, said crucible being surrounded by inductor windings, which windings are each substantially horizontal and are adapted to form part of a high frequency electric circuit.

1,786,203. VENTILATING DEVICE. ALFRED C. GILBERT, Hamden, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn. Filed July 5, 1928. Serial No. 290,499. 8 Claims. (Cl. 98—94.)

1. In a ventilator, a generally flat sheet metal body part having a ventilating opening therein, flat sheets of metal in surface to surface contact with the body part on the opposite faces thereof, one of said last-named sheets of metal forming an adjustable extension for the body part and the other of said sheets forming a damper for the ventilating opening, means for slidably mounting said sheets on the body part, a motor driven fan, and means for mounting said fan on the body part opposite the opening.

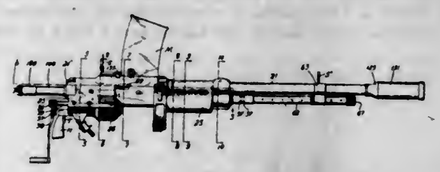
1,786,204. AUXILIARY LENS ATTACHMENT FOR EYEGLASSES. GUY GRAVITT, Lawrenceville, Ill. Filed June 2, 1927. Serial No. 196,066. 2 Claims. (Cl. 88—41.)



1. In a pair of eyeglasses having its glass frame hingedly connected to the side members thereof, a pivot pin for the hinges whereof, an angular rod formed integrally with said pin and having a head formed on one end thereof, a tubular link arranged upon the angular portion of said pin, an auxiliary lens frame having a yoke formed at one side thereof, means pivotally connecting said yoke upon said head, said auxiliary lens frame being adapted to move into or out of focusing position with respect to the lens of the eyeglass frame and means carried by the head engaging said yoke whereby to prevent the movement of the auxiliary lens frame beyond a position parallel with the eyeglass frame.

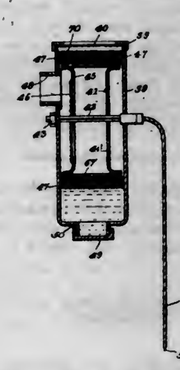
1,786,205. TRANSPARENT FILM. CLARENCE E. GREIDER, Lakewood, Ohio, assignor to National Carbon Co., Inc., a Corporation of New York. Filed July 2, 1928. Serial No. 290,047. 8 Claims. (Cl. 174—177.)

1. A light filter comprising a film of a polymerized vinyl compound and a reticulated member incorporated therein.



1,786,206. CABLE CONNECTION FOR BATTERIES. CHARLES P. HILL, Los Angeles, Calif. Filed Aug. 11, 1928. Serial No. 299,062. 2 Claims. (Cl. 173—259.)

1. In a battery terminal connector, wherein the battery is provided with a substantially triangular binding post, a block formed of soft metal having a complementary substantially triangular opening for the reception of the binding post, an annulus of comparatively hard metal enclosing the peripheral side of the block, means for frictionally coupling the post and block together, a threaded shank screwed through the annulus and into the block and extending laterally therefrom, and a cable coupling element threaded on the free end of the shank.



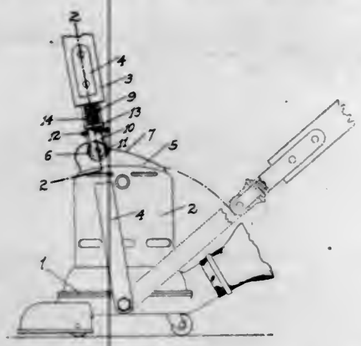
1,786,207. MACHINE GUN. ROBERT F. HUDSON, Richmond, Va., assignor, by mesne assignments, to Automatic Guns, Inc., a Corporation of Delaware. Filed Dec. 12, 1927. Serial No. 239,437. 13 Claims. (Cl. 89—2.)

1. A machine gun, including a receiver, a barrel, a breech block reciprocatingly mounted in the receiver, means for actuating the breech block, power-storing means for operating the actuating means, means actuated by the gases of explosion for setting the power-storing means, and a muzzle brake attached to the end of barrel and

acted upon by the emitting gases of explosion, whereby the combined action of the gases of explosion act upon the actuated means and the brake to reduce the recoil of the gun.

1,786,208. DUST SEPARATOR. ANDERS JORDAHL, New York, N. Y., assignor to American Air Filter Company, Inc., Louisville, Ky., a Corporation of Delaware. Original application filed Dec. 19, 1924, Serial No. 757,014. Divided and this application filed Nov. 8, 1927. Serial No. 231,952. 7 Claims. (Cl. 183—9.)

7. A dust separator for air and gases, comprising a casing adapted to contain a liquid in its lower portion and an inlet and an outlet for the air; rotatable filter elements mounted in said casing and adapted to pass through said liquid, said elements forming an air-tight joint with the end walls of said casing, and the gas being adapted to pass through the filter and the gas tight contact preventing leakage of gas around the filter; a ratchet and pawl mechanism for rotating said filter elements; and a screen for separating, from the gases which have passed through the filter, particles of the liquid carried in suspension with the gases.



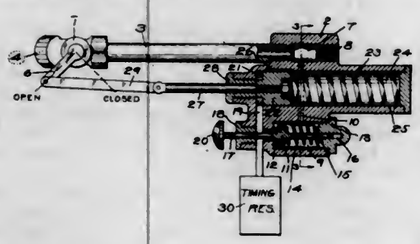
1,786,209. VEGETABLE ADHESIVE AND METHOD OF MAKING. IRVING F. LAUCKS and GLENN DAVIDSON, Seattle, Wash., assignors to I. F. Laucks, Inc., Seattle, Wash., a Corporation of Washington. Original application filed Oct. 29, 1923, Serial No. 671,381. Divided and this application filed Aug. 31, 1928. Serial No. 303,360. 12 Claims. (Cl. 87—17.)

1. An adhesive composition, which comprises the reaction products of a vegetable protein-containing meal, an alkaline medium and a small proportion of a zinc compound.

1,786,210. HANDLE LOCK FOR VACUUM SWEEPERS. DENNIS E. LESPERANCE, Oakland, Calif. Filed Mar. 1, 1930. Serial No. 432,423. 2 Claims. (Cl. 306—2.)

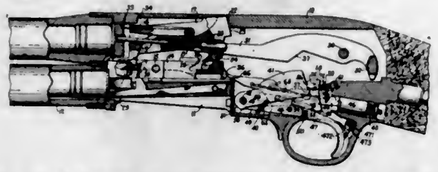
1. Catch means for a vacuum sweeper handle, said handle comprising a main bar, and fork straps depending

from the bar in straddling relation to and pivoted at their lower ends on the sweeper; said catch means including a cam mounted on the sweeper between the forks and below the lower end of the handlebar, and eccentric relative to the fork-pivots, said cam terminating at its end furthest from said pivots in a depression, a stem slidable in and depending from the lower end of the handle-bar, a head on the



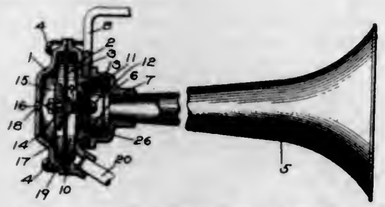
lower end of the stem, a bracket secured to the forks through which the head slidably but nonturnably projects, a roller carried by the head below the bracket to ride on the cam and seat in the depression, a spring on the stem between the head and handle-bar to force the stem and head downwardly, and means between the head and bracket limiting such movement of the head.

1,786,211. PRESSBOARD. GEORGE K. LEWIS, Chicago, Ill., assignor to Met-L-Wood Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1928. Serial No. 313,240. 10 Claims. (Cl. 11—1.)



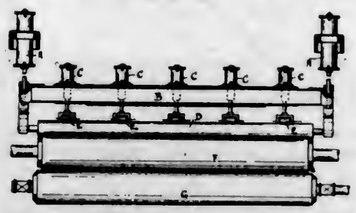
1. A press board made up of a plurality of laminations of fibrous material and metal, the metallic laminations being disposed to form the exterior surfaces of said board; and means including portions of said metallic laminations, providing a beaded construction along the marginal edge of said board.

1,786,212. ANGLE COCK. FREMONT P. LIVINGSTON, Denver, Colo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 25, 1927. Serial No. 201,358. 7 Claims. (Cl. 303—86.)



1. The combination with a valve controlling communication through a train pipe, of a piston operatively connected to said valve, a spring acting on said piston for normally operating said piston to hold said valve in its open position, and manually operable means for supplying fluid under pressure to said piston to shift said piston and said valve to its closed position.

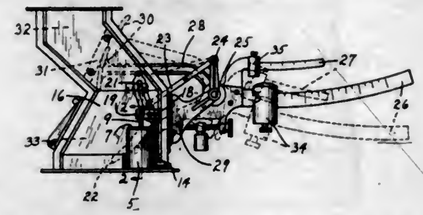
1,786,213. FIREARM. CRAWFORD C. LOOMIS, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Sept. 15, 1926, Serial No. 135,582. Renewed May 16, 1930. 10 Claims. (Cl. 42—16.)



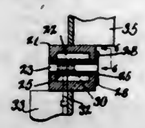
10. In a firearm, in combination, a hammer, a trigger provided with a forwardly extending nose adapted to engage said hammer, and a separate hammer controlling sear actuated by said trigger.

1,786,214. VACUUM-OPERATED HORN. JOSEPH C. MCCUNE, Edgewood, and STEPHEN JOHNSON, Jr., Pittsburgh, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 19, 1929. Serial No. 400,781. 7 Claims. (Cl. 116—138.)

1. A sound producer comprising a flexible diaphragm having a chamber at one side constantly open to the atmosphere, a partial vacuum source, manually operated means for connecting said source to said chamber, a horn, and a thin flexible valve operated by said diaphragm for controlling communication from said horn to said vacuum chamber.



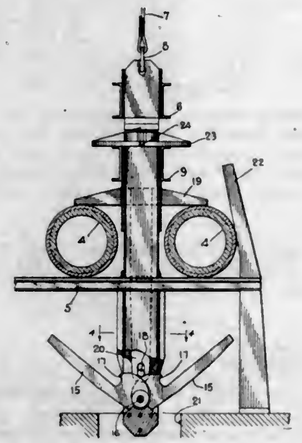
1,786,215. METHOD AND APPARATUS FOR MAKING SEAMLESS PIPES. ADOLFO MAZZA, Genoa, Italy, assignor, by mesne assignments, to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1924, Serial No. 749,556, and in Italy Sept. 10, 1923. 11 Claims. (Cl. 92—66.)



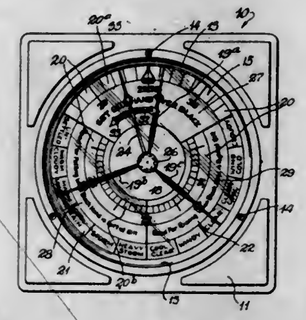
1. In a machine of the character described, the combination with a rotary pipe-forming cylinder, of a pressure cylinder cooperatively related thereto, means for supplying a plastic mixture to said pipe-forming cylinder, a hydraulic press for imparting pressure to said pressure-cylinder, and means under control of the pipe-forming operation for controlling the pressure of the fluid supplied to said hydraulic press.

1,786,216. COUNTERBALANCE STABILIZER. GLEN G. MERCHEN, Spokane, Wash. Filed Oct. 2, 1929. Serial No. 396,669. 3 Claims. (Cl. 249—2.)

1. The combination with a feed control device of a counterbalance stabilizer comprising a cylinder secured to the casing of the control device, a plunger slidably disposed within the cylinder, a plunger rod for the plunger slidably disposed through the top of the cylinder, an adjustable air valve for the cylinder, a horizontal arm fixed to the counterbalanced tray of the control device, and said plunger rod pivotally and slidably connected with said horizontal arm.



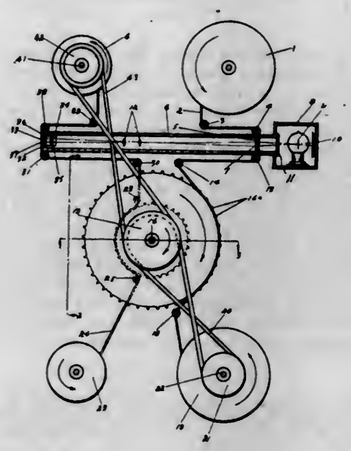
1,786,217. AEROPLANE. MÁTYÁS MORÁNSZKY, New York, N. Y. Filed Feb. 13, 1929. Serial No. 339,532. 1 Claim. (Cl. 170—162.)



A propeller comprising a central hollow block, a plurality of blades, shafts on said blades rotatably mounted in said block, the axes of said shafts lying in the general plane of rotation of the propeller but being out of alignment, a cylindrical member adapted to be secured to the main propeller shaft rotatably mounted in said block and having worm threads on its outer side, worm wheels on said first named shafts in engagement with said worm threads, a flange on said cylindrical member on the outer side of said block, a plurality of teeth in said flange, a pawl pivotally mounted on said block and adapted to engage said teeth, and means for holding said pawl in engagement with said teeth to prevent rotation of said cylindrical member in said block.

1,786,218. FLASK-HANDLING DEVICE. STEPHEN D. MOXLEY, Birmingham, Ala., assignor to Sand Spun Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 7, 1927. Serial No. 224,583. 14 Claims. (Cl. 214—1.)

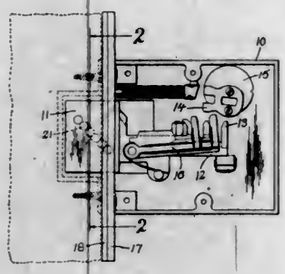
1. In mechanism of the class described, means for simultaneously lifting a plurality of flasks, said means pivotally mounted to rotate on a vertical axis, means to impart angular movement to said lifting means, and means to limit such movement to a selected arc, the angular movement imparting means including a cam for engaging the flasks supported by the supporting means.



1,786,219. BAROMETER. HERMAN NEUWIRTH, Brooklyn, N. Y. Filed Feb. 4, 1930. Serial No. 425,744. 6 Claims. (Cl. 73—4.)

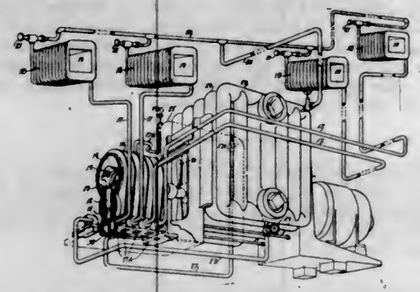
1. In an aneroid barometer, a dial having a calibrated scale and a plurality of sets of interpretive legends, and a three-handed pointer actuated by the barometer mechanism and having one hand for indicating the atmospheric pressure on the scale and hands co-operating respectively with each set of legends, as and for the purpose described and specified.

4. In an aneroid barometer, a dial having an atmospheric pressure scale, weather nomenclature relating to rising atmospheric pressure conditions, weather nomenclature relating to falling atmospheric pressure conditions, and a tri-hand pointer actuated by the barometer mechanism and comprising a hand for indicating a reading on said scale and hands for respectively indicating a reading on each of said nomenclatures.



1,786,220. OPTICAL PRINTER. FREEMAN H. OWENS, New York, N. Y., assignor to Owens Development Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1926. Serial No. 147,977. 4 Claims. (Cl. 88—24.)

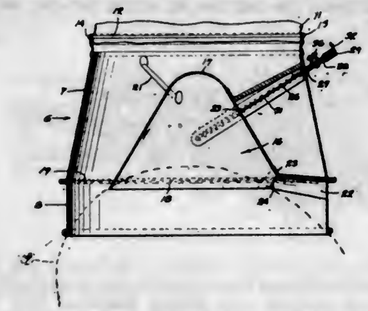
1. An optical printer comprising spaced parallel means for guiding strips of negative and positive film of dif-



ferent widths in spaced parallel relation, optical means for projecting images directly from said negative film to said positive film, a single rotatable shaft, and sprockets of different sizes on said shaft for moving said film strips synchronously.

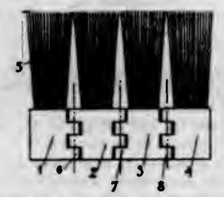
1,786,221. BURGLARPROOF KEY BOLT. CLAYTON L. PHILLIPS, Hamden, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Nov. 8, 1928. Serial No. 317,953. 8 Claims. (Cl. 70—16.)

1. In a lock, a bolt head having a pocket in an intermediate part thereof and a plurality of hardened resisting elements arranged in a row in said pocket, said elements being overlapped with respect to a transverse plane through the bolt head.



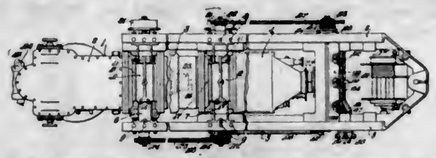
1,786,222. MULTIPLE REFRIGERATOR SYSTEM. THOMAS I. POTTER, Portland, Oreg. Filed Apr. 17, 1929. Serial No. 355,776. 2 Claims. (Cl. 62—115.)

1. In a refrigerating system the combination of a compressor comprising a plurality of pumping units, a condensing unit, a separating unit having an oil reservoir in the bottom thereof, an oil level balancing pipe connecting the bottom of said oil reservoir with the oil well of said compressor, a gas pressure balancing pipe between the upper portions of said compressor and condenser, a delivery pipe for warm compressed gas connecting the discharge side of all of said pumping units with the upper portion of the condenser, an expansion coil, a pipe for liquefied gas connecting said condenser with said expansion coil, a control valve interposed between said compressed gas pipe and the expansion coil, an evaporated gas pipe connecting the opposite end of said expansion coil to a separate pumping unit of said compressor, and means for dissipating heat from said condenser.



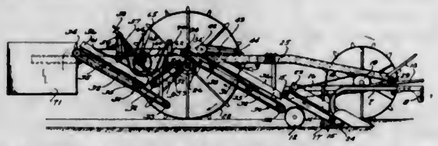
1,786,223. HAIR DRIER. ERNEST N. POTVIN, San Pedro, Calif. Filed July 15, 1929. Serial No. 378,470. 12 Claims. (Cl. 34—26.)

2. A device of the character described, comprising a tubular headpiece open at its lower end and adapted to be positioned upon a patient's head, means for coupling a source of fluid under pressure to said headpiece, a shield disposed within the headpiece to protect selected



portions of the patient's head from said fluid, said shield being adjustable to permit varying the effective area of said shield.

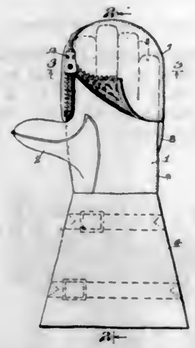
1,786,224. SHAVING BRUSH. MICHEL CHARLES BLONDIN, Meudon, France, assignor, by mesne assignments, to Old Colony Distributing Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 3, 1929, Serial No. 390,169, and in France Oct. 15, 1928. 6 Claims. (Cl. 15—203.)



1. A sectional, folding shaving brush comprising a plurality of substantially flat holders each surrounding a substantially flat group of bristles, said holders being hinged together along adjacent edges thereof, each holder being substantially rectangular in cross-section.

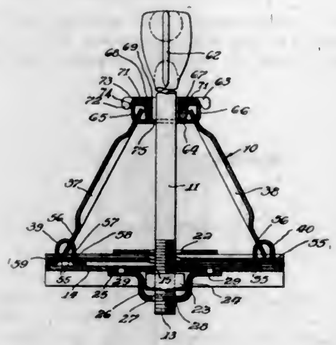
1,786,225. MINING MACHINE. CORNELIUS G. BOUDETTE, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 31, 1927. Serial No. 230,004. 56 Claims. (Cl. 262—28.)

2. In a mining machine, a machine body, cutting mechanism carried thereby, a motor in said body, adjustable front and rear supports for said body, and mechanism driven by said motor for adjusting said supports including a differential operatively connected to each support.



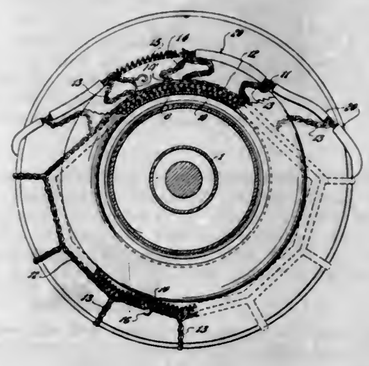
1,786,226. QUACK-GRASS DIGGER. EDGAR R. BRADLEY, Fargo, N. Dak. Filed Apr. 4, 1929. Serial No. 352,447. 10 Claims. (97—10.)

8. A machine of the class described having a plow, an elevator arranged to receive the earth from the plow,



front and rear elevating conveyors, means for snaking the conveyors, a retarding device cooperating with the front conveyor, a feeder between the two conveyors and arranged to receive materials from the front conveyor and deliver the same on to the rear conveyor, means for producing a pounding and raking action on the materials on the feeder, and means for driving the elevator, conveyors and feeder.

1,786,227. GLOVE. ALPHONSE J. BRUGGEMAN, Milwaukee, Wis., assignor to Fried-Osterman Company, Milwaukee, Wis. Filed June 5, 1929. Serial No. 368,598. 2 Claims. (Cl. 2—159.)



1. A glove including a body having finger stalls and a lateral thumb stall, a gauntlet connected to the body opposite the finger stalls, a pocket formed with a flexible tab having its end remote from the pocket connected to the connection between the body and gauntlet, said tab having a portion of one longitudinal edge secured to the body at one side thereof, said pocket having one side opened with means for detachably connecting the edges of the open side whereby the pocket can be positioned over the finger stalls or removed therefrom without withdrawing the fingers of the hand from the stalls, and adjustable means for retaining the pocket in a folded back position onto the gauntlet when not arranged over the finger stalls.

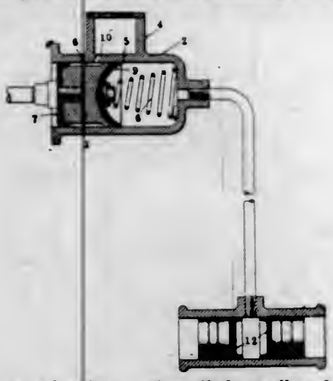
1,786,228. EARTH ANCHOR. ALBERT B. CHANCE, Centralia, Mo. Filed May 26, 1928. Serial No. 280,699. 14 Claims. (Cl. 189—82.)

1. In an expanding anchor the combination of a bottom plate with means carried by said plate for guiding an anchor fluke, a fluke slidably mounted upon said plate, a crosshead, and a link connecting said crosshead and fluke, said means comprising a housing extending over said fluke.

1,786,229. NONSKID TIRE CHAIN WHICH IS PERMANENTLY ATTACHED TO THE WHEELS. MATTHIAS W. CONROW, Springfield, Mass. Filed Apr. 30, 1929. Serial No. 359,228. 8 Claims. (Cl. 152—14.)

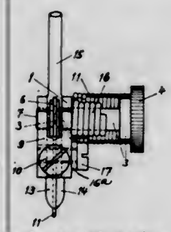
1. In combination, a device for the purpose described comprising an annular member having a throat opening; means for attaching the annular member to the inner side of a vehicle wheel, a non-skid tire chain designed for housing in the annular member, the outer side chain being divided into a plurality of sections, means for connecting the sections together when the said chain is in use, the inner side chain having a means for connecting the ends of this chain together, a coiled contractile spring located in the housing and attached to the inner side chain for automatically drawing the non-skid chain, as a whole, into the annular member, and means for preventing the entire length of the outer side chain from entering the housing.

1,786,230. CALENDAR. MELVIN H. DAVIS, Seattle, Wash. Filed Apr. 13, 1929. Serial No. 354,732. 3 Claims. (Cl. 40—119.)



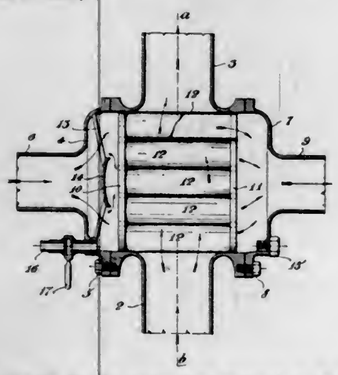
1. A calendar comprising a base provided with a score line substantially midway of its length, a series of monthly calendars arranged in book form secured to said base on one side of said score line, means for holding said calendar leaves in open position, said score line permitting of the base portion holding said calendars to be torn off and bent around said calendars to provide a closure for the calendar whereby it may be filed in book form for future reference.

1,786,231. HYDRAULIC BRAKE APPARATUS. BURNS DICK, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed July 11, 1928. Serial No. 291,724. 3 Claims. (Cl. 60—54.6.)



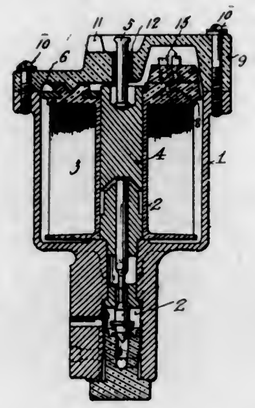
1. In apparatus of the class described, a liquid containing cylinder, a reciprocating piston operating therein, said

piston having a recess in its forward end, and a sealing cup of resilient material having its body portion in said recess and having a sealing rim extending in advance of



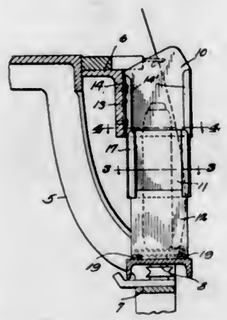
the piston and bearing on the cylinder wall and engaging the peripheral portion of the face of the forward end of the piston.

1,786,232. NEEDLE HOLDER FOR THE SOUND BOXES OF TALKING MACHINES. JAKOB EIGENHEER, Vogelsang, near Turgi, Switzerland. Filed Apr. 13, 1927, Serial No. 183,500, and in Germany May 17, 1926. 7 Claims. (Cl. 274—37.)



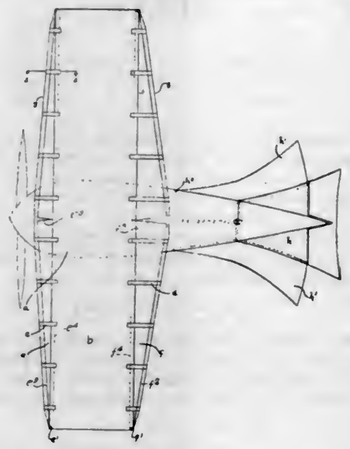
1. A needle holder for a stylus wire for the sound boxes of talking machines comprising in combination a casing; a stylus wire arranged on said casing, a hand operated feed roller rotatably mounted in said casing, a spring loaded disc for pressing the wire against the roller, said roller having a V-shaped groove to receive the wire, and said casing having an outlet groove for the wire.

1,786,233. HEATING APPARATUS FOR THE CARBURATED MIXTURE. GABRIEL FERRARA, Tres Arroyos, Argentina. Filed Aug. 23, 1929, Serial No. 388,019, and in Argentina Apr. 17, 1929. 2 Claims. (Cl. 257—236.)



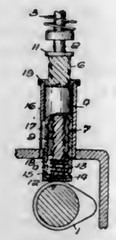
1. A heater for the carbureted mixture of internal combustion engines comprising a cylindrical casing, a pair of discs secured to said casing, a plurality of tubes extending parallel to the longitudinal axis of said casing and having their ends secured to said discs, two ports in said casing diametrically opposed to one another for the inlet and outlet of the combustion gases for heating said tubes, a cover fixed to one end of said casing having a tube shaped prolongation extending parallel to said tubes for the entry of the carburated mixture, arms secured to said cover, a plate supported by said arms disposed in front of said tube shaped prolongation against which the carburated mixture will strike and be diffused through said tubes, another cover fixed to the other end of said casing having a tube prolongation thereon through which the carburated mixture is conducted to the engine and means upon said casing through which said casing may be cleaned.

1,786,234. MAGNET-VALVE CONSTRUCTION. PARIS R. FORMAN, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Sept. 24, 1927. Serial No. 221,839. 5 Claims. (Cl. 137—139.)



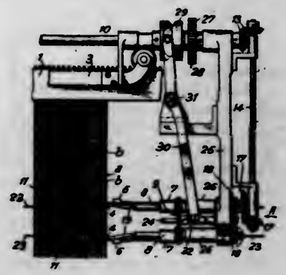
1. In a magnet valve construction the combination with a casing having a magnetically operated valve therein of a molded spool therein having a winding thereon and a molded cover for said casing having means thereon for cooperation with said spool for aligning said cover with said casing.

1,786,235. SEPARATOR FOR RING-SPINNING MACHINES. LEO GARIEPY, Woonsocket, R. I. Filed Apr. 30, 1930. Serial No. 448,664. 2 Claims. (Cl. 118—11.)



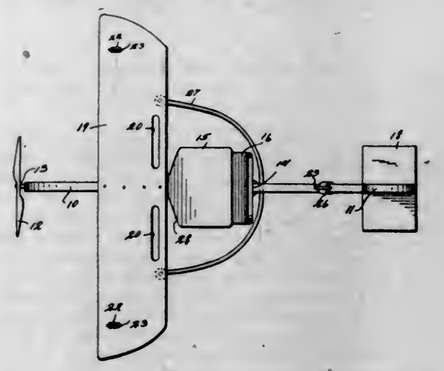
1. In a ring spinning frame, a stationary top rail, a vertically movable ring member, a spindle rail carrying spindles, and over which the ring rail moves, bobbins on the spindles, separators disposed on opposite sides of the bobbins, each of said separators comprising an upper section, an intermediate section and a lower section, said upper section and intermediate section having inwardly extended flanges at their sides providing guide rails for the adjacent lower section, means for restricting movement of one section with respect to its adjacent section, and means for securing the upper sections and lower sections to a spinning frame.

1,786,236. AIRCRAFT WING. JONATHAN P. GLASBY, Jr., Verona, N. J. Filed Nov. 17, 1925, Serial No. 69,570. Renewed June 28, 1929. 20 Claims. (Cl. 244—12.)



1. In a supporting surface for an aeroplane, a relatively stationary section, a forwardly disposed slidable section pivotally connected to the stationary section and rearwardly disposed slidable section pivotally connected to the stationary section, and means to move said sections with respect to the pivot to maintain the angle of incidence of the wing constant.

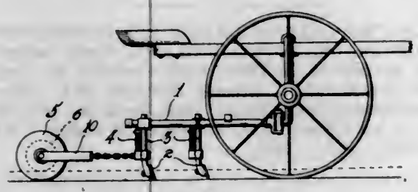
1,786,237. SELF-ADJUSTING TAPPET. REGINALD HAROLD HAMILTON, Christchurch, New Zealand. Filed Jan. 9, 1930, Serial No. 419,511, and in New Zealand Nov. 1, 1929. 7 Claims. (Cl. 123—90.)



1. A tappet comprising a sleeve reciprocable longitudinally between a driving and a driven part, an internal thread in said sleeve, an intermediate member having one end actable upon said driven part, said member being formed with an external thread received in said thread in the sleeve, an axial bore in said intermediate member having an internal thread formed in the opposite direction to that of aforesaid threads, a third member having an external thread received in said threaded bore, all of said threads being of sufficient coarseness to permit of said members being screwed one within the other in response to endwise impulses, a head upon said third member actable upon by said driving part and adapted under pressure of the latter to contact with the adjacent end of said sleeve, thereby to retain said threaded parts rigid, stop-means limiting aforesaid movement of said sleeve towards the driving part, and means tending to unscrew said third member from said intermediate member thereby to carry said head clear of the sleeve to permit of said threaded members re-adjusting themselves to the requirements of said driving and driven parts when said sleeve is in contact with said limiting stop.

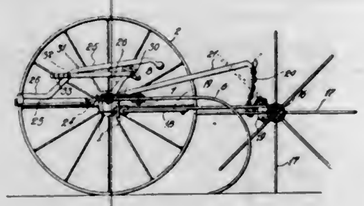
1,786,238. SEPARATING DEVICE FOR INTERCROSSING THREADS. WILLIBALD HAMMER, Uster, Switzerland, assignor to the Firm: Uster Factories for Apparatus and Machines, formerly Zellweger Ltd., Uster, Switzerland. Filed Mar. 27, 1929, Serial No. 350,324, and in Switzerland Mar. 28, 1928. 6 Claims. (Cl. 28—43.)

1. In a separating device for warp threads comprising, cylindrical separating spindles each having an eccentric part cooperating with a row of warp threads, a stop member on each of said separating spindles adapted to be longitudinally reciprocated on said eccentric part and means for controlling the movement of said stop members on said spindles.



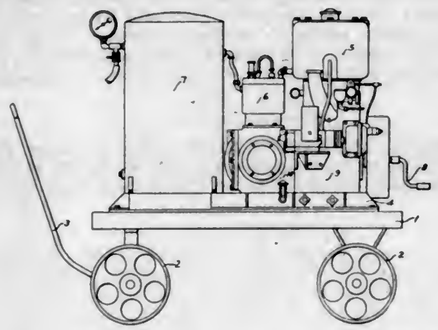
1,786,239. AIRPLANE SWING. FREDERICK C. HESTER, Jr., Leesburg, Fla. Filed Nov. 29, 1929. Serial No. 410,587. 2 Claims. (Cl. 155—60.)

1. A swing of the character described, comprising a body formed in the simultation of an airplane fuselage and having a propeller at its forward end, the body being cut away at its middle, a seat and back disposed at the middle of the body in this cut away portion, a plane mounted upon the body forward of the cut-away portion and extending laterally of the body, supporting members



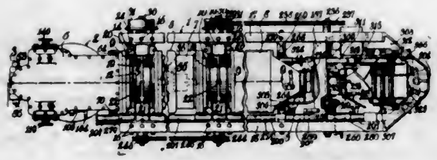
connected to the body and to spaced points upon the wing or plane, braces connecting the extremities of the wings with the body, said seat being cut away to permit the child to reach the braces with his feet, and a brace attached to the wing on each side of the seat and extending around back of the seat and through the body.

1,786,240. COTTON PACKER. ARTHUR HIGHTOWER, Frost, Tex. Filed Aug. 3, 1929. Serial No. 383,288. 1 Claim. (Cl. 97—7.)



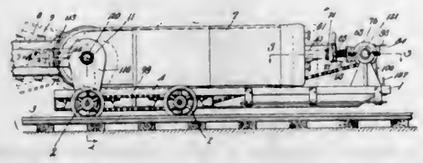
In combination with a cotton cultivator or the like having earth working implements arranged in groups adapted to engage the soil on opposite sides of a row of cotton, and a roller for repacking the loose earth after the passage of said earth working implements, said roller being of reduced diameter adjacent its center and tapering inwardly from adjacent its ends, and flexible chain members connecting each side of the roller to one of the earth working elements on the same side of the cotton row, whereby the roller will follow in the wake of the cultivator and conform to the crown of a row of soil containing cotton plants.

1,786,241. CROSS-ROW COTTON CHOPPER AND CULTIVATOR. ARTHUR HIGHTOWER, Frost, Tex. Filed Aug. 3, 1929. Serial No. 383,289. 2 Claims. (Cl. 97—23.)



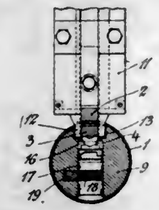
1. A cross-row cotton chopper and cultivator comprising an axle having a plurality of goose-neck blades rigidly attached to the axle; a channel bar disposed to the rear of connected to and parallel with said axle, said blades having a loose connection through said channel bar to afford a free vertical play of the blades; a walking beam carrying pointed rods, said beam disposed to the rear of the channel bar and having connection with said axle; said pointed rods normally projecting between said blades and adapted to pull and retrieve the vegetation dislodged by the blades from between the blades to retain the latter in clean cutting condition, said axle including a frame loosely connected to the front side thereof, a lever pivoted to the frame, a member rigidly connected to the axle and including notched jaws; an element connecting the lever to the member carrying the jaws; said lever when raised adapted to tilt the axle forwardly, thereby lifting the blades out of the soil; said element connecting the lever to the member carrying the jaws including spaced holes, the jaws and holes permitting adjustment of the lever and jaw member to set the blades at desired depth in the soil.

1,786,242. COMPRESSOR. EDWARD A. HOBART, Troy, Ohio, assignor to The Hobart Bros. Company, Troy, Ohio, a Corporation of Ohio. Filed Sept. 1, 1928. Serial No. 303,591. 5 Claims. (Cl. 230—56.)



1. In combination, an internal combustion engine, a compressor, means of connecting the crank shaft of the engine to the crank shaft of the compressor, including a spiral bevel gear and pinion respectively mounted on the crank shafts of said compressor and engine, the crank shaft of the engine being located at right angles to the crank shaft of the compressor and a common support for the engine and compressor.

1,786,243. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 2, 1925, Serial No. 6,477. Renewed Apr. 24, 1930. 153 Claims. (Cl. 262—28.)

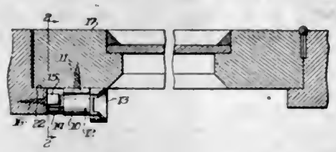


1. In a mining machine, in combination, supporting means, a motor having a casing rotatably mounted on said supporting means, cutting means carried by said motor casing, and means driven by said motor for elevating said casing relative to said supporting means.

1,786,244. MINING APPARATUS. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Sept. 30, 1926, Serial No. 138,660. Renewed Apr. 23, 1930. 52 Claims. (Cl. 262—29.)

1. In a mining apparatus, a wheeled truck frame, a cutter carrying frame supported thereon and movable relative thereto, kerf cutting mechanism including a pivoted cutter bar mounted on said frame and having a relatively fixed pivotal connection with said truck frame, and mechanism for moving said second frame relative to said truck frame to effect swinging movement of said cutter bar about its pivot relatively thereto.

1,786,245. METHOD AND MEANS FOR MANUFACTURING DRAINPIPES FROM VENEER. AMUND HÖNNINGSTAD and ARNE ARNESON, Forus, near Stavanger, and ALFRED NORHEIM, Hinna, near Stavanger, Norway. Filed Mar. 25, 1930, Serial No. 438,855, and in Norway Apr. 2, 1929. 4 Claims. (Cl. 144—259.)



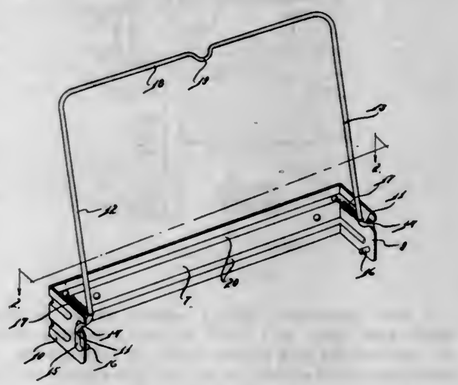
1. A method of making drain pipes from veneer, consisting in bending a sheet of veneer into a pipe, clamping the longitudinal edges of said sheet together between two laths, piercing said longitudinal edges on both sides of said laths, inserting through the holes thus pierced loops of wire and clamping the ends of said loops about said laths by intertwining their ends.

1,786,246. PROCESS FOR PURIFICATION OF HYDROCARBON OILS. EDWARD B. HUNN, Roselle, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 1, 1927. Serial No. 202,979. 8 Claims. (Cl. 196—33.)

2. The process of improving light hydrocarbon distillate, comprising treating the distillate with doctor solution, adding a low boiling alkyl disulfide, and separating the precipitate formed thereby from the distillate.

1,786,247. CASEMENT-WINDOW FASTENER. ALFRED J. JOHNSON, Chicago, Ill., assignor to Andrew Hoffman Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 20, 1928. Serial No. 248,026. 6 Claims. (Cl. 292—241.)

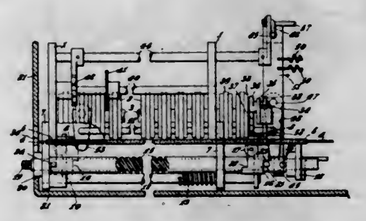
1. A casement window fastener, comprising a strike which is elongated in the direction of movement of the window and is adapted to be mounted on the frame surrounding the window, and a head which is adapted to be pivotally mounted on the window with its axis nearer one end of the strike than the other when the window is closed, said head having an axially offset cam portion which will cooperate with one end of the strike to draw the window closed and assume a dead-center position with respect to the strike and having another axially offset cam portion which will cooperate with the other end of the strike to pry the window open.



1,786,248. PRODUCTION OF NEUTRAL FATS AND OILS. OTTO JORDAN, Ludwigshafen-on-the-Rhine, and GEORG KRAEMER, Heidelberg, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 18, 1929, Serial No. 348,122, and in Germany Apr. 5, 1928. 9 Claims. (Cl. 87—12.)

1. The process for the production of neutral fats and oils which comprises acting with an alkylene oxide on a material selected from the group of fats and oils containing free acids.

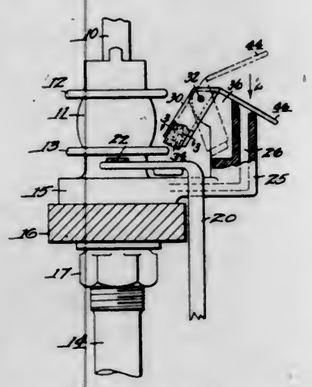
1,786,249. CLEANING COMPOSITION. LESTER KIRSCHBRAUN, Leonia, N. J., assignor to Frank L. Belknap, Chicago, Ill. Filed Feb. 9, 1920, Serial No. 357,204. Renewed Nov. 21, 1927. 4 Claims. (Cl. 87—5.)



2. A homogenized cleaning composition consisting of a volatile hydrocarbon dispersed in a water vehicle with a water soluble saponaceous emulsifying agent to form a substantially permanent emulsion, the hydrocarbon forming the dispersed phase and the water and emulsifying agent the continuous phase, said composition capable of having a viscosity which will allow same to be extruded from a tube and possessing the characteristics of having been homogenized under a pressure.

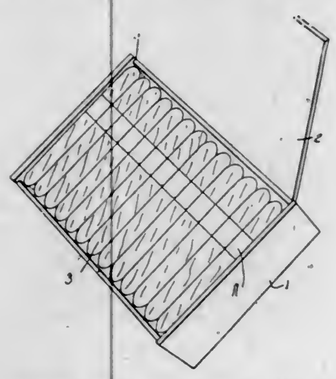
1,786,250. PAPER HOLDER. HILARY G. KNOTH, Detroit, Mich. Filed Sept. 23, 1929. Serial No. 394,508. 4 Claims. (Cl. 24—66.)

1. A paper holder of the class described comprising a supporting member having a main body; angularly turned ends projected outwardly from said main body and extending in parallel spaced relation, each of said ends having notches formed in its outer edge adjacent the upper end thereof and each of said ends having an opening formed therein; a U shaped retaining member having the ends of its legs angularly turned to engage in the said notches, the ends of said angularly turned portions of said legs projecting through said openings and pivotally mounting said retaining member on said supporting member.



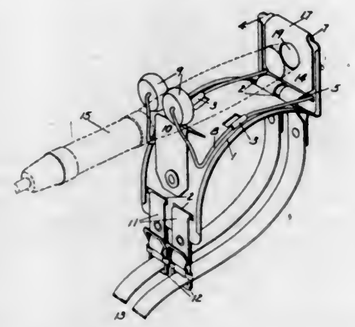
1,786,251. CONTROL DEVICE OF CURRENCY-STAMPING MACHINES HAVING COUNTING MECHANISM. ULRICH KOHLER, Bern, Switzerland, assignor to Hasler A.-G., vormals Telegraphenwerk-Statte Von G. Hasler, Bern, Switzerland, a Corporation of Switzerland. Filed June 7, 1929, Serial No. 369,183, and in Switzerland Aug. 9, 1928. 6 Claims. (Cl. 101—93.)

1. In a machine of the character described, the combination with a counter comprising rotatable number type discs, of a registration-card holder that is movable into two end positions in its own plane transverse to the axial



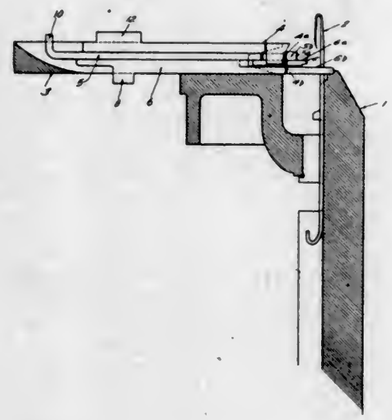
direction of the counter, a device for pressing the card against the discs in each of its two end positions at the commencement and end of a counting period, means for moving said pressing device along said card holder so that said card holder is automatically moved into the end positions of said pressing device whereby the numbers of the counter are printed over one another upon the card.

1,786,252. BEARING SUPPORT FOR SPINNING OR TWISTING SPINDLES. GEORGE H. MAGRATH, Whitinsville, Mass. Filed Oct. 2, 1929. Serial No. 396,812. 3 Claims. (Cl. 118—8.)



1. The combination with a spindle having a driving whirl with upper and lower flanges, a bearing support for said spindle and a knee brake for said spindle, of a retaining device pivoted on said bearing support to swing about a horizontal axis and extending downward and inward to a point above and adjacent an upper rotating surface of said spindle, said device having a friction member normally positioned to be engaged by said upper surface of said spindle whirl and to thereby limit upward movement of said spindle by said knee brake, said point of horizontal pivotal support being located substantially above said rotating surface and outside of but adjacent the periphery of said whirl.

1,786,253. DISPLAY DEVICE. AUGUST MAYER, New York, N. Y., assignor to Adartcraft, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 18, 1929. Serial No. 407,949. 5 Claims. (Cl. 40—7.)

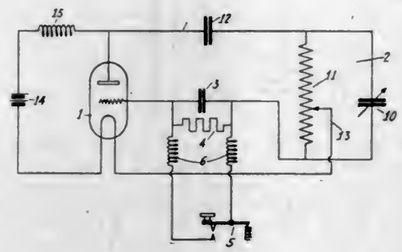


1. A display device comprising a cigar box, an embossing representing a row of cigars, a supporting member to which said embossing is secured, and flanges formed on said supporting member, said flanges being adapted to engage the bottom of the box to retain said embossing in the position normally occupied by the top row of cigars in the box.

1,786,254. FISH-ROD HOLDER. WILLIAM H. MEEHAN, Springfield, Mass. Filed Mar. 12, 1929. Serial No. 346,298. 8 Claims. (Cl. 248—37.)

1. The combination, in a fish-rod holder, of a plate adapted to be placed against some part of a person's body, and having an angularly arranged support which is perforated to receive a rod, rolls, a spring extending across the top and down the sides of said support, passing forwardly over said plate, extending therefrom upwardly to terminate in axial supports for said rolls, means to secure said spring to said first-named support, means to secure said spring to said plate, and means to fasten said plate to said body part.

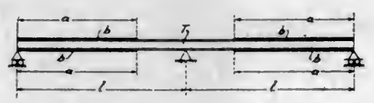
1,786,255. KNITTING MACHINE. MAX C. MILLER, Cumberland, R. I. Filed Nov. 25, 1925. Serial No. 71,316. 17 Claims. (Cl. 66—102.)



1. In a knitting machine the combination with the needles of independently movable webholders and sinkers arranged to cause the thread engaging surfaces of the sinkers and webholders to overlap at right angles to the direction of movement.

1,786,256. BUTTER COLORING. KARL J. MONRAD, Little Falls, N. Y., assignor to Chr. Hansen's Laboratory, Inc., Little Falls, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 183,622. 2 Claims. (Cl. 99—11.)

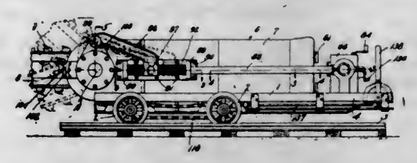
1. The method of lightening the color of an orange colored butter by mixing therewith a soluble green coloring matter which neutralizes the red component of the orange color.



2. Butter containing an added oil-soluble green coloring matter which lightens the color of the butter by neutralizing the red component of the orange color of the butter to make the butter appear paler.

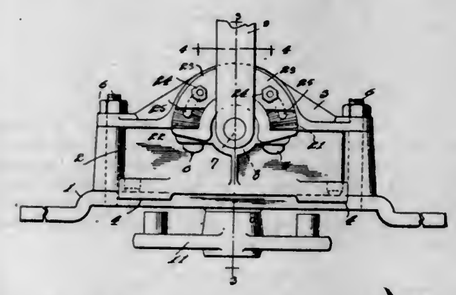
1,786,257. KEY-OPERATING ARRANGEMENT FOR SHORT-WAVE TUBE TRANSMITTERS. WILHELM MOSER and ERICH TOD, Berlin, Germany, assignors to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Aug. 18, 1925, Serial No. 51,002, and in Germany Sept. 4, 1924. 2 Claims. (Cl. 250—19.)

1. In combination, a three-element electron discharge tube having a control electrode condenser to enable the control electrode to accumulate a bias; a leak across said condenser; means comprising a tuned circuit connected to the anode and control electrode of the tube for causing said tube to produce oscillations; and means for short-circuiting said leak consisting solely of a key and a pair of choke coils.



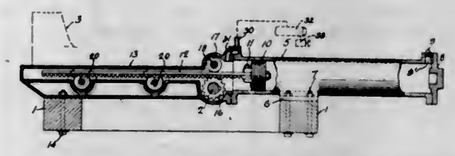
1,786,258. TURNTABLE. THEODORUS WILLEM MUNDT, Bilthoven, Netherlands. Filed Apr. 22, 1929, Serial No. 357,300, and in Germany June 16, 1927. 3 Claims. (Cl. 104—35.)

1. In a turntable, a pair of continuous girders of substantially uniform cross-section suitably interconnected, central and end supports, reinforcing plates for said girders extending from said end supports short of the center support in order to provide rigidity of the girders against bending forces for the entire length of said plates, while permitting bending between the inner ends of said plates.



1,786,259. MINING APPARATUS. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 9, 1926. Serial No. 140,579. 30 Claims. (Cl. 262—28.)

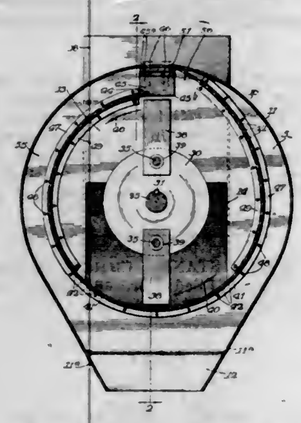
1. In a mining apparatus, a wheeled truck adapted to run along a mine trackway, cutting mechanism mounted thereon including a pivoted kerf cutter, a driving motor on said truck having its axis extending longitudinally of the apparatus, said cutting mechanism being driven from one end of said motor, constantly operative means connected to said kerf cutter and driven from the opposite end of said motor for swinging positively said kerf cutter about its pivot in opposite directions, said bar swinging means including a reciprocable element movable bodily in



one direction relative to said motor to effect swinging of said kerf cutter in one direction and movable bodily in the opposite direction relative to said motor to effect swinging of said kerf cutter in the opposite direction, and mechanism for propelling the apparatus bodily along the mine trackway in opposite directions to effect opposite rectilinear movements of said kerf cutter at a cutting speed.

1,786,260. SWITCH STAND. CHARLES H. PARTINGTON, Cincinnati, Ohio. Filed Apr. 16, 1930. Serial No. 444,798. 9 Claims. (Cl. 246—404.)

1. A switch stand comprising target and switch actuating mechanism including concentric shafts, an operating lever rigidly connected to one of said shafts, and means adjustably connecting the operating lever to the other shaft.

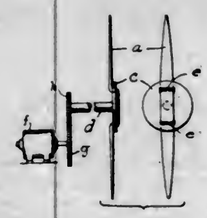


1,786,261. RECEDING MECHANISM. GEORGE M. PELTON, Milwaukee, Wis., assignor to The Filer & Stowell Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 28, 1928. Serial No. 281,170. 6 Claims. (Cl. 143—118.)

1. A receding mechanism for a knee of a sawmill carriage of the type wherein a set shaft is geared to the knee and turned in one direction for advancing the same and comprising a cylinder fixed to the sawmill carriage and having one end open, a piston operating in the cylinder, a rack fixed to the piston and projecting through the open end of the cylinder, a combined rack housing and pressure chamber connected to and communicating with the cylinder, and traversed by a portion of the set shaft, said housing extending and having a closed end beyond

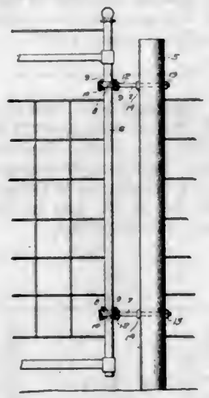
the end of the rack, a pinion fixed to the portion of the set shaft located in the combined rack housing and pressure chamber and meshed with the rack to turn the set shaft reversely when the piston is moved under the influence of fluid pressure in the combined rack housing and pressure chamber and in the communicating end of the cylinder, and means for maintaining fluid pressure to the combined rack housing and pressure chamber.

1,786,262. GRINDER. CARL POPPELMAN, Racine, Wis. Filed May 27, 1927. Serial No. 194,597. 12 Claims. (Cl. 83—11.)



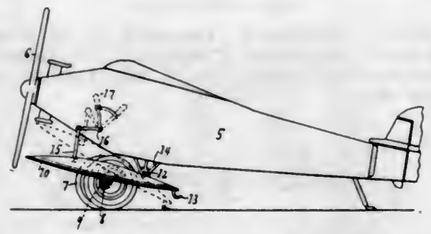
1. The combination in a grinder of rotary grinding means and a spiral wall surrounding said grinding means and provided with perforations throughout its annular extent, the ends of said spiral wall being spaced apart radially of the grinder, a break bar mounted between said spaced ends, and a casing forming a receiving chamber around said perforated wall.

1,786,263. HARDENING PARAFFIN, WAXES, AND THE LIKE. WILHELM PUNGS, Ludwigshafen-on-the-Rhine, and MICHAEL JAHRSTORFER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Dec. 22, 1927, Serial No. 242,010, and in Germany Dec. 23, 1926. 8 Claims. (Cl. 87—19.)



1. A composition of matter comprising a material having physical properties similar to those of beeswax, and up to 10 per cent by weight thereof of oxidation-bleached Montan wax.

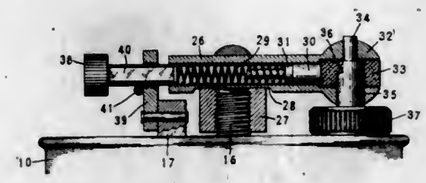
1,786,264. ENERGY-TRANSMISSION MEANS. SYLVANUS A. REED, New York, N. Y. Filed Oct. 14, 1927. Serial No. 226,232. 8 Claims. (Cl. 181—0.5.)



5. In combination, a power operated non-interrupting transmitter for producing, in a material medium, compression waves of super-audition pitch; and a distantly removed receiving apparatus capable of doing external mechanical work, said receiving apparatus being mechanically responsive to said wave train and receiving therefrom the energy necessary to the mechanical working thereof.

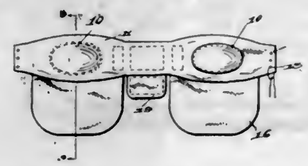
1,786,265. GATE BOLT. GEORGE J. ROSCH, Marcus, Iowa. Filed Mar. 14, 1929. Serial No. 347,052. 2 Claims. (Cl. 16—171.)

1. A device of the character described, comprising a threaded shank of a length to traverse a gate post, which shank terminates in a curved head and a loose part pivoted to said head which, complementally with said head, provides means adapted to embrace the vertical frame member of the gate, means for holding said loose part in embracing position and a gate carried part riding upon the upper face of said device in the movement of the gate and serving to hold the gate against downward movement therethrough.



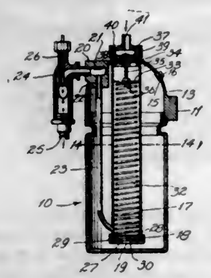
1,786,266. STABILIZING DEVICE FOR AEROPLANES. EDWARD G. SCHLEICHER, Mount Vernon, N. Y. Filed Sept. 18, 1929. Serial No. 393,396. 2 Claims. (Cl. 244—29.)

1. In a stabilizing device for aeroplanes the combination with a wing arranged under the forward portion of a fuselage, a landing gear having an axle connected to the wing, of means secured behind the axle for swingingly mounting the wing, the weight of the landing gear gravitating the forward portion of the wing downward, and devices arranged at the forward portion of the wing for limiting the upward and downward oscillation of the wing.



1,786,267. LIGHTER. SAMUEL SEGAL, New York, N. Y., assignor to Segal Automatic Tweezer Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1927. Serial No. 222,280. 11 Claims. (Cl. 67—7.1.)

11. A lighter including a case formed with a wick opening, spark producing means mounted on said case in operative relationship to said opening, an adjusting screw forming a part of said latter means, a snuffer cap for said wick opening, a lever pivotally mounting said cap upon

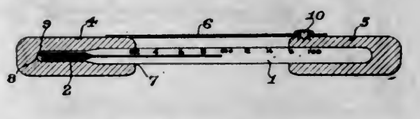


said case, and means actuated by said lever and shiftable to a position in engagement with said adjusting screw to prevent movement of the latter when said snuffer cap is in opening-covering position.

1,786,268. BODY-PROTECTING SHIELD. CARL GREY SNAVELY, Lewisburg, Pa. Filed June 20, 1929. Serial No. 372,465. 6 Claims. (Cl. 2—2.)

1. A body protective apparel comprising a hip belt of flexible cushion material, rigid hollow spheroidal sector shaped guard members positioned on said belt so as to cover the hip portions of the body, means for securing the guard members to the belt, the base edges of said members being curved to engage the cushion material and conform to the shape of the body at the hips and means for securing the belt to the body.

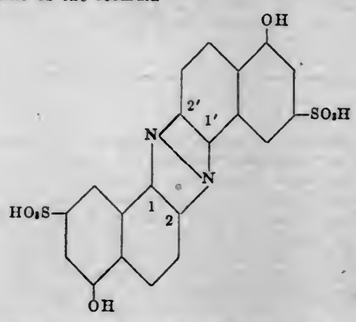
1,786,269. OVERHEAD GASOLINE-ENGINE OILER. AARON R. SOLOMON, St. Louis, Mo., assignor to Modern Auto Repair and Reconstructing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 20, 1929. Serial No. 348,372. 2 Claims. (Cl. 123—196.)



1. In a device of the character described an oil reservoir, having means of fluid communication therefrom to the intake manifold of a gasoline engine, a cylinder secured in said oil reservoir, a piston positioned in said cylinder, one end of said cylinder behind said piston being in fluid communication with the oil pressure line of a gasoline engine, a valve positioned at the bottom of said cylinder, which closes the bottom of said cylinder from fluid communication with said oil reservoir in the downward stroke of said piston and forces the oil from said cylinder to a pipe, which is in fluid communication with the intake manifold of a gasoline engine.

1,786,270. WATER-RESISTANT AND FIRE-RESISTANT FIBROUS PRODUCT AND METHOD OF MAKING SAME. HUGH MCCURDY SPENCER, Lockport, N. Y., assignor to The Upson Company, Lockport, N. Y., a Corporation of New York. Filed May 4, 1927. Serial No. 190,642. 5 Claims. (Cl. 92—21.)

1. The process of making a fire-resistant and water-resistant fibrous product which comprises mixing ammonium phosphate and paraffin coated comminuted material with fibers in fluid suspension.

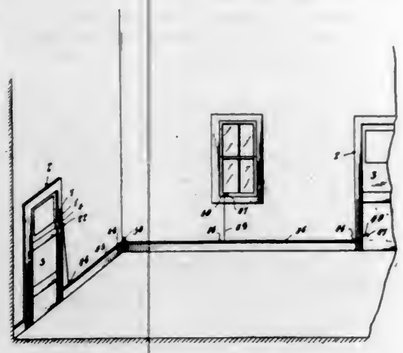


1,786,271. CASE FOR CLINICAL THERMOMETERS. HAROLD E. STONEBRAKER, Rochester, N. Y. Filed Sept. 16, 1929. Serial No. 392,930. 5 Claims. (Cl. 206—16.5.)

4. A case for a breakable thermometer comprising two parts constructed of resilient material and adapted to be frictionally arranged upon and entirely supported by the opposite ends of the thermometer, one of said parts having a bore which for a portion of its length is of approximately the diameter of the body portion of the thermometer and for a portion of its length is of approximately the diameter of the bulb of the thermometer and closely embracing the outer surface of the thermometer end throughout a substantial portion of the length of the thermometer, the body wall of said part being of sufficient thickness to afford such a degree of resiliency as to prevent breakage of the thermometer when falling on a hard surface.

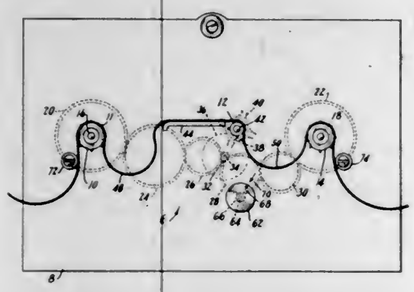
1,786,272. AZO DYESTUFFS CONTAINING METALS AND PROCESS OF MAKING SAME. FRITZ STRAUB and WALTER ANDERAU, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Aug. 26, 1929, Serial No. 388,614, and in Switzerland Sept. 8, 1928. 15 Claims. (Cl. 260—12.)

1. Process for the production of metalliferous azo-dyestuffs, consisting in combining with diazo-compounds containing lake-forming groups in ortho-position to the diazo-group the 5 : 5'-dihydroxy-7 : 7'-disulfo-1 : 2' : 1' : 2-diaphthazine of the formula



and treating the products thus obtained with an agent which yields metal capable of forming lakes.

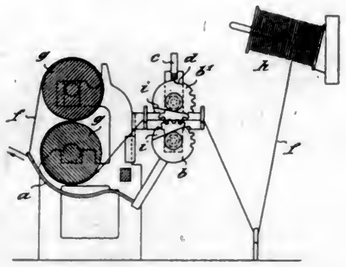
1,786,273. BURGLAR ALARM. ANDREW L. TURNER, Depew, Okla. Filed Aug. 9, 1930. Serial No. 474,197. 8 Claims. (Cl. 116—81.)



1. In a burglar alarm system of the character described, a signal unit designed to be mounted adjacent a door, a shiftable element forming a part of said unit adapted to be held in a predetermined position by the door when the

latter is closed and to shift for the operation of the signal unit upon the opening of the door, a locking element designed to control the operation of said unit independently of said shiftable element, a cable connected to

said locking element and designed to be shiftably supported in proximity to door and window openings, and means for connecting said cable with the closure elements for said door and window openings.

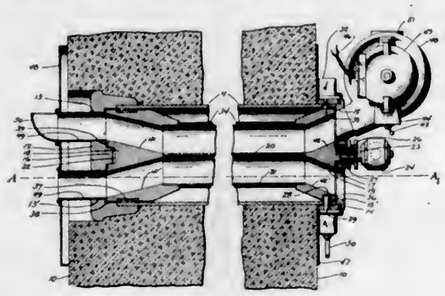


1,786,274. SYNCHRONOUS MOTION-PICTURE AND SOUND REPRODUCTION. FERDINAND VON MADALER, Hampton Bays, N. Y., assignor, by mesne assignments, to National Vision-Tone Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 6, 1928, Serial No. 324,073. Renewed May 17, 1930. 3 Claims. (Cl. 88—16.2.)

3. In combination, sound and light record apparatus, a plurality of adjustable members for engaging said light record, light and sound records having indicia thereon to determine initial setting positions thereof, said records being set in initial position before said apparatus is operated, and means for simultaneously changing the positions of said members to position them in a predetermined relation for cooperation with said light record indicia when positioning the light record on the apparatus.

1,786,275. DEVICE FOR STOPPING DELIVERY IN SPINNING AND TWISTING MACHINES ON THE BREAKING OF THE THREAD. JOHANNES VON TRÖMBACH, Dusseldorf-Oberkassel, Germany. Filed June 20, 1929, Serial No. 372,395, and in Germany June 22, 1928. 8 Claims. (Cl. 118—7.)

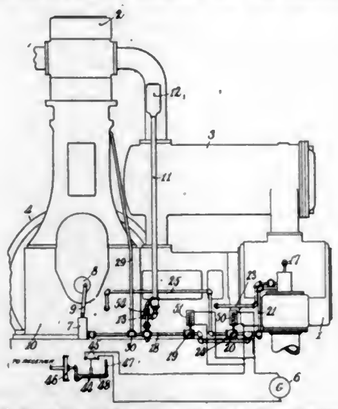
2. In a trap motion, thread gripping devices comprising intergeared cylindrical members, a portion of the periphery of each member being cut away to cause the cut away portions to define an open channel between the members for the passage of the thread when the members are in a predetermined position, and means for compelling relative



movement of the members on the breakage of the thread to present the peripheral surfaces of the members in gripping contact with the thread.

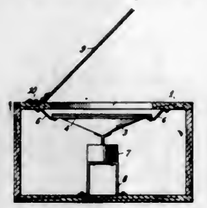
1,786,276. DROP CORD. CARL D. WAYNE, St. Paul, Minn. Filed Jan. 11, 1929. Serial No. 331,812. 1 Claim. (Cl. 173—264.)

A flexible cable comprising a helically arranged conducting element, a central flexible core and a fabric cord element within said core, and an outer coating of elastic non-conductive material about said conductor element.



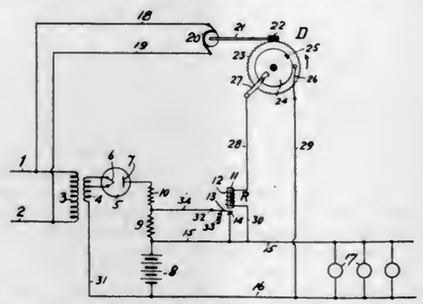
1,786,277. VAULT VENTILATOR. ROSS R. WEST, San Mateo, Calif. Filed Nov. 14, 1927, Serial No. 232,956. Renewed July 1, 1930. 5 Claims. (Cl. 109—1.)

1. The combination with a vault wall, of a rotor element having a plurality of openings therethrough, and means at the ends of said openings adapted to support said rotor in said wall and close said openings when the rotor is in one position.



1,786,278. COMPRESSOR SYSTEM. LEONARD WILSON, Salt Lake City, Utah, assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 12, 1927, Serial No. 225,789. Renewed Feb. 27, 1930. 27 Claims. (Cl. 230—4.)

1. In combination, a pump having a cylinder, means operable by pressure variations for loading said pump cylinder, means other than said cylinder for producing pressure variations for effecting operation of said loading means, and means responsive to pressure variations produced by operation of said pump for controlling the operation of said loading means by the first mentioned pres-

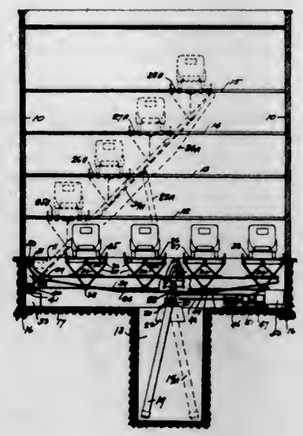


sure variations to effect loading and unloading in response to said second mentioned pressure variations during continuous running of said pump.

1,786,279. REFLECTOR. IRVING WOLFF, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 31, 1927. Serial No. 179,744. 9 Claims. (Cl. 181—31.)

1. In combination a sound producing device of the cone type and reflecting means comprising a member having an elliptical cross section associated therewith for modifying the direction of the sound waves emitted therefrom.

1,786,280. MEANS FOR CONTROLLING THE CHARGE OF A STORAGE BATTERY. JOSEPH LESTER WOODBRIDGE, Philadelphia, Pa. Filed Dec. 31, 1927. Serial No. 243,794. 5 Claims. (Cl. 171—314.)



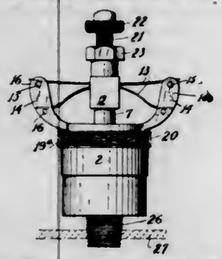
1. In combination, a storage battery and its load circuit, a charging source for the battery, means for transmitting current from the source to the battery selectively at either of two different rates, means responsive to the battery voltage and adapted to reduce the rate from the higher to the lower value, and other means for restoring the rate to the higher value at regular time intervals.

1,786,281. RUBBERLIKE COMPOSITION AND PROCESS OF MAKING SAME. FREDERICK C. ZOBEL, Brooklyn, N. Y. Filed Jan. 23, 1926. Serial No. 83,388. 7 Claims. (Cl. 106—23.)

1. As a new article of manufacturing, a composition having substantially the physical properties of soft rubber and obtainable by the interaction of gum copal, hard wood creosote oil and petroleum naphtha.

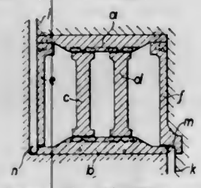
5. The process of forming a composition having substantially the physical properties of rubber, which comprises mixing gum copal and hard wood creosote oil, heating the mixture until a clear solution is formed, and causing precipitation by the addition of petroleum naphtha.

1,786,282. AUTOMOBILE HANDLING DEVICE. ELLIS B. ANDERSON, Memphis, Tenn. Filed Aug. 31, 1929. Serial No. 389,640. 10 Claims. (Cl. 214—16.1.)



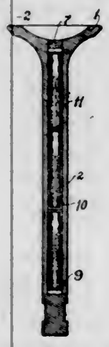
1. An elevator, for a building having a main floor and a plurality of elevated floors, comprising a pair of parallel beams spaced apart, and normally disposed parallel to said main floor level, pivotal mountings, one for each of said beams, positioned in alignment at right angles to said beams at one end thereof, supports extending rigidly upward from each of said beams, there being one support on each beam for each of said elevated floors, said supports being spaced from said pivotal mountings at distances proportional to the distance of said floors above said mountings, platforms pivotally mounted, each on a transversely aligned pair of supports, members secured to and extending rigidly downward from each of said platforms adjacent said beams, pivotal strut mountings disposed below said beam mountings, struts disposed parallel with said beams and carried by said strut mountings, pins connecting said rigid members to said struts, a hydraulic cylinder disposed below said beams and pivotally supported, and a ram in said cylinder, hingedly connected at its upper end to said beams intermediate their ends, whereby said beams may be pushed upward to raise said platforms, and said platforms will be maintained in level position.

1,786,283. AUTOMATIC AIR-INLET VALVE FOR INTERNAL-COMBUSTION ENGINES. JAMES LIPTROT ARDERN, East Kew, Melbourne, Victoria, Australia. Filed Jan. 4, 1927, Serial No. 158,931, and in Australia Apr. 15, 1926. 7 Claims. (Cl. 251—145.)



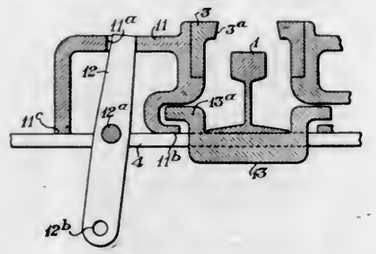
1. A device for the purpose indicated consisting in the combination of a valve casing having means of con-

nection to the induction pipe of an internal combustion engine and a passage leading from the interior of said casing through said connecting means, a valve mounted within said casing and adapted to control the admission of air through said passage to the engine, a valve stem



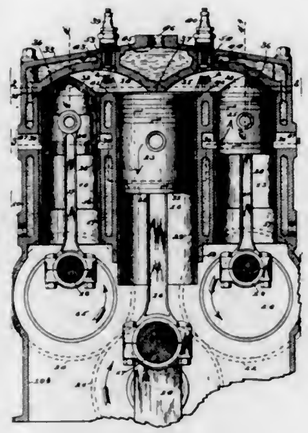
passing slidably through the wall of said casing, a plate spring supported externally of the casing and acting upon said valve stem to normally retain the valve in closed position against the action of the engine suction, and screw adjusting means acting upon said plate spring to vary the pressure thereof upon said valve.

1,786,284. CONSTRUCTION OF THE EXPANSION JOINT OF REENFORCED CONCRETE STRUCTURES. BRUNO BAUER, Vienna, Austria. Filed Dec. 27, 1928, Serial No. 328,646, and in Austria Jan. 3, 1928. 1 Claim. (Cl. 72—106.)



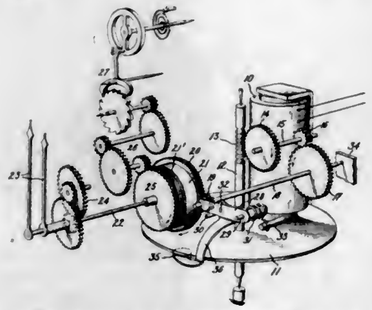
A bearing between the abutting overlapping ends of beams forming the expansion joint of reenforced concrete structures comprising a casing closed at all sides and including spaced top and bottom walls interposed between the overlapping ends of said joint and laterally removable side walls, and upright pillars forming the bearings arranged in pendulous position within said casing.

1,786,285. COOLING-CAPSULE-FILLED VALVE. RICHARD E. BISSELL, deceased, Cleveland, Ohio, by Genevieve Bissell, administratrix, Lansing, Mich., assignor to Thompson Products, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 20, 1930. Serial No. 422,208. 8 Claims. (Cl. 123—177.)



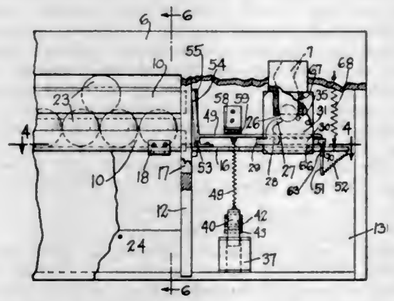
1. A valve comprising a hollow stem, a capsule in said stem and a cooling agent that is fluid within the working temperature range of the valve within said capsule.

1,786,286. RAILWAY-CAR RETARDER. HERBERT L. BONE, Swissvale, Pa., assignor to The Union Swith & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed June 20, 1928, Serial No. 287,008. Divided and this application filed Apr. 28, 1930. Serial No. 447,852. 5 Claims. (Cl. 188—62.)



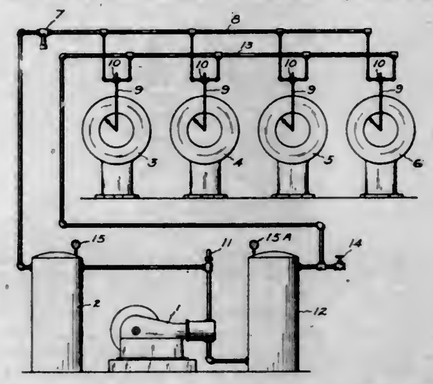
1. A railway car retarder comprising a brake beam located beside a track rail and movable toward and away from the rail, means for permitting said beam to swing so that its wheel engaging surface moves upwardly from its normal position when engaged by a car wheel, and means for limiting such swinging movement of the beam.

1,786,287. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Santa Rosa, Calif. Filed July 1, 1929. Serial No. 375,069. 6 Claims. (Cl. 123—53.)



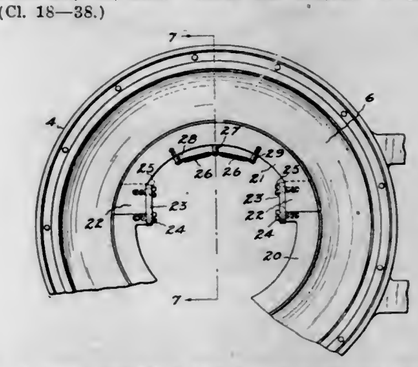
1. In an internal combustion engine, a three cylinder combustion unit, comprising in combination, one cylinder having exhaust ports and two cylinders having inlet ports, the three cylinders being arranged with their head ends terminating in a common plane, a detachable head arranged with the three cylinders, pistons adapted to control the ports of the respective cylinders being arranged for reciprocatory movement in all the cylinders, the cylinder having exhaust ports being arranged adjacent and between the two cylinders having the inlet ports, the pistons of the two cylinders having the inlet ports being formed with dome shaped heads, the piston of the cylinder having the exhaust ports being formed with a flat head, the three cylinders being formed with a common integral head face, all the pistons being adapted to reciprocate with their headward stroke movement relatively terminating with the peripheries of all the pistons approximately occupying a common plane substantially coincident with the said integral head face of the three cylinders, the said detachable head being formed with its underside face adapted to engage the said integral head face of the three cylinders, two compression clearance chambers formed in the underside face of the said head member, the said two clearance chambers being relatively arranged so as they respectively connect the chambers of the two cylinders having inlet ports with the chamber of the cylinder having exhaust ports, each of the said two clearance chambers connecting the chamber of one inlet port cylinder with the chamber of the cylinder having exhaust ports and each of the said two clearance chambers being formed with their inner walls formed of a radius conforming with the radius of the dome head of the piston of the respective cylinder having the inlet ports to which the respective clearance chamber is adapted.

1,786,288. ELECTRICALLY-WOUND CLOCK. ARTHUR B. CAMPBELL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Feb. 28, 1929. Serial No. 343,366. 7 Claims. (Cl. 185—40.)



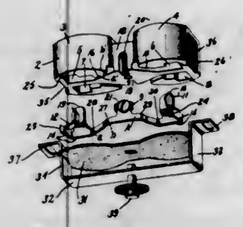
1. In a mechanical power transmission system, a pair of rotatably mounted intermeshed spur gear wheels through which power is transmitted, one of said gears being mounted for limited bodily movement with respect to the other in substantially a tangential direction, resilient means for opposing such bodily movement occasioned by the transmission of power between said wheels, and means controlled by such bodily movement for maintaining the torque between said gears substantially constant.

1,786,289. BALL-BENDING MACHINE. JOHN E. CRADDOCK, Brooklyn, N. Y. Filed Nov. 29, 1929. Serial No. 410,455. 4 Claims. (Cl. 194—7.)



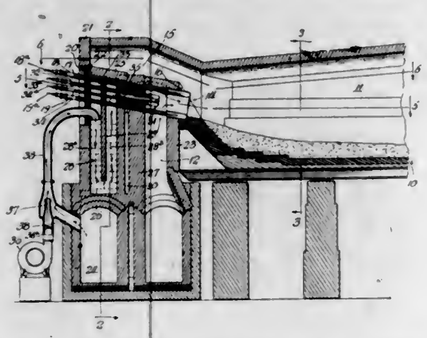
3. A ball vending machine comprising a ball shelf, means for sustaining the shelf in ball supporting position including a latch hinged to said shelf, and a detent strip engageable by said latch, a coin control mechanism including a solenoid for disengaging said latch and strip to drop the shelf to non-supporting position, and a switch engageable by the solenoid in its latch disengaging movement to complete a circuit.

1,786,290. METHOD OF VULCANIZING HOLLOW RUBBER ARTICLES. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 12, 1927. Serial No. 190,757. 4 Claims. (Cl. 18—53.)



4. In the vulcanization of hollow rubber articles, the herein described method of producing and supplying to the interior of such articles during vulcanization, a substantiallly inert gaseous medium, which comprises collecting and confining a body of air, introducing a portion of the air under pressure into a hollow article during the vulcanization thereof, evacuating the article after vulcanization and returning the air together with gaseous products of vulcanization to the confined body of air, and repeatedly using the gaseous mixture so produced for the inflation of articles subsequently vulcanized.

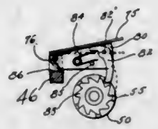
1,786,291. TIRE-VULCANIZING MOLD. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 17, 1928. Serial No. 278,446. 8 Claims. (Cl. 18—38.)



8. A mold comprising separable side sections adapted to abut face to face and having annular recesses which conform to the side and tread portions of a tire casing, each mold section having a resilient contractile transversely divided ring along the inner margin of its annular recess, said rings abutting edge to edge when the mold is closed and having abutting diagonally disposed ends, each ring having an end portion movable outwardly from the face of the mold section upon which it is mounted to permit the ring to contract, the pressure on said end portions upon closing the mold forcing the same into alinement with the adjacent end of the ring and the wedging engagement between the diagonally disposed ends of each ring causing said ring to be expanded as the mold is closed, each ring being resilient and biased toward its contracted position whereby the ring automatically contracts upon opening the mold.

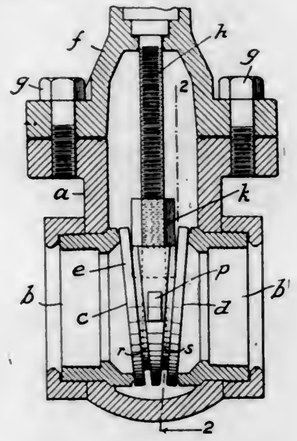
1,786,292. ELECTRIC SOCKET. FRANK C. DE REAMER, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed July 18, 1927. Serial No. 206,458. 8 Claims. (Cl. 173—330.)

1. In a socket a conducting plate folded into the general form of the letter W with the ends of the outer limbs turned out, the two lower heels of the folded plate being flattened, the central section of the folded plate being bent to form a flattened portion offset with respect to the other flattened portions and a contact spring projecting laterally with respect to the plate from each of said lower heels and an insulating body formed and slotted to receive the folded plate sidewise, and a pair of cavities in said body, one opposite each of said springs, each spring projecting into its corresponding cavity, and openings in said body, one leading to each of said cavities whereby connections may be established with said springs by means of a plug element, the mid portion of said plate being located on the outside of said body and having a terminal for a wire connection thereto.



1,786,293. PORT CONSTRUCTION AND GAS BURNER FOR OPEN HEARTH FURNACES. GEORGE F. DOWNS and HERBERT F. MILLER, Jr., Buffalo, N. Y. Filed Nov. 4, 1920. Serial No. 421,755. 27 Claims. (Cl. 263—15.)

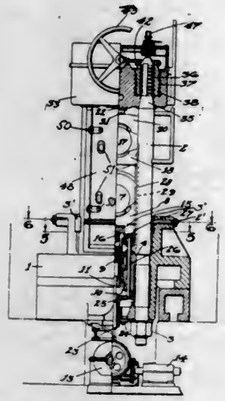
1. In a furnace of the kind described, in combination with the furnace walls defining gas and air uptakes, gas and air ports, and air and gas regenerators, means for conducting a part of the air from the air regenerator to the interior of the body of gas in advance of the issue of the gas from the gas port, and means for compressing said air prior to its introduction into the interior of said gas body.



1,786,294. SWITCH DEVICE. NELSON C. DURAND, East Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Original application Filed June 22, 1925, Serial No. 38,613, now Patent No. 1,733,951. Divided and this application filed Sept. 27, 1929. Serial No. 395,535. 4 Claims. (Cl. 200—8.)

1. In a switch device comprising a member mounted for rotary movement, and means for turning said member about its axis comprising a ratchet secured to said member and a movable mounted member having a pawl co operating with said ratchet, said movably mounted me

ber having means which when such member is moved to cause the pawl to turn the ratchet acts to limit, the turning movement of the latter, substantially as described.

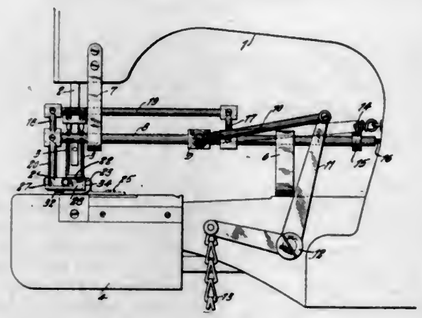


1,786,295. HIGH-DUTY VALVE STRUCTURE. GUNNAR ERICSSON, Philadelphia, Pa. Filed Dec. 30, 1927. Serial No. 243,636. 4 Claims. (Cl. 251—62.)

1. A valve structure comprising a valve casing provided wtih substantially circular valve seats surrounding openings in opposite sides of the valve casing, the planes of the two valve seats converging, and a valve having a wedge shape substantially corresponding to the converging planes of the valve seats and having opposite faces of substantially circular contour adapted adjacent their peripheries to engage the respective valve seats, the valve being provided with grooves extending in planes substantially parallel to the respective planes of the seating faces of the valve and on opposite sides of a plane extending centrally through the valve at right angles to its transverse axis, thereby providing marginal webs respectively engaging the circular valve seats and adapted to flex to the degree required to insure accurate seating of the valve while providing also a substantially solid body within said webs and between said grooves to maintain the valve approximately rigid when seated.

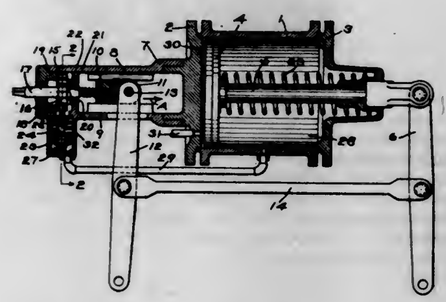
1,786,296. ROLLING-MILL HOUSING. JEROME R. GEORGE, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 28, 1928. Serial No. 265,446. 17 Claims. (Cl. 80—55.)

9. In a rolling mill housing, a plurality of upright columns rising from the housing base, a housing cap wherein the upper ends of said columns are received, a plurality of sleeves rotatably mounted in said cap and each adapted to pass telescopically over one of said columns when said cap is lowered into position on said columns, a matching series of lateral grooves and projections formed externally of each column and internally of each sleeve, which are circumferentially displaced, one from the other, when said cap is lowered into position on said columns, means for rotating said sleeves in unison to interlock the sleeve projections and grooves with



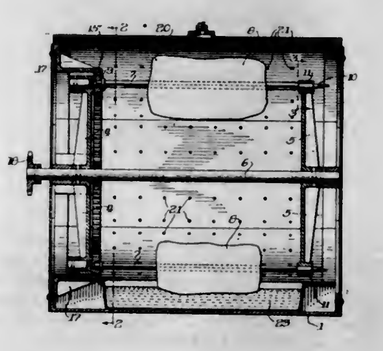
the column projections and grooves, for transmission to said columns of the upward rolling pressures exerted on said cap, and means acting between said cap and each of said columns for eliminating lost motion or play between said interlocked projections and grooves.

1,786,297. PROCESS OF ROLLING ALLOY STEEL. HOWARD M. GIVENS, Abington, FRANCIS B. FOLEY, Philadelphia, and JOHN L. COX, Springfield Township, Montgomery County, Pa. Filed Nov. 20, 1929. Serial No. 408,671. 6 Claims. (Cl. 80—60.)



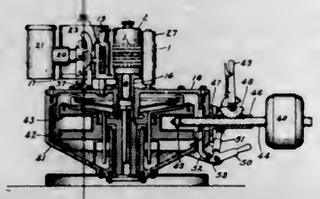
1. The process of rolling alloy steels that are strongly martensitic in character which comprises rolling the alloy steel while it is cooling within a range whose upper limit is substantially above its critical temperature on heating and whose lower limit is substantially above its critical temperature on cooling, then cooling, without rolling, to a temperature below its critical temperature on cooling, then reheating to a temperature not above its critical temperature on heating, and then completing the rolling while it is cooling from the temperature to which it is reheated.

1,786,298. METHOD OF AND APPARATUS FOR OPERATING ON TUBULAR ARTICLES. HORACE F. GRUMAN, Richmond Heights, Mo., assignor to Lewis Invisible Stitch Machine Company, Kittery, Me., a Corporation of Maine. Filed Mar. 30, 1925. Serial No. 19,382. 1 Claim. (Cl. 112—152.)



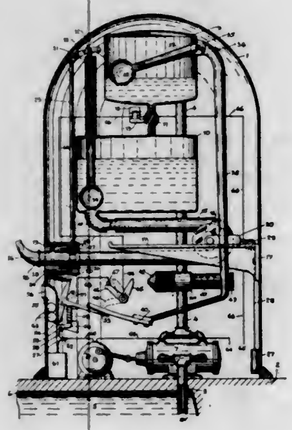
In a machine of the character described, means for folding the material to form a casing, means for stitching the formed casing, a band guide, constructed and arranged so that said guide may be positioned to guide a band into the casing or be moved clear of the casing, and means for adjusting the size of the casing.

1,786,299. SLACK ADJUSTER. MILTON L. HANCOCK, East McKeesport, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 14, 1928. Serial No. 299,550. 13 Claims. (Cl. 188—203.)



1. In a fluid pressure brake, the combination with a brake cylinder, of a slack adjuster operated by fluid under pressure supplied to said brake cylinder in applying the brakes, a support for said slack adjuster, and means subject to the pressure of fluid supplied to the brake cylinder for engaging said support for preventing the operation of said slack adjuster upon a predetermined increase in brake cylinder pressure.

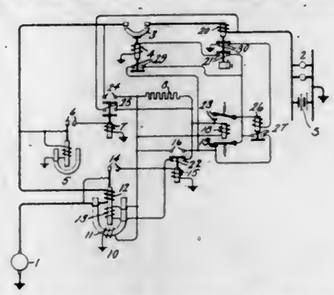
1,786,300. MACHINE OR APPARATUS FOR TREATING FOODS OR THE LIKE. MONROE HARRISON, Chicago, Ill. Filed Feb. 8, 1928. Serial No. 252,892. 7 Claims. (Cl. 126—41.)



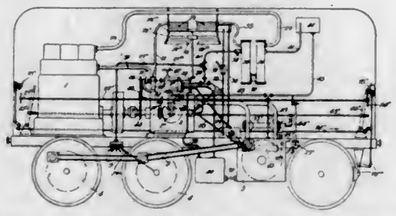
1. In a device of the class described, the combination with a casing having a stationary internal toothed annular gear in one end thereof and heating elements along sides thereof, of a rotating shaft journaled centrally in the casing, two disks secured on said shaft at opposite ends thereof, stub shafts journaled in the periphery of one of the disks and having spur gear pinions thereon meshing with the annular gear, spits arranged parallel to each other and to the central rotating shaft, sockets in said spur pinions for one end of the spits, said spits extending to the other disk, and separable bearings for the other ends of the spits in the second mentioned disk.

1,786,301. SOUND RECORDING AND REPRODUCING APPARATUS. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 19, 1928. Serial No. 320,261. 5 Claims. (Cl. 179—100.3.)

1. Apparatus of the character described comprising a convex film supporting member, means for moving the film longitudinally and in opposite directions at a substantially uniform speed, means for projecting a narrow beam of light on the film, means for shifting the light projecting means and the film supporting member transversely of the film, and means for retaining the film against transverse movement.



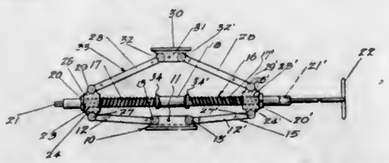
1,786,302. AUTOMATIC DISPENSER FOR LIQUIDS. ERNST HERBST and HANS KOHLER, Hoboken, N. J. Filed Feb. 29, 1928. Serial No. 257,892. 20 Claims. (Cl. 221—100.)



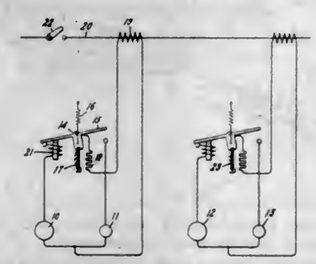
1. In combination with the apparatus described, a housing completely covering said apparatus, and having a hole therein, a dispensing hose passing through said hole, a shiftable sheave in said housing, over which passes said hose, mean pulling said sheave away from said hole and means normally locking said hose in said hole.

1,786,303. AUTOMATIC CONTROL EQUIPMENT. EUGENE L. HOUGH, Richmond Heights, Mo., assignor to General Electric Company, a Corporation of New York. Filed Mar. 2, 1929. Serial No. 344,046. 6 Claims. (Cl. 171—118.)

1. In combination, a source of current, a load circuit, a circuit breaker for connecting said source to said circuit, a directional relay for controlling said circuit breaker including a magnetizing winding responsive to the voltage of said source and two operating windings one of said operating windings being responsive to the current output of said source and the other of said operating windings being responsive to the voltage difference between said source and load circuit, means controlled by said relay for rendering said last mentioned operating winding unresponsive to said voltage difference when the source voltage exceeds the load circuit voltage, and means responsive to a predetermined electric condition of said load circuit while said last mentioned operating winding is unresponsive to said voltage difference for effecting the closing of said circuit breaker.

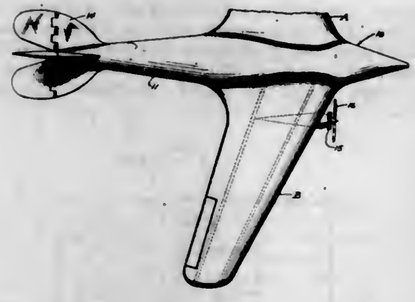


1,786,304. LOCOMOTIVE. MAURICE KERR INGOLDBY, Westminster, London, England assignor to Internal Combustion Locomotives, Limited, Westminster, England, a British Company. Filed July 8, 1926. Serial No. 121,115. 17 Claims. (Cl. 60—19.)



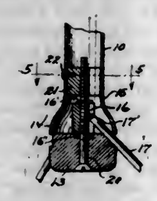
1. A locomotive consisting in the combination of an internal combustion engine, an hydraulic gear comprising a pump unit and a motor unit, driving wheels for said locomotive, means for driving the pump unit from the engine, means for transmitting power from the motor unit to the locomotive driving wheels cooling water for said engine, and means for utilizing the cooling water of the engine for cooling the motive oil of the hydraulic gear.

1,786,305. SCREW JACK. GEORGE H. JAMES, Oakland, Calif., assignor of one-half to Frank H. Simpson, Oakland, Calif. Filed Jan. 27, 1927. Serial No. 163,860. 2 Claims. (Cl. 254—126.)



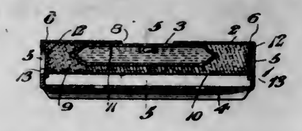
1. In a screw-jack of the class described, an elevating screw having right and left-hand threaded sections, correspondingly threaded nut members carried by said screw sections, a base for engagement with a fixed object, a head for engagement with a relatively movable object toggle members of equal length pivotally connecting said nut members with said head, and toggle members of equal length pivotally connecting said nut members with said base, said last toggle members being shorter than said first toggle members.

1,786,306. CONTROLLING DEVICE. BENJAMIN W. JONES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Apr. 12, 1924, Serial No. 706,190. Divided and this application filed Dec. 12, 1925. Serial No. 75,111. 12 Claims. (Cl. 200—88.)



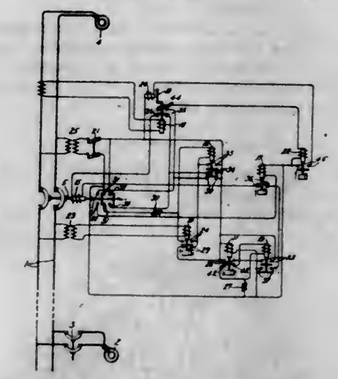
1. A thermal responsive device comprising a member movable between two positions, an electromagnet for holding the same in one of said positions, and a cooperating thermal responsive element arranged to be heated upon energization of the electromagnet for giving the member a tendency to move out of said position, whereby upon the deenergization of the said electromagnet the said member is moved to its other position.

1,786,307. AEROPLANE. HOBART R. KRIEGH, Albany, Calif. Filed Dec. 17, 1928. Serial No. 326,505. 4 Claims. (Cl. 244—14.)



1. An aeroplane comprising a fuselage, wings extending laterally of the fuselage, said aeroplane being equipped with driving and propelling means, said wings being upwardly and rearwardly inclined, said wings presenting a varied angle of attack gradually increasing from the inner to the outer ends of the wings.

1,786,308. COMBINED MUSIC RACK AND CANE. JOSEPH LATOURELLE and FRANK STEVERMER, Centuria, Wis. Filed Dec. 18, 1925. Serial No. 76,290. 1 Claim. (Cl. 248—44.)

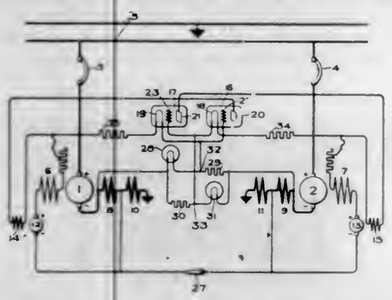


In a device of the class described, a tubular staff, an element fixed therein, a tripod structure comprising a head and sleeve and legs pivoted to the sleeve, said legs being movable from collapsed position, into diverging relation with reference to each other and so retained between the head and the end of the tubular staff, and means for detachably connecting the head and sleeve with the fixed element in the staff, said means extending longitudinally of the staff and providing an adjustable connection.

1,786,309. LEVEL. LANGDON LEA, Wynnewood, and JOHN A. HAWTHORNE, Jr., Moores, Pa. Filed Nov. 9, 1927. Serial No. 232,017. 3 Claims. (Cl. 33—211.)

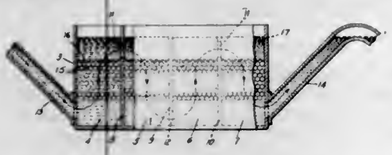
1. A level of the character stated, comprising an upper casing having a top opening and a bottom slot extending longitudinally the entire length thereof, an indicating vial positioned within said casing and centered with respect to said top opening, the spaces on either end of and below said vial within said casing being packed with a slowly setting plastic material, and a support for said casing comprising a longitudinal member provided with end heads clamped against and forming closures for the ends of said casing, and provided with tongues for engaging the ends of said casing slot, said support being provided with narrow, longitudinal bottom edges.

1,786,310. CONTROL SYSTEM. ROBERT Y. MCCULLOUGH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 29, 1929. Serial No. 335,955. 5 Claims. (Cl. 171—97.)



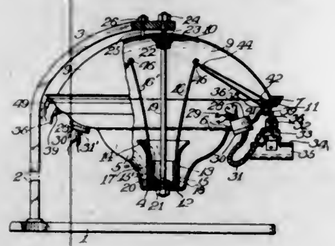
5. In combination, a normally energized circuit, an auxiliary source of current, means responsive to the voltage of said circuit for effecting the connection of said source to said circuit when the voltage of said circuit decreases below a predetermined value, and timing means responsive to the connection of said source to said circuit and the voltage of said source for effecting the disconnection of said source from said circuit after it has supplied current thereto for a predetermined time.

1,786,311. REGULATING SYSTEM. GORDON R. MCDONALD, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Dec. 26, 1929. Serial No. 416,343. 6 Claims. (Cl. 171—312.)



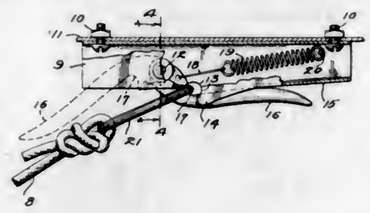
1. In combination, two sources of current connected in parallel, and means for maintaining a predetermined division of load between said sources including a plurality of resistors having different temperature coefficients con-

nected to said sources so that a given percent change in the differences between the current outputs of said sources produces a greater percent change in the potential differ-



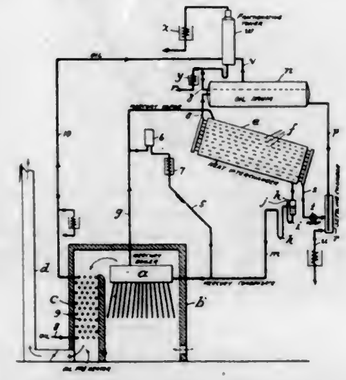
ence between predetermined points on said resistors, and regulating means responsive to the potential difference between said predetermined points.

1,786,312. PROCESS AND APPARATUS FOR CLEANING LIQUID MERCURY AND THE LIKE. BURT L. NEWKIRK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 14, 1927. Serial No. 240,061. 8 Claims. (Cl. 210—126.)



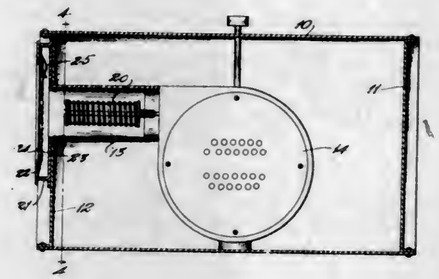
1. The method of separating from a liquid minute particles not wet by the liquid which comprises passing the liquid through a filter bed consisting of material not wet by the liquid and which serves to divide the liquid so as to develop a large liquid surface.

1,786,313. HAIR-WAVING APPARATUS. AUGUST H. OPPERMAN, Indianapolis, Ind. Filed Apr. 30, 1930. Serial No. 448,686. 10 Claims. (Cl. 132—36.)



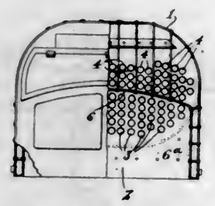
10. In hair-waving apparatus, the combination of a housing part having a bottom, a cup having a bottom and a cylindrical side wall, the cup bottom being seated upon the housing bottom and the wall having a flared upper portion, a plurality of laterally-elastic controllers having flat base portions vertically arranged on the inner side of said cup wall, a hollow core engaging the inner sides of said base portions and having a bottom seated upon the cup bottom, a center rod extending through all of said bottoms, a nut on said rod bearing upon said core bottom, and a nut on said rod bearing on said housing bottom, with heater-supporting cords anchored to the housing part and tensioned on the upper portions of the controllers.

1,786,314. TRIP-ROPE HOLDER. ANTHONY J. PASSMEL, Valley City, N. Dak. Filed Mar. 10, 1928. Serial No. 260,598. 2 Claims. (Cl. 280—33.16.)



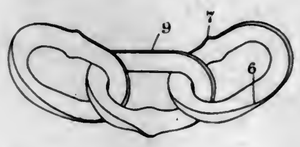
2. A device for releasably securing a trip rope of a tractor plow or similar farm implement to a tractor, comprising a bracket adapted to be secured to a tractor, a hook pivoted at one end in said bracket and normally projecting forwardly so that a portion of the hook strikes said bracket, a spring urging said hook into forwardly projecting position and an annulus adapted to be secured to a trip rope and to be engaged over said hook between said hook and bracket, said hook and bracket having co-operating notched and shouldered portions between which said annulus is adapted to be guided when carried rearwardly on said hook between said hook and bracket, said co-operating notched and shouldered portions acting to prevent the release of said annulus from said hook when said annulus is pulled in the general direction toward which said hook extends.

1,786,315. PROCESS OF CRACKING MINERAL OIL. ARTHUR E. PEW, Jr., Bryn Mawr, and HENRY THOMAS, Ridley Park, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 24, 1926. Serial No. 90,247. 3 Claims. (Cl. 196—119.)



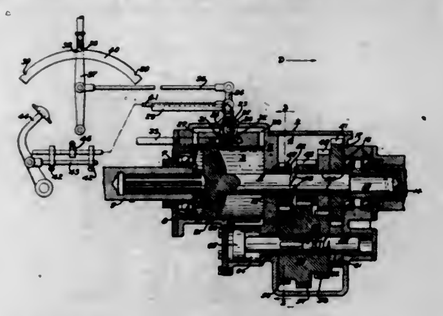
1. The process of cracking mineral oil which comprises continuously flowing the oil from a source of supply into a cracking zone and thence continuously circulating it through a second cracking zone and back to the first cracking zone, vaporizing a body of liquid mercury and flowing the mercury vapor into heating relation with the second cracking zone so as to effect condensation of mercury vapor and impart, by such condensation, sufficient heat to the oil in the second cracking zone to decompose higher boiling constituents into lower boiling constituents in the second cracking zone and to continue the decomposition in the first cracking zone, continuously removing vapors from the first cracking zone and fractionating the vapors outside the specified circuit.

1,786,316. DRYING DEVICE. JAMES V. RILEY, Simcoe, Ontario, Canada. Filed Apr. 17, 1930. Serial No. 445,044. 4 Claims. (Cl. 34—26.)



1. In combination, a casing, a blower in said casing having an outlet pipe opening through one end of the casing, a heater in said pipe, a switch box on the front of the casing into which the pipe opens, said box being provided with a door having a reticulated opening, and a spring clip on the top of the inner face of the door to clip the upper edge of a switch and support it behind said opening.

1,786,317. FIRE-TUBE STEAM BOILER. GORDON W. RUSSELL, Brookline, Mass., assignor to James Russell Boiler Works Co., a Corporation of Massachusetts. Filed Mar. 15, 1928. Serial No. 261 784. 1 Claim. (Cl. 122—76.)

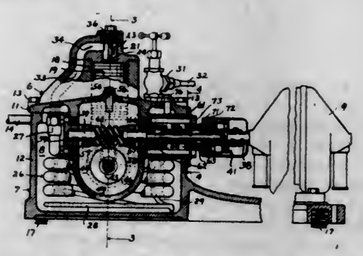


A fire tube boiler embracing in its construction a boiler shell of elliptical cross section with the major axis of the ellipse extending horizontally, a fire box located at the lower forward end of the shell and partitioned at its top from the overhead semi-elliptical upper half of the boiler shell by an upwardly arched crown sheet, a series of fire tubes extending directly from the rear of the fire box to the rear end portion of the boiler, a series of return tubes arranged above the level of the crown sheet and extending the whole length of the boiler, and vertical stay rods passing between both sets of fire tubes and tieing the top and bottom walls of the ellipse to resist the pressure of the internal body of steam.

1,786,318. CROSS CHAIN FOR ANTISKID DEVICES. FRANK E. STAHL, Tonawanda, N. Y., assignor to The Columbus-McKinnon Chain Corporation, Tonawanda, N. Y., a Corporation of Ohio. Filed Apr. 30, 1930. Serial No. 448,721. 3 Claims. (Cl. 152—14.)

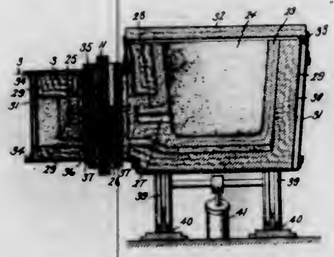
1. A link for a tire chain having a twisted end and a sharp edge formed around one face thereof and its opposite face rounded.

1,786,319. TRANSMISSION BEARING. WENDELIN D. STARRETT, Alameda, Calif. Filed Sept. 18, 1927. Serial No. 219,224. 24 Claims. (Cl. 74—58.)



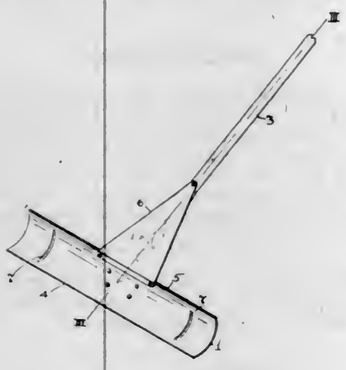
1. A transmission comprising a driving shaft, a driven shaft, an axially shiftable selector shaft mounted for rotation with one of said shafts a loose gear journaled on the selector shaft, a pitched key on the selector shaft for screwing into and engaging a complementary pitched keyway in the loose gear, means for shifting the selector shaft to cause engagement of the loose gear with the selector shaft, and means for connecting the engaged gear with the other shaft.

1,786,320. SURFACING APPARATUS. HERBERT R. STRATFORD, Cleveland, Ohio, assignor to The Stratmore Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 10, 1927, Serial No. 225,165. Renewed May 24, 1930. 2 Claims. (Cl. 51—195.)



1. In surfacing apparatus, the combination of a rotatable shaft, a relatively thin flexible flexure resistant disc rigidly secured at its central portion to said shaft, and a surfacing disc also secured to said shaft, said first disc being free from said surfacing disc except at their respective centers but engaging and resistantly supporting said surfacing disc when pressed against a work surface.

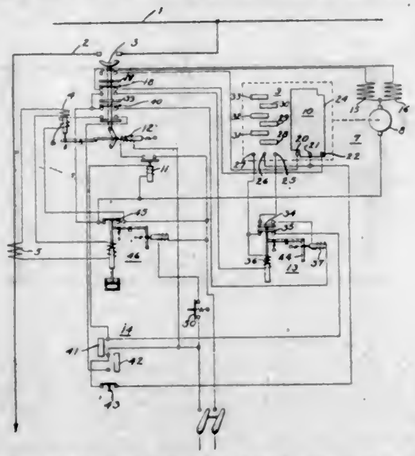
1,786,321. GAS-COMPRESSOR UNIT. WILLIAM H. THOMPSON, Berkeley, Calif. Filed Jan. 6, 1928. Serial No. 244,904. 3 Claims. (Cl. 230—206.)



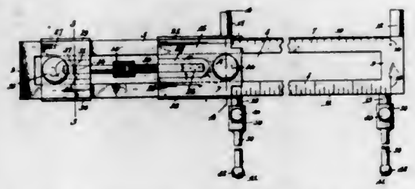
1. In apparatus of the class described, a base member providing a cavity arranged for the circulation of a cooling fluid therethrough, a top wall for said cavity, a pump having cylinder and crankcase portions carried by said top wall, a crank shaft for said pump extending from said crankcase, a drive shaft extending into said cavity, means within said cavity operatively connecting the extending portions of said shafts, and a casing carried by said top wall enclosing said connecting means and the extending shaft portions, said casing and crank shaft being disposed in the fluid circulation space of said cavity.

1,786,322. ELECTRIC FURNACE. MAGNUS UNGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 1, 1928. Serial No. 282,154. 3 Claims. (Cl. 266—1.5.)

1. In a metal melting furnace, the combination with a crucible for the charge, of a heat insulating wall substantially surrounding said crucible, a metal casing surrounding said wall and spaced therefrom and a plurality of metallic corrugated members between said casing and said wall.



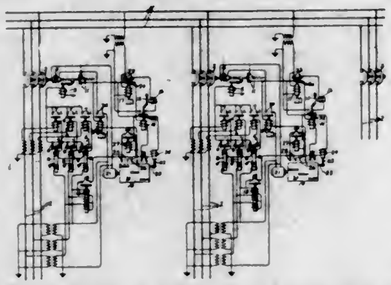
1,786,323. SCRAPER FOR CLEANING STREETS AND THE LIKE. CHESTER J. WELSH, Conneaut, Ohio, assignor to The Conneaut Shovel Company, Conneaut, Ohio, a Corporation of Ohio. Filed June 22, 1926. Serial No. 117,743. 2 Claims. (Cl. 37—53.)



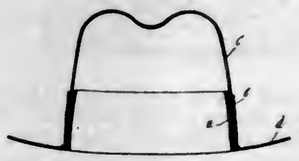
1. In an article of the character described, the combination of a blade curved throughout to present a forwardly extending portion and an upturned back wall forming a pocket, a handle-receiving socket projecting rearwardly of said blade, and means for protecting the handle, said means comprising a triangular plate secured to the upper part of said blade and thence extending rearwardly over said socket.

1,786,324. PERIODIC-RECLOSING CIRCUIT-BREAKER SYSTEM. ROY J. WENSLEY, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 16, 1923. Serial No. 632,592. 30 Claims. (Cl. 175—294.)

15. In a power-distribution system, the combination with a supply circuit, a load circuit and an interrupter therebetween, of means for opening the interrupter upon the occurrence of an abnormal condition in the load circuit, and reclosing means therefor comprising electromagnetic means operative in two directions, means operative as a timing switch controlled thereby, means operative as a directional switch also controlled by said electromagnetic means, and switching means controlled by the interrupter and cooperating with the directional switch to control the electromagnetic means.



1,786,325. CALIPERS. JACOB J. YOUNG, Buffalo, N. Y. Filed Nov. 19, 1929. Serial No. 408,337. 2 Claims. (Cl. 33—163.)

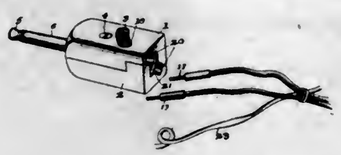


1. Calipers, comprising an elongated body-portion having graduations along the same, a gaging element movable lengthwise on said body portion, co-operating gaging studs extending respectively from said body portion and said gaging element, and extension legs detachably secured to said studs and having lateral projections thereon providing contact points in alinement with the outermost regions of said gaging studs.

1,786,326. AUTOMATIC SWITCHING SYSTEM. ARVID E. ANDERSON, Lansdowne, and FREDERIC D. KING, Brookline, Pa., assignors to General Electric Company, a Corporation of New York. Filed Dec. 28, 1928. Serial No. 328,980. 11 Claims. (Cl. 175—294.)

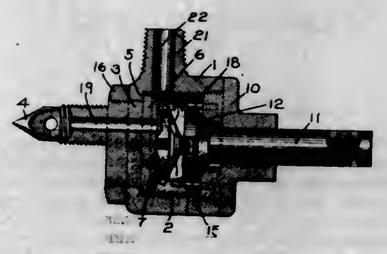
1. In combination, a load circuit, a plurality of supply circuits connected thereto, means for effecting the disconnection of said supply circuits from said load circuit and the automatic reconnection thereto after predetermined time intervals, means for preventing the reconnection of a supply circuit to said load circuit after the supply circuit has been connected thereto a predetermined number of times, and means responsive to a predetermined electrical condition of said load circuit for effecting the reconnection of any of said supply circuits to said load circuits which may be disconnected therefrom whenever said predetermined electrical condition occurs and said supply circuits are energized.

1,786,327. HAT MAKING. FRANK M. BARTLETT, Reading, and BENJAMIN F. HARTWELL, Winchester, Mass. Filed Mar. 5, 1930. Serial No. 433,237. 5 Claims. (Cl. 2—184.)



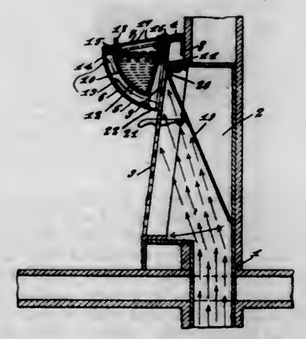
1. As an article of manufacture, a sweatband designed for stitching to hats, the inside of said band carrying an integral film of rubber coagulated from latex at least over the longitudinal zone where said band is to be stitched to the hat.

1,786,328. COMPOSITE SEPARATOR AND PROCESS OF MAKING THE SAME. RAYMOND C. BENNER, Bayside, and NEWCOMB K. CHANEY, Kew Gardens, N. Y., assignors, by mesne assignments, to Prest-O-Lite Storage Battery Corporation, a Corporation of Indiana. Filed Sept. 8, 1923. Serial No. 661,677. 5 Claims. (Cl. 136—145.)



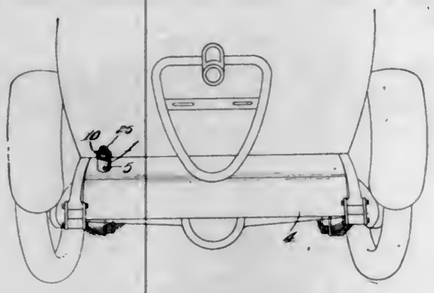
2. A composite separator comprising fabric embedded in bonded fiber.

1,786,329. SWITCHBOARD PLUG. ANATOL P. BEREGKOFF, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 8, 1922. Serial No. 605,711. 7 Claims. (Cl. 173—361.)



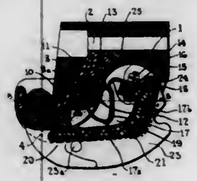
1. A switchboard plug having a longitudinally split shell of insulating material cored out for the metallic parts, metallic current carrying brackets respectively connected to plug terminals, sheet insulation disposed between said brackets, common means for holding said shell parts, said brackets and sheet insulation in assembled relation, and wire gripping means secured to said brackets and provided with hand engaging means projecting outside said shell.

1,786,330. VALVE DEVICE. LAURENCE J. BERKELEY, Cleveland, Ohio, assignor to W. M. Jenkins, trustee, Pittsburgh, Pa. Filed Aug. 10, 1929. Serial No. 385,013. 8 Claims. (Cl. 251—86.)



2. A throttle valve device comprising a valve seat member having a cavity in its seat of varying width and curved about the axis of said seat and a valve mounted on said seat and having a radially extending parallel sided port adapted to register with said cavity.

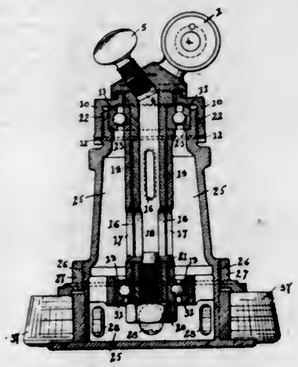
1,786,331. HUMIDIFIER FOR WALL REGISTERS. CHARLES A. BESCH, La Crosse, Wis. Filed Sept. 21, 1929. Serial No. 394,255. 2 Claims. (Cl. 98—109.)



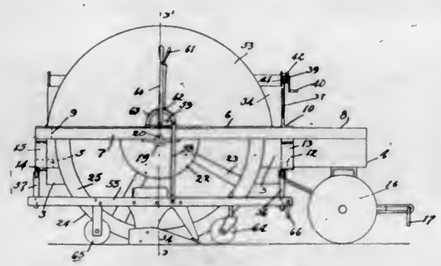
1. A humidifier designed to be removably attached to the upper edge of a wall register for a hot air furnace, comprising a body having an open back, a curved front which is apertured and an inclined top which is partly open, a water receptacle in the body having an inclined rear wall which is gradually spaced away from the inner wall of said body and an outer wall which is struck at the same curvature as the outer wall of the body, said water receptacle being disposed a distance below the open top of the body and providing, with said body, a continuous flange, said flange forming a seat for a flanged and apertured closure which is hingedly secured to the open top of the body for covering the open top of the body and receptacle.

1,786,332. TANK-CLOSURE LOCK. AUBREY O. BRADSHAW, Bluefield, W. Va. Filed Nov. 1, 1928. Serial No. 316,517. 3 Claims. (Cl. 70—90.)

1. In a closure for tanks, the combination with a tank having a filling neck, said neck having an annular enlargement intermediate its length, and having annular recesses at the upper and lower sides thereof, a closure cap arranged to seat in one of said recesses, said cap having a central plug portion fitting within said annular enlargement and projected below said enlargement, a lock mounted in said plug, said lock having latch members arranged to be projected from opposite sides of said plug for engagement in said lower recess.



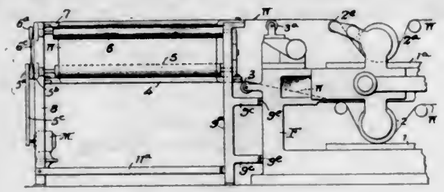
1,786,333. FUSE CUT-OUT FOR ELECTRIC CIRCUITS. JAMES BROWN and EDGAR BARRETT, St. Albans, Christchurch, New Zealand. Filed June 3, 1927, Serial No. 196,336, and in New Zealand June 22, 1926. 7 Claims. (Cl. 200—114.)



1. A fuse cut-out for electric circuits comprising a body portion of insulating material fitted with contacts adapted to be connected with circuit main ends, and adapted to be secured to a wall, panel or pole, and a fuse carrier of insulating material fitted with contacts connected by a fuse wire, detachably hinged to said body portion so that the carrier contacts may be engaged with or engaged from the contacts of the body portion without disconnecting said carrier from the body portion, while at the same time permitting bodily removal of said carrier for renewal of the fuse, said body being provided with side shield portions for protecting the contacts which it carries from outside influences.

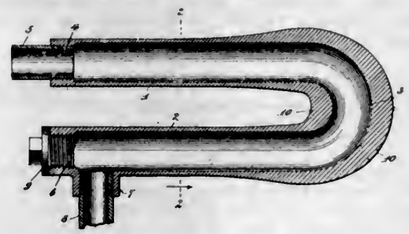
1,786,334. LUBRICATING APPARATUS FOR THE FLANGES OF WHEELS OF ENGINES OR VEHICLES TRAVELING UPON RAILWAY TRACKS. ACHILLE BUCLON, Ales, France. Filed May 8, 1928, Serial No. 276,132, and in France May 18, 1927. 4 Claims. (Cl. 184—3.)

1. An oiling device for flanges of wheels comprising a stationarily mounted shaft, an oil container supported by said shaft and rotatably mounted upon the same, and a ring of porous material carried by said container and capable of receiving the oil from the container, said ring of porous material being adapted to have frictional engagement with the flange of the wheel for rotating the oil container and thereby, through centrifugal force, forcing the oil through said ring of porous material.



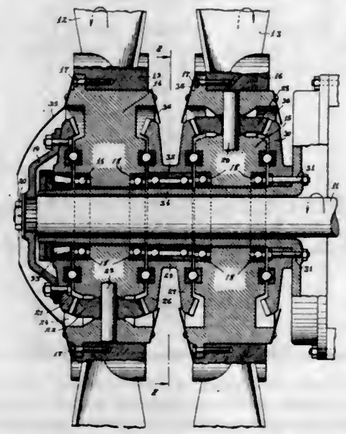
1,786,335. EARTH-EXCAVATING MACHINE. ADAM CLARK, Willows, Saskatchewan, Canada. Filed Dec. 1, 1928. Serial No. 323,011. 3 Claims. (Cl. 37—9.)

1. In an earth excavating machine, a rotatably mounted wheel embodying a relatively wide rim having side flanges, a hub, spokes extending between one of the flanges and the hub at one side of the wheel, the other side thereof being open, spaced cross members located on the inner side of the rim and forming with the rim a plurality of earth elevating buckets and earth deflecting means adjoining the hub and extending transversely of the wheel.



1,786,336. MULTICOLOR ATTACHMENT FOR FLAT-BED WEB-PRINTING PRESSES. PAUL F. COX, Chicago, Ill., assignor to The Goss Printing Press Company, Chicago, Ill., a Corporation of Illinois. Filed July 13, 1929. Seral No. 378,166. 11 Claims. (Cl. 101—188.)

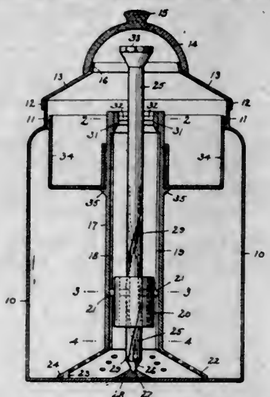
1. In combination with a flat bed traveling cylinder web printing press having guides for directing a web successively between the cylinders and beds; web deflecting



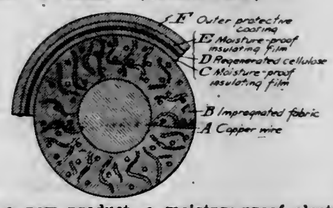
devices at the end of the press adjacent the beds, said devices including upper and lower angle bars and intermediate guide rollers whereby a narrow web after being printed on one bed can be deflected to one side before it reaches the second bed in such manner that the lengths of web over the beds will be parallel but at opposite sides of the press and the same side of the web will be presented to both beds.

1,786,337. WATER HEATER. CHARLES DARGENT, Brooklyn, N. Y. Filed Apr. 12, 1929. Serial No. 354,627. 3 Claims. (Cl. 257—248.)

1. A hot water heater, comprising a one piece substantially U-shaped body approximately twice as long as wide formed with parallel tubular members merging into an arc-shaped section having walls appreciably thicker than the tubular members, the bore in said parallel members and in said arc-shaped section being of uniform diameter throughout.



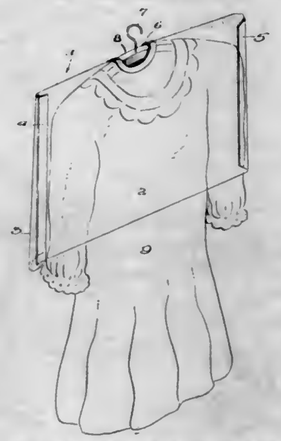
1,786,338. PROPELLER MECHANISM FOR AIRCRAFT. FRANK DONOHUE, Jr., New York, N. Y. Filed Aug. 16, 1929. Serial No. 386,267. 9 Claims. (Cl. 244—25.)



1. A propulsion mechanism for airplanes, including a plurality of oppositely pitched propellers, means operable by a single drive shaft for rotating said propellers in opposite directions at inverse speed ratios, said means including a bevel gear carried by said drive shaft, and freely rotatable pinions carried by one of said propellers and meshing with said gear.

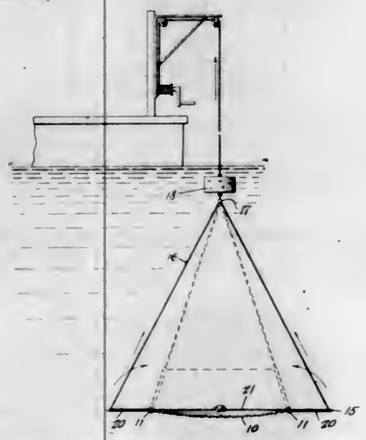
1,786,339. GAUGE. EDWARD J. FORD, Spokane, Wash. Filed Nov. 5, 1929. Serial No. 404,963. 3 Claims. (Cl. 73—82.)

1. A liquid level gauge for use within reservoirs and the like comprising a tubular housing member having a foraminated base member, a float disposed and mounted for reciprocating action within said housing, a gauge element extending centrally and longitudinally through the housing, pin and slot connections between the float, housing and gauge element respectively to impart rotary oscillatory movement to the gauge element, and an enlargement carried upon the upper most visible portion of the gauge element calibrated at spaced intervals tangentially thereof to indicate the contents of the reservoir by known quantities.



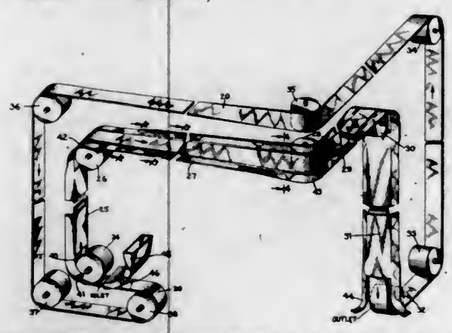
1,786,340. INSULATED CARRIER. HENRY A. GARDNER, Washington, D. C. Filed Feb. 1, 1930. Serial No. 425,335. 4 Claims. (Cl. 154—2.6.)

1. As a new product, a moisture-proof electrically resistive wrapping comprising a sheet of cellulosic material, carrying on each side thereof an adhering layer of a composition consisting essentially of a cellulose ester and a plasticizing resin.



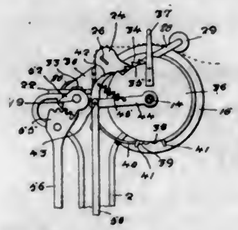
1,786,341. GARMENT COVER. CHARLES B. GILBERT, Burlington, N. J., assignor of one-half to J. Graham Bosworth, New York, N. Y. Filed Feb. 23, 1927. Serial No. 170,330. 1 Claim. (Cl. 223—61.)

A display device for garments, comprising an inverted protecting bag including unbroken front and rear walls



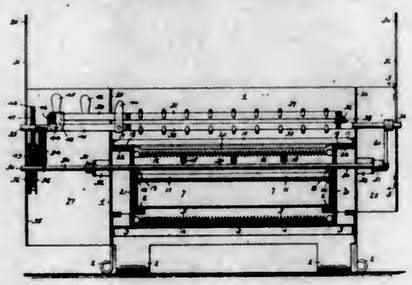
of transparent sheet material, said walls being secured permanently together along the side and top edges, the lower edges forming a permanently open mouth, through which the upper portion of a garment may be inserted for display, the length of said walls being less than that of said garment, and the lower edge of one wall extending below that of the adjacent wall, whereby access to the bag is facilitated, the upper end of said bag being provided with an aperture to accommodate the hook of a garment hanger, whereby when said device is applied to a garment on display, said garment is visible in its entirety, and the lower portion of the garment is unconfined, thus avoiding creasing or rumpling.

1,786,342. FISH NET. GEORGE W. GREENE, Hamarville, Pa. Filed Nov. 8, 1929. Serial No. 405,827. 1 Claim. (Cl. 43—8.)



An automobile trap comprising a net having a continuous reinforcing element secured circumferentially thereof, spring elements disposed at intervals and encircling the reinforcing element, lifting arms carried by and extended as continuations of the spring elements and normally induced thereby to occupy positions in a plane with the net and reinforcing element, a netting carried upon the outer portion of the reinforcing element and extended for connection with the lifting arms, a bait carrying element having one end disposed above the net and a weight operated release mechanism operatively engaged with the opposite end of the weight carrying element.

1,786,343. UNIVERSAL DRAG CONVEYER. FRANCIS GRIFFITH, Passaic, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1930. Serial No. 426,709. 5 Claims. (Cl. 271—75.)

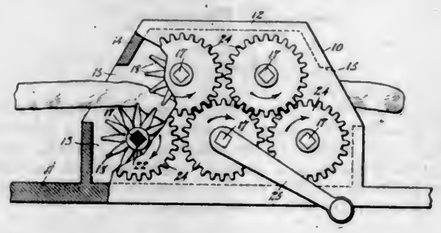


1. A drag conveyer comprising a stationary channel having a base and outwardly extending side flanges, said channel being twisted intermediate its length so that transverse elements of said base, at spaced points along the length thereof, are inclined to each other, and a belt of less width than the width of the channel positioned in said channel and adapted to travel therein, said belt conforming to the shape of the base of said channel and being in frictional contact therewith, so as to convey sheet material along the channel beneath the belt.

1,786,344. INTERMITTENT GRIP DEVICE FOR COPY-HOLDERS. HARVEY HARTER, Paterson, N. J., assignor, by mesne assignments, of forty-nine one-hundredths to John McGowan, Camden, N. J. Filed Aug. 18, 1926. Serial No. 130,020. 2 Claims. (Cl. 74—54.)

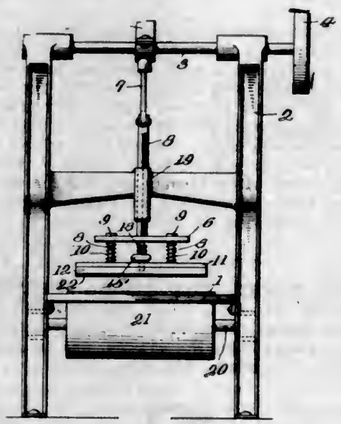
1. In an apparatus of the character described a ratchet, a shell rotatably mounted and surrounding the ratchet, said shell having an opening exposing a plurality of the ratchet teeth, a lever operated rod, a pawl carried thereby cooperating with said exposed teeth, the shell being adjustable to vary the relation of the opening therein to the initial position of the pawl, and a retaining member, the shell having a series of notches selectively engageable by the retaining member.

1,786,345. ELECTRIC COOKER. PETER ITZI, Philadelphia, Pa. Filed Dec. 11, 1929. Serial No. 413,346. 3 Claims. (Cl. 219—19.)



2. In an electric heater, a slice holding grid comprising two hingedly connected sections, means for swinging the sections away from each other, means for latching the sections associated, trunnions on the ends of one of the sections, guide means for the trunnions, a shaft journaled in bearings below the trunnions, an offset arm on one end of the shaft, a link connection between the arm and one of the trunnions, a substantially rectangular gear having a rounded end fixed on the second end of the shaft, a similar gear on one of the trunnions in mesh with the first mentioned gear, a coil spring connecting the last mentioned gear with the shaft, an operating handle on the first mentioned gear and a semi-circular guide for the handle.

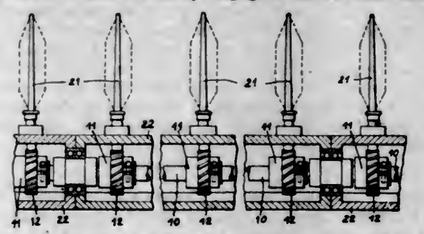
1,786,346. CUTTING MACHINE. ORA E. JACQUES, Plymouth, N. H. Filed Mar. 14, 1929. Serial No. 347,139. 1 Claim. (Cl. 17—26.)



In a meat tendering machine, a group of upper shafts and a group of lower shafts, each shaft consisting of

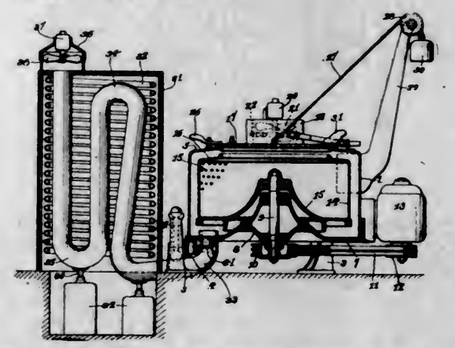
cross-sectionally square stock, a series of cutters arranged on each shaft, each cutter having a square shaft hole therein to receive its shaft to prevent relative turning of the cutter with respect to the shaft, each cutter having spaced circumferenial cutting edges, each cutting edge being disposed at an angle with respect to the axis of

rotation of the related shaft, and means to rotate the upper shafts in the same direction and said lower shafts in the same direction but opposite to the direction of rotation of the upper shafts, to cause the rotation of the cutters, for the purpose of cutting into the opposite sides of a piece of meat when subjected thereto by rotating said cutters.



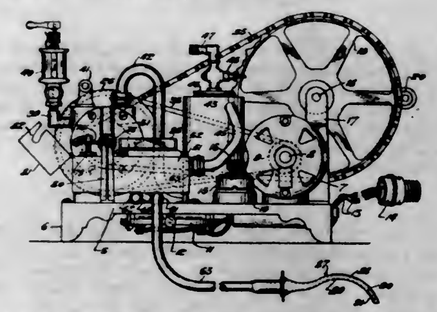
1,786,347. METHOD AND APPARATUS FOR STENCILING ON CLOTH. CHARLES F. KENNEDY, Stamford, Conn., assignor to Harry E. Verran, Stamford, Conn. Filed Dec. 20, 1929. Serial No. 415,479. 10 Claims. (Cl. 101—114.)

1. A method of stenciling on fabric which comprises the steps of placing paint in a pervious bottomed paint container which is impervious to paint at normal pressure, locating a stencil beneath said pervious bottom and pneumatically forcing paint from the container through the pervious bottom and the stencil on to fabric positioned there beneath.



1,786,348. SPINNING AND TWISTING MACHINE. JOHANN JACOB KEYSER, Aarau, Switzerland. Filed June 10, 1930, Serial No. 460,198, and in Germany June 21, 1929. 5 Claims. (Cl. 118—8.)

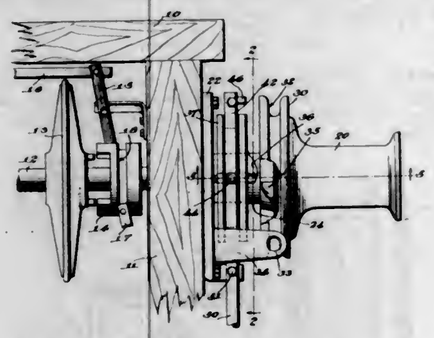
1. In a spindle beam a hollow longitudinal beam casing, a plurality of spaced rotatable spindles carried thereby, a common actuating shaft for the said spindles and a plurality of operative connections between the actuating shaft and the spindles, each connection comprising a gear loosely mounted on the actuating shaft and meshing with a spindle actuating element, a cylindrical hollow sleeve fixedly mounted on the actuating shaft and centrifugal coupling means carried by the said loosely mounted gear and adapted to frictionally engage with the said hollow



sleeve so as to establish a fixed connection therewith and to rotate the said spindle actuating gear when the common actuating shaft is rotated.

1,786,349. DRYING MACHINE. HARRY KOPLIN, Chicago, Ill., assignor to The Amico Company, Inc., Chicago, Ill. Filed Feb. 1, 1930. Serial No. 425,270. 4 Claims. (Cl. 210—66.)

2. In a clothes drier, an open top casing, an open top clothes drying basket within the casing, a lid for the casing formed with an opening, a heater shell carried by the lid and surrounding the opening, a steam coil within the shell, longitudinally aligned pipe sections mounted on the casing, steam conduits connecting the coil with the pipe sections and having loose connection with the latter to provide a hinge mounting for the lid, a weighted cable connected with the lid and normally tending to swing the same to open position, and a clamp carried by the casing for engagement with the lid to maintain the latter in closed position.



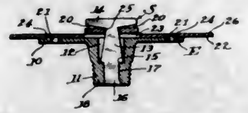
1,786,350. RESUSCITATOR. DAVID N. LAMBERT, Brooklyn, N. Y. Filed Sept. 12, 1925. Serial No. 56,028. 4 Claims. (Cl. 128—29.)

1. In a resuscitator or pulmotor of the class specified, means having an inlet for a gaseous medium and outlets for

the delivery of such medium to and its discharge from a patient, a pump connected to said inlet for delivering gaseous medium to said receiving means, said pump having a rotatable shaft, means comprising a reciprocating valve for alternately establishing communication between the inlet and delivery outlet and between the delivery and discharge outlets of said receiving means, means including a worm wheel for reciprocating said valve, and a plurality of worms of different pitch mounted on the shaft of said pump and selectively engageable with said worm wheel.

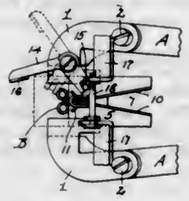
1,786,351. DRIVE OR CLUTCH MECHANISM FOR WINCHES. JOHN E. LE BUS, Electra, Tex. Filed Oct. 11, 1928. Serial No. 311,796. 2 Claims. (Cl. 192—33.)

1. A winch comprising a driving shaft, a spool driven by the shaft, a wheel mounted for rotation on the spool, a pair of clutch elements for connecting the spool with the wheel, a shifter adapted to be rocked for placing one of the clutch elements into operative relation with the second clutch element, a lug on the shifter and a cam on the wheel adapted to engage the lug for causing automatic disengagement of the clutch elements, the spool being provided with an integrally formed sleeve, the first mentioned clutch element being slidably keyed on the sleeve.



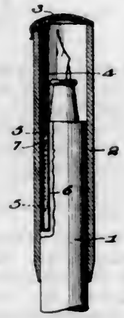
1,786,352. LOCKING DEVICE. CARL O. B. LOFGREN, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 17, 1928. Serial No. 278,527. 6 Claims. (Cl. 200—119.)

1. In a safety device for a fuse, a button, transverse, divergent, non-radial recesses in one face of the button, said recesses extending to the periphery at spaced points thereabout, dogs pivoted in said recesses and having toothed ends adjacent the periphery, and a spring means engaging each dog and urging it about its pivot in the direction of desired rotation of the device.



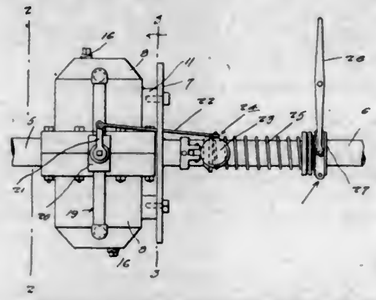
1,786,353. DEVICE FOR SECURING OUTLET BOXES TO THEIR HANGERS. ORREN E. LOGAN, Los Angeles, Calif., assignor of one-half to George L. Barnes, Los Angeles, Calif. Filed July 26, 1927. Serial No. 208,588. 12 Claims. (Cl. 247—22.)

1. In combination, a hanger adapted to be secured to a wall or ceiling and provided with a slot, an outlet box having openings in one wall thereof, and a device in the box comprising a body portion having protuberances received in certain of said box openings to prevent lateral shifting of the device in the box, and a stud fixedly secured to and projecting from the body portion and extendible through another of the box openings to project



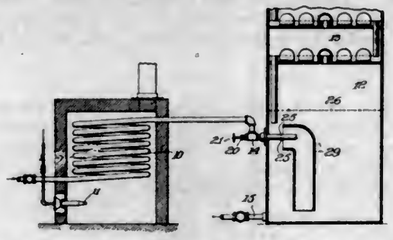
from the box, said stud having an elongated head insertable through said hanger slot when occupying a position parallel with respect to the length of the slot and operable when occupying a position transversely of the slot in response to relative rotation between the hanger and box, to secure the box to the hanger.

1,786,354. ATTACHMENT FOR BUTTON-SEWING MACHINES. JEFFERSON S. LOHMAN, Scranton, Pa. Filed Nov. 9, 1929. Serial No. 406,008. 3 Claims. (Cl. 112—107.)



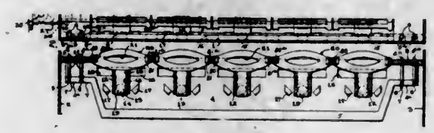
1. In combination with a sewing machine, including holding members, a member connected with each holding member and having a part extending inwardly beyond the inner edge of said holding member, the inner edge of said part having a groove therein, said grooves forming guideways, a plate slidably arranged in said guideways and having holding means thereon for receiving an article having eyelets thereon, with the eyelets projecting from the front of the plate, whereby the machine will sew the eyelets to fabric, and means for adjusting the plate inwardly or outwardly.

1,786,355. DEVICE FOR TIMELY OPENING AND CLOSING OF THE FLAP OF FOUNTAIN PENS. ROBERT PETER MARKSTEIN, Vienna, Austria. Filed Dec. 4, 1929, Serial No. 411,604, and in Austria Oct. 24, 1929. 4 Claims. (Cl. 120—49.)



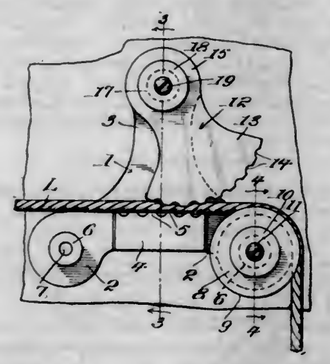
1. A pen barrel, a protecting sleeve for the pen slidable on the barrel and having a pivoted closure at its outer end, an operating rod for the closure, and coacting means, on the barrel and on the rod, to temporarily resist relative movement between the sleeve and the barrel and thereby cause the rod to operate the closure.

1,786,356. POWER TRANSMISSION. THOMAS R. MCFARLAND, Sawtelle, Calif. Filed Apr. 30, 1929. Serial No. 359,249. 2 Claims. (Cl. 192—60.)



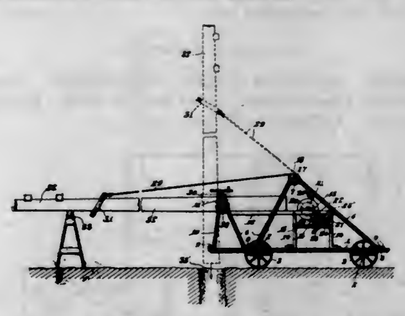
1. In a transmission structure of the class described, a main drive shaft, a driven shaft associated therewith, a plate fixed on one end of said driven shaft, a valved fluid clutch device carried by the plate through which the drive shaft rotatably extends, a centrifugal governor carried by said driven shaft, operating links between the arms of said governor and the valves of said clutch, and spring means for regulating the sensitivity of operation of the governor, said spring means comprising a coil spring surrounding said driven shaft and a collar assembly and pivoted operating lever therefor.

1,786,357. APPARATUS FOR DISTILLING HYDROCARBON OILS. CLARKE C. MILLER, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed June 15, 1927. Serial No. 198,925. 7 Claims. (Cl. 196—126.)



1. In combination, a flash drum for flashing heated hydrocarbon oils, a valve adapted to inject heated oil thereinto, said valve comprising a tubular portion provided with a seat and a flaring open-ended portion therebeyond, and a valve-member adapted to cooperate with said seat for the purpose of regulating the flow of oil through the valve, said flaring portion being provided with openings adapted to receive oil maintained in said flash-drum, and an elbow adapted to receive the oil discharged from said flaring portion and conduct it downwardly to the bottom of the flash drum.

1,786,358. GRATE. HENRY KEY MILNER, Birmingham, Ala., assignor to Morton Kirk Moore, Charleston, S. C. Filed June 14, 1926, Serial No. 115,928. Renewed Nov. 7, 1930. 3 Claims. (Cl. 126—180.)

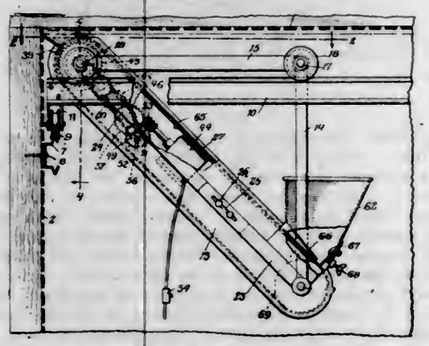


1. In a fuel supporting element for grates, an elliptical shaped head having a transverse opening extending entirely therethrough and a vertically disposed slot extending substantially the length of the head and stopping short of the ends of the latter and communicating with the transverse opening, a horizontal support, and a shank projecting from the under face of the head for supporting the latter on said horizontal support.

1,786,359. AUTOMATIC CLOTHESLINE FASTENER. GEORGE H. MILLER, Decatur, Ill. Filed Nov. 8, 1929. Serial No. 405,773. 1 Claim. (Cl. 24—134.)

A clothes line clamping device comprising an attaching plate, a fixed gripping member upon said plate having a gripping face member, over which the line is to be drawn in tautening the same, bosses upon the said face of the attaching member at opposite ends of the gripping member, a pulley interchangeably mounted upon the said bosses and over which and the face of the fixed gripping member the clothes line is to be drawn, and a gripping member pivotally mounted for swinging movement, and having a gripping edge for coaction with either end portion of the gripping face of the gripping member, in the swinging adjustment of the said pivoted gripping member to grip the clothes line between the gripping face of the fixed gripping member and the gripping edge of the pivoted gripping member when the gripping member is in either position of its pivotal adjustment.

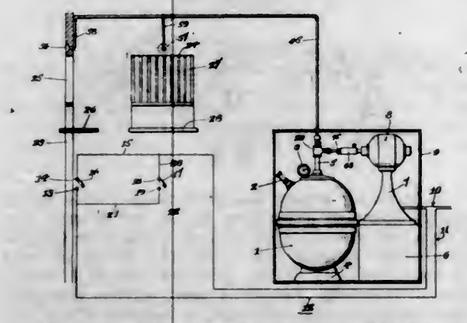
1,786,360. LINE-POLE-SETTING DEVICE. EDWARD NOBLES, Pocatello, Idaho. Filed Aug. 27, 1928. Serial No. 302,411. 3 Claims. (Cl. 214—3.)



1. A device for setting line poles comprising a mobile structure including a platform having its forward portion provided with a cutout opening through its forward end, a cable winding and unwinding means on said platform rearwardly of the inner end of said cutout, a pair of standards secured on said platform forwardly of said means and each positioned on one side of said cutout at the forward portion of the latter, a releasable, combined clamping and binding element positioned between

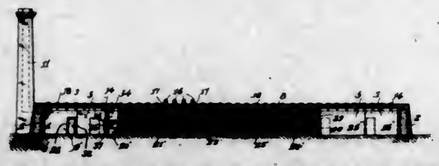
said standards, said element including two parts for encompassing the butt end of a pole, one of said parts pivotally mounted on the upper end of the standards and the other of said parts carrying means for binding the pole to said element, a pole coupling member in the form of an annulus for encompassing the pole forwardly of said element, and an elevating cable winding on and off said means, extending over said element and having its forward end connected to the rear of said member.

1,786,361. PROCESS FOR THE PRODUCTION OF FILTER SIEVES AND SIEVES PRODUCED BY SUCH PROCESS. AUGUST PAHL, Berlin-Wilmersdorf, Germany. Filed Jan. 28, 1927, Serial No. 164,328, and in Germany May 20, 1925. 1 Claim. (Cl. 252—2.)



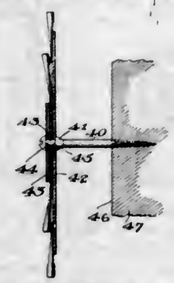
A metal screen having a covering coat of adhesive and a surface coat of particles of absorbent material secured by the adhesive.

1,786,362. PLASTERING MACHINE. THOMAS PALATINI, Belmar, N. J. Filed May 18, 1929. Serial No. 364,165. 6 Claims. (Cl. 72—130.)



1. A plastering machine, including rails adapted to be secured to the walls of a room, wheels rotatably mounted on said rails, transverse bars mounted on said wheels, said bars extending from one side of the room to the other, a plurality of wheels carried by said bars, a frame supported by said wheels, part of said frame acting as an elevator, said elevator being formed with an extending wall acting as a trowel for applying the plaster raised by said elevator, and means carried by the elevator for actuating the elevator and simultaneously moving said frame along said longitudinally-positioned bars.

1,786,363. BURGLAR-GUARD APPARATUS. THOMAS G. PATE, Liberal, Kans. Filed Nov. 29, 1929. Serial No. 410,619. 4 Claims. (Cl. 20—1.01.)

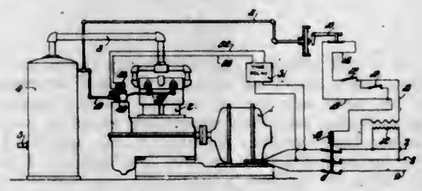


1. In a burglar guard apparatus of that type including a conducting line for tear gas, the combination of a reservoir containing an agent under pressure and having an outlet adapted to communicate with said line, a valve normally closing the outlet, a motor normally in an open power circuit, means for closing said circuit to make the motor active, and means operated from the motor for quickly shifting said valve to establish communication between the line and the outlet.

1,786,364. METHOD AND APPARATUS FOR DRYING AND BURNING MOLDED WARE. JOHN MARTIN PILLATZKE, Minneapolis, Minn. Filed Mar. 18, 1929. Serial No. 347,906. 5 Claims. (Cl. 25—134.)

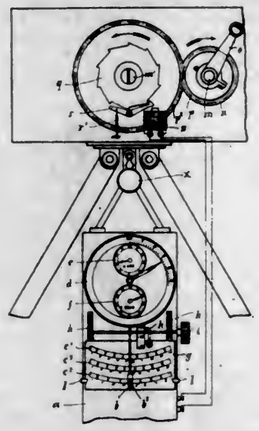
1. An apparatus of the character described comprising, an endless burn tunnel having its upper wall provided with a plurality of smoke outlets, a smoke flue extending lengthwise of the tunnel and having its upper wall formed with a plurality of longitudinally spaced smoke inlets, removable caps normally closing said outlets and inlets, means for selectively connecting certain of said outlets and inlets to provide for the passage of smoke from the burn tunnel to the smoke flue through selected outlets and inlets, and means for creating drafts of air in said tunnel on opposite sides of said connected outlets and inlets, said drafts flowing longitudinally of the tunnel toward the connected outlets and inlets.

1,786,365. CURTAIN OR PORTIÈRE HOLDER. DANIEL SAFFORD QUINTARD, New York, N. Y. Filed Apr. 17, 1930. Serial No. 445,061. 8 Claims. (Cl. 156—33.)



5. In combination, a fastening device comprising a shank having a head at one end and a point at the other end, a frusto-conical enlargement on the shank spaced from the head to provide confining means for rosette disks, and rosette disks mounted on the shank between the head and the enlargement.

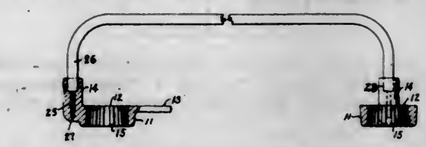
1,786,366. CABLE-TRANSPORT DRUM. JULIUS RATH, Lippstadt, Germany, assignor to the Firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Filed Feb. 1, 1930, Serial No. 425,147, and in Germany July 20, 1927. 1 Claim. (Cl. 242—77.)



A metallic cable transported drum, comprising a substantially cylindrical portion, disc portions at either end of said cylindrical portion and of considerably greater diameter than said cylindrical portion, said discs having outwardly extending flanges around the peripheries thereof, said flanges having corrugations of wave-like configuration around their peripheries parallel to the axes of said discs and of a slight depth, said depth being less than the difference in the diameters of said cylindrical portion and of said discs, to aid in handling the drum and to permit the easy application of wooden planking to the drum.

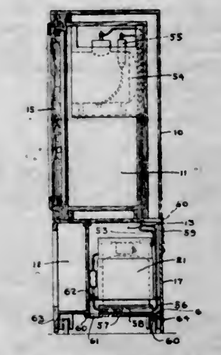
1,786,367. AUTOMATIC COMPRESSOR-CONTROL SYSTEM. JOHN W. SANFORD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 1, 1928. Serial No. 282,256. 20 Claims. (Cl. 230—4.)

1. In an automatic compressor control system, in combination, a compressor, a driving motor therefor, means including a pressure responsive device for automatically starting and stopping the compressor in response to variations in compressor discharge pressure, an unloading device for said compressor automatically operable to cause loading and unloading in response to discharge pressure, said start and stop means and said unloading device being selectively operable to accomplish their respective functions, and control means operable either to render said start and stop means effective or to render such means ineffective while control is effected by said unloading device during continuous running of the compressor.



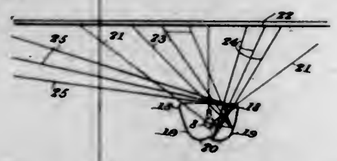
1,786,368. METHOD AND DEVICE OF SYNCHRONIZING CINEMATOGRAPHIC PERFORMANCE AND SOUND PRODUCTION. JOHANN JACOB FRIEDRICH STOCK, Munich, Germany. Filed Apr. 23, 1926, Serial No. 104,197, and in Germany May 4, 1925. 17 Claims. (Cl. 88—16.2.)

8. The method of synchronizing cinematographic performance and sound production, characterized by automatically regulating the advance of cinematographic film at a transmitting station by positive time-control means, correspondingly regulating the advance of duplicate films at independently operable stations by like time-control means correspondingly set, and producing and regulating sound accompaniment for the film according to the advance thereof at the transmitting station only while simultaneously transmitting the sound to the receiving stations.



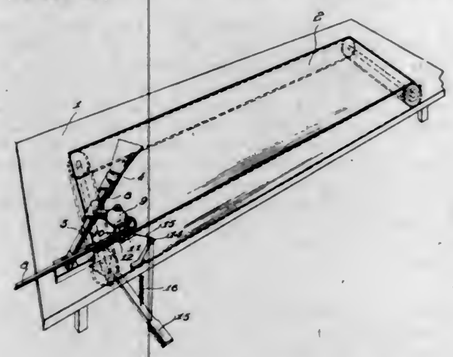
17. In an arrangement for practicing the method of synchronizing cinematographic film projection with sound accompaniment as claimed and described herein, the combination with a cinematograph having mechanism for feeding a film therethrough, of a clock-like device having a movable contact member, contact pieces over which said member is movable, and check-means in circuit with said pieces and operable retardably upon said mechanism by electric impulses through the circuit for controlling the rate of film feed in consonance with the rate at which the sound accompaniment is produced.

1,786,369. BATTERY-CHARGING CONNECTER. HAROLD C. TERRELL and FRANK A. KERKHOFF, Cincinnati, Ohio, assignors to The Ohio Parts Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 30, 1928. Serial No. 296,232. 2 Claims. (Cl. 173—259.)



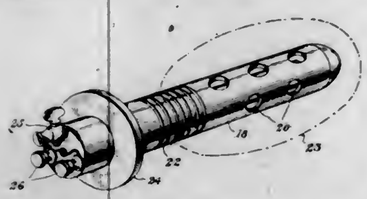
1. A battery connecter comprising a body having a hole the wall whereof is provided with sharp-edged ribs arranged for scraping the outer periphery of a tapered battery terminal post for forming good electric connection between said body and said post, a fork at one side of said hole for connection with a battery terminal post, and a lug at the other side of said hole, the axes of said lug and of said hole being substantially parallel, and an insulated electric conductor, said electric conductor having an end extending beyond its insulation, and said end of said electric conductor and the proximate end of said insulation imbedded in said lug.

1,786,370. REFRIGERATOR. MATSON C. TERRY, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1925. Serial No. 70,118. 9 Claims. (Cl. 62—116.)



1. In a refrigerating apparatus, the combination of an evaporator, a condenser, a fluidtight casing enclosing a motor and a compressor, substantially V shaped cooling fins provided upon the outer walls of the casing, a jacket surrounding the cooling fins, and a blower for passing air between the casing and the jacket.

1,786,371. LIGHTING FIXTURE. WILLEM JOHANNES DOMINICUS VAN DIJCK, The Hague, Netherlands, assignor to Naamlooze Vennootschap: Glasfabriek "Leerdam" Voorheen Jeekel, Mijnssen & Co., Leerdam, Netherlands. Filed Feb. 15, 1929, Serial No. 340,135, and in the Netherlands Feb. 13, 1928. 3 Claims. (Cl. 240—78.)

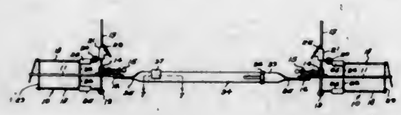


1. A lighting fixture comprising an incandescent lamp, and a light-reflecting casing surrounding the same and provided with a top opening; said casing embodying distinct upper and lower, convexo-concave ellipsoidal portions disposed with their concave surfaces turned toward each other, so that the rays emitted by the lamp and impinging against the surface of the bottom portion will be reflected by the latter a single time only and will pass through said opening, while avoiding the lamp; one focus of the ellipsoidal parts being disposed at the center of the incandescent lamp.

1,786,372. FOOD PRODUCT AND METHOD OF MARKETING THE SAME. CHARLES H. VOGT, Philadelphia, Pa. Filed Jan. 23, 1928. Serial No. 249,304. 6 Claims. (Cl. 99—11.)

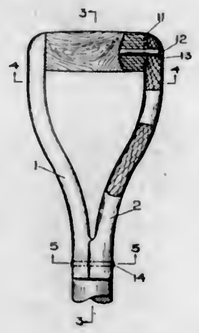
1. In the process of making scrapple, the steps which comprise introducing the scrapple mixture while hot into an imperforate molding receptacle, and removing the scrapple from the molding receptacle with a gaseous medium under pressure applied between the molded scrapple and a wall of said receptacle.

1,786,373. ELECTRICALLY-HEATED THERAPEUTICAL APPLIANCE. RALPH C. WALKER, Portland, Oreg. Filed Nov. 30, 1929. Serial No. 410,780. 6 Claims. (Cl. 128—344.)



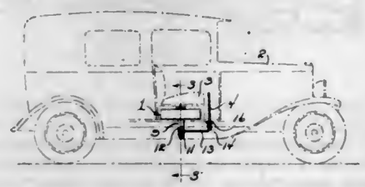
1. A therapeutic appliance comprising in combination, a heating element, a sleeve surrounding the heating element in spaced relation thereto and provided with perforations for the passage of liquid therethrough, and a dilatable sheath disposed about and housing said perforated sleeve, and means for admitting liquid into the sheath.

1,786,374. BOOT AND SHOE CONSTRUCTION. CHRISTIAN WALTON, Chicago, Ill. Filed Nov. 23, 1928. Serial No. 321,495. 3 Claims. (Cl. 36—15.)



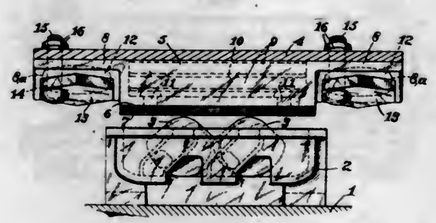
1. In a boot and shoe construction, an insole, an intermediate sole, anchoring elements on said intermediate sole, an outer sole having recesses therein, means for interconnecting said soles comprising fastening elements including head portions mounted in the anchoring elements on said intermediate sole, and securing elements disposed in the recesses in said outer sole and connected to said fastening elements.

1,786,375. ANIMAL HOPPLE. HARVEY LOUIS WATSON, Mount Pleasant, Iowa. Filed Apr. 23, 1929. Serial No. 357,511. 6 Claims. (Cl. 119—128.)



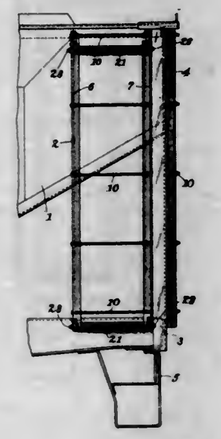
1. In an animal hopple, pairs of leg holding members, each pair comprising an inner bar, a transverse adjustable bar carried by the inner bar, sides adjustably mounted upon the transverse bar, jaws carried by the sides, means connecting said sides, and means connecting said pairs of members.

1,786,376. SHOVEL HANDLE. LEWIS EDMOND WEBSTER, Wilkes-Barre, Pa. Filed Feb. 15, 1927. Serial No. 168,277. 7 Claims. (Cl. 294—57.)



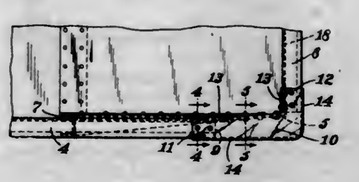
1. In a split-D handle construction, a main stem having side arms, a pressed metal casing embracing the body of the stem and said arms, a grip between the ends of the arms, said casing forming a ferrule for the ends of the arms and the grip.

1,786,377. ROAD-SANDING DEVICE FOR AUTOMOBILES. NELSON E. WHIPPLE, Windsor, N. Y. Filed May 7, 1930. Serial No. 450,561. 1 Claim. (Cl. 291—38.)



A road sanding device for automobiles comprising an elongated supply tank mounted under the front seat of an automobile and having the bottom wall inclined upwardly from each end of said tank toward the intermediate portion thereof to cause gravitation of the sand in the tank toward each end thereof, discharge pipes in communication with the ends of the tank and having the discharge ends thereof disposed a considerable distance in advance and in alinement with the rear wheels of the automobile to permit the sand to strike and spread on the roadway before being engaged by the rear wheels, valves in said pipes, and a control means for the valves to regulate and discontinue the flow of sand from the pipes as desired.

1,786,378. SIDE BEARING. WILLIAM E. WINE, Toledo, Ohio. Filed Mar. 1, 1927. Serial No. 171,758. 1 Claim. (Cl. 308—226.)

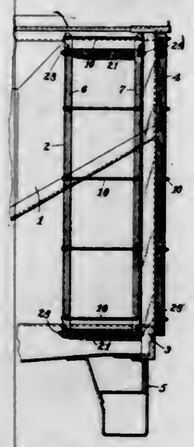


A side bearing comprising a truck bearing and a body bearing, the body bearing adapted to be secured to the bottom sloping wall of a bolster and the said body bearing having wings extending out beyond the body portion of the bearing and lying parallel with the bolster, the said body of the bearing adapted to lie in a horizontal plane, the said wings each provided with a circular opening, circular plates located in these openings and said plates free to turn in said openings without being moved inwardly or outwardly of said openings, bolts eccentrically mounted in said plates, the bolts adapted to be secured to the body bolster and said bolts extending at right angles to the said sloping wall of the body bolster and to the body bearing, said plates when turned capable of adjusting the body bearing with relation to the height of the truck bearing, said bolts being shorter in length than the depth of the body bearing, and means on the bolts for locking the circular plates in the openings.

1,786,379. CAR LADDER. WILLIAM E. WINE, Toledo, Ohio. Filed Apr. 16, 1928. Serial No. 270,303. 9 Claims. (Cl. 228—49.)

1. A freight car ladder comprising angular stiles, said stiles having openings substantially rectangular in shape in the opposite faces of said stiles, and round rungs having flattened ends to be interlocked within the openings of the two respective faces in each of said stiles.

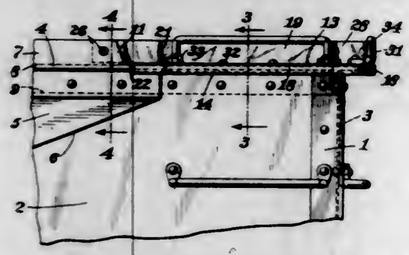
1,786,380. CORNER CONSTRUCTION FOR FREIGHT CARS. WILLIAM E. WINE, Toledo, Ohio. Filed Apr. 2, 1929. Serial No. 351,968. 7 Claims. (Cl. 105—406.)



1. A freight car having end side sheets sloping from near the end side stakes to the corner posts of the freight car, end top rails, side top rails terminating short of the ends of the end top rails, right angular shaped brackets riveted to the ends of the end top rails and side top rails, and also riveted to the end side sheets to thereby make the top rails rectangular in outline.

2. A freight car having inwardly sloping end side sheets, top side rails and end top rails, the side top rails terminating short of the end top rails, corner brackets respectively having a downwardly extending flange on its inner side, the said brackets riveted to the said top rails, and the end sheets also riveted to the said respectively downwardly extending flange of the said brackets.

1,786,381. CAR LADDER. WILLIAM E. WINE, Toledo, Ohio. Original application filed Apr. 16, 1928, Serial No. 270,303. Divided and this application filed Apr. 17, 1929. Serial No. 355,842. 6 Claims. (Cl. 228—49.)

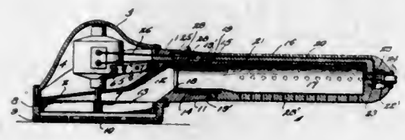


4. A car ladder comprising angle iron stiles and rungs, brackets within the angles of the stiles, each of said

brackets having a portion spaced from both the legs of the stile, car brackets to respectively engage the brackets

on the stiles and fill up the spaces between the two respective legs of the stiles, and means for locking the stiles to the car brackets.

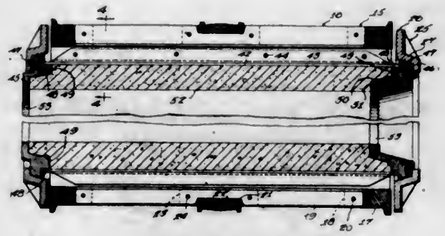
1,786,382. CORNER CONSTRUCTION FOR FREIGHT CARS. WILLIAM E. WINE, Toledo, Ohio. Filed Feb. 12, 1930. Serial No. 427,823. 11 Claims. (Cl. 105—406.)



1. A freight car having end side sheets sloping from the normal sides of the car to the corner post, end top rails and side top rails formed of Z-bars and the end top rails and side top rails terminating short of one another, the upper legs of the said Z-bar rails being cut away near their adjacent ends, a bracket for the respective corners resting on the said Z-bar rails, and an upwardly extending flange on each bracket adapted to be secured to the upper legs of the respective adjacent Z-bar top rails.

2. A freight car having end side sheets, end sheets, and corner posts, Z-bar top side rails and Z-bar top end rails, the top leg of the respective Z-bars being cut away, corner brackets respectively secured to the end and side rails and extending between the cut-out portions of the top legs thereof, each of said brackets having a flange along its inner edge and extending outwardly near its opposite ends and secured to the said Z-bars.

1,786,383. PROCESS OF PURIFYING NATURAL AND ARTIFICIAL MATTER. CECIL ROY BRABAZON YOUNG, Hamburg, Germany. Filed Aug. 30, 1926, Serial No. 132,660, and in Germany Sept. 11, 1925. 3 Claims. (Cl. 252—8.)



1. The herein described process of removing impurities from natural or artificial matter such as minerals and rock, which consists in purifying the disintegrated matter by means of a liquid consisting essentially of sulphuric acid, hydrochloric acid and oxalic acid.

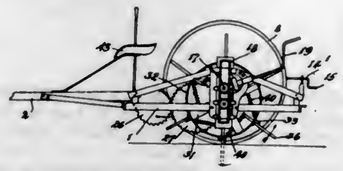
1,786,384. VACUUM BRUSH. WILLIS J. AMSTUTZ, Latty, Ohio. Filed Jan. 12, 1927. Serial No. 160,720. 2 Claims. (Cl. 15—7.)

1. A vacuum brush comprising a hollow head, a detachable top for said head, a curved partition formed in said head and dividing the latter into upper and lower chambers, a motor supported in the upper chamber with its shaft extending thru the partition into the lower chamber, a fan secured to the extending end of the shaft, a bottom plate for said head formed with parallel slots disposed upon opposite sides of the shaft, bristles secured to said bottom plate, a sleeve formed with said head, a handle secured to said sleeve, dust receiving means in said handle, said head having a passage-way providing communication between said sleeve and the lower chamber, and means carried by said sleeve to control the motor.

1,786,385. APPARATUS FOR FORMING HOLLOW ARTICLES OF CEMENTITIOUS MATERIAL. DAVID EDWARD ANDREWS, Detroit, Mich., assignor of sixty one-hundredths to Walter L. Stone, Detroit, Mich. Filed Nov. 17, 1927. Serial No. 233,994. 7 Claims. (Cl. 25—30.)

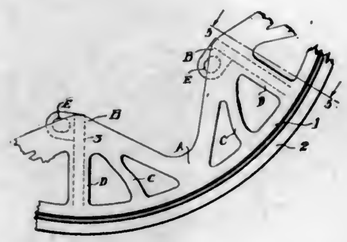
1. Apparatus of the character described comprising a cage, means for rotatably supporting said cage, a form adapted to be arranged in said cage and provided with ends having tapered portions, said cage being provided with tapered portions adapted to receive the corresponding portions of said form, one of the tapered portions of said cage being detachable to permit withdrawal of said form from said cage, and means for rotating said cage.

1,786,386. EXTRACTION OF TIN FROM ORES OR MATERIALS CONTAINING TIN. EDGAR ARTHUR ASHCROFT, Waye House, near Ashburton, England. Filed May 4, 1928, Serial No. 275,267, and in Great Britain June 24, 1927. 3 Claims. (Cl. 75—17:)



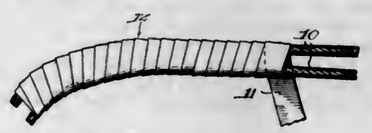
1. In the extraction of tin, the steps of reducing tin oxide by means of carbon and divided iron.

1,786,387. ICE-CREAM CAKE AND METHOD OF MAKING SAME. DONALD ALEC BATTISTA, Washington, D. C. Filed July 25, 1930. Serial No. 470,680. 4 Claims. (Cl. 107—54.)



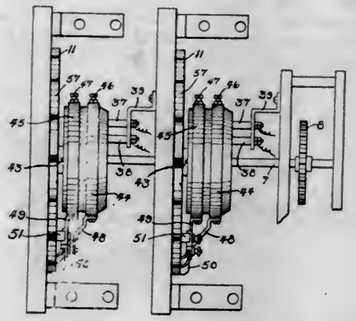
2. A process for preparing ice cream cake, which consists in baking a cake, immediately cooling the same rapidly from its hot condition, then slicing the cake into equal layers, spreading ice cream mix between the layers and covering the same with an edible coating, and finally freezing the whole.

1,786,388. CULTIVATOR. JOSEPH BEAUDRY, Somerset, Manitoba, Canada. Filed Sept. 24, 1928. Serial No. 307,907. 3 Claims. (Cl. 97—216.)



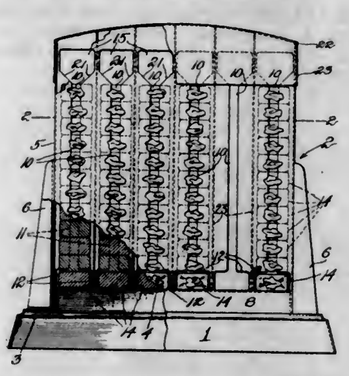
1. In a cultivator, a rotatably mounted drum having spaced longitudinally disposed angle bars at the periphery thereof, a row of teeth carried by each bar, the teeth in the rows passing through suitable openings provided in the bars and each tooth being pivotally mounted on the bar and adjustable tensioned springs connecting the inner ends of the teeth to the drum.

1,786,389. STRUCTURE OF AUXILIARY FLANGES FOR AUTOMOBILE WHEELS. ERNEST R. AMBROSE, Topeka, Kans., assignor to U. S. Safety Flange Company, Topeka, Kans., a Corporation of Kansas. Filed May 27, 1929. Serial No. 366,491. 1 Claim. (Cl. 301—39.)



In an auxiliary flange for automobile wheels to take the load upon deflation of a pneumatic tire, a flange, the web of which is flat and comprises a plurality of arches and struts as connecting means for the transmission of the load to knee members, the knee members each positioned integral with the web at one of the struts thereon and extending laterally therefrom and having at its outward extremity a portion formed at right angles and parallel with the web, the said portion being apertures to receive a bolt.

1,786,390. GASKET. MARTIN M. CODY, Chicago, Ill., assignor to Crane Packing Company, a Corporation of Illinois. Filed Oct. 21, 1929. Serial No. 401,318. 5 Claims. (Cl. 154—45.5.)

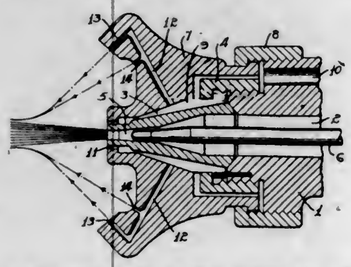


1. A flexible gasket comprising a pair of cores of compressible material and a helical wrapping of soft metal foil about the same, said cores being spaced apart with the metal bent partially around the cores to provide a section thinner in the middle than at the ends.

1,786,391. CIRCUIT CLOSER. WILLIAM H. GROVER and WILLIAM S. POOLEY, Toledo, Ohio, and CLARENCE E. MERRITT, Adrian, Mich. Original application filed Apr. 1, 1926, Serial No. 99,047. Divided and this application filed Mar. 16, 1928. Serial No. 262,180. 7 Claims. (Cl. 200—24.)

1. In a circuit closer, a commutator having concentric rows of segments and a rotatable member cooperating therewith including interconnected bushings, contact rings positioned on said bushings, brush arm carrying rings adjustable circumferentially of said contact rings, brush arms carried by the respective adjustable rings, and means for locking said adjustable rings in the desired setting.

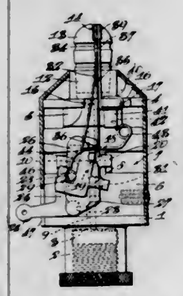
1,786,392. HOLDER FOR CONFECTIONERY. EDWARD F. KEMP, Somerville, Mass. Filed Dec. 10, 1928. Serial No. 324,970. 3 Claims. (Cl. 312—42.)



1. A holder for packages of confectionery having twisted end extensions, said holder comprising a base provided

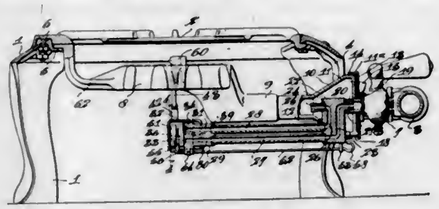
with a box-like superstructure having front and back walls of stiff sheet material formed with several pairs of oppositely disposed narrow slots adapted to be occupied by the twisted end extensions of vertical files of packages stacked upon said base between said walls and whose opposite side edges are adapted to engage said twisted end extensions so as to hold said packages in vertical alinement, the slots of each of said pairs being enlarged at their lower ends to provide exits for the lowermost package of its file at opposite sides of said superstructure.

1,786,393. METHOD OF PRODUCING FERROMOLYBDENUM AND FERROTUNGSTEN. PAUL SCHWARZKOPF, Reutte, Austria. Filed Apr. 29, 1929, Serial No. 359,181, and in Germany May 22, 1926. 4 Claims. (Cl. 75—45.)



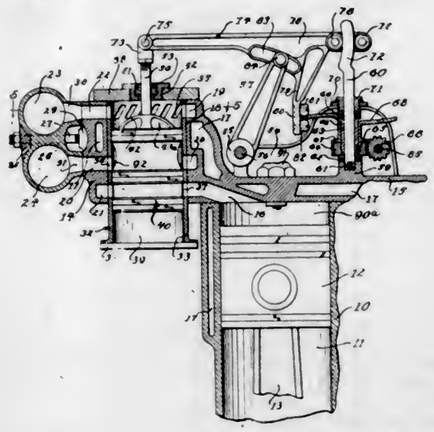
1. A method of producing ferromolybdenum or ferrotungsten consisting in evaporating molybdic acid or tungstic acid of very fine grain and maximum surface development from molten ore and introducing the acid vapors directly into a bath of iron containing a reducing agent, as set forth.

1,786,394. AIR BRUSH. ROBERT W. TRACY, Toledo, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 10, 1929. Serial No. 331,570. 2 Claims. (Cl. 91—45.)



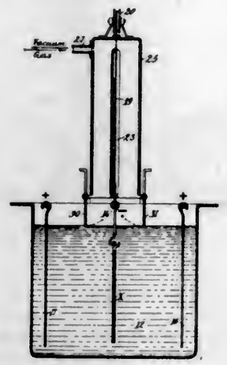
1. An air brush provided with means for discharging a material laden stream by the use of air under pressure, and means for discharging supplemental air jets against opposite sides of the main stream to flatten the same, the supplemental jet discharge means at each side of the material stream including a plurality of outlets which are in a common plane with the material stream and which converge at such an angle that the streams emitted thereby intersect and form a single fan-shaped air stream before impinging against the main stream.

1,786,395. SAFETY APPLIANCE FOR GAS BURNERS. FRANCIS J. CANCIANICH, Newport News, Va. Filed Dec. 9, 1929. Serial No. 412,885. 12 Claims. (Cl. 67—116.)



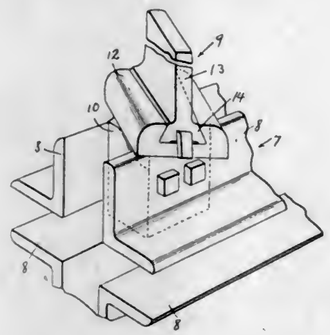
2. In gas burners, a pillar having a tip holder and a member for mounting the burner on a gas supply fixture, said pillar having a vertically disposed flat face with gas ports and ducts leading from said ports to the supply fixture and to the tip holder respectively; a slide valve having a flat face to engage said vertically disposed flat face and having a port to control gas passage between said gas ports; gravity actuated means to hold said valve in gas-tight contact with said flat face; a thermostat device associated with the valve for holding said valve in the open position when the gas issuing from the burner is ignited and to move said valve to and hold it in the closed position when the flame is extinguished, and manually operated means to move the valve to the open position initially, and another means operating to cause said valve to be moved to the closed position should said thermostat device become broken or disconnected.

1,786,396. GAS BURNER. FRANCIS J. CANCIANICH, Newport News, Va. Filed Dec. 9, 1929. Serial No. 412,886. 10 Claims. (Cl. 158—117.1.)



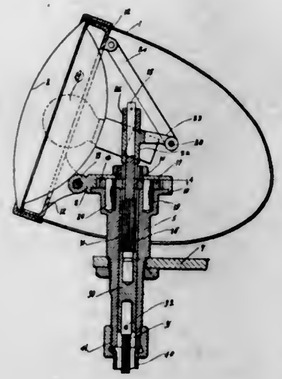
1. In heating burners, a support, a gas supply pipe with a stop cock, and a burner mounted on said support, said burner including a mixing tube having an entrant end, a gas pipe from the stop cock, a shut-off valve, a thermostatic device located adjacent the burner proper so as to be effected by the heat from the burner to actuate said shut-off valve, means conducting gas from said gas pipe to said shut-off valve, means conducting gas from said shut-off valve and delivering it into said mixing tube, said entrant end having an air admission opening, an air valve fitted over said opening and having a port cooperating therewith, means in virtue of which said air valve may be moved to close said air admission opening and means operated by said air valve for opening said shut-off valve.

1,786,397. VALVE MECHANISM. WILLIAM KARL GOSSE, Chicago, Ill. Filed Aug. 16, 1928. Serial No. 300,089. 14 Claims. (Cl. 123—188.)



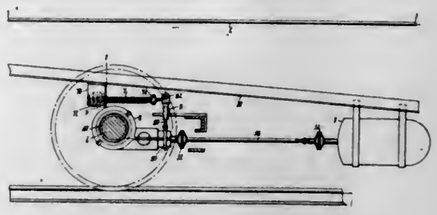
1. A valve construction for an internal combustion engine including a valve member adapted to control communication between the intake and exhaust manifolds and the cylinder of an internal combustion engine, means for motivating said valve member including a lever, a link member connecting said lever and said valve member, means for actuating said lever, and means for guiding said lever whereby said link member will be moved in a substantially straight line.

1,786,398. PROTECTIVE METAL COATING AND PROCESS AND APPARATUS FOR PRODUCING THE SAME. COLIN G. FINK, New York, N. Y., and CHARLES H. ELDRIDGE, Metuchen, N. J., assignors to Chemical Treatment Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 12, 1925, Serial No. 49,751. Renewed May 6, 1930. 2 Claims. (Cl. 204—1.)



1. The process of producing protective and resistant coatings, comprising electrodepositing a relatively thin plate of the coating metal on an article, exposing the plate to gas at sub-atmospheric pressure, and resuming plating, thereby to produce a coating free from so-called "pin-hole" defects.

1,786,399. PADDLE ORE-WASHING MACHINE. GEORGE E. KRIDER, Duncansville, Pa., assignor to McLanahan-Stone Machine Company, Hollidaysburg, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1930. Serial No. 445,717. 3 Claims. (Cl. 259—103.)

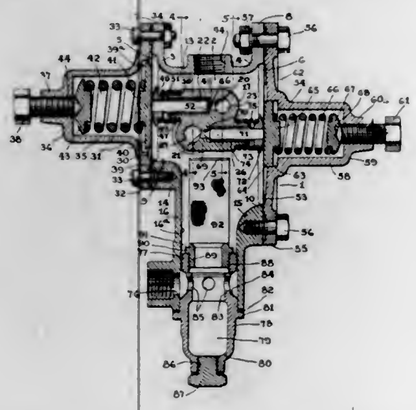


1. In a structure of the class described, in combination, a rotary shaft embodying a pair of spaced parallel angle irons, a paddle, said paddle including a shank removably bolted between said irons, said shank having a keeper embodying a head provided with a keyway, and a renewable blade having a key removably fitted in said keyway, together with a retaining tongue formed integrally with said key and bendable against said head for maintaining said blade in position.

1,786,400. VEHICLE LIGHT. CYRUS B. KURTZ, Lakewood, Ohio, assignor to The National Appliance Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 21, 1928, Serial No. 255,913. Renewed Oct. 27, 1930. 11 Claims. (Cl. 240—61.)

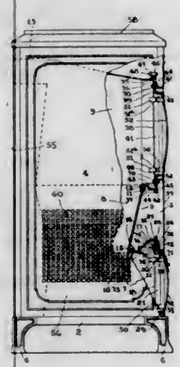
1. A movable lamp for vehicles or the like comprising a tubular support adapted to be attached to a portion of a vehicle, a lamp attached to said support by a pivot, a rod reciprocable in said support, an arm projecting from said rod, a friction sleeve on said rod above said arm, a pair of links attached to said arm and to said lamp at a point above said pivot and straddling said friction sleeve, and resilient means pressing at least one of said links toward said sleeve.

1,786,401. TRAIN-LIGHTING APPARATUS. WILLIAM ALEXANDER PITT, Montreal, Quebec, Canada, assignor of forty-nine per cent to Frank Summer, New York, N. Y. Filed Mar. 6, 1929. Serial No. 344,875. 5 Claims. (Cl. 105—109.)



1. In a train lighting apparatus the combination of a generator mounted on the car body, a transmission gear drive for rotatively connecting the car axle to the generator, and suspension means for the drive comprising a leaf spring pivotally mounted on a bracket on the car body and connected at its flexible end with the drive.

1,786,402. REGULATOR. PHILIP SHERMAN RUSSEL, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 10, 1929. Serial No. 331,655. 7 Claims. (Cl. 137—153.)

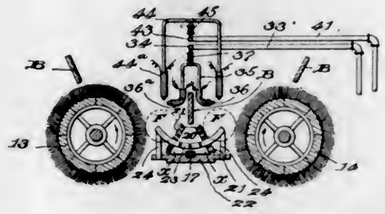


1. A regulator comprising a hollow casing having an internal chamber, an inlet to said chamber, a block member in said chamber, means supporting said member in said casing, a plurality of outlet passages extending through said member and said supporting means, valve seats in said

passages, valves in said passages cooperable with said seats and normally seated thereon, one of said valves sealing its passage, means to permit a minimum flow through another

of said passages when its valve is seated, and means responsive to the pressure in said chamber to control the opening and closing of said valves.

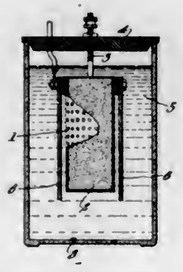
1,786,403. HEATING APPARATUS. MAX M. SUPPES, Elyria, Ohio, assignor to The Fox Furnace Company, Elyria, Ohio, a Corporation of Ohio. Filed Dec. 24, 1928. Serial No. 328,175. 9 Claims. (Cl. 126—67.)



1. A heating apparatus comprising a base member, a heating stove supported upon said base member, a casing supported on said base member and enclosing said heating stove, said stove having a door opening, said casing having an opening registering with said door opening, a closure member for said door opening, said casing being substantially flush with said closure member, said casing carrying inwardly extending members at its opening, and means securing certain of said inwardly extending members to said stove to rigidly support said casing at said casing opening.

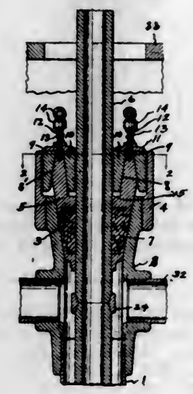
1,786,404. DERIVATIVE OF GLYCOL. HOYLANDE DENUNE YOUNG, Chicago, Ill. Filed Oct. 31, 1927. Serial No. 230,165. 19 Claims. (Cl. 260—103.)

1. A composition of matter comprising an ester of a polycarboxylic acid in which the hydrogen of at least one of the carboxyl groups is replaced by an acyl-oxy-alkyl radical and the hydrogen of another carboxyl group is replaced by a monovalent hydrocarbon radical.



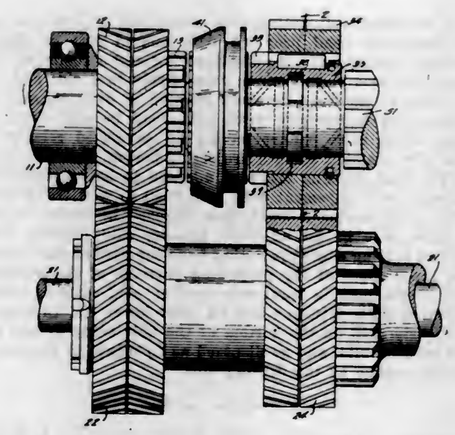
13. A composition of matter comprising beta-acetyl-oxy-ethyl butyl phathalate.

1,786,405. APPARATUS FOR TREATING FRUIT AND THE LIKE. ERNEST M. BROGDEN, Pomona, Calif., assignor to Brogdex Company, Los Angeles, Calif., a Corporation of Florida. Original application filed July 23, 1923, Serial No. 653,227, now Patent No. 1,671,924. Divided and this application filed May 19, 1928. Serial No. 279,056. 10 Claims. (Cl. 146—202.)



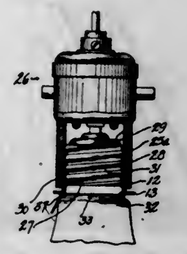
1. Apparatus for treating fruit comprising the combination, with a rotary cylindrical rubbing roll, of an endless traveling conveyor device mounted to travel with a flight thereof substantially parallel to the roll axis and having members adapted to cooperate with said rubbing roll in supporting fruit to be treated and operative to advance fruit longitudinally of said roll, and fruit-retarding means mounted to project into the path of travel of fruit so advanced and adapted to exert pressure on the fruit below the top thereof.

1,786,406. GALVANIC CELL. GEORGE W. HEISE, Bayside, N. Y., and CLARENCE W. BROKATE, Danbury, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Feb. 16, 1923. Serial No. 619,464. 2 Claims. (Cl. 136—115.)



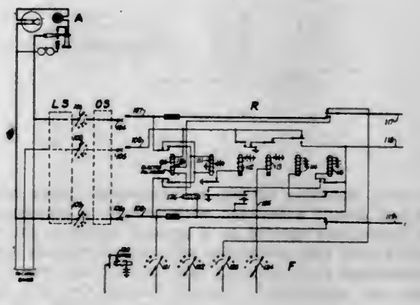
1. A galvanic cell comprising a container, a metallic anode, a depolarizing oxid cathode, and caustic electrolyte in operative relation in said container, and an area exposed to the electrolyte and having a rough surface favoring crystallization of compounds of the anode metal.

1,786,407. CASING HEAD. GRANVILLE A. HUMASON, Houston, Tex., assignor of one-half to J. A. Logan, Harris County, Tex. Filed Feb. 16, 1929. Serial No. 340,492. 7 Claims. (Cl. 166—14.)



1. In well drilling apparatus having a casing set in a well bore, and a drill stem within said casing; a spider carried by the casing having a seat, sealing means carried by said stem adapted to seat against said seat, upon the lowering of said means relative to the casing, to form a seal between said stem and casing, said sealing means including spider engaging slips and stem engaging slips.

1,786,408. TRANSMISSION DAMPENER. CARL DAVID PETERSON, Syracuse, N. Y. Filed Feb. 24, 1930. Serial No. 430,843. 2 Claims. (Cl. 74—6.)

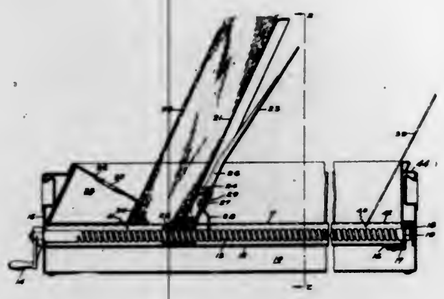


1. A herring-bone gear provided with a bore slidable and rotatable upon a shaft, the gear provided with an annular slot cut in its bore, a spring ring within the bore gripping the shaft.

1,786,409. SAFETY LAMP LOCK. ROBERT A. MOORE, New York, N. Y., assignor to Multiple Selling Corporation, New York, N. Y. Filed Jan. 29, 1929. Serial No. 335,786. 11 Claims. (Cl. 173—356.)

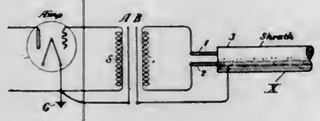
1. A lamp locking device, including, in combination, male and female interengaging screw members, a support mounted on the male member, a locking member extending between the circular walls of the interengaging members, said locking member having edges lying along an angle with the tangent to the male member to bite into the said circular walls on attempting to unscrew the male member, means on the support movably carrying the locking member for withdrawal from between the said circular walls, and other means to withdraw the locking member to permit the male member to be unscrewed.

1,786,410. TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Aug. 27, 1927, Serial No. 215,793. Renewed Apr. 9, 1930. 39 Claims. (Cl. 179—27.)



34. In combination, registering apparatus arranged to register a pair of digits, and a sender operable under the control of said registering apparatus to send two groups of impulses simultaneously corresponding, respectively, to the registered digits.

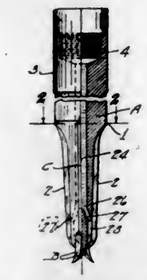
1,786,411. RECORD TRAY. ROSS R. WEST, San Francisco, Calif. Filed Jan. 23, 1928. Serial No. 248,712. 9 Claims. (Cl. 129—26.)



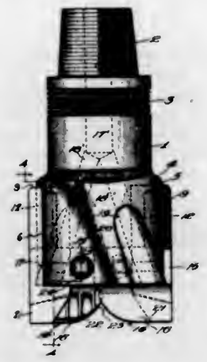
1. A device of the class described, a tray for receiving records, a follower within the tray, a threaded rod

mounted on the tray for traversing the follower, and another rod removably mounted on the tray for retaining record cards within the same.

3. A device of the class described comprising a tray for receiving records, a follower within said tray, and means adapted for moving the same along the tray, said means including a member pivotally mounted upon the follower and operable for disengaging the follower from the remainder of said moving means for movement of the follower independently of said remaining means.



1,786,412. SHIELDING ARRANGEMENT. GEORGE CRISSON, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 20, 1929. Serial No. 408,581. 4 Claims. (Cl. 178—44.)

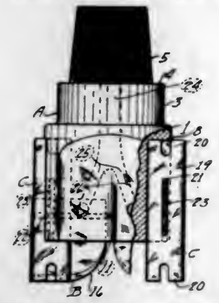


1. In a signaling system, a translating means having its input circuit associated with ground, a transmission path inductively related to a ground having a potential different from that associated with the translating means, a transformer for connecting said path to said translating means, and conductively separate shields for said transformer, one connected to the ground associated with said translating device and the other connected directly to the ground associated with said transmitting path.

1,786,413. WELL-DRILLING TOOL. CHARLES B. KENNEDYE, University City, Mo., assignor to The Kennedye Corporation, Wilmington, Del., a Corporation of Delaware. Filed Feb. 2, 1925. Serial No. 6,306. 1 Claim. (Cl. 255—61.)

A well-drilling tool, including, in combination, a head having a point of greatest cross section intermediate its ends and longitudinally decreasing in cross section from that point to its lower end, and sinuous in surface contour in simulation of the tail of a fish, slots transversely disposed at the lower end of said head, drilling elements removably mounted in said slots, elongated slots in the side of said head, reamers adapted to be removably mounted in the elongated slots having surfaces projecting beyond the sides of said head, said reamers interlocking with the drilling elements to hold same in place.

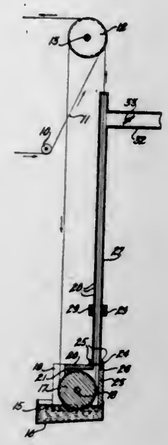
1,786,414. ROTARY WELL-DRILLING TOOL. CHARLES B. KENNEDYE, University City, Mo., assignor to The Kennedye Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 3, 1927. Serial No. 172,248. 2 Claims. (Cl. 255—61.)



1. A rotary well drilling tool comprising in combination a supporting head provided with spaced sets of slots, each set comprising a longitudinal slot and a communicating transverse slot openings respectively to a side and to the base of the head, reamers adapted to have removable cooperative engagement with said head in said longitudinal slots, each reamer having an elongated relatively thin side reaming surface projecting beyond the side wall of the head, drilling bits also adapted to have removable cooperative engagement with said head in said transverse slots, each having a main face disposed in contact with a main face of an adjacent reamer, said drilling bits having cutting edges projecting from the base of said head, the inner edges of the projecting portions of the drilling bits overlapping in transverse section, said reamers being provided with cutting edges on their lower end to simultaneously drill on the bottom of the hole being drilled by the drilling bits, and so disposed as to rotate in the same circular plane as the drilling bits.

1,786,415. WELL-DRILLING TOOL. CHARLES B. KENNEDYE, University City, Mo., assignor to The Kennedye Corporation, Wilmington, Del., a Corporation of Delaware. Continuation of application Serial No. 31,058, filed May 18, 1925. This application filed Nov. 9, 1929. Serial No. 406,176. 24 Claims. (Cl. 255—61.)

1. A rotary well drilling tool, including in combination, a head having end slots, primary drilling bits re-



movably carried in said end slots and extending outwardly beyond the side of the head to cut a hole of predetermined size, longitudinal slots in the sides of the head communicating with the end slots, elongated reaming bits each having an elongated reaming side projecting beyond

the side of the head and lying in a plane parallel to the plane of the head removably mounted in the longitudinal slots, said reaming bits being disposed immediately adjacent the primary drilling bits, and having cutting edges on their lower ends acting as secondary drilling bits.

1,786,416. APPARATUS FOR TREATING MATERIALS. FRANK MARTINDELL, Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1927, Serial No. 164,894. Renewed Mar. 17, 1930. 7 Claims. (Cl. 91—55.)

1. In a wire enameling apparatus, a vessel for containing an insulating composition, a chamber for treating the composition upon a wire, and a sealing unit associated with the chamber comprising a rotatable member extending into the composition, around which a wire may be passed to be coated with the composition and guided into the

chamber, and a sealing member secured in close proximity to the rotatable member, the rotatable member conveying a quantity of the composition upon its surface when rotated and thereby sealing the space between the last mentioned members against the entrance of air.

Patents Nos. 1,786,417 to 1,787,423

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 401—No. 5 TUESDAY, DECEMBER 30, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notices of Cancellation

U. S. Patent Office, *Washington, Dec. 11, 1930.*

The Jell-X-Cell Co., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Jesse C. Stewart Co., 568–580 South Aiken Avenue, Pittsburgh, Pennsylvania, to effect the cancellation of the trade-mark registration of The Jell-X-Cell Co., of 1360 Allison Avenue, Los Angeles, Calif., No. 217,892, dated September 14, 1926, and the notice of such proceeding sent by registered mail to The Jell-X-Cell Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless The Jell-X-Cell Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, Dec. 9, 1930.*

G. C. Mitchell Co., Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Kranish Bros., Inc., of 10 West Thirty-seventh Street, New York, N. Y., to effect the cancellation of the trade-mark registration of G. C. Mitchell Co., Inc., No. 238,289, dated January 31, 1928, and the notice of such proceeding sent by registered mail to the said G. C. Mitchell Co., Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said G. C. Mitchell Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, Dec. 8, 1930.*

William M. Grant & Son, their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Peck & Peck, 587 Fifth Avenue, New York, N. Y., to effect the cancellation of the trade-mark registration of William M. Grant & Son, of 31–33 South Market Street, Johnstown, N. Y., No. 170,123, dated July 10, 1923, and the notice of such proceeding sent by registered mail to the said William M. Grant & Son, at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said William M. Grant & Son, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Adjudicated Patents

(D. C. R. I.) Ornstein patent, No. 1,142,361, for process of antisepticising water, claims 4, 5, 6, and 10 *Held* valid and infringed. *Electro Bleaching Gas Co.* v. *Pascoag Water Co.*, 43 F.(2d) 844.

(C. C. A. Minn.) Howe patent, No. 1,551,515, for automatic train-control system, claims 9, 10, 23, 30, 34, 43, 48, 56, 57, and 58 *Held* valid and infringed. *General Ry. Signal Co.* v. *Great Northern Ry. Co.*, 43 F.(2d) 790.

Condition of Applications Under Examination at Close of Business December 19, 1930

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 107,627; Trade-Mark Division, 1,298. Oldest new case, Mar. 14, 1930; oldest amended, Mar. 14, 1930.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Tillage; Scattering Unloaders; Handling and Hoist Line Implements.	May 12	May 24	1,010

DECISIONS IN PATENT AND TRADE-MARK CASES

Commissioner's Decision

EX PARTE MERICA AND KAYES

Decided September 13, 1930

1. APPLICATION—FINAL REJECTION—PETITION.

Where, after an appeal from a final rejection, a petition is filed that that final rejection be vacated but that petition is accompanied by neither amendment nor argument, *Held* that the final rejection can not be withdrawn since such action would leave nothing for the Examiner to consider.

2. SAME—SAME—REOPENING.

Where a final rejection was entered in response to an argument as to the process claims and a slight amendment to the article claims and it does not appear from the petition to vacate the final rejection that applicant desires to amend the article claims but to amend the process claims, *Held* that no ground is shown for reopening the case.

ON PETITION.

CARBON-FREE METALS

Messrs. Byrnes, Stebbins & Parmelee for the applicant.

ROBERTSON, *Commissioner:*

Applicants petition that they be permitted to withdraw the appeal in this case on the ground that the final rejection of certain of the claims was premature.

It appears that the claims were finally rejected on the second action, no amendment whatever having been made to the process claims and the Examiner regarding the amendments to the article claims as not avoiding the grounds of rejection previously stated.

That final rejection was on January 9, 1929, appeal was filed July 6, 1929, and the present petition was not filed until August 22, 1930.

It is to be noted that no amendment whatever has been presented, so that if the finality of the rejection be set aside and appeal withdrawn there would be nothing responsive to the rejection of January 9, 1929. Furthermore no statement is made that applicants desire to further amend the article claims, as to which the making of the rejection final is said to have been premature, but desire to amend the process claims which have never been amended since they were originally presented. Furthermore applicants were not forced to appeal, if in their opinion the final rejection was premature, since a petition to set aside that final rejection could have been filed at any time prior to July 9, 1929; but it was not filed until more than a year thereafter.

The only thing, according to the petition, that has been done since the appeal was taken was to present informally to the Examiner an amendment to the process claims. The idea seems to have been that if the Examiner would regard the amendment as rendering the process claims patentable the appeal could continue as to the article claims.

Clearly, in view of what has been above stated, no reason has been presented for now reopening this case for further action before the Examiner.

The petition is denied.

Decision of the Board of Appeals

EX PARTE DIXON

Decided April 5, 1929

PATENTABILITY—FORM OF CONTRACT—NOT WITHIN THE STATUTE.

Claims for a printed form comprising a promissory note in which a stated amount of money is to be paid at a definite place in installments, a proviso that all payments become due upon the default of anyone and a lien upon a piece of real estate with a space for the maker's signature at the bottom of the instrument *Held* not patentable, since the article involves no physical structure, and therefore does not come within the terms of the statute. (*Cincinnati Traction Company* v. *Pope*, 210 F. 443, 1914 C. D. 216, distinguished.)

[Affirmed by Court of Customs and Patent Appeals, see —— C. C. P. A. Patents —— O. G. ——.]

Before KINNAN, First Assistant Commissioner, RUCKMAN and LANDERS, Examiners in Chief

LANDERS, *Examiner in Chief:*

This is an appeal from the action of the Examiner finally rejecting claims 1 to 6, inclusive. Claim 1 is illustrative and is as follows:

1. An instrument of the character described bearing printed and written matter legalized by a statement of the place and date of execution and by the signature of a promisor in a designated space, said matter including a promissory note for payment of a stated sum of money at a specified time, and a lien upon a stated property as security for the payment of the amount for which the note is given; said lien being located between the body portion of the note and the space for the signing of the same.

The appeal has been withdrawn as to claim 6 and it will accordingly be dismissed as to this claim.

The claims are drawn to a printed form comprising a promissory note in which a stated amount of money is to be paid at a definite place in installments, a proviso whereby all the payments become due upon the default in payment of any particular installment and a lien upon a piece of real estate. A space for the maker's signature is provided at the bottom of the instrument.

The Examiner has not cited any prior art references but he holds the claims are not drawn to an art, machine, manufacture, or composition of matter within the meaning of section 4886, Revised Statutes. He regards the instrument as a form of contract which may not be given patent protection and cites

the decisions: *Ex parte Sheldon*, 1878 C. D. 44, and *In re Moeser*, 1906 C. D. 685, 27 App. D. C. 307, in support of his view.

It is our view that the instrument disclosed by appellant is only a particular form of contract and is unpatentable under the statute, if the reasoning in the decisions cited by the Examiner is sound. Appellant contends, however, that these decisions do not correctly state the law at the present time; that the term "manufacture" comprehends anything that is made by the hand of man and that his instrument clearly falls within this definition. He cites the case of *Cincinnati Traction Company* v. *Pope*, 210 F. 443, 1914 C. D. 216, in support of his contention.

In that case the court quoted counsel as saying that the transfer ticket had no physical characteristics which enabled it to be distinguished from any other transfer ticket or any other printed slip of paper and then observed that if this criticism is well taken the subject matter is not within the patent statute. In making that observation the court cited several decisions including *In re Moeser* relied upon by the Examiner. The decision then stated that the device of the patent clearly involved physical structure and the claims in themselves were in a proper sense limited to such structure; that the alleged patentable novelty did not reside in the arrangement of the printed text and that such text did not merely constitute a printed agreement. The decision further pointed out that the body of the ticket alone is good at one time and that the body and coupon are required for the other portion of the day. It then stated that there was no attempt merely to patent the form of contract.

We believe this decision on which appellant relies constitutes clear and convincing authority that the claims on appeal are not patentable. In appellant's device there is no essential physical characteristic that may be relied upon to confer patentability. The novelty resides in the specific form of contract disclosed by the printed matter. Appellant contends that since the claims state that the lien is located between the promissory note and the space for the signature there is a definite relative arrangement of parts in view of which the instrument may be regarded as something more than a mere contract. We see no patentable novelty in arranging the various provisos of the contract or agreement all above the space for the signature. It is the most usual thing to provide written instruments with a space at the bottom of the instrument for a signature.

In addition to the decisions referred to above attention is directed to the decision of the circuit court of appeals, second circuit, in the case of *Guthrie* v. *Curlett, et al.* 10 F.(2d) 725. We believe that appellant's claims are not drawn to a manufacture within the sense this term is used in the patent statute for the reasons stated in that decision.

The appeal is dismissed as to claim 6.

The decision of the Examiner is affirmed as to claims 1 to 5, inclusive.

Supreme Court of the United States

LEKTOPHONE CORPORATION *v.* THE ROLA COMPANY AND MILLER BROTHERS COMPANY *v.* LEKTOPHONE CORPORATION

Nos. 19 and 68. Decided December 8, 1930

PATENTS—INFRINGEMENT.

Hopkins Patent No. 1,271,529, for an "Acoustic Device" *Held* not infringed, if valid.

No. 19, on writ of certiorari to the Circuit Court of Appeals for the Ninth Circuit. Affirmed.

No. 68, on writ of certiorari to the Circuit Court of Appeals for the Third Circuit. Reversed.

Mr. William H. Davis for Lektophone Corporation.

Mr. Thomas G. Haight for The Rola Company.

Mr. Samuel E. Darby, Jr., for Miller Brothers Company.

Mr. Justice HOLMES delivered the opinion of the Court.

These are two suits brought by the Lektophone Corporation alleging the infringement of a patent. In the first named, No. 19, in the ninth circuit, the decision was for the defendant, 34 F.(2d) 764, affirming the decree of the district court, 27 F.(2d) 758, and declining to follow the third circuit's decision in *Lektophone Corporation* v. *Brandes Products Corporation*, 20 F.(2d) 155. A writ of certiorari was granted by this Court, 280 U. S. 551. Later, the second of the suits before us, No. 68, was brought in the third circuit, and the district court, in obedience to the precedent there, decided for the plaintiff, 37 F.(2d) 580. An appeal was taken to the circuit court of appeals. A writ of certiorari was granted by this Court without the formality of awaiting the result. 281 U. S. 713.

The patent is No. 1,271,529, granted July 2, 1918, to Hopkins, assignor, by mesne assignments, to the Lektophone Corporation; the original application having been filed July 14, 1913, in the time of the phonograph and before the days of radio, for an "Improvement in acoustic devices." The object is the—

> direct propagation, in free air, from a record or equivalent element subjected to the action of the original sound waves or vibrations, of self-sustaining sound waves substantially corresponding in intensity and amplitude, as well as in pitch or timbre, to the said original sound waves—

as distinguished from the then prevailing use of the sound box and horn. The device, as set forth in claim 8, comprised—

> a tympanum embodying a bodily movable, central conical portion, and an annular rim which encircles said conical portion and which is rigidly supported, said conical portion being freely exposed on all sides to unconfined air and being of sufficient area to produce self-sustaining sound waves in the surrounding air when vibrated.

On the question what is a sufficient area the patent says,—

> If satisfactory regeneration by sounds from a record or other sound-vibrated element is to be had, the whole diameter of the tympanum, that is, the diameter of the aperture in the rings [that rigidly clamp the edges of the tympanum] should exceed nine inches. . . . The diameter of the base of said conical portion should be at least eight-tenths of the diameter of the said aperture—

with further details. Paper is pronounced a satisfactory material, the requirement being that it should be crisp and strong and have considerable rigidity within itself.

The state of the art at and before 1913 will be found in the cases already cited, two excellent discussions by Thacher, D. J., in *Lektophone Corporation* v. *Western Electric Co.*, 20 F.(2d) 150 and Hickenlooper, D. J., in *Lektophone Corporation* v. *Crosley Radio Corporation*, southern district of Ohio, not reported, and in the English case of *Lektophone Corporation* v. *S. G. Brown, Ltd.*, Ch. Div., January 23, 1929; court of appeals, July 12, 1929. It is unnecessary to repeat, because it is conceded that the conical tympanum and material were known in connection with a sound box for the phonograph of which Hopkins was thinking, as shown by the words "from a record" quoted from the patent. The effect of increasing the size of the cone also was known. The contribution of Hopkins, if he made one, as held in several cases in the lower courts and abroad, was to combine abandoning the sound box, determining the size of the cone deemed by him most suitable to reproduce the sounds communicated to it by vibration, and tightly gripping and rigidly supporting the outer edge of the cone between two rings. A result claimed for the rigid support, although seemingly not thought of at the time, is to avoid interfering sounds, "blasting" and rattling, that were made when the edge of the cone was loose. As said by Hickenlooper, J.,—

> All of these elements in combination went to make up the novelty of his alleged invention. . . . To the size, shape and proportion thus disclosed the patentee is limited by the prior art and the very essence of his invention.

If the patent was valid it must be confined narrowly to the combination described.

In No. 19 the defendant's device is very like that of the plaintiff but differs in at least one particular. The plaintiff's cone, of crisp, strong, more or less rigid material, is continued in one piece under the rings that give it a rigid support. Its tympanum includes this outer edge. On the other hand, as said by Judge Thacher about another contrivance—

> the defendant's structure, although it comprises a tympanum support having a circular aperture, does not comprise a tympanum having its outer edge rigidly mounted on said support in said aperture within the meaning of claim 4. Nor does it comprise an annular rim which encircles the conical portion of the tympanum within the meaning of claim 8. (*Lektophone Corporation* v. *Western Electric Co.*, 20 F.(2d) 150, 154.)

The defendant's tympanum is only the paper cone, distinct from the rim. The rim is made of limp leather. In view of the importance attached to this element in the plaintiff's patent it is impossible to say that it is infringed. To quote again from the last cited case, "to hold that the defendant's device comprises 'a tympanum rigidly supported at its periphery' within the meaning of the claims is to construe the claims contrary to the plain import of their terms;" and the judge refers to experiments that showed the difference in function of the two devices. *Ibid.* There are other questions that would have to be answered before the plaintiff could prevail, such as the difference in size, argued in this case 27 F. (2d) 758, 760; s. c. on appeal, 34 F. (2d) 764, 773; the size being regarded by Hopkins as of the essence of his invention. But we think the matter too plain to need more words. The same conclusion applies to the second case where the rim is made of cloth.

Decree in No. 19 affirmed.

Decree in No. 68 reversed.

The Chief Justice took no part in the decision of these cases.

U. S. Circuit Court of Appeals—Third Circuit

ALEMITE MFG. CORP. ET AL. *v.* ROGERS PRODUCTS CO., INC.

No. 4,058. Decided January 23, 1930

[42 F.(2d) 648]

PATENTABILITY—GREASE GUNS.

The Nelson patent for a grease gun, claim 2 *Held* valid, since, while the elements of the combination are old, the combination produces such a new and useful result as clearly stamps it with the merit of invention.

APPEAL from the District Court of the United States for the District of New Jersey; Clark, judge.

Patent infringement suit by the Alemite Manufacturing Corporation and another against the Rogers Products Company, Incorporated. From a decree dismissing their bill, complainants appeal. Decree reversed, and bill reinstated.

Messrs. Williams, Bradbury, McCaleb & Hinkle, and *Messrs. Fish, Richardson & Neave*. (*Mr. Lynn A. Williams, Mr. Stephen H. Philbin*, and *Mr. Benjamin F. Wupper* of counsel) for the appellants.

Messrs. Dean, Fairbank, Obrieght & Hirsch, (*Mr. Clair W. Fairbank* and *Mr. George C. Dean* of counsel), for the appellee.

Before BUFFINGTON, Circuit Judge, and THOMSON and AVIS, District Judges

THOMSON, *Dis. J.:*

This case involves the question of validity and infringement of claim 2 of Patent No. 1,377,023, of Bernard S. Nelson, for which a patent issued May 3, 1921. The invention relates to lubricating devices, and more especially to that class of articles known in the trade as "grease guns," which are used for the purpose of quickly and easily supplying a regulated quantity of lubricant to parts of automobiles and other mechanism receiving periodic lubrication. The object of the invention was to provide a device of the character described, which was well balanced, easily handled and manipulated, readily assembled and taken apart for inspection, avoiding the waste of lubricant while in use and the cost of manufacture reduced to a minimum.

Claim 2, the only one in suit, is as follows:

> A lubricating device comprising a cylinder having a bore and inlet port and a discharge passage, a plunger reciprocating within said bore, a lubricant receptacle attached to and depending from said cylinder and having its interior communicating with said bore through said inlet port, a spring actuated piston within said receptacle for feeding the lubricant within the receptacle through said inlet port into said bore of the cylinder, means for locking said piston against movement in the said receptacle, and means connected to said plunger and cylinder for reciprocating said plunger within the bore to withdraw the lubricant from said receptacle into said bore and eject the lubricant from the bore through the discharge passage.

The defendant company denied validity by reason of anticipation and also denied infringement. After hearing, the court below dismissed the bill, and from the decree so entered this appeal is taken.

Confessedly, all the elements entering into this device are old and well-known, but it is claimed by the plaintiff that in combination they form a new and useful invention.

Prior to 1918, one Gullborg invented, and through the Alemite Die-Casting Company, put upon the market, what is known as the Alemite system of automobile lubrication, which rapidly displaced all other methods and was very generally installed as factory equipment. Gullborg's invention was covered by patent. The Alemite system, as made in 1918, and largely as made and sold at the present time, comprises a grease gun—a receptacle from which grease may be discharged under pressure—a conduit and coupling attached to the grease gun, and certain lubrication-receiving fittings. This device was sold in great quantities, and at the time of the application for a patent by Nelson, in 1920, was the standard equipment on several makes of cars. Under this Alemite system, automobile owners largely lubricated their own machines, and this screw-type device served the purpose well, as it could develop pressure in the neighborhood of from 500 to 650 pounds per square inch. That device was so far superior to the former methods of lubrication (grease cups, which had to be filled with finger or ladle) that it immediately displaced them.

Experience, however, showed that certain bearings of an automobile would, after a time, become caked or frozen, which was the result of the packing of dirt and grit in the bearings. The pressure developed by the ordinary screw-type compressor was found not sufficient to remove this caked material, and this required the bearing to be taken completely apart and cleaned with gasoline or other means. It was an important problem how to dislodge this caked lubricant, which had become frozen. Different methods were employed, but without much success.

In 1921, one Shere invented a grease gun, which was so constructed that an extremely high pressure, necessary to dislodge the caked material in tight or frozen bearings, could be obtained. His idea was brought to the attention of the Harshaw Corporation, a patent-holding company, under whose patents the Gat Gun Lubricating Corporation held an exclusive license. During the prosecution of the application for a patent filed by Shere, the Patent Office cited the Nelson patent as a reference, and it was found that this patent anticipated and claimed the essential features of the Shere gat gun. The result was that the Shere Metal Corporation, predecessor of the Gat Gun Lubricating Corporation purchased the Nelson patent. The Shere grease gun, which embodied the Nelson invention, formed the basis of a most flourishing business. The device was marketed under the trade name "Gat Gun" and was far superior to anything then on the market for use by lubricating stations, garages, and others. The evidence shows that 74,000 of these devices were sold by the Gat Gun Lubricating Corporation, which forced the Alemite Corporation to obtain a license under the Nelson patent to manufacture and sell this greatly-improved grease compressor, which license it obtained. Since 1928, the Alemite Manufacturing Corporation, manufactured the Gat Gun compressors, paying royalties to the Gat Gun Lubricating Corporation.

By stipulation of record, defendant admits its manufacture and sale of the "ever ready gun," as shown in the drawing accompanying the stipulation. This grease gun differs from plaintiff's device, namely, in the type of means used to lock the piston against movement in the receptacle, and in the kind of lever used to reciprocate the plunger.

In answer to the position of the defendant that there was no such invention in the device as justified the grant of the patent in suit, counsel for appellee made this statement:

> A hand grease gun having a high pressure cylinder and plunger located at right angles to one end of a detachable grease receptacle and provided with a lever connected to *said* plunger and *cylinder* for delivering a man's pressure producing power to said plunger and which, therefore, lies parallel to the receptacle which, in turn, has a spring pressed piston and lock to keep the plunger cylinder primed with grease and to permit easy refilling.

The invention of Nelson lies in the combination of elements, producing a new and useful result. In *Leeds & Catlin Co.* v. *Victor Talking Machine Co.*, 213 U. S. 325, 29 S. Ct. 503, 505, 53 L. Ed. 816, the United States Supreme Court in its opinion said:

> A combination is a composition of elements, some of which may be old and others new, or all old, or all new. It is, however, the combination that is the invention, and is as much a unit in contemplation of law as a single or noncomposite instrument.

The courts have frequently declared that invention must be determined by the evidence in each particular case. Here the evidence has established that the Nelson gun has very many advantages over the screw-type compressor. It is capable of developing pressure six or more times as high as the screw-type compressor, because the applied force is exerted upon a plunger of relatively small area. In this device, the size of the plunger may be reduced to produce practically any desired discharge pressure, without reducing the capacity of the gun for holding the lubricant. In the screw type compressor, to increase the discharge pressure, the diameter of the cylinder must be reduced.

In the Nelson device, the link and lever transmit practically all of the power applied to the lever. In the screw type, the screw-threaded piston wastes much of the power in friction. The movement of the hands in the Nelson type is much more effective in delivering the grease under high pressure. It is much quicker in operation, in applying the power and disconnecting the coupler, than the slow, twisting movement of the screw. A single rapid movement of the piston puts the barrel in condition to be refilled. In the screw type, the screw must be rotated, so as to move the piston the entire length of the barrel. The grease may be expelled from the Nelson gun suddenly, with the effect of an explosion, upon a frozen bearing. The screw type is ineffective to accomplish such result. When we add to these cheapness, simplicity of construction and assembling, and its great commercial success, we have before us a combination of elements, old in themselves, but producing such a new and useful result as clearly stamps it with the merit of invention.

We are of opinion that nothing in the prior art cited by the defendant anticipates the Nelson invention; that is, the complete combination of elements described in claim 2 of the Nelson patent. Some of the patents of the cited prior art show somewhat similar structure, but are intended for an entirely different use. Some, although they relate to the art of lubrication, fail to disclose the Nelson combination.

All attempts to distort and magnify prior nonanalogous art by way of anticipation have been condemned by the courts. Many of these citations include patents upon devices designed for dispensing various forms of liquid, as liquid soap in toilets, devices for fire-extinguishing purposes, for injecting oil into steam pipes supplying steam to engine cylinders, and for dispensing and measuring liquids, such as oil from storage tanks of various kinds. These are nonanalogous arts. In none of them do we find the combination of elements in the Nelson patent.

We next reach the question of infringement. Perhaps the only tangible position as the basis for nonfringement relates to the use of the word "depending" in claim 2 of the Nelson patent. That claim begins its enumerations of the elements which make up the combination as follows: (1) A cylinder having a bore and outlet port and a discharge passage. (2) A plunger reciprocating within said bore. (3) A lubricant receptacle attached to and depending from said cylinder, etc., the word "depending" here meaning suspended or hanging.

It is, therefore, claimed that, in the Nelson patent, the receptacle hangs from the plunger cylinder, while in defendant's invention the receptacle does not hang from the plunger cylinder. The use of the word "depending" was an apt way of saying that the receptacle is attached to the cylinder, in such a way that the two have a right-angle relationship to each other.

It would be futile to give to the word "depending" the meaning of gravitational hanging. This becomes apparent when it is observed that, although the Nelson receptacle hangs from the Nelson cylinder when the gun is held in one position, it does not hang from the cylinder when turned onto its side. The same is true of the defendant's gun. The receptacle there does not hang from the cylinder in one position, whereas it does in another.

We have no difficulty in concluding that defendant's device infringes on the device of the plaintiff. Our conclusion, therefore, is that claim 2 of the Nelson patent is valid and infringed, and that the decree of the district court, dismissing the plaintiff's bill, should be reversed, and the bill reinstated; and it is accordingly so ordered.

U. S. Circuit Court of Appeals—Third Circuit

VOICES, INC., *v.* UP-TO-DATE MFG. CO., INC.

Nos. 4,213 and 4,214. Decided April 29, 1930

[41 F.(2d) 22]

PATENTABILITY—SOUND-PRODUCING DEVICE FOR DOLLS.

Patent for a sound-producing device for dolls *Held* valid since the compact, readily-made, durable device was not a mere reassembling of old parts but was a discarding of features which really crippled the old art in efficiency, made the disc perform new and broader functions, and resulted in a cheaper, better, larger, and less fragile product.

APPEAL from the District Court of the United States for the District of New Jersey; William Clark, judge.

Suits by Voices, Incorporated, against the Up-To-Date Manufacturing Company, Incorporated. From decrees dismissing the bills, plaintiff appeals.

Record remitted, with instruction.

Mr. C. P. Goepel for the appellant.

Mr. C. C. Cousins (*Mr. Morris Kirschstein*, of counsel) for the appellee.

Before BUFFINGTON, WOOLLEY, and DAVIS, Circuit Judges.

BUFFINGTON, *Cir. J.:*

In the court below the owner of Patent No. 1,507,826, issued September 9, 1924, to Leo J. Grubman for a sound-producing device for dolls, and of Patent No. 1,588,354, issued June 8, 1926, to the same patentee for sound-producing device, filed two bills against the Up-To-Date Manufacturing Company, Inc., for infringement thereof.

Grubman's devices are aptly described in the opinion in the Second Circuit, where these patents were involved in *Voices, Inc.*, v. *Uneeda Doll Co.* (C. C. A.) 32 F.(2d) 673, as follows:

> The devices are installed in dolls for simulating the crying sound of a baby—its pronouncing of ma-ma—and comprises a flexible bellows, a short tubular casing in which the bellows is inclosed, and which serves both to operatively support the bellows and prevent foreign matters, such as the stuffing of the doll, from interfering with the proper function of the bellows. One end of the bellows is anchored, while its other end is free to move, and the anchored end of the bellows is closed by an anchoring disc, while the free end is closed by the weighted disc. Either disc, weighted or anchored, is provided with an opening, in which is placed a sounding reed. When in an upright position, the weight will act, upon the influence of gravity, to fully expand the bellows, * * * and, when the device is inflated, the weight will collapse the bellows, forcing the entrapped air through the reed, producing the sound.

The foremost advance in this industry, prior to Grubman, was the doll of Lloyd embodied in his Patent No. 1,277,229, granted August 27, 1918. Referring only to those features of Lloyd's device which are here pertinent, we note that Lloyd's bellows was cylindrical throughout and of the same diameter, with the result that the enveloping casing had to be much larger so as to permit expansion of the cylinder. It necessitated two separate

closure discs, one for the bellows, another for the space between cylinder and casing, to shut out foreign matter, which prevented bellows expansion. The device was necessarily handmade; its intricacies necessitated time, the tedious labor of successive gluing operations, as well as a number of other operations. It was restricted to small output, relatively high cost, and fragile construction. An enumeration of its short-comings is obviated by reference to the detailed recital thereof in 32 F.(2d) 674. As there also stated, the invention of the (Grubman) patent disclosed that by using a frustro-conical bellows, having the end anchored to the casing, of sufficient diameter to abut the inner face of the casing, that end of the bellows could be anchored directly to the end of the casing by a single disc, which additionally served as a common closure member, both for the end of the bellows and the end of the casing, thus dispensing with two discs of different diameters, one to close the bellows and the other to close the casing, and the difficult folding and gluing steps which were required with the use of the cylindrical bellows of the prior art. It eliminated the tedious glue steps and indeed the use of glue. This is important because glue gets brittle and when brittle cracks, and when it cracks breaks the bellows, and when the bellows breaks air enters and the function power of the mechanism is destroyed. Moreover, in the Lloyd glue device there are eleven steps or movements of manufacture; in the Grubman device there are but six, which, measured by man power or girl power, result in one girl making the Grubman device and doing the work of three girls making the Lloyd device. The breakage of the Grubman device and the consequeut return and money loss was less than in the Lloyd device, and, finally, four competitive manufacturers took licenses under the Grubman patents and since 1925 these licenses have sold over 22,000,000 of the patented structures. All this was found by the art to effect economy in time, labor, and materials, and provided a more simple, compact, durable, and strong construction. It was more than an assembling of old elements, for it brought into use two new elements, a conical bellows and the common closure for the bellows and casing. It secured a novel weighted end of the bellows, by clamping the smaller end of the conical bellows to the weight, instead of gluing it, as had been done.

To our mind, the advance made by Grubman involved invention. His compact, readily-made, durable device was not a mere reassembling of old parts, but was a discarding of features which really crippled the old art in efficiency, made his disc perform new and broader functions, and resulted in a cheaper, better, larger, and less fragile product. It substituted mechanical for glue closure. The advance made by Grubman centered in using a tapering, conical bellows, instead of the cylindrical, uniform diameter, one of Lloyd. But in the wake of this simple change there followed the advantages that make this suit a matter of real substance—to the inventor to monopolize the improvement, to the infringer to share it.

The second patent of Grubman is a distinct improvement, and not a double patenting, of his first device, in that it provides a frictional clamping ring having a marginal flange with two annularly disposed gripping surfaces, one of which clamps the bellows to the outer face of the disc and the other of which fastens the peripheral face of the disc to the end of the bellows. We are of opinion that both patents are valid, and as infringement is not contested if validity be shown, the plaintiff is entitled to injunctive and accounting relief. The record will therefore be remitted to the court below for further action in accord herewith.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,010,273, F. A. Law, Speed-changing mechanism, C. C. A., 6th Cir., Doc. 5331, *The Warford Corp. et al.* v. *The Bryan Screw Machine Products Co. et al.* The Bryan Screw Machine Products Co. enjoined Nov. 5, 1930.

1,019,158, F. C. Ielfield, Mail-marking machine, D. C., W. D. N. Y., Doc. 1491–I, *Columbia Postal Supply Co.* v. *The Ielfield Postal Supply Corp. et al.* Dismissed Nov. 3, 1930.

1,038,029, H. L. Turney, Logging engine, filed Nov. 7, 1930, D. C. Oreg. (Portland), Doc. L 11185, *H. L. Turney* v. *Clyde Equipment Co.*

1,052,167, C. Nessler, Process of waving hair; 1,611,466, Lewis and Murray, Steaming tube for hair waving; 1,619,798, same, Container for hair in permanent-waving process, D. C., E. D. Mich., S. Div., Doc. 3561, *The Nestle Le Mur Co.* v. *L. E. Morris Co.* Dismissed under equity rule 57 Nov. 6, 1930.

1,069,830, J. Trau, Process of producing polychrome photogravures and apparatus therefor, filed Aug. 11, 1930, D. C. N. J., Doc. E 4088, *R. H. Stone* v. *Wyanoak-Elco Publishing Corp.*

1,102,152, P. Jones, Process of pumping oil wells, filed Nov. 5, 1930, D. C., N. D. Okla. (Tulsa), Doc. E 583, *Jones-McLaughlin, Inc.*, v. *Independent Oil & Gas Co.*

1,142,361, G. Ornstein, Process of antisepticizing water, D. C. N. J., Doc. E 3948, *Wallace & Tiernan Co., Inc.*, v. *R. V. Donnelly et al.* Dismissed Sept. 22, 1930.

1,177,697, L. Gaumont, Developing, fixing, toning, and otherwise treating photographic films and prints; 1,209,696, same, Apparatus for drying photographic films; 1,260,595, F. B. Thompson, Film-treating apparatus; 1,299,266, same, Film-wiping apparatus; 1,569,156, same, Photographic-film drier, filed Nov. 6, 1930, D. C., S. D. N. Y., Doc. E 56/199, *Cinema Patents Co., Inc.*, v. *Fox Film Corp.*

1,180,159, I. Langmuir, Incandescent electric lamp, filed Oct. 28, 1930, D. C. N. J., Doc. E 4132, *General Electric Co.* v. *Jewel Lamps, Inc., et al.* Same, filed Nov. 7, 1930, D. C., S. D. N. Y., Doc. E 56/217, *General Electric Co.* v. *Butler Bros., Inc.*

1,184,979, H. C. Miller, Flexible binder post for loose-leaf binders, D. C., E. D. Wis. (Milwaukee), Doc. 2873, *Stationers Loose Leaf Co.* v. *Sickert & Baum Stationery Co.* Decree for plaintiff, claims 1 and 9 held valid Nov. 1, 1930. Doc. 2903, *Stationers Loose Leaf Co.* v. *H. H. West Co.* Decree as above.

1,209,696. (See 1,177,697.)

1,212,840, F. J. Straub, Building block and method of making same, D. C. N. J., Doc. E 3763, *Crozier-Straub, Inc., et al.* v. *Decker Bros., Inc.* Interlocutory decree Sept. 22, 1930. Doc. E 3823, *Crozier-Straub, Inc., et al.* v. *D. Apriceno.* Decree as above. Doc. E 3829, *Crozier-Straub, Inc.*, v. *E. D. Snook et al.* Decree as above. Same, filed Sept. 11, 1930, D. C. N. J., Doc. E 4100, *Crozier-Straub, Inc., et al.* v. *J. Claus et al.* Doc. E 4101, *Crozier-Straub, Inc., et al.* v. *Middlesex Concrete Products Co. et al.* Same, filed Aug. 25, 1930, D. C., E. D. Pa. Doc. 6189, *Crozier-Straub, Inc., et al.* v. *A. di Renzo* (*Bristol Composition Stone Co.*).

1,218,314, C. P. Read, Machine for placing springs in casings, C. C. A., 6th Cir., Doc. 5507, *Simmons Corp.* v. *National Spring & Wire Co. et al.* Claims 1 and 2 held not infringed Nov. 11, 1930.

1,220,038, C. W. White, Child's toy vehicle filed Nov. 3, 1930, D. C., S. D. N. Y., Doc. E 56/191, *H. C. White Co.* v. *Butler Bros., Inc.*

1,248,961. (See 1,402,817.) 1,260,595. (See 1,177,697.)

1,277,652, B. J. Seymour, Gearing C. C. A., 6th Cir., Doc. 5559, *B. F. Seymour* v. *Ford Motor Co.* Patent held invalid Nov. 5, 1930.

1,299,266. (See 1,177,697.)

1,307,733, A. V. Gullborg, Lubricating apparatus; 1,307,784, same, Lubricating means, D. C., S. D. N. Y., Doc. E 44/56, *The Bassick Mfg. Co.* v. *E. Jumpano.* Consent decree for plaintiff (notice Nov. 6, 1930).

1,307,734. (See 1,307,733.)

1,317,431, L. P. Clutter, Ditching or excavating machine; 1,476,121, Wagner and Downie, Excavating scoop; 1,511,114, 1,543,250, R. R. Downie, Excavating machine, C. C. A., 6th Cir., Doc. 5433, *The Byers Machine Co. et al.* v. *Keystone Driller Co.* Claim 4 of Patent 1,317,431 and patents 1,476,121, 1,511,114, and 1,543,250 held valid and infringed Nov. 5, 1930.

1,350,363. (See Re 15,529.)

1,357,790, R. Marx, Furnace, filed Nov. 6, 1930, D. C. R. I., Doc. 359, *American Electric Furnace Co.* v. *C. I. Hayes, Inc.*

1,358,493, A. Wachsman, Stop mechanism for knitting machine, appeal filed Nov. 8, 1930, C. C. A., 2d Cir., Doc. 11178, *A. Wachsman* v. *J. Wachsman.*

1,365,896, T. I. Duffy, Disk wheel for vehicles, D. C., E. D. Mich., S. Div., Doc. 1978, *G. H. Forsyth* v. *Budd Wheel Co. et al.* Dismissed without prejudice Nov. 4, 1930.

1,402,817, H. M. Weber, Cumaron resin chewing gum; 1,248,961, same, Chewing gum, filed Sept. 23, 1930, D. C. N. J. Doc. E 4112, *Sweets Laboratories, Inc.*, v. *Barrett Co.*

1,411,227, L. A. Suckoff, Spring-cushion construction, filed Nov. 5, 1930, D. C., S. D. N. Y., Doc. E 56/195, *Nachman Spring-Filled Corp.* v. *Spring Products Corp.*

1,432,658, C. J. Bellar, Grease pump, C. C. A., 6th Cir., Doc. 5435, *Bennett Pumps Corp.* v. *The Wayne Pump Co. et al.* Held valid and infringed Nov. 6, 1930.

1,443,363, I. E. Heller, Means and method of manufacturing interfolded pieces of cloth, etc., filed Sept. 23, 1930, D. C., E. D. Pa., Doc. 6235, *D. A. Rosenthal* v. *West Disinfecting Co., Inc., et al.*

1,466,701, L. de Forest, Method of and means for controlling electric currents by and in accordance with light variations; 1,693,071, same, Sound-recording attachment for motion-pictures cameras; 1,695,414, same, Talking-moving-picture machine; 1,607,480, E. E. Ries, Method of reproducing photographic sound records, appeal filed July 29, 1930, C. C. A., 3d Cir., Doc. 4462, *General Talking Pictures Corp. et al.* v. *Stanley Co. of America.*

1,473,686, J. J. Sullivan, Hosiery, filed Oct. 17, 1930, D. C., E. D. Pa., Doc. 6275, *W. Brown Co.* v. *Fedden Bros. Co., Inc.*

1,476,121. (See 1,317,431.)

1,496,458, V. A. Friend, Method of preparing canned baked beans, appeal filed Nov. 4, 1930, C. C. A., 1st Cir., Doc. 2508, *L. A. Friend et al.* v. *Burnham & Morrill Co.*

1,502,462, H. F. Curtis, Apparatus for cleaning gravel, filed Sept. 19, 1930, D. C., E. D. Pa., Doc. 6231, *H. F. Curtis* v. *Warner Co.*

1,511,114. (See 1,317,431.)

1,526,982, E. W. Hill, Stencil sheet, D. C., S. D. N. Y., Doc. E 54/173, *A. B. Dick Co.* v. *Duplicating Supplies Corp. et al.* Decree for plaintiff (notice Nov. 8, 1930).

1,539,300. (See 1,599,807.)

1,542,803, Gordon and Redlin, Lathe, D. C., E. D. Mich., S. Div., Doc. 3899, *The Gordon Form Lathe Co.* v. *The Jackson Motor Shaft Co.* Dismissed without prejudice Nov. 11, 1930. Doc. 3945, *The Gordon Form Lathe Co.* v. *General Motors Corp.* Decree as above. Doc. 3946, *The Gordon Form Lathe Co.* v. *Packard Motor Car Co.* Decree as above.

1,543,250. (See 1,317,431.) 1,569,156. (See 1,177,697.)

1,586,307, F. E. Johnson, Electric-lamp socket, C. C. A., 2d Cir. Doc. —, *J. I. Paulding* v. *I. Leviten.* Decree reversed (notice Nov. 5, 1930).

1,599,807, 1,539,300, A. L. Christiansen, Fish cutting and cleaning machine, D. C., S. D. Calif. (Los Angeles), Doc. E N–36–M, *R. L. Dee* v. *W. S. La Londe et al.* Dismissed with prejudice Aug. 9, 1930.

1,604,224, B. Friedman, Syringe; 1,624,327, same, Needle mounting for hypodermic syringes, D. C., S. D. N. Y., Doc. E 41/262, *B. Friedman* v. *A. Bandman* (*Metzan Dental Mfg. Co.*). Consent order of discontinuance Nov. 6, 1930.

1,607,480. (See 1,466,701.) 1,611,466. (See 1,052,167.)

1,614,619, J. J. Kaplan, Apparatus for photographing checks, filed Aug. 12, 1930, D. C., E. D. Pa., Doc. 6175, *J. J. Kaplan* v. *National Perforator Co.*

1,619,798. (See 1,052,167.)

1,622,103, J. O. Fulton, Hardwood block flooring; 1,622,104, same, Block flooring and process of making same, filed Nov. 1, 1930, D. C., W. D. Mich. (Grand Rapids), Doc. 2394, *The J. O. King Flooring Co.* v. *The Art Designed Flooring Co. et al.*

1,622,104. (See 1,622,103.) 1,624,327. (See 1,604,224.)

1,624,146, F. Oliver, Core drill, D. C., S. D. Calif. (Los Angeles) Doc. L–120–M, *Elliott Core Drilling Co.* v. *H. C. Smith.* Dismissed Aug. 6, 1930.

1,688,478, A. J. Weiss, Electrical condenser, appeal filed Nov. 10, 1930, C. C. A., 2d Cir., Doc. 11181, *Dubilier Condenser Corp.* v. *Aerovox Wireless Corp.*

1,693,071. (See 1,466,701.) 1,695,414. (See 1,466,701.)

1,704,833, C. J. Irwin, Hob grinder, D. C., E. D. Mich., S. Div., Doc. 3537, *Illinois Tool Works* v. *Michigan Tool Co.* Decree for plaintiff Nov. 5, 1930.

1,715,555, J. W. Jackson, Brake construction; 1,752,269, H. F. Shaw, Brake for baby carriages, filed Aug. 20, 1930, D. C. N. J., Doc. E 4092, *F. A. Whitney Carriage Co.* v. *S. Slatkin.*

1,730,420, G. W. Gillen, Coincidental lock for motor vehicles, filed Oct. 30, 1930, D. C. N. J., Doc. E 4133, *Gillen, Kimmey, Baker Syndicate, Inc.*, v. *Newark Buick Corp.*

1,737,971, A. Law, Tubular rack, filed Oct. 15, 1930, D. C., E. D. Pa., Doc. 6273, *A. Law* v. *D. L. Ward Co.*

1,748,489, McCarthy and Novick, Photographing apparatus, filed Sept. 22, 1930, D. C., E. D. Pa., Doc. 6233, *G. L. McCarthy et al.* v. *National Perforator Co., Inc.*

1,751,301, R. M. Bagley, Apparatus for making soap solution, filed Nov. 5, 1930, D. C., S. D. N. Y., Doc. E 56/196, *The R. M. Hollingshead Co.* v. *Fischer's Surfa Saver, Inc.*

1,752,269. (See 1,715,555.)

1,762,390, G. V. Gavaza, Combined filling and draining device, filed Nov. 4, 1930, D. C. Mass., Doc. E 3354, *Siph-o-Products Corp.* v. *J. J. Reedy.*

1,763,212, A. J. Barnett, Bathing suit, filed Oct. 22, 1930, D. C., E. D. Pa., Doc. 6281, *The Worcester Knitting Co.* v. *B. Peterzell et al.* (*Hub Knitting Mills*).

Re. 15,529, Dick and Wolters, Heat-resisting cabinet and method of making; 1,350,363, same, Heat-resisting safe or cabinet, C. C. A., 2d Cir., Doc. 10796, *Remington Rand Inc.*, v. *Art Metal Construction Co.* Decree modified (notice Nov. 5, 1930).

Re. 16,590, Olson and England, Hob-grinding machine, D. C., E. D. Mich., S. Div., Doc. 3420, *Illinois Tool Works* v. *Michigan Tool Co.* Decree for plaintiff Nov. 5, 1930.

Re. 16,817, J. H. Smith, Reaming and counterboring tool, C. C. A., 6th Cir., Doc. 5530–5531, *Gairing Tool Co.* v. *Eclipse Interchangeable Counterbore Co.* Claims 1, 2, 3, 5, 7, 8, and 9 held invalid, claims 4 and 6 held valid and infringed, Nov. 5, 1930.

Re. 17,087, P. L. Billingsley, Sawing device, D. C., S. D. Ohio, W. Div., Doc. 695, *The P. L. Billingsley Co.* v. *The Mechanical Supplies Co.* Consent decree holding patent valid and infringed (notice Sept. 10, 1930).

Re. 17,510, J. A. Hoegger, Wall cabinet, filed Oct. 18, 1930, D. C. N. J., Doc. E 4124, *J. A. Hoegger* v. *F. W. Lee Co.*

Re. 17,642, P. P. Horni, Traffic signal, filed Aug. 13, 1930, D. C. N. J., Doc. E 4090, *P. P. Horni* v. *Mayor & Alderman of Jersey City.*

T. M. 259,216, G. H. Lee Co., Capsules, pills, etc.; T. M. 264,624, same, Capsules for treating worms in poultry, filed Nov. 3, 1930, D. C. Nebr. (Omaha), Doc. E 1080, *G. H. Lee Co.* v. *The Henry Field Co.* Injunction rendered Nov. 3, 1930.

T. M. 264,624. (See T. M. 259,216.)

Important Information

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)
Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)
Original application. (Facsimile petition, specification, oath, and drawings at present time.)
Specification as originally filed. (As received in Office.)
Specification as amended. (With amendments entered.)
Specification as allowed. (As passed by the Examiner for issue.)
Original specification. (Facsimile at present time.)
File-wrapper. (File-wrapper only.)
File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented-cases, printed copy of the specification and drawings of the patent is furnished.)
File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)
Assignment. (Give the liber and page of the record as well as the name of the inventor.)
Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Notice Regarding Payment of Fees

All fees must be paid in advance. Payment of money required for Office fees *must* be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks must be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. (See Rule 194.)

Certified checks, bank drafts, express and foreign money orders must be immediately negotiable in this country and for the full amount of the fee required by the Patent Office. No allowance can be made by this Office for any charge for their collection or exchange. Postage stamps will not be accepted. Failure to comply with the above instructions will cause delay.

Drawings

PRECAUTIONS TO BE OBSERVED IN FORWARDING DRAWINGS TO THE UNITED STATES PATENT OFFICE

Where drawings are to be filed in connection with an application for Letters Patent in the United States Patent Office, each sheet, before it can be accepted by the Office as a part of the application, must be signed in the name of the inventor at the lower right-hand corner, either by him or by an attorney whose written authorization from the applicant is filed in connection with the application. The signatures should never be written on a line parallel with the longer edges of the sheet, one of the shorter edges being always regarded, for the purpose of locating the signatures, as the lower edge of the sheet. The signatures must all be within the margin-lines of the sheet and below the lines of the drawing. The title of the invention should be written with pencil on the back of each sheet of drawings.

When there are filed on the same day two or more applications by the same inventor, each of the documents and drawings belonging to the same application should have placed thereon the same letter or number, which should be different from the letter or number placed upon those of any other of the applications.

It is desirable that all parts of the complete application, including the drawings, be deposited in the Office at the same time. Should, however, the other parts of the application be filed before the drawings are sent, the latter when forwarded should be accompanied by a letter stating the number of sheets inclosed, and that the drawings are to be filed with the other parts of the application, giving the date at which such other parts were filed in the Office, the name of the inventor, and title of the invention. If the application has received a serial number, that should also be given, and it should be indorsed with pencil on the back of each sheet of drawings. The letter should also state, if such be the case, that the new drawings are to be substituted for those previously filed.

Examiners' Letters and Amendments

Examiners are directed to recite in each letter in an application the date of the action by the applicant to which it is a reply, and applicants are requested to indicate in their actions on an application the date of the last Office letter.

Disbarred Attorneys

It is hereby directed that any person who has been disbarred from practice before the Patent Office by order of the Commissioner will be denied access to the files of the Office, either in his own capacity or as the representative of any other person or firm.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 30, 1930

[VOL. 401. No. 5]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 296,564. DOROTHY RADWAY, West New Brighton, N. Y. Filed Feb. 26, 1930.

WINDOBAG

For Grass Seeds, Field Seeds, Vegetable Seeds, and Flower Seeds.

Claims use since July 22, 1929.

Ser. No. 308,011. EAGLE-OTTAWA LEATHER CO., Grand Haven, Mich., and New York, N. Y. Filed Nov. 18, 1930.

No claim being made to the exclusive use of the words "Chrome Grand Haven, Mich.," apart from the mark as shown in the drawing.

For Patent Leather.

Claims use since Oct. 1, 1930.

CLASS 2

Receptacles

Ser. No. 303,217. M. H. SIKES, Atlanta, Ga. Filed July 7, 1930.

For Metallic Oil and Gasoline Cans.

Claims use since Apr. 10, 1930.

Ser. No. 306,225. EMPIRE BOX CORPORATION, Chicago, Ill. Filed Sept. 22, 1930.

REDIPAK

THE LIGHTNING CONTAINER

Applicant hereby disclaims the word "Container" apart from the mark as shown on the drawing.

For Paper Boxes and Cartons.

Claims use since Sept. 16, 1930.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 291,463. MERCK & CO., INC., Rahway, N. J. Filed Oct. 23, 1929.

Fabriklene

For Fluid for Dry Cleaning Garments, Upholstery, and Other Textile Materials.

Claims use since Oct. 19, 1929.

Ser. No. 297,500. SPEE DEE PRODUCTS COMPANY, Philadelphia, Pa. Filed Mar. 18, 1930.

SPEE DEE KLEEN

The exclusive use of the word "Kleen" when expressing the sense of "clean" is disclaimed in itself.

For Cleansers of Wearing Apparel and Other Fabrics, Leather Articles; Articles of Wood, Metal, and Glass; and Chinaware.

Claims use since Jan. 1, 1930.

Ser. No. 300,885. PERCO-STERIL MACHINE CORPORATION, New York, N. Y. Filed May 20, 1930.

Perco
POLISH

"It Cleans as it Polishes"

No claim being made to the word "Polish" or the words "It Cleans As It Polishes" apart from the mark shown.

For Liquid Used for Cleaning, Polishing, and Restoring Metals, Glass, Porcelain, and Articles Having Similar Surfaces.

Claims use since Feb. 1, 1930.

Ser. No. 305,568. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Sept. 11, 1930.

Perchloron

For Soaps and Washing Powders Having Incidental Bleaching Properties.

Claims use since May, 1930.

Ser. No. 306,203. TURCO PRODUCTS, INC., doing business as Turco, Los Angeles, Calif. Filed Sept. 29, 1930.

For Abrasive and Detergent Cleaning Compounds in Flake, Pulverized, Paste, and Liquid Form.

Claims use since Oct. 15, 1927.

Ser. No. 306,711. TIMOTHY D. PERKINS, doing business as Ace Products Co., San Diego, Calif. Filed Oct. 13, 1930.

No claim is made to the word "Cleaner" apart from the trade mark shown.

For Cleansing Liquid for Woven or Knit Fabrics Such, for Instance, as Dresses or Wearing Apparel or Otherwise.

Claims use since Jan. 10, 1928.

Ser. No. 307,010. PAL PRODUCTS CO. INC., Brooklyn, N. Y. Filed Oct. 21, 1930.

PALO

For Cleansing and Polishing Powder for Porcelain, Tile, Enamel, Woodwork, and Painted Walls.

Claims use since May, 1928.

Ser. No. 307,082. GUSTAV A. ABRAHAMSEN, Locust Valley, N. Y. Filed Oct. 23, 1930.

HANDI-DANDY

For Automobile Polishing Cloth Which Has Been Chemically Treated.

Claims use since Aug. 9, 1930.

Ser. No. 307,474. IGNACE BOURIE, doing business as The Bourieo Mfg. Co., Reno, Nev. Filed Nov. 3, 1930.

BOURIEO

For Liquid Cleaner for Removing Stains and Cleaning Silks, Linens, Woolens, Leathers, Woodwork, Glass, Metal, and the Like.

Claims use since Oct. 1, 1929.

Ser. No. 307,517. WILHELM BROS., Kansas City, Mo. Filed Nov. 3, 1930.

LéMir

For Liquid-Cleaning Composition for Glass.

Claims use since Oct. 22, 1930.

CLASS 5
Adhesives

Ser. No. 307,446. FIRESTONE FOOTWEAR COMPANY, Hudson, Mass. Filed Nov. 1, 1930.

TRU-PUTT

For Adhesive Liquid Cement for Use on Artificial Golf-Green Surfaces.

Claims use since Sept. 16, 1930.

Ser. No. 308,015. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Nov. 18, 1930.

Cosavult

For Adhesives for Affixing Rubber and Rubber Substitutes of All Kinds Upon Rubber, Leather, Textile Materials, and the Like.

Claims use since Jan. 20, 1928.

CLASS 6
Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 291,004. THE H. H. H. MANUFACTURING COMPANY, Dunkirk, N. Y. Filed Oct. 12, 1929.

The word "Preparations" is hereby disclaimed apart from the mark as shown on the drawing.

For Preparations for Colds in the Throat, Head, and Chest; Tonics for the Blood, Laxatives and Liniments for Skin Lesions and Abrasions, Sprains, and Contusions, Irritations of Skin, Corns, and Callouses.

Claims use since Sept. 12, 1929.

Ser. No. 291,832. EARL HURD, doing business as Earl Hurd Laboratories, Oklahoma City, Okla. Filed Oct. 31, 1929.

HUR-GO

For Preparation for Promoting the Growth of Hair.

Claims use since May 10, 1928.

Ser. No. 295,506. MATILDA CREGER, doing business as Sunsap Laboratories, Los Angeles, Calif. Filed Feb. 3, 1930.

Sunsap

For Dentifrices.

Claims use since May 1, 1909.

Ser. No. 296,850. ART CHEMICAL WORKS, INC., Tampa, Fla. Filed Mar. 5, 1930.

Art-Kem

For Poultry Supplies—Namely, Contact Insect and Vermin Destroyers, Tonics, and Worm Removers; Special Paradichlorbenzene for Fumigation and Sanitation, and a Combined Plant-Insect Destroyer Having Nutritive Properties.

Claims use since Feb. 1, 1928.

Ser. No. 303,104. EVA FORD (MRS. JOHN W. FORD), doing business as Southern Hair Ointment Company, Bowling Green, Ky. Filed July 3, 1930.

SEVEN STAGE

For Hair Ointment.
Claims use since June 23, 1930.

Ser. No. 303,870. CHARLES S. ARNOLD, INC., Los Angeles, Calif. Filed July 28, 1930.

BATH-O-VELVET

For Bath Salts and Water Softeners.
Claims use since June 1, 1930.

Ser. No. 304,141. HEINRICH VON MAYENBURG KOMMANDITGESELLSCHAFT, Dresden, Germany. Filed Aug. 2, 1930.

Leopills

For Pharmaceutic and Cosmetic Preparations—Namely, Laxatives, Preparations for Purifying the Blood, and Antifat Preparations.
Claims use since March, 1919.

Ser. No. 304,677. THE J. S. YOUNG COMPANY, Baltimore, Md. Filed Aug. 15, 1930.

All wording with the exception of the letter "Y" and the numeral "51" is disclaimed apart from the mark as shown on the drawing.
For Logwood Extract.
Claims use since Jan. 1, 1917.

Ser. No. 304,808. GUY T. GIBSON, INC., New York, N. Y. Filed Aug. 20, 1930.

FLOVERIS

For Perfume, Toilet Water, Sachet, Face Powder, Dusting Powder, Talcum Powder, and Rouge.
Claims use since May 1, 1930.

Ser. No. 305,250. TEE TEE LABORATORIES, San Francisco, Calif. Filed Sept. 2, 1930.

TEE TEE

For External Medicine for Use in the Treatment of Foot Ringworm, Athlete's Foot, Cracked Toes, Itching Between the Toes and Along the Sides of the Feet, by Means of External Application.
Claims use since Nov. 25, 1929.

Ser. No. 305,569. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Sept. 11, 1930.

Perchloron

For Disinfectants and Bleaching Powders.
Claims use since May, 1930.

Ser. No. 305,603. THE ASIATIC PETROLEUM COMPANY, LIMITED, London, England. Filed Sept. 12, 1930.

SHELLTOX

For Insecticides.
Claims use since May, 1929.

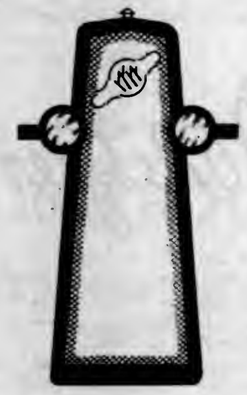
Ser. No. 306,296. THE DEANE PLASTER CO., Yonkers, N. Y. Filed Oct. 1, 1930.

'BAC-EZ'

For Medicated Kidney Plasters.
Claims use since July 2, 1930.

Ser. No. 306,357. REINHART J. KOEPP, doing business as The Luglyfe Sales Co., Euclid Village and Cleveland, Ohio. Filed Oct. 3, 1930.

For Preservative Compound for Battery Terminals.
Claims use since Sept. 22, 1930.



Ser. No. 306,431. CONSTANTINE LABORATORIES, Cincinnati, Ohio. Filed Oct. 6, 1930.

ARVO

For General Tonic.
Claims use since May 26, 1930.

Ser. No. 306,620. STERLING CHEMICAL CO., Jamaica Plain, Boston, Mass. Filed Oct. 10, 1930.

For Flushing Compound for Automobile Radiators, Compound for Stopping Leaks in Radiators, Cylinder Blocks, and Water Jackets; and Compound for Stopping Leaks in Heating Systems.
Claims use since July 1, 1930.

Ser. No. 306,879. PIERRE PAUL PLACIDE ASTIER, doing business as Laboratoires P. Astier, Paris, France. Filed Oct. 18, 1930.

COLITIQUE

For Vaccine Used for Combating Colibacillus, Used for Gastrointestinal Troubles and in All Cases Caused by the Colibacillus.
Claims use since December, 1927.

Ser. No. 307,020. W. J. STAHL, doing business as The Phil-Lors' Chemical Co., Georgetown, Ohio. Filed Oct. 21, 1930.

PHIL-LORS' OINTMENT

The word "Ointment" not being claimed apart from the mark as shown on the drawing.
For an Ointment for Hay Fever, Nasal Catarrh, Colds in Head, Nose, Throat, and Chest, Sore Gums and Teeth, Sore and Inflamed Eyelids, Neuralgia, Sore Muscles, Stiff Joints, Sore and Aching Feet, Corns and Bunions, Skin Eruptions, Pimples, Blackheads, Flesh Worms, Burns and Scalds, and Hemorrhoids or Piles.
Claims use since Aug. 19, 1930.

Ser. No. 307,029. BALFOUR, GUTHRIE & CO., LIMITED, San Francisco, Calif. Filed Oct. 22, 1930.

KERO-WASH

The word "Wash" is disclaimed except as used in connection with the balance of the mark as shown.
For Kerosene Emulsion Used as an Aid to Hydrochloric Acid in Removing Arsenical Residue on Fruit.
Claims use since Sept. 5, 1930.

Ser. No. 307,184. THOMPSON BARBER SUPPLY CO., doing business as Jos. Thompson, Sioux City, Iowa. Filed Oct. 25, 1930.

Dixie Rose

For Hair Oil.
Claims use since 1916.

Ser. No. 307,219. IDA RIBNER, doing business as Beatrice Morgan, Brooklyn, N. Y. Filed Oct. 27, 1930.

No claim is made herein for registration of the representation or outline of the label per se or apart from its association as shown in the drawing.
For Cleansing Cream, Almond Cream, Foundation Cream, Skin and Tissue Cream, Lemon Bleach Pack, Liquid Face Powder, Face Powder, Face Astringent, Rouge, Lip Stick.
Claims use since December, 1927.

Ser. No. 307,396. GILCOR MANUFACTURING CO. INC., New York, N. Y. Filed Oct. 31, 1930.

Yankee
PERFUME
STARCH

The words "Perfume Starch" appearing on the drawing are hereby disclaimed as part of said trade-mark.
For Washing Starches.
Claims use since Aug 15, 1924.

Ser. No. 307,508. RING-ROUT, INC., New Orleans, La. Filed Nov. 3, 1930.

RING-ROUT

For Medical Compound for the Treatments of Affections of the Skin.
Claims use since Oct. 4, 1930.

Ser. No. 307,549. ELIJAH W. HUNTER, Tulsa, Okla. Filed Nov. 5, 1930.

ELIJAH W. HUNTER'S

The portrait forming a part of the trade-mark is of the applicant.
For Liniment for Use in the Treatment of Mange and Stiffness.
Claims use since Sept. 5, 1930.

Ser. No. 307,601. GOTTFRIED METZLER, Ambler, Pa. Filed Nov. 6, 1930.

G. Metzler

The name "G. Metzler" appearing on the drawing is a facsimile of the signature of the applicant.
For Preparation for Rheumatic Ailments.
Claims use since Sept. 1, 1930.

Ser. No. 307,625. WILLIAM R. KNOTT, Rochester, N. Y. Filed Nov. 7, 1930.

AQUAJOYS

For Salts Used for Bathing.
Claims use since Oct. 1, 1930.

Ser. No. 307,761. ASPIRIN SELTZER CORPORATION, North Cambridge, Mass. Filed Nov. 11, 1930.

PYR ASPIRIN

No claim is made to the descriptive word "Aspirin" apart from the mark shown in the drawing.
For Medicinal Compound for Treatment of Headaches, Colds, and Neuralgia, Muscle Aches and Pains.
Claims use since August, 1930.

Ser. No. 307,994. SANDOZ CHEMICAL WORKS, INC., New York, N. Y. Filed Nov. 17, 1930.

CEROLS

For Chemical Preparations Adapted for Waterproofing Fabrics.
Claims use since Aug. 25, 1930.

Ser. No. 308,067. ROSE R. HAMBURGER, doing business as Nostro Laboratories, Baltimore, Md. Filed Nov. 19, 1930.

NOSTRO

For Preparation for the Relief of Head Colds, Hay Fever, Rose Fever, Nasal Irritations, Minor Throat and Bronchial Irritations.
Claims use since Oct. 4, 1930.

Ser. No. 308,085. FRANK W. ROECA, Omaha, Nebr. Filed Nov. 19, 1930.

MARGEROCA

For Hair Oil, a Preparation for the Treatment of the Scalp and Invigorating the Roots of the Hair.
Claims use since Sept. 15, 1930.

Ser. No. 308,220. ANNIE PORTER, doing business as Madam Anna Porter, Chicago, Ill. Filed Nov. 22, 1930.

The trade-mark consists of the applicant's portrait.
For Hair Grower.
Claims use since 1918.

Ser. No. 308,241. CALIFORNIA SPRAY CHEMICAL CO., Berkeley, Calif. Filed Nov. 24, 1930.

ORTHOL-K

For Insecticides, Germicides, and Fungicides.
Claims use since May 31, 1927.

Ser. No. 308,245. WILLIAM COOPER & NEPHEWS, INCORPORATED, Chicago, Ill. Filed Nov. 24, 1930.

BARKO

For Liquid Spray for Plants and Trees.
Claims use since Nov. 12, 1930.

Ser. No. 308,266. MRS. HUGH QUINN, Fort Worth, Tex. Filed Nov. 24, 1930.

QUINN—ATONE

For Liquid Composition for Treating the Blood and the Digestive Organs.
Claims use since Sept. 1, 1929.

Ser. No. 308,284. HAROLD BENNETT, doing business as Melrose Chemcal Co., Melrose, Mass. Filed Nov. 25, 1930.

MELCO

For Preparations for Finishing, Bleaching, Sizing, Boiling Off, and Degumming Textile Fabrics.
Claims use since Oct. 25, 1930.

CLASS 7

Cordage

Ser. No. 273,329. ALEXANDER L. SYKES, doing business as The International Cordage & Yarn Co., New York, N. Y. Filed Oct. 3, 1928.

ICY

The lining on the drawing indicates the color blue.
For Manila, Flax, Jute, or the Like Rope.
Claims use since May 1, 1927.

CLASS 12

Construction Materials

Ser. No. 292,101. THE FLINTKOTE COMPANY, Boston, Mass. Filed Nov. 7, 1929.

No claim is made to the exclusive use of the words "Asphalt Roofings" apart from the mark as shown in the drawing.
For Asphaltic Roofing Composition Shingles, Waterproof Building Paper, and Asphaltic Roofing Cement, Manufactured by It and Sold Through The Sal-Mo Company as Its Selling Division.
Claims use since 1910.

Ser. No. 302,642. FREDERICK A. PURDY, Scarsdale, N. Y. Filed June 20, 1930.

"Garage-Boy"

For Garage Doors and Automatic Control and Operating Mechanism for Opening and Closing the Same.
Claims use since Oct. 10, 1923.

Ser. No. 304,302. TENNESSEE PRODUCTS CORPORATION, Nashville, Tenn. Filed Aug. 6, 1930.

TENSULATE

For Insulating Material Used to Resist Cold or Heat and for Verminproof and Fireproof Constructions.
Claims use since May 20, 1929.

Ser. No. 306,222. SOUTHWESTERN PORTLAND CEMENT COMPANY, Los Angeles, Calif. Filed Sept. 29, 1930.

No claim is made to the geographical term "El Paso, Tex." apart from the mark shown.
For Cements—Namely, Portland Cement, Oil-Well Cement, Quick-Setting Cement, Masonry Cement, and Plastic Quick-Setting Cement for Forming Waterproof Concrete.
Claims use since May, 1909.

Ser. No. 306,223. SOUTHWESTERN PORTLAND CEMENT COMPANY, Los Angeles, Calif. Filed Sept. 29, 1930.

No claim is made to the geographical words "Osborn, Ohio" and "Miami" apart from the mark shown.
For Cements—Namely, Portland Cement, Oil-Well Cement, Quick-Setting Cement for Forming Waterproof Concrete.
Claims use since June, 1925.

Ser. No. 307,529. KALITE COMPANY, LIMITED, Pasadena, Calif. Filed Nov. 4, 1930.

KALITE

For Acoustical Plaster.
Claims use since Aug. 20, 1930.

Ser. No. 307,771. GENERAL REFRACTORIES COMPANY, Philadelphia, Pa. Filed Nov. 11, 1930.

RITEX

For Refractory Brick.
Claims use since Apr. 11, 1929.

Ser. No. 307,820. MACKLANBURG-DUNCAN COMPANY, Oklahoma City, Okla. Filed Nov. 12, 1930.

On-GARD

For Metal and Felt Weather Stripping, Metal Weather Stripping, and Felt Weather Stripping.
Claims use since August, 1930.

Ser. No. 307,882. ASBESTOS LIMITED INC., New York, N. Y. Filed Nov. 14, 1930.

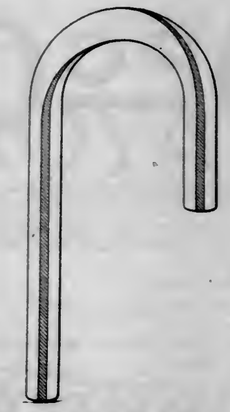
NEWMARVEL

For Wall Board in Sheet or Slab Form.
Claims use since Nov. 1, 1930.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 293,515. LOUIS D. CAHN, doing business as L. D. CAHN CO., New York, N. Y. Filed Dec. 11, 1929.



The words "Czecho-Slovakia" are disclaimed apart from the mark as shown.
For Kitchen Utensils—Namely, Base-Metal Cooking Hollow Ware.
Claims use since June 4, 1929.

Ser. No. 306,578. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Oct. 9, 1930.

MAID OF HONOR

For All White Enameled Pressed-Steel Baby Bathtubs, Baking Pans, Chambers, Coffeepots, Combinets, Convex Kettles, Dish Pans, Double Boilers, Drinking Cups, Mixing Bowls, Mugs, Percolators, Preserving Kettles, Plates, Pudding Pans, Refrigerator Sets, Saucepans, Teakettles, Water Pitchers.
Claims use since Mar. 1, 1930.

Ser. No. 307,533. NATIONAL TUBE COMPANY, Pittsburgh, Pa. Filed Nov. 4, 1930.

The trade-mark consists of two green stripes disposed longitudinally and diametrically opposite each other on the metal pipe. The drawing is lined for green. No claim is made for the pipe in itself.
For Metal Pipe.
Claims use since Nov. 10, 1928.

Ser. No. 307,892. GRIMES SPRINKLER COMPANY, INC., Newark, N. J. Filed Nov. 14, 1930.

GRIMES

For Automatic Sprinkler Systems Including All Parts and Accessories Necessary to the Proper Functioning of Such Systems.
Claims use since Nov. 3, 1930.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 307,627. P. R. MALLORY & CO. INCORPORATED, Indianapolis, Ind. Filed Nov. 7, 1930.

ELKALOY

For Electrode Material for Manual Spot Welding.
Claims use since Oct. 21, 1930.

CLASS 15

Oils and Greases

Ser. No. 282,645. THE GREAT WESTERN OIL COMPANY, Cleveland, Ohio. Filed Apr. 19, 1929.

CRESCENT

For Gasoline.
Claims use since 1901.

Ser. No. 298,457. OPCO CO., INC., Buffalo, N. Y. Filed Apr. 5, 1930.

OPCO

For Lubricating Oils, Lubricating Greases, Gasoline, Motor Fuel Oil, Furnace Fuel Oil, Cutting Oil, and Thinning Oil Having a Low Cold Test Used for Thinning Greases and Oil to a Point Where They Will Not Congeal at Low Temperatures.
Claims use since 1915.

Ser. No. 307,360. MCDONALD & MACHADO, Venice, Calif. Filed Oct. 30, 1930.

E-Z-ZINK

The word "Zink," being a misspelling of a word which is descriptive of the goods, is disclaimed apart from the other features of the mark shown in the accompanying drawing.
For Gasoline.
Claims use since 1924.

Ser. No. 307,510. OLIVER SAIVE, doing business as Aplus Products Co., New York, N. Y. Filed Nov. 3, 1930.

APLUS

For Lubricating Oil.
Claims use since Aug. 15, 1930.

Ser. No. 307,546. E. W. FAWCETT, Denver, Colo. Filed Nov. 5, 1930.

"The Oil of the Golden West"

No claim is made to the words "Wax-Out," "Motor Oil," and "Oil" apart from the mark as shown.
For Motor-Lubricating Oil.
Claims use since Sept. 6, 1930.

Ser. No. 307,769. EMERY INDUSTRIES, INC., St. Bernard, Ohio. Filed Nov. 11, 1930.

Little Flower

For Candles.
Claims use since May 1, 1930.

CLASS 16

Paints and Painters' Materials

Ser. No. 298,855. THE SHARPLES SOLVENTS CORPORATION, Philadelphia, Pa. Filed Apr. 14, 1930.

PENTEXEL

For Solvent for Lacquers, Varnishes, and Paints.
Claims use since Oct. 18, 1929.

Ser. No. 306,699. GENERAL ELECTRIC X-RAY CORPORATION, Chicago, Ill. Filed Oct. 13, 1930.

RUBYLITE

For Dark-Room Paint.
Claims use since Feb. 1, 1930.

CLASS 17

Tobacco Products

Ser. No. 306,080. CHARLES J. WOUTERS, Oakland, Calif. Filed Sept. 25, 1930.

The words "Little Cigars" which appear on the drawing are disclaimed apart from the mark shown.
For Cigars and Cigarettes.
Claims use since June 1, 1930.

Ser. No. 307,686. MI HOGAR CIGAR CORPORATION, New York, N. Y. Filed Nov. 8, 1930. Under 10-year proviso.

CORDERO

For Cigars.
Claims use since at least 1884.

Ser. No. 308,022. MACLIN-ZIMMER-MCGILL TOBACCO CO., INC., Petersburg, Va. Filed Nov. 18, 1930.

For Tobaccos.
Claims use since Jan. 21, 1878.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 307,497. IRVING ENGINEERING CO., INC., Sioux City, Iowa. Filed Nov. 3, 1930.

Kani-Keen

For Automobile Heaters Employing Hot Fluids from the Engine.
Claims use since June 2, 1930.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 276,150. ROYAL ELECTRIC BURGLAR ALARM CORP., Brooklyn, N. Y. Filed Dec. 1, 1928.

ROYAL

For Electric Burglar Alarms and Electric Burglar-Alarm Systems.
Claims use since June 1, 1928.

Ser. No. 291,135. NORTHERN STATES MFG. CO., INC., also doing business as Toastall Co., Minneapolis, Minn. Filed Oct. 16, 1929.

Toastall

For Electric Toasters.
Claims use since Aug. 15, 1928.

Ser. No. 294,287. NORTH VERNON LUMBER MILLS, doing business as The Platter Cabinet Company, North Vernon, Ind. Filed Dec. 31, 1929.

TALKAFILM

For Unitary Electrical Apparatus for the Reproduction of Sound Recorded Upon Photographic Films, Such Apparatus Being Separate from the Picture-Projection Apparatus Although Synchronized Therewith.
Claims use since Nov. 1, 1929.

Ser. No. 297,461. WÜRTTEMBERGISCHE METALLWARENFABRIK, Geislingen-Steige, Wurttemburg, Germany. Filed Mar. 17, 1930.

Cromargan

For Electric Lamps, Electric Grills, Electric Percolators, Cooking Utensils with Electric Heaters.
Claims use since Mar. 4, 1927.

Ser. No. 304,421. NEW JERSEY WOOD FINISHING CO. INC., Woodbridge, N. J. Filed Aug. 9, 1930.

VARTEX

THE PEAK OF QUALITY

No claim is made to the exclusive use of the words "The Peak of Quality" apart from the mark as shown in the drawing.

For Varnished Cambric Fabrics and Tapes and Varnished Tapers to be Used in the Insulation of Cable, Motors, Generators, and Similar Electrical Apparatus.

Claims use since July 21, 1930.

Ser. No. 305,088. RADIO CORPORATION OF AMERICA, New York, N. Y. Filed Aug. 27, 1930.

RCA

For Electrical Systems for Receiving and/or Distributing Electrical Waves of Audible or Superaudible Frequency, Amplifying and Reproducing Such Waves, and Parts Thereof—Namely, Antenna Coupling Units, Extension Coupling Units, Balanced Transmission Lines, Line-Terminating Units, Radio Outlet Units, Loading Coil Units, Capacitance Units, Resistor Units, Wall-Type Loud-Speakers, Channel Selectors, Switches, Combined Channel-Selector Switches and Volume-Control Switches, Flexible Cable Equipment, Key-Panel Assemblies, Neon Protective Devices, Radio Key Panels Adapted for Combination with Electric Phonograph Units, Telescopic Wall-Box Speakers, Wall-Type Electro-Dynamic Loud Speakers, Central Coupling Units, Antenna Ground Outlets, Volume-Control Switches for Flush Wall Mounting, Radio Outlet Jack Units, Portable Channel and/or Volume Control Switches, Cord-Terminal Units, Combined Channel-Selector and/or Volume-Control and Single Jack Units, Combined Loud-Speaker and Controls, Supervisory Key-Control Racks and/or Cabinets, Central Rack Assemblies Comprising Radio Receiving Sets, Interstage Amplifiers, Power Amplifiers, Audio Segregating Systems, and Automatic Time Switches, Jack Panel Assemblies, Auditorium Radio Receiving Sets Adapted for Combination with Single Turntable Phonographs, and for Housing in the Same Cabinet Thereof, and Commercial Current Power-Supply Units.

Claims use since August, 1928.

Ser. No. 305,254. TRANSFORMER CORPORATION OF AMERICA, Chicago, Ill. Filed Sept. 2, 1930.

For Assembled Sound Amplifiers and Loud-Speakers Used in Connection with Wireless Telephone and Telegraph Receiving Instruments, Radio Receiving Sets and Parts Thereof, and Accessories Therefor Consisting of Phonograph Record Electric Pick-Up Attachments, Radio Receiving Sets Used in Combination with Phonographs, and Electron or Vacuum Radio Tubes.

Claims use since May 12, 1930.

Ser. No. 306,108. H. ROST & CO., Hamburg, Germany. Filed Sept. 26, 1930.

HAROCO NONHYGRO

For Insulated Wires and Cables and for an Insulating Compound for Wires and Cables.

Claims use since May 15, 1930.

Ser. No. 306,280. GEORGE NEWMAN, doing business as Electrical Engineering & Equipment Co., Long Island City, N. Y. Filed Oct. 1, 1930.

Triple E

For Electric Lamps, Electric Mercury-Tube Control Switches, Electric Current Test or Contact Prods, Electric Mercury-Control Float Switches, Automatic Electric Time-Controlled Mercury Switches.

Claims use since Oct. 21, 1928.

Ser. No. 306,400. HILAM, INC., Milwaukee, Wis. Filed Oct. 4, 1930.

TIME-O-LITE

For Electric Lamps for General Illumination.

Claims use since Sept. 18, 1930.

Ser. No. 307,131. CHICAGO FLEXIBLE SHAFT COMPANY, Chicago, Ill. Filed Oct. 24, 1930.

MIXMASTER

For Electric Food Mixers.

Claims use since Sept. 1, 1930.

Ser. No. 307,412. H. MAIMIN COMPANY INCORPORATED, New York, N. Y. Filed Oct. 31, 1930.

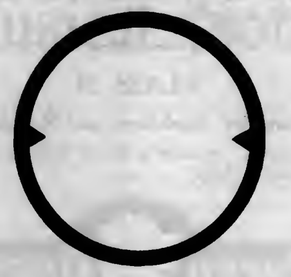
ROTOSHERE

For Electric Cloth-Cutting Machines.

Claims use since Oct. 21, 1930.

Ser. No. 307,516. UNITED STATES RUBBER COMPANY, New York, N. Y. Filed Nov. 3, 1930.

RAINBOW



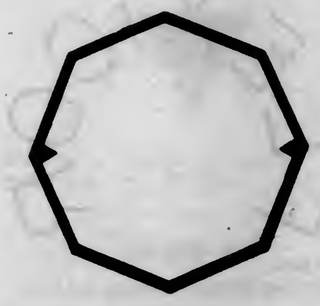
For Electrical Conductors Having a Rubber Covering.

Claims use since Mar. 7, 1929.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 305,213. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Filed Sept. 2, 1930.



The mark consists of a circle having a pair of small darts or pointed projections in the inner periphery thereof.

For Pocket-Billiard Balls.

Claims use since Aug. 14, 1930.

Ser. No. 305,214. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Filed Sept. 2, 1930.

The mark consists of an octagon having a pair of small darts or pointed projections in the inner periphery thereof.

For Pocket-Billiard Balls.

Claims use since Aug. 14, 1930.

Ser. No. 306,506. PEO MANUFACTURING CORPORATION, Rochester, N. Y. Filed Oct. 7, 1930.

LITTLE WHIRL-WIND

For Game of Skill—Namely, a Game Board Having Pockets and Balls to be Projected Therein.

Claims use since Sept. 1, 1930.

Ser. No. 307,213. JOHN F. MEYER, doing business as The Exhibit Supply Company, Chicago, Ill. Filed Oct. 27, 1930.

BELL JACK

For Coin-Operated Amusement Machines.

Claims use since Aug. 30, 1930.

Ser. No. 307,558. MALLOY, LIMITED, San Pedro, Calif. Filed Nov. 5, 1930.

DRIVABAL

For Golf Game Consisting of a Portable Helical-Track Apparatus.

Claims use since August, 1930.

Ser. No. 308,062. THE CRAWFORD, MCGREGOR AND CANBY COMPANY, Dayton, Ohio. Filed Nov. 19, 1930.

FLEXICOR

For Golf Clubs.
Claims use since Oct. 10, 1930.

Ser. No. 308,224. SHOFSTALL & SHOFSTALL, Omaha, Nebr. Filed Nov. 22, 1930.

BOOP-A-DOOP

For Game Board Adapted for Use in Connection with Playing Miniature Golf.
Claims use since Sept. 1, 1930.

Ser. No. 308,225. STANDARD NOVELTY WORKS, Duncannon, Pa. Filed Nov. 22, 1930.

CHALLENGER

For Coasting Sleds.
Claims use since June 16, 1930.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

Ser. No. 306,479. WATT MANUFACTURING COMPANY, Sterling Ill. Filed Oct. 6, 1930.

KORECTAIRE

For Air-Humidifying Machinery.
Claims use since Nov. 1, 1927.

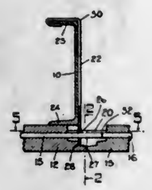
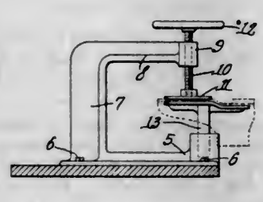
REISSUES



DECEMBER 30, 1930

17,912. PROCESS FOR SIMULATING NATURAL PATTERNS. LLOYD V. CASTO, Detroit, Mich., assignor to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 21, 1930. Serial No. 446,113. Original application filed Jan. 24, 1927, Serial No. 163,200. Renewed Mar. 16, 1928. Original No. 1,682,067, dated Aug. 28, 1928. 21 Claims. (Cl. 101—170.)



1. A process for decorating surfaces in simulation of natural subjects, having a grain or cleavage vein pattern, which includes the use of an etched plate or roll made from a photographic resist, by first treating the surface to be decorated with an underlying or ground coating of pigment, applying pigment to the etched plate or roll of a color simulating one of the natural pattern colors of the subject to be reproduced, transferring the pigment from the plate or roll to the surface to be finished, drying said transferred pattern, applying to the etched plate or roll a second pigment coating and removing said coating therefrom by a resilient roll, the second transferred pattern being over the previously transferred pattern but out of register therewith to such an extent that the duplication of pattern cannot be noticed on casual observation of the finished product.

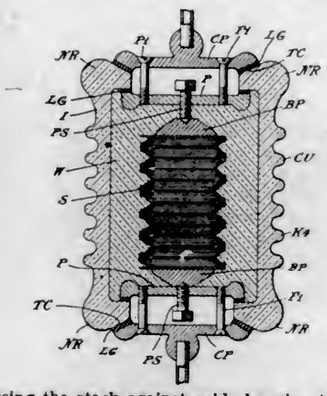
17,913. BUILDING CONSTRUCTION. THOMAS ROWAN, Brooklyn, N. Y., assignor to Structural Gypsum Corporation, New York, N. Y., a Corporation of Delaware. Filed June 3, 1929. Serial No. 368,129. Original No. 1,632,453, dated June 14, 1927, Serial No. 20,555, filed Apr. 3, 1925. 24 Claims. (Cl. 72—118.)

12. The combination with a floor beam, of a pre-cast ceiling slab of plastic material provided with a slot, a device embedded in the slab and extended into said slot, and means engaging the floor beam and cooperating with said device within the slot, for suspending the slab from the floor beam.

17,914. DEVICE FOR FORMING RECESSES AND ENLARGEMENTS ON SHOE INSOLES. ABRAHAM SACHS, Salisbury, Md., assignor to Sachs Sole Shaping Machine Company, Incorporated, a Corporation of Maryland. Filed Aug. 15, 1930. Serial No. 475,608. Original No. 1,747,029, dated Feb. 11, 1930, Serial No. 329,783, filed Jan. 2, 1929. 4 Claims. (Cl. 12—17.)

1. A device of the class described, including a supporting member, said supporting member having a plurality of parallel and transverse communicating grooves, and members having ribs adjustably positioned in the grooves, said members being adapted to be forced into engagement with the insole of a shoe to form depressions in the insole.

17,915. RADIO FREQUENCY AMPLIFYING SYSTEM. LESTER L. JONES, Oradell, N. J. Filed Oct. 4, 1929. Serial No. 397,426. Original No. 1,713,132, dated May 14, 1929, Serial No. 51,569, filed Aug. 21, 1925. 28 Claims. (Cl. 179—171.)



1. An amplifying system comprising an electron discharge device having an input circuit and an output circuit capacitively coupled by means of said device to

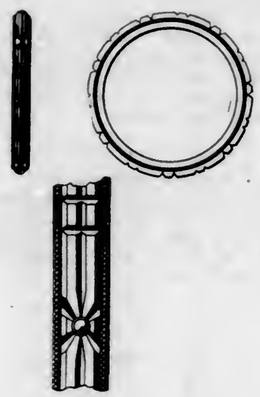
the input circuit, means for tuning the input circuit through a predetermined range of frequencies, the output circuit being untuned and embodying non-tunable coupling means, coupling the same to a subsequent circuit, said untuned output circuit in the combination with the subsequently coupled circuit having a natural frequency greater than the highest frequency of the whole frequency range through which the input circuit is tunable whereby the reactions of the output circuit on the input circuit due to the said capacitive coupling are fixed for the whole frequency range.

17,916. ELECTRIC CONDENSER. JOHN A. PROCTOR, Lexington, and WILLIAM M. BAILEY, Lynn, Mass., assignors to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed May 16, 1929. Serial No. 363,564. Original application filed Jan. 23, 1925, Serial No. 4,150. Divided and application filed Sept. 18, 1925, Serial No. 57,073. Original No. 1,697,477, dated Jan. 1, 1929. 42 Claims. (Cl. 175—41.)

1. The combination with an electrical condenser stack to be enclosed and compressed, of a porcelain casing surrounding the stack, a clamping terminal located inside the said casing at one end of the stack; and a device located inside the casing at the other end of the stack

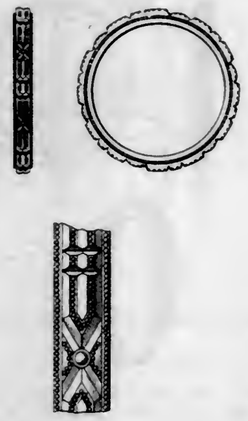
and forcing the stack against said clamping terminal and thereby against the casing as a tension member of means clamping the stack.

DESIGNS



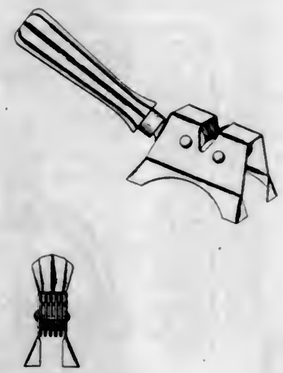
DECEMBER 30, 1930

82,926. LUGGAGE LOCK. OTTO A. BOESEL, Ansonia, Conn., assignor to The H. A. Matthews Manufacturing Company, Seymour, Conn., a Corporation. Filed Oct. 23, 1930. Serial No. 37,360. Term of patent 3½ years.



The ornamental design for a luggage lock as shown.

82,927. RING. ANDREW O. BURGESS, Brooklyn, N. Y., assignor to J. R. Wood & Sons, Inc., New York, N. Y., a Corporation of New York. Filed June 27, 1930. Serial No. 36,191. Term of patent 3½ years.



The ornamental design for a ring, as shown.

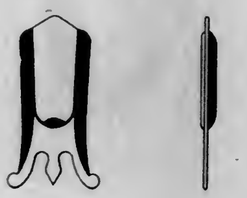
82,928. RING. ANDREW O. BURGESS, Brooklyn, N. Y., assignor to J. R. Wood & Sons, Inc., New York, N. Y., a Corporation of New York. Filed June 27, 1930. Serial No. 36,194. Term of patent 3½ years.

The ornamental design for a ring, as shown.

82,929. KNIFE SHARPENER. EDWARD W. CARPENTER, Fairfield, Conn., assignor to The E. W. Carpenter Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 8, 1930. Serial No. 37,588. Term of patent 14 years.

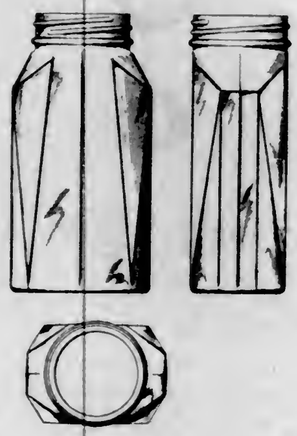
The ornamental design for a knife sharpener, substantially as shown.

82,930. RING. ARTHUR A. CONSTABEL, Norristown, Pa., assignor to The Bailey, Banks & Biddle Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1930. Serial No. 34,275. Term of patent 7 years.



The ornamental design for a ring, as shown.

82,931. STATUETTE OR SIMILAR ARTICLE. ALICE CULIN, New York, N. Y. Filed Sept. 16, 1930. Serial No. 36,982. Term of patent 7 years.

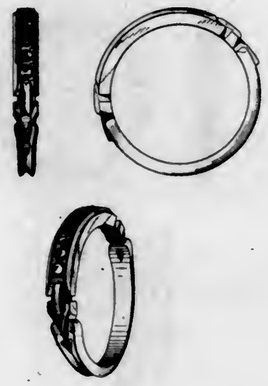


The ornamental design for a statuette or similar article, as shown.

82,932. FINGER-NAIL FILE. CLARENCE A. FORESMAN, Cicero, Ill.; Dagne Adeline Lund administratrix of said Clarence A. Foresman, deceased. Filed Mar. 27, 1930. Serial No. 35,038. Term of patent 7 years.

The ornamental design for a finger-nail file substantially as shown.

82,933. JAR. EDWIN WENDELL FUERST, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 27, 1930. Serial No. 37,398. Term of patent 14 years.

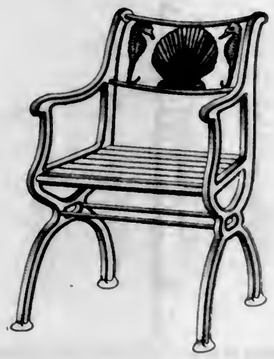


The ornamental design for a jar substantially as shown.

82,934. FINGER RING. JOSEPH GRANAT, San Francisco, Calif. Filed Oct. 1, 1930. Serial No. 37,103. Term of patent 7 years.

The ornamental design for a finger ring substantially as shown and described.

82,935. FINGER RING OR ARTICLE OF SIMILAR NATURE. EDWARD J. GROSS, New Rochelle, N. Y. Filed Nov. 6, 1930. Serial No. 37,575. Term of patent 7 years.

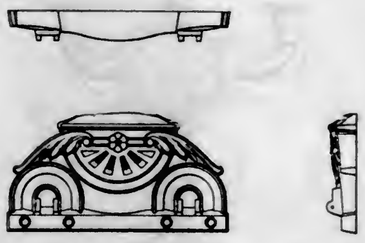


The ornamental design for a finger ring or article of similar nature as shown and described.

82,936. TEXTILE PANEL FOR A MATTRESS COVERING. HERMAN HAUG, New York, N. Y., assignor to Rosemary Mfg. Co., Roanoke Rapids, N. C., a Corporation of North Carolina. Filed Apr. 1, 1930. Serial No. 35,090. Term of patent 3½ years.

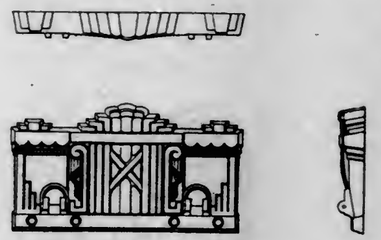
The ornamental design for a textile panel for a mattress covering, as shown and described.

82,937. CHAIR OR SIMILAR ARTICLE. EMIL HAUSER, New York, N. Y., assignor to Marcy Foundry Co., Perth Amboy, N. J., a Corporation of New Jersey. Filed Oct. 25, 1930. Serial No. 37,375. Term of patent 7 years.



The ornamental design for a chair or similar article, as shown.

82,938. CHAIR OR SIMILAR ARTICLE. EMIL HAUSER, New York, N. Y., assignor to Marcy Foundry Co., Perth Amboy, N. J., a Corporation of New Jersey. Filed Oct. 25, 1930. Serial No. 37,376. Term of patent 7 years.

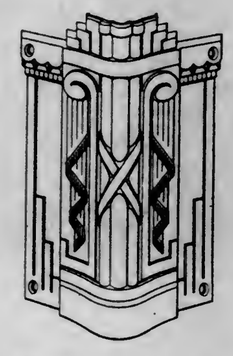


The ornamental design for a chair or similar article, as shown.

82,939. EAR FOR BURIAL-CASKET HANDLES. ROE P. HENDERSON, Springfield, Ohio, assignor to The Springfield Metallic Casket Company, Springfield, Ohio, a Corporation of Ohio. Filed Oct. 13, 1930. Serial No. 37,246. Term of patent 14 years.

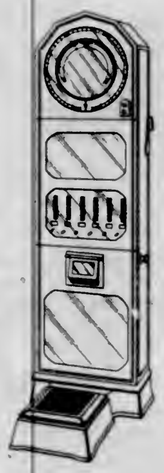
The ornamental design for an ear for burial-casket handles as shown.

82,940. EAR FOR BURIAL-CASKET HANDLES. ROE P. HENDERSON, Springfield, Ohio, assignor to The Springfield Metallic Casket Company, Springfield, Ohio, a Corporation of Ohio. Filed Oct. 13, 1930. Serial No. 37,247. Term of patent 14 years.



The ornamental design for an ear for burial-casket handles as shown.

82,941. CORNER FOR BURIAL CASKETS. ROE P. HENDERSON, Springfield, Ohio, assignor to The Springfield Metallic Casket Company, Springfield, Ohio, a Corporation of Ohio. Filed Oct. 13, 1930. Serial No. 37,248. Term of patent 14 years.



The ornamental design for a corner for burial caskets, as shown.

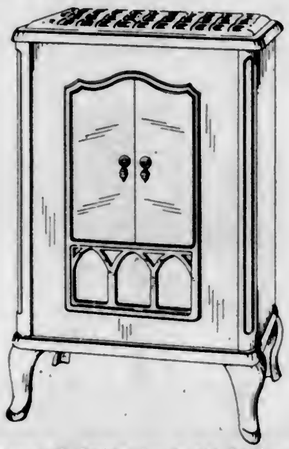
82,942. CORNER FOR BURIAL CASKETS. ROE P. HENDERSON, Springfield, Ohio, assignor to The Springfield Metallic Casket Company, Springfield, Ohio, a Corporation of Ohio. Filed Oct. 13, 1930. Serial No. 37,249. Term of patent 14 years.

The ornamental design for a corner for burial caskets, as shown.

82,943. CASING FOR A WEIGHING AND VENDING MACHINE. ODE D. JENNINGS, Chicago, Ill., assignor to O. D. Jennings & Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1930. Serial No. 36,036. Term of patent 7 years.

The ornamental design for a casing for a weighing and vending machine, substantially as shown.

82,944. FAN. JAMES KARAGEORGE, Chicago, Ill. Filed Nov. 10, 1930. Serial No. 37,616. Term of patent 14 years.

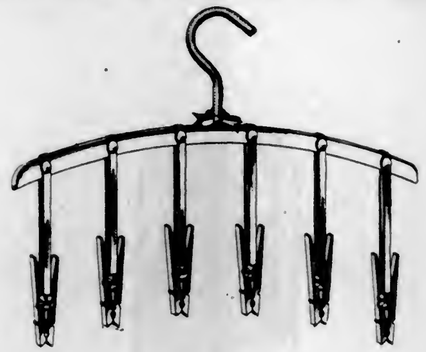


The ornamental design for a fan as shown.

82,945. BEDPOST OR SIMILAR ARTICLE. THOMAS G. KINDEL, Grand Rapids, Mich., assignor to Kindel Furniture Company, a Corporation of Michigan. Filed May 23, 1930. Serial No. 35,735. Term of patent 3½ years.

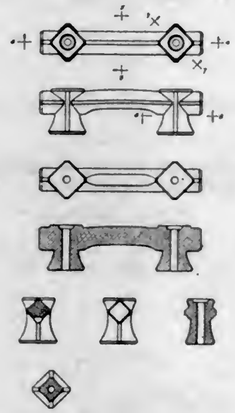
The ornamental design for a bed post or similar article, as shown.

82,946. GAS HEATER. JOSEPH E. LEONARD, Berkeley, Calif. Filed Oct. 17, 1930. Serial No. 37,281. Term of patent 7 years.



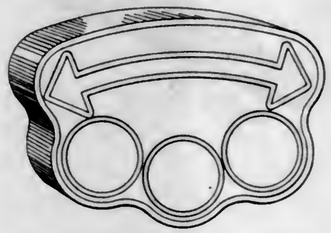
The ornamental design for a gas heater substantially as shown.

82,947. STAND LAMP OR ANALOGOUS ARTICLE. WILLIAM J. LINNEMANS, Big Rapids, Mich. Filed June 9, 1930. Serial No. 35,994. Term of patent 7 years.



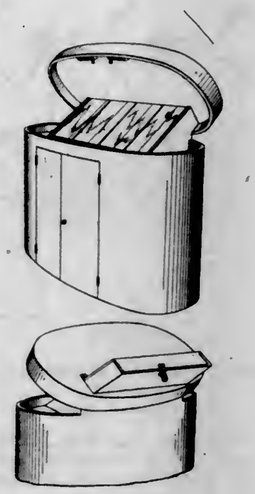
The ornamental design for a stand lamp or analogous article, as shown.

82,948. COMBINATION HANGER. SAM E. LIVINGSTON, Bloomington, Ill. Filed Oct. 25, 1930. Serial No. 37,378. Term of patent 7 years.



The ornamental design for a combination hanger substantially as shown.

82,949. DRAWER PULL. JAMES A. MCBRIDE, Salem, W. Va., assignor to Thomas McBride Glass Works, Inc., Salem, W. Va., a Corporation of West Virginia. Filed Oct. 9, 1930. Serial No. 37,206. Term of patent 7 years.



The ornamental design for a drawer pull substantially as shown.

82,950. DIRECTION SIGNAL LIGHT. RUPERT EMERSON MCGEE, Tampa, Fla., assignor of one-half to Ida M. Tracy. Filed Mar. 17, 1930. Serial No. 34,906. Term of patent 14 years.

The ornamental design for a direction signal light, as shown.

82,951. COMBINED DISPLAY AND VENDING CASE. RALPH M. MESSINGER, Toledo, Ohio. Filed Oct. 6, 1930. Serial No. 37,146. Term of patent 3½ years.

The ornamental design for a combined display and vending case as shown.

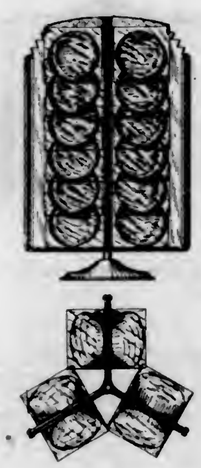
82,952. TEXTILE FABRIC. BENJAMIN S. NASH, Short Hills, N. J., assignor to The Stearns & Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed July 24, 1929. Serial No. 32,175. Term of patent 7 years.

The ornamental design for textile fabric substantially as shown and described.

82,953. TUMBLER. JAMES M. PAYNE, Jr., Dunbar, W. Va., assignor to F. W. Woolworth Company, a Corporation of New York. Filed Nov. 1, 1930. Serial No. 37,488. Term of patent 3½ years.

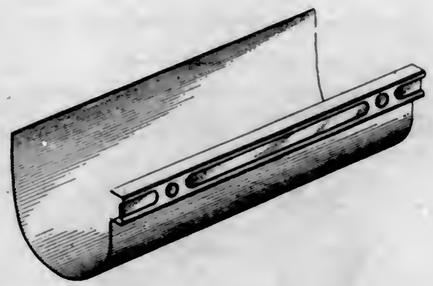
The ornamental design for a tumbler, as shown and described.

82,954. TUMBLER. JAMES M. PAYNE, Jr., Dunbar, W. Va., assignor to F. W. Woolworth Company, a Corporation of New York. Filed Oct. 29, 1930. Serial No. 37,430. Term of patent 7 years.



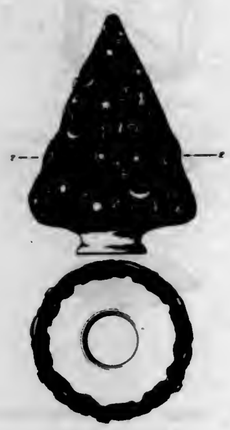
The ornamental design for a tumbler, as shown and described.

82,955. HEATING STOVE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed July 12, 1930. Serial No. 36,330. Term of patent 7 years.



The ornamental design for a heating stove, substantially as shown and described.

82,956. ADVERTISING POWDER-PUFF-DISPLAY STAND. SAMUEL L. POMERANTZ, Brooklyn, N. Y. Filed July 21, 1930. Serial No. 36,421. Term of patent 7 years.

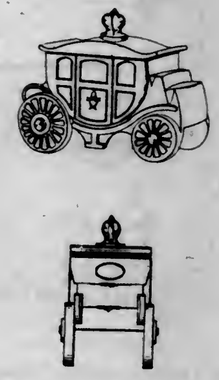


The ornamental design for an advertising powder puff display stand, as shown and described.

82,957. EAVES TROUGH. MAX RACHLIN, Brooklyn, N. Y. Filed Sept. 5, 1929. Serial No. 32,671. Term of patent 14 years.

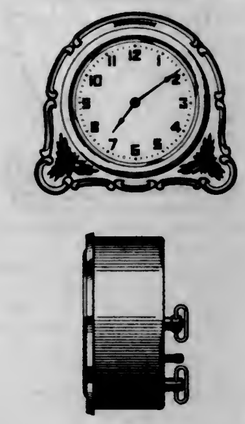
The ornamental design for an eaves trough, as shown and described.

82,958. LAMP SHADE. FREDERICK C. SCHOENHUT, Philadelphia, Pa., assignor to The A. Schoenhut Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 28, 1930. Serial No. 37,407. Term of patent 7 years.



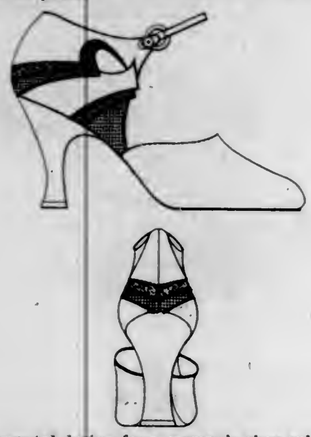
The ornamental design for a lamp shade, as shown.

82,959. SMOKER'S STAND. GOTTHOLD P. SCHWARZ, Bridgeport, Conn. Filed Nov. 3, 1930. Serial No. 37,520. Term of patent 7 years.



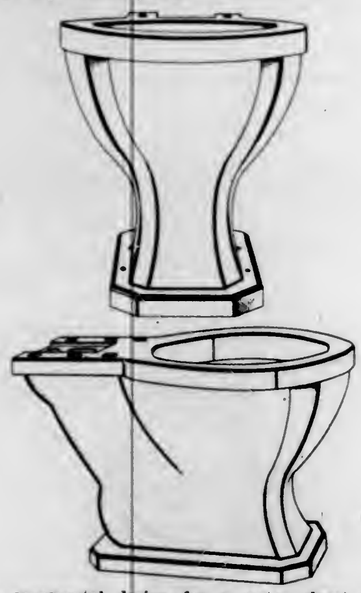
The ornamental design for a smoker's stand substantially as shown and described.

82,960. FACE-POWDER CONTAINER. ALBERT E. SIERAD, New York, N. Y., assignor to George W. Button Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1930. Serial No. 37,576. Term of patent 7 years.



The ornamental design for a face powder container substantially as shown.

82,961. CLOCK CASE. NORMAN F. THOMPSON, Jr., Colebrook, Conn., assignor to The William L. Gilbert Clock Company, Winsted, Conn., a Corporation of Connecticut. Filed Mar. 10, 1930. Serial No. 34,801. Term of patent 8¼ years.

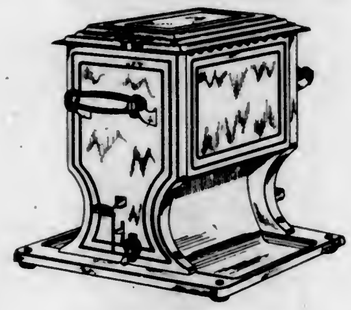


The ornamental design for a clock case as shown.

82,962. WOMAN'S SHOE. SEYMOUR TROY, Brooklyn, N. Y. Filed Sept. 19, 1930. Serial No. 37,017. Term of patent 14 years.

The ornamental design for a woman's shoe substantially as shown and described.

82,963. WATER-CLOSET BOWL. HARRY F. WEAVER, Evansville, Ind. Filed Aug. 8, 1930. Serial No. 36,600. Term of patent 14 years.



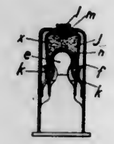
The ornamental design for a water closet bowl, as shown.

82,964. VANITY CASE. SIMON MORRISON, New York, N. Y. Filed Oct. 3, 1929. Serial No. 32,919. Term of patent 14 years.

The ornamental design for a vanity case, as shown.

82,965. TOASTER. EDWIN A. RUTENBER, Milwaukee, Wis., assignor to A. J. Lindemann-Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 29, 1930. Serial No. 37,435. Term of pateut 14 years.

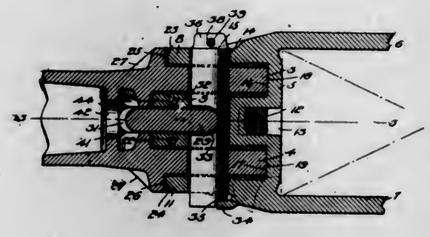
The ornamental design for a toaster, as shown.



PATENTS

GRANTED DECEMBER 30, 1930

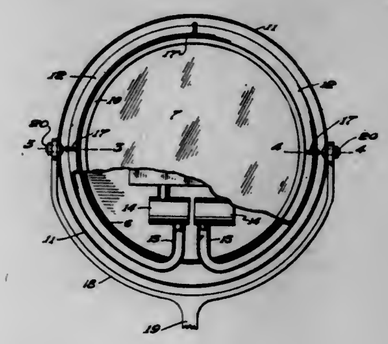
1,786,417. ADHESIVE COMPOUND AND PROCESS OF MAKING SAME. WALTER ALEXANDER, White Plains, N. Y. Filed July 25, 1928. Serial No. 295,354. 5 Claims. (Cl. 87—17.)



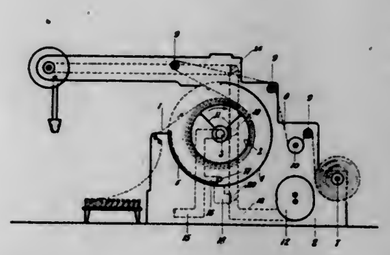
1. An adhesive consisting of a starch, a water-soluble, alkaline boron compound and diethylene glycol.

1,786,418. FACE PAINT OR FARD DISTRIBUTOR WITH STUMP. PIERRE BAQUEY, otherwise known as Gaston Baquey, Colombes, France. Filed July 2, 1929, Serial No. 375,490, and in Luxemburg July 5, 1928. 4 Claims. (Cl. 132—82.)

4. In a face paint or fard distributor with stump, the combination of a body carrying the stump, a cap adapted to slidably fit on the said body and to cover the said stump, a removable cup in the said cap and open on the side of the latter having an opening, two side fixed springs in the said cap and adapted to hold the said cup, a screw screwed in the bottom of the said cup and fitted in the bottom of the said cap, a sachet-sieve in the said cap for containing face paint in powder form, the arrangement being such that the said stump may enter the said cup.



1,786,419. DRAFT RIGGING. DONALD S. BARROWS, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Continuation of application Serial No. 4,443, filed Jan. 24, 1925. This application filed Aug. 17, 1928. Serial No. 300,401. 47 Claims. (Cl. 213—71.)

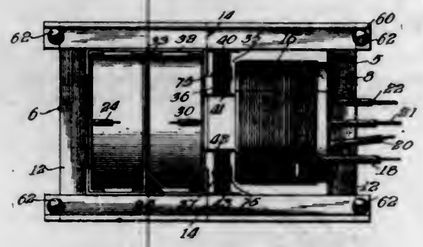


12. In a railway draft rigging, the combination with a coupler, of a yoke, a pin connecting said yoke and coupler, a key extending at an angle thereto, engaging said coupler and yoke, and intersecting said pin for retaining the same in position and preventing rotation thereof.

1,786,420. ILLUMINATED MIRROR. NORMAN BLYTHE BRALY, Redwood City, Calif. Filed Dec. 8, 1928. Serial No. 324,677. 5 Claims. (Cl. 240—4.1.)

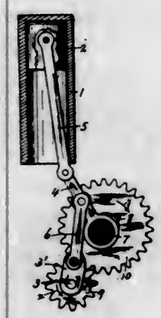
3. An illuminated mirror, comprising a casing having a mirror on its front wall, a retaining ring for the mirror detachably fitted to and surrounding the casing and having an inturned flange overlying the mirror and an outstanding forwardly faced channeled flange, a luminary of tubular form located in the channel, and means in the casing for causing the luminary to become active.

1,786,421. METHOD OF TREATING TEXTILES OF CELLULOSE FIBER. ADOLPH WALTER BUHLMANN, Mount Vernon, N. Y. Filed Apr. 11, 1929. Serial No. 354,324. 1 Claim. (Cl. 26—49.)



The process of treating fabrics of synthetic fiber with the result of removing the flat high lustre, swelling the fiber and softening the fabric, consisting in permeating the fabric with steam at a pressure of approximately 15 lbs., and temperature of approximately 213° F., and thereafter cooling the fabric and withdrawing the steam by forcing air through the fabric.

1,786,422. TRANSFORMER. JAMES C. DALEY and EDWIN G. GODDARD, Chicago, Ill., assignors to Jefferson Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 11, 1927. Serial No. 232,523. 26 Claims. (Cl. 171—119.)

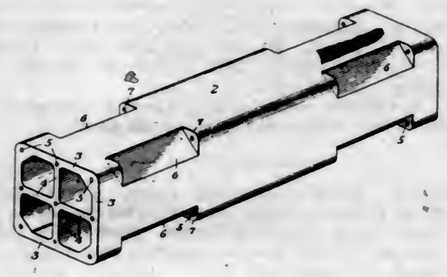


1. In a transformer having a primary coil for connection with the exciting current, a secondary, primary and secondary cores, and means in said transformer for inducing a relatively high initial voltage in the secondary

and for thereafter decreasing the voltage in the secondary, said means including a shunt path in the primary

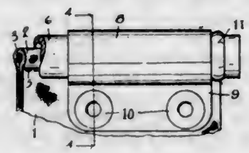
core and a butt joint between the primary and secondary cores adjacent said shunt and on the secondary side thereof.

1,786,423. INTERNAL-COMBUSTION ENGINE. CHARLES P. CADY, Canastota, N. Y. Filed May 7, 1928. Serial No. 275,728. 11 Claims. (Cl. 123—78.)



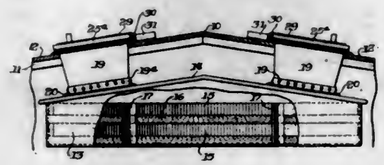
1. In an internal combustion engine having a reciprocatory piston, a rotary crank-shaft and a rotary cam-shaft actuated by the crank shaft, a lever having one end eccentrically pivoted to the cam shaft, and pitmen connected to the lever at different fixed distances from the pivotal connection of the lever with the cam shaft, said pitmen being pivotally connected to the piston and to the crank shaft respectively.

1,786,424. KNIFE-EDGE BEARING. RENÉ FRANÇOIS HENRI CAILLAUD, St. Maurice, France, assignor to Societe Anonyme des Etablissements Luteraan, Paris, France. Filed Oct. 20, 1928, Serial No. 313,835, and in France Nov. 7, 1927. 1 Claim. (Cl. 308—2.)



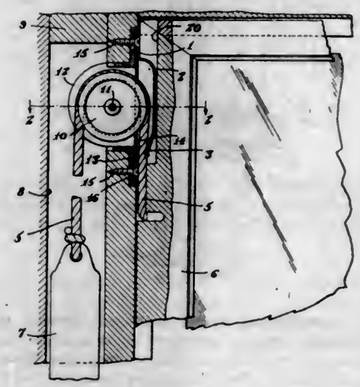
The combination of a knife edge with an eccentric bearing support comprising a main support having a circular opening therein, a bearing sleeve mounted in said opening and having an opening eccentric to said first mentioned opening, a knife edge having a tapered shank fitting said opening, and means for securing said tapered shank in the opening in any angular position, whereby by turning both the bearing sleeve and knife edge said edge may be moved in a vertical direction.

1,786,425. CONDUIT AND METHOD OF MAKING SAME. LLEWELLYN M. CHRISTIE, Pittsburgh, Pa., assignor, by mesne assignments, to National Fireproofing Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1928. Serial No. 267,851. 15 Claims. (Cl. 247—27.)



1. A ceramic conduit section for electric installations comprising a unitary homogeneously formed body portion and end flanges integral with the body portion and provided with means for connecting the section to adjacent sections.

1,786,426. BAG CLOSURE. JAMES K. DIAMOND, Grand Rapids, Mich. Filed June 20, 1927. Serial No. 199,975. 7 Claims. (Cl. 150—5.)

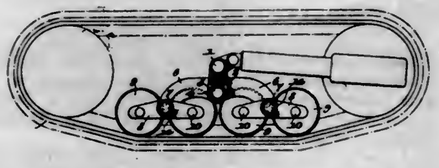


5. In a bag closure, the combination of a bag having an opening provided with beaded edges, a longitudinally slotted tubular closure telescopingly engaging the said beaded edges, and a supporting sleeve for said closure member secured to said bag.

1,786,427. POULTRY CAR. ISRAEL V. EDGERTON, Chicago, Ill., assignor to Palace Poultry Car Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 19, 1927, Serial No. 192,609. Divided and this application filed Mar. 19, 1928. Serial No. 262,635. 2 Claims. (Cl. 119—10.)

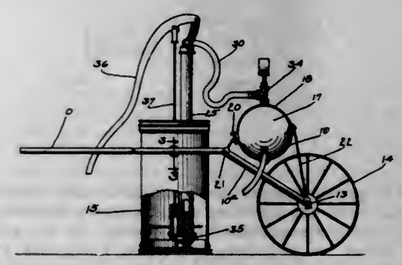
1. The combination with a car roof formed with an opening and a water tank therebeneath, of a filling spout mounted in the roof of said tank filling and projecting above said car roof opening, said spout formed with an integral external depending flange on its upper end, and an angle sealing ring having a base portion resting on and attached to said car roof around the projecting portion of said spout and an upstanding flange at its upper end encircled by said depending flange and forming a dust and water proof joint with the latter.

1,786,428. WINDOW-PULLEY SHIELD. REGINALD L. HOWARD, Roxbury, Mass., assignor, by direct and mesne assignments, to How-Mac, Inc., Dorchester, Mass., a Corporation of Massachusetts. Filed June 22, 1929. Serial No. 372,957. 3 Claims. (Cl. 16—210.)



3. A shield for window cord pulleys, comprising a plate, a housing formed thereon, the bottom end of said housing having an opening therein, the edges of said opening being flared to prevent injury to a cord traveling therethrough, the said plate having a slit communicating with said opening, said plate having sufficient resiliency to permit spreading at said slit, whereby the shield may be applied over the window cord while said cord is in position, and the edges of said slit being normally in substantial engagement.

1,786,429. DOOR. BERTRAND B. KAHN, Cincinnati, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a Corporation of Ohio. Filed Sept. 10, 1928. Serial No. 304,996. 18 Claims. (Cl. 126—190.)

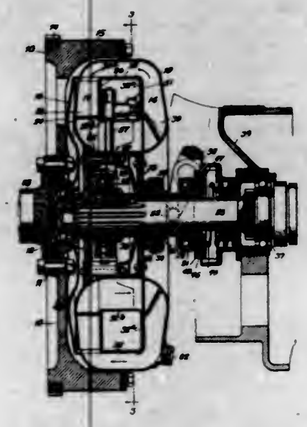


1. An oven door comprising a rigid back plate assuming substantially all the door strains, hinge means fixed to said back plate and providing a pair of spaced pivot members, a front finish plate, and means for fastening said front finish plate to said back plate without direct connection to said hinge means so that the front plate is substantially free from stress in normal door movements, the points of fastening all being inwardly spaced from the peripheral edges of said finish plate.

1,786,430. ENDLESS-TRACK VEHICLE. ADOLPHE KÉGRESSE, Suresnes, France. Filed Apr. 13, 1928, Serial No. 269,780, and in France Apr. 15, 1927. 1 Claim. (Cl. 305—9.)

A bearing train for endless flexible track belts, comprising a supporting axle, a sleeve fitted on and secured to said axle and provided with a pair of spaced depending cheeks, a main rocking beam having down-turned end portions, the central portion of the beam being disposed between and pivotally connected to said cheeks, and bearing rollers connected two-and-two to said beam ends, the pivotal connection between the cheeks and the central portion of the beam consisting of a pair of short trunnions provided on one of the two connected elements, and shallow bearings provided on the other element to receive the trunnions therein but free of axial connection between said trunnions.

1,786,431. SPRAYER. ANTON W. KEGLER, Minneapolis, Minn., assignor to Hudson Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Original application filed Feb. 20, 1924, Serial No. 694,019. Renewed Apr. 28, 1928. Divided and this application filed Sept. 17, 1928. Serial No. 306,319. 8 Claims. (Cl. 299—45.)

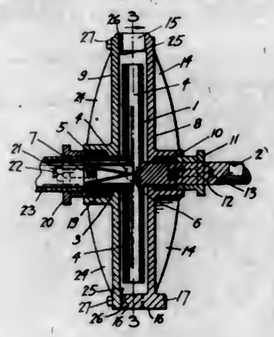


7. In a portable spraying apparatus the combination with a single wheel frame, a tank swingingly mounted to act as a foot for the frame, a second tank mounted upon the frame, means for delivering liquid from one tank to the other including a flexible delivery tube.

1,786,432. LUBRICATING DEVICE. GEORGE KIRK, North Providence, and ANDREW C. DANVER, Providence, R. I.; said Kirk assignor to said Danver. Filed Jan. 4, 1929. Serial No. 330,384. 5 Claims. (Cl. 261—121.)

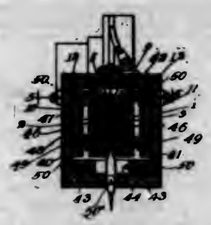
1. In a lubricating device, the combination of an oil reservoir having a domed top, an intake pipe having an outlet in the dome of the reservoir and extending down through the bottom thereof, means for connecting the lower end of said pipe with the intake manifold of an engine, a baffle-plate partitioning the dome from the reservoir and provided with restricted openings disposed outwardly from the intake pipe, and an atomizing duct leading from the atmosphere to the bottom of the reservoir.

1,786,433. POWER TRANSMITTER. GUSTAV A. KLIMEK, East Rutherford, N. J., assignor to Turbine Patents Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1927. Serial No. 172,285. 20 Claims. (Cl. 60—54.)



1. A power transmitter including a pump impeller, a turbine rotor for receiving liquid directly from said impeller and returnng said liquid directly to the impeller, and means for by-passing the liquid freely and without obstruction past the rotor to the inlet of the impeller and simultaneously closing the inlet of the rotor.

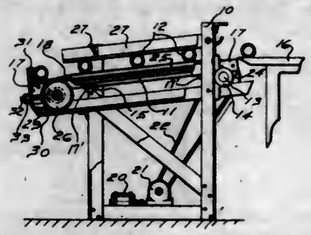
1,786,434. MULTICOLOR PENCIL. PAUL KOHLER, Pforzheim, Germany. Filed Nov. 7, 1927, Serial No. 231,643, and in Germany Oct. 28, 1926. 8 Claims. (Cl. 120—14.)



1. A multicolor-pencil with propelling pencils of different colours adapted to be selected for writing, comprising in combination an outer casing of octagonal cross-section, octagonal guide sleeves soldered together in longitudinal direction rotatably mounted in said casing, sliding elements of octagonal cross-section shiftably mounted in said guide-sleeves, a short rotatable pencil for each guide-element, and a flexible spring connecting said pencil with said guide-element.

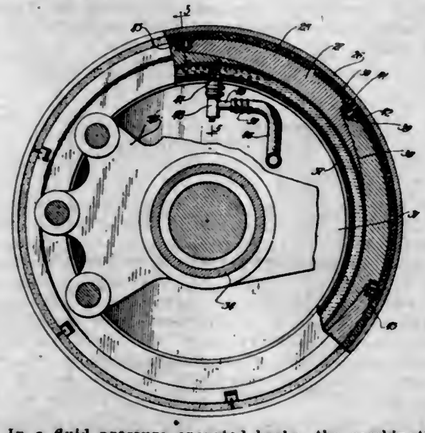
1,786,435. CENTRIFUGAL PUMP. STEVE KOMPALA, Denver, Colo. Filed June 11, 1928. Serial No. 284,641. 9 Claims. (Cl. 103—103.)

1. In a centrifugal pump, a closed housing provided with discharge means, a rotor concentrically mounted to rotate in the housing and spaced from the internal circumference thereof, the rotor being provided with a central axially extending intake passage and with straight radial passages in communication therewith, a concave faced pyramid at the inner end of said intake passage having a concave face aligned with each radial passage, and a distributor in said intake passage provided with channels adapted to register with said radial passages and said concave faces whereby the fluid pumped is divided into separate streams during its movement through said intake passage and provided with streamline paths of travel from the intake passage to the radial passages said channels being separated adjacent their outer circumference at the outer end of the distributor by walls of small radial extent, tapered portions being removed from the central part of said walls.



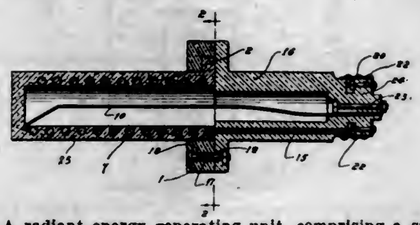
1,786,436. ELECTROSTATIC REPRODUCER. RALPH H. LEFFLER, Batavia, Ill. Filed Jan. 18, 1929. Serial No. 333,492. 4 Claims. (Cl. 179—100.41.)

1. An electrostatic reproducer for the reproduction of records comprising a flexible metallic plate associated with fixed metallic plates to form several variable capacity elements, said flexible plate being mounted at its ends beyond said fixed plates, the body of said flexible plate being between said fixed metallic plates in such a manner that inverse capacitance variations are produced simultaneously between said movable plate and said fixed plates by lateral movement of one of the extending ends of said flexible plate.



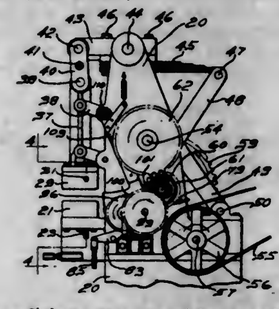
1,786,437. AUTOMATIC TUBE-DUSTING DEVICE. PAUL W. LEHMAN, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 27, 1928. Serial No. 250,023. 5 Claims. (Cl. 91—59.)

2. A device for applying powder to green rubber tubes while the latter are supported on mandrels which comprises a relatively stationary padded support, a powder carrying belt traveling over the support and adapted to receive and advance the tubes and pressure means positioned to engage the end portions of the tube mandrels to force the tubes and the underlying portions of the belt



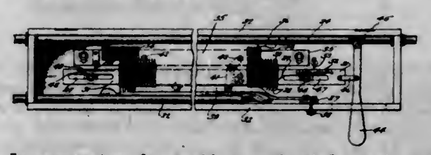
into the padding of the support, said pressure means tending to retard the advance of the mandrels to cause the tubes to rotate with respect to the surface of the belt.

1,786,438. FLUID-PRESSURE BRAKE. BERT A. LINDERMAN, New York, N. Y., assignor to Linderman & Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 1, 1924. Serial No. 753,085. 5 Claims. (Cl. 188—152.)



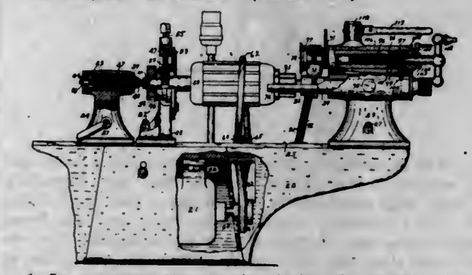
3. In a fluid pressure operated brake, the combination of a support member, a collapsible, hollow tube mounted thereon, braking means adapted to be shifted by the inflation of said tube to operate the brake, said tube having an inflating nipple projecting therefrom and connecting to a source of fluid, a relatively small tube mounted within said nipple projecting into said inflatable tube, said relatively small tube having a discharge opening to the atmosphere through the wall of said nipple and a valve for opening and closing said opening.

1,786,439. RADIANT-ENERGY-GENERATING UNIT. ROLLAND H. MAXSON, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,221. 10 Claims. (Cl. 174—177.)



1. A radiant energy generating unit, comprising a supporting base member, a sub-base secured to said base member and adapted for partial reception within a receptacle support, a refractory element carried by said base and interlocking with the base, and an electrical heating coil imbedded in the refractory element and having electrical connections terminating at the sub-base.

1,786,440. TUBE-SPLICING PRESS. CHARLES E. MAYNARD, Northampton, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 3, 1927. Serial No. 210,294. 5 Claims. (Cl. 18—17.)

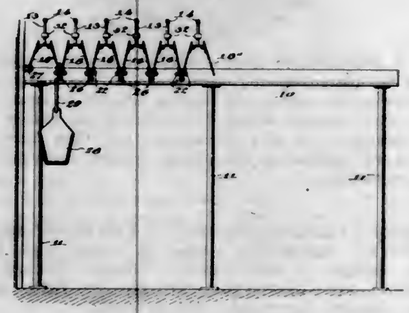


3. A tube splicing press comprising a pair of substantially flat platens having opposed splice receiving grooves, mechanism for moving the platens towards or away from each other, manual means for initiating the platen closing movement of said mechanism, and time controlled means for initiating the platen opening movement of said mechanism.

1,786,441. CHANGE-KEY SWITCH FOR MUSIC-REPRODUCING MACHINES. BERT E. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 16, 1927. Serial No. 219,870. 13 Claims. (Cl. 84—461.)

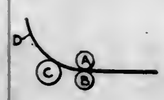
5. In apparatus for making perforated music rolls, the combination of a master roll operated electric controller, a perforating machine electrically operated by said controller and adapted to reproduce the roll, a switch in the electrical connections between the controller and the perforating machine whereby the latter may be caused to reproduce rolls adapted for playing in a different key than that for which the master roll is prepared, and an instrument playable from the master roll but in the key of the reproduced rolls.

1,786,442. COMMUTATOR-TURNING LATHE. HARRY G. MILLER, Denver, Colo. Filed Oct. 20, 1926. Serial No. 142,841. 24 Claims. (Cl. 29—27.)



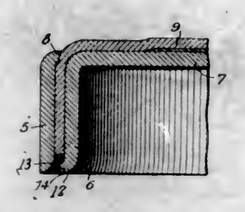
1. In a commutator turning lathe, the combination of means for supporting and centering an armature in its

own bearings, a tool holder, a tool feed bar, a hollow spindle mounting for said bar, a feed screw for slowly actuating the bar together with the spindle, rack and pinion mechanism for reciprocating the spindle and feed screw along a line parallel to the axis of the armature, means for locking the feed screw against reciprocation, and turning and grooving tools for the tool holder.



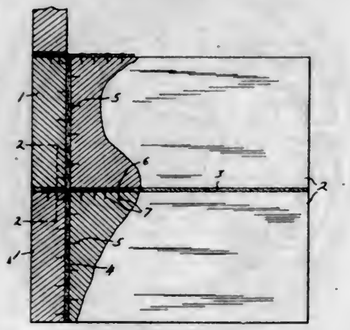
2. In a commutator turning lathe, the combination with a head stock, of a tool holder spindle provided with a rack, a manually operable pinion in mesh with the rack, a tool feed bar mounted in the spindle, a feed screw for actuating the feed bar and spindle, bearings therefor, means for locking and releasing said bearings, and a tool holder provided with turning and grooving tools interchangeably adjustable to position for operation upon the work.

1,786,443. POULTRY ROOST. CURTIS H. MOOMAW, Springfield, Mo. Filed Dec. 20, 1927. Serial No. 241,370. 7 Claims. (Cl. 119—22.)



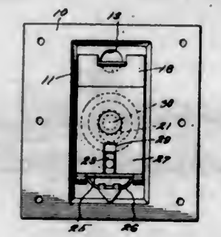
1. A poultry roost comprising an elongated support, drop board sections arranged above said support and normally disposed in close edge to edge relation, means interconnecting the adjacent side edges of all of said sections whereby the same will be adapted to be moved in successive pairs from one end of said support to oppositely inclined positions and in a manner that the adjacent side edges of each pair will be spaced apart for the discharge of droppings and other soil accumulations thereon downwardly of the spaces so provided, and roost bars disposed in spaced relation above said drop board sections.

1,786,444. PROCESS FOR TREATING MILL BAND SAWS. OTTO MUEHLEN, Denver, Colo. Filed June 17, 1927. Serial No. 199,552. 11 Claims. (Cl. 76—27.)



1. The process of equalizing the strains in a band saw by bending, consisting of passing the saw repeatedly through rolls composed of two gripping and one bending roll and alternately reversing the upper and the lower faces thereof and thereby alternately stretching first one side and then the other side of the saw and reducing the amount of such stretching for the final one or more of such complete operations.

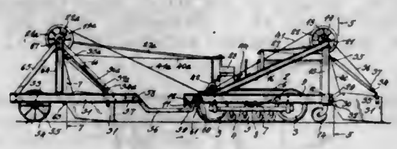
1,786,445. PHONOGRAPH BEZEL. HENRY RODLEY NAYLOR, Seymour, Conn., assignor to The H. A. Matthews Manufacturing Company, Seymour, Conn. Filed Dec. 1, 1928. Serial No. 323,031. 4 Claims. (Cl. 274—39.)



1. In combination with a phonograph turntable, having a dependent flange with a small outwardly turned rim at the edge thereof, a continuous one piece bezel engaged over said flange and having a small thinned inwardly turned bezel rim at the upper edge thereof.

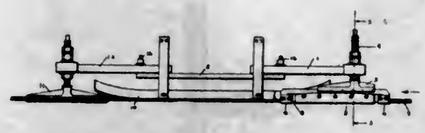
1,786,446. MEANS FOR SECURING ELECTRIC BARRIERS AND THE LIKE. PAUL NICHOLAY, Wayne, Mich., assignor of one-half to Charles W. Attwood, Wayne, Mich. Filed Nov. 10, 1927. Serial No. 232,277. 2 Claims. (Cl. 72—101.)

1. The combination with two substantially abutting insulating barriers, of a binding layer of cementitious material arranged between abutting faces of said barriers, and spaced anchorage members carried by both of said barriers and projecting into said binding layer to rigidly connect both barriers to said layer, said anchorage members having heads of greater area than the remainder of said members adapted to be embedded within said binding layer.



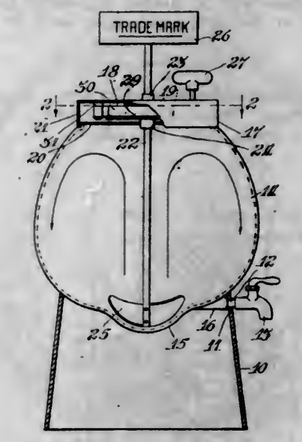
1,786,447. KEYLESS CATCH AND COMBINATION LOCK. GUST J. NYROSE, Claresholm, Alberta, Canada. Filed July 14, 1927, Serial No. 205,725. Renewed May 17, 1930. 2 Claims. (Cl. 70—55.)

1. A lock of the class described having a casing, a stud, a latch slide within the casing having a slot through



which the stud passes, said slide having an end wall at an angle thereto, means urging said end wall into contact with the stud, an operating shank journaled in the slide, an actuating member on the shank having a slot registrable with said stud and having a lug, a removable frame engaging said slide and fitting said wall, said frame carrying said stud; said stud extending into said shank, tumbler members journaled on the stud and having elongated slots into which the lug extends, and said tumbler members having slots to register with the first mentioned slot for the purpose specified.

1,786,448. DUPLEX POWER SCRAPER. HAROLD M. PURSEL, Casper, Wyo., assignor to Sharrock and Pursel, Casper, Wyo., a Copartnership consisting of W. G. Sharrock and Harold M. Pursel. Filed Jan. 23, 1930. Serial No. 422,809. 1 Claim. (Cl. 37—118.)

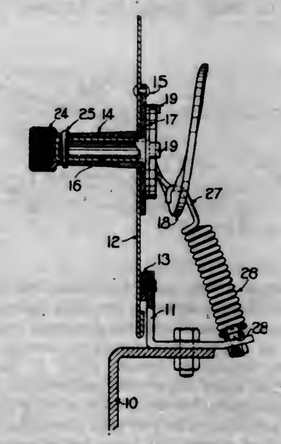


A trailer attachment for a power operated scraper, comprising, in combination, a substantially rectangular frame, a supporting axle secured to the rear end of the frame, two wheels carried by the axle, the frame having a transverse beam in front of the wheels, the front end of the frame having a substantially triangular hitch frame secured thereto, the front end of the rectangular frame forming the base of the hitch frame, a scraper located within the rectangular frame, the rear end of the scraper being pivotally attached to the transverse frame member, a vertical supporting beam extending upwardly from each of the side members of the rectangular frame, a shaft rotatably supported on the upper ends of the vertical beams, means including the shaft for tilting the scraper and means for latching the scraper in tilted position.

1,786,449. TROLLEY-WIRE CONTACTOR. GEORGE D. RABUN, Louisville, Ky., assignor to Cheatham Electric Switching Device Company, Louisville, Ky. Filed Oct. 30, 1926. Serial No. 145,273. 18 Claims. (Cl. 246—254.)

1. In apparatus of the class described, the combination of a body member adapted for attachment to a trolley wire and having an integral contact shoe insulated from but embracing and holding said wire to said body.

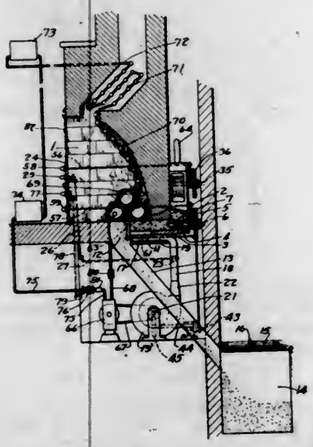
1,786,450. AGITATING DISPLAY JAR. ALBERT E. REPENNING and CLAYTON J. HOWEL, Chicago, Ill., assignors to Orange-Crush Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1929. Serial No. 341,404. 5 Claims. (Cl. 40—28.)



1. A display dispensing device comprising a transparent reservoir, a slip-on cover thereon having a stirring mechanism therein, and a spring motor in said cover for actuating said stirring mechanism.

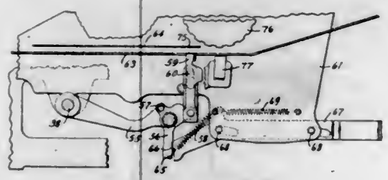
1,786,451. OAR BLADE OR THE LIKE. JEAN LOUIS RIBARD, Paris, France. Filed June 1, 1928, Serial No. 282,203, and in France June 10, 1927. 1 Claim. (Cl. 9—24.)

An oar blade having longitudinal rows of openings therein, the corresponding openings in relatively adjacent rows being relatively longitudinally offset, and the said openings each having the form of two truncated cones meeting at their smaller ends.



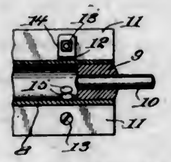
1,786,452. HOOD FASTENER. CHESTER S. RICKER, Indianapolis, Ind. Filed June 14, 1924. Serial No. 719,973. 4 Claims. (Cl. 292—241.)

1. A fastener for retaining an automobile hood against its associated sill, comprising a tension spring attached



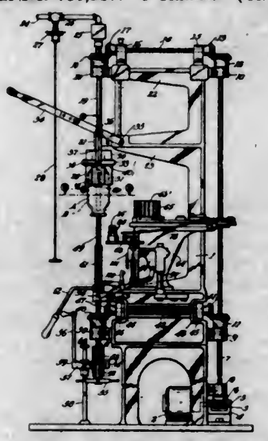
at one end to said sill, and a spiral cam carried by said hood and rotatably mounted thereon, said cam having a camming surface which, as the cam is rotated, engages the free end of the spring and moves thereover to stretch the spring, said cam being provided at one end of said camming surface with a locking depression into which the free end of the spring may drop after it has been stretched.

1,786,453. COMBINATION FIREPLACE. IVAN RISDON, Seattle, Wash. Filed July 18, 1928. Serial No. 293,747. 1 Claim. (Cl. 126—120.)



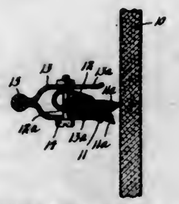
In a combination fireplace of the character described, a chimney having a hearth opening in the side thereof, a floor in the said opening, a grate in an opening in the said floor, mechanical means for feeding fuel to a point at the closed side of the said chimney and directly behind the said hearth opening, other mechanical means for feeding the said fuel through the said chimney and into the floor opening below the grate, and means for forcing a draft up through the said floor opening.

1,786,454. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed June 14, 1926. Serial No. 115,924. 11 Claims. (Cl. 235—130.)



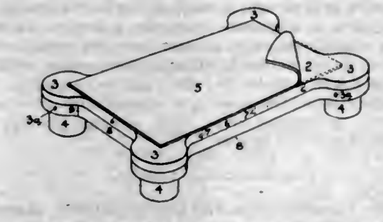
1. In a machine of the class described, the combination of a record material container, a machine operating means, detaining means for said operating means, manually operated means to release said detaining means, means for arresting said detaining means after it has made a partial operation when no record material is in the container, and a manipulative device for moving the arresting means into a position, whereby said arresting means will be ineffective upon subsequent insertion of record material into the container after the manipulative device is released.

1,786,455. STALK CUTTER. JAY ROBBINS, Cooledge, Tex. Filed Mar. 30, 1928. Serial No. 265,942. 1 Claim. (Cl. 97—215.)



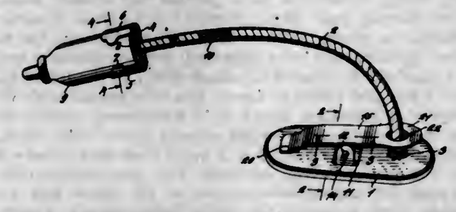
A cutter of the character described comprising a cylinder having cores disposed within the ends thereof, stub axles carried by and projecting from the cores, brackets secured upon the outer surface of the cylinder, ears projecting from the opposed side portions of the bracket members in right angularly disposed relation, and blades having fixed connection with the ears.

1,786,456. METHOD OF AND APPARATUS FOR ASSEMBLING GLASS BLANKS. ERICH H. ROHL, Chicago, Ill., assignor to The Mantle Lamp Company of America, Chicago, Ill., a Corporation. Filed Dec. 15, 1924. Serial No. 756,137. 6 Claims. (Cl. 49—1.)



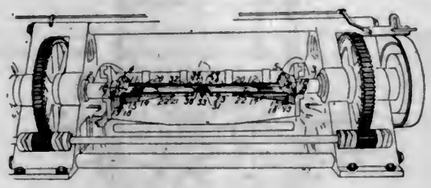
1. An assembling machine for glass blanks, including means for bringing an inner and an outer hollow blank into concentric relations with the open ends of said blanks downward, means for synchronously rotating said blanks, fires for heating the pendent edges of said blanks, internal means for sustaining the lower end of the inner blank and means for uniting and shaping said pendent edges.

1,786,457. WINDSHIELD-WIPER ELEMENT AND CONSTRUCTION. RAY D. SARVER, Minneapolis, Minn. Filed Oct. 28, 1927. Serial No. 229,336. 2 Claims. (Cl. 15—255.)



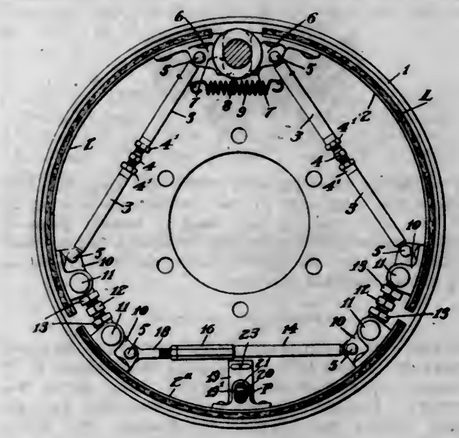
1. In a windshield wiper, a strip of yieldable material having an obtuse-angled V-shaped groove in one of its longitudinal edges, said groove intersecting the sides of the strip to form a pair of sharp edge portions, and means for moving the strip over a windshield with said edge portions alternately engaging the surface thereof.

1,786,458. INSULATING NONTILTING STOOL. EMANUEL F. SHIPMAN, Philadelphia, Pa. Filed Dec. 11, 1929. Serial No. 413,185. 6 Claims. (Cl. 173—28.)



1. An insulating non-tilting stool, comprising a body portion of general rectangular shape composed of upper and lower boards secured together to form a multi-ply structure of substantially uniform thickness, and in which the corner portions of the upper and lower boards are extended beyond the general rectangular body portion, insulating foot portions having their upper ends extended into the lower boards of the multi-ply corner portions, and said foot portions extending beyond the rectangular area of the body portion.

1,786,459. BABY-BOTTLE HOLDER. BURDICK SIMONS, Denver, Colo. Filed July 30, 1926. Serial No. 125,941. 3 Claims. (Cl. 248—65.)

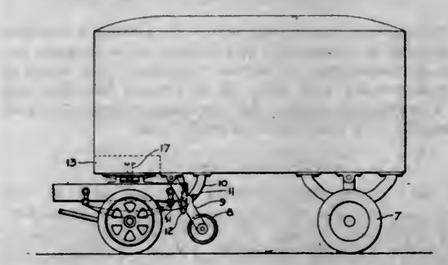


1. A bottle holder comprising a base, an arm attached thereto and bottle holding means on said arm, said base being of a size and weight sufficient to maintain said holder in upright position when said base is resting on a supporting surface, and having a clamping member attached thereto whereby said holder may be clamped to a support.

1,786,460. STAY LOG. JOHN S. STONE, Kansas City, Mo., assignor to Penrod Walnut and Veneer Company, Kansas City, Mo., a Corporation of Missouri. Filed Aug. 1, 1928. Serial No. 296,761. 3 Claims. (Cl. 144—214.)

1. In combination with a stay log having longitudinal edge log-engaging flanges and log-engaging means extending through said flanges for securing a veneer log to the stay log, a plate secured to the stay log on the face opposite to said flanges including a central thickened portion on the median line of the log having a pin-receiving opening, and a threaded log-engaging pin extending through said opening, adapted to be anchored by the plate, the stay log having an opening to admit the pin to veneer log portions spaced from said log-engaging flanges for stabilizing the veneer log.

1,786,461. INTERNAL EXPANSION BRAKE. GEORGE H. STONER, East Boston, Mass., assignor, by mesne assignments, to Stoner-Ames Brake Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 13, 1927. Serial No. 205,477. 13 Claims. (Cl. 188—78.)



1. In a brake, a pair of shoes and an intermediate shoe pivotally linked to each and a radially yieldable mount for the intermediate shoe in sustaining relation thereto.

1,786,462. PLASTIC COMPOSITION. GEORGE B. STRYKER, Jr., Memphis, Tenn., assignor to The Weatherproof Products Company, Memphis, Tenn., a Corporation of Tennessee. Filed July 31, 1928. Serial No. 296,607. 1 Claim. (Cl. 92—41.)

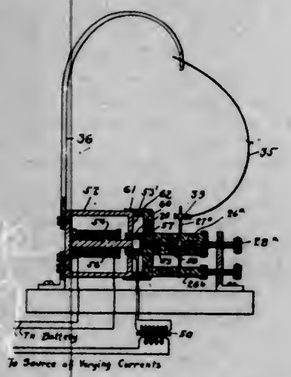
As an article of manufacture a heat-insulating material comprising finely comminuted cotton stalk fibre, 67 to 78% (by weight); finely comminuted paper waste, 25% by weight; and dissolved rosin, 2 to 8% by weight.

1,786,463. TRAILER CONSTRUCTION. DAVID R. THOMAS, Cleveland, Ohio. Filed Sept. 7, 1929. Serial No. 390,952. 10 Claims. (Cl. 105—159.)

1. A vehicle of the class described having coupling mechanism in which the entire coupling mechanism is disposed within the limits of the general contour of the vehicle body.

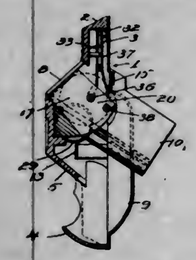
2. A vehicle of the class described having a body, individually supported wheels mounted on said body and coupling means disposed entirely within the limits of the general contour of said body.

1,786,464. SHOVEL FOR POTATO DIGGERS. PETER SKOVBY THOMSEN, Great Village, Nova Scotia, Canada. Filed Jan. 5, 1929. Serial No. 330,441. 1 Claim. (Cl. 55—9.)



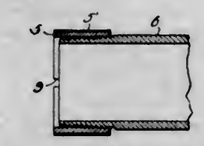
A shovel for a potato digger having an endless elevator, said shovel comprising longitudinally directed spaced

bars extending forwardly and downwardly from beneath the receiving end of the elevator, said bars being slightly upwardly curved, heads integral with the frontal ends of said bars, said heads consisting of enlarged members flared to produce broad flat penetrating surfaces and guide



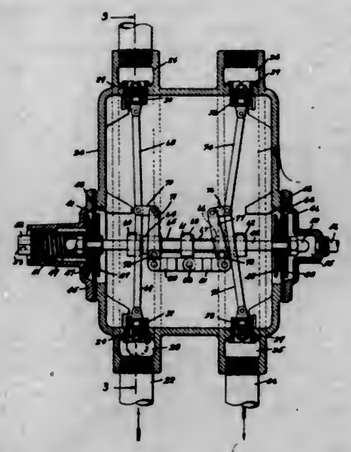
rods extending upwardly and rearwardly from the said heads to the upper side of the elevator, there being at least two guide rods to each head to prevent potatoes dropping through, said guide rods being of a less substantial structure than the bars so as to constitute an apron for potatoes uprooted thereby.

1,786,465. ELECTROMAGNETIC SOUND-PRODUCING DEVICE. JAMES H. VAN WAGENEN, Washington, D. C. Original application filed May 10, 1923, Serial No. 638,079. Divided and this application filed Apr. 24, 1928. Serial No. 272,535. 13 Claims. (Cl. 179—115.5.)



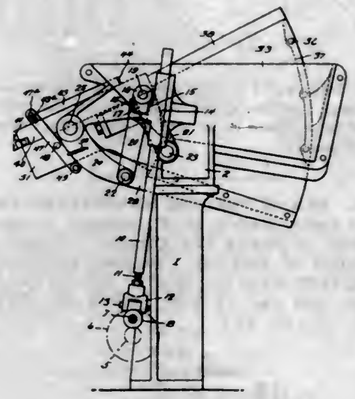
1. An electric translating device comprising a movable coil element in a magnetic field subject to mechanical impulses corresponding to sound vibrations and resilient means associated with said coil to support said coil and form a cushioning medium for the same without confining the location of a nodal point in said device.

1,786,466. COIN DEPOSITORY. HARRY WALKER, Oil City, La., assignor, by mesne assignments, to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 27, 1925. Serial No. 71,815. 4 Claims. (Cl. 194—97.)



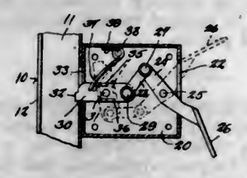
3. A fraud preventive constructed to form a coin entrance for a coin controlled mechanism comprising a casing provided with a plurality of individual coin slots for receiving coins of different denominations, coin receiving and conducting chutes carried by the casing, a coin return carried by the casing, a coin guide in association with said return, a notched bar in the casing, the notches being in alignment with the chutes, a manually operated slidably mounted plunger provided with pockets, spring means for normally aligning the pockets with the slots, and a safety device including guards cooperable with said pockets when the latter are aligned with the chutes, to prevent perforated slugs from passing through the pockets and into the chutes.

1,786,467. PROTECTIVE MEANS FOR PIPES. HARRISON B. WALTER, Chicago, Ill., assignor to Container Corporation of America, Chicago, Ill., a Corporation of Delaware. Filed Jan. 2, 1930. Serial No. 417,966. 1 Claim. (Cl. 137—91.)



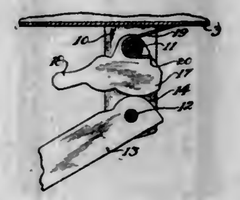
A protective device for the ends of threaded metal pipe comprising a sleeve of fibre material having a relatively soft, easily deformable inner portion and a stiff, strong outer portion, said sleeve having an internal diameter sufficient to permit it to be slipped partially over the tapered threaded end of a pipe and having sufficient body and elasticity to cause it to adhere firmly to the end of the pipe when said sleeve is forced into engagement with the threads of increased diameter, a waterproof coating for the thread contacting portion of said sleeve, said coating impregnating the material to a depth such that certain of the threads of larger diameter will pass substantially through the impregnated portion of the sleeve and will engage with a portion of lesser impregnation whereby the friction between said sleeve and pipe will be materially increased.

1,786,468. WATER SYSTEM. CLARENCE WARNER, Dayton, Ohio, assignor to Delco Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 25, 1925. Serial No. 71,504. 16 Claims. (Cl. 103—6.)



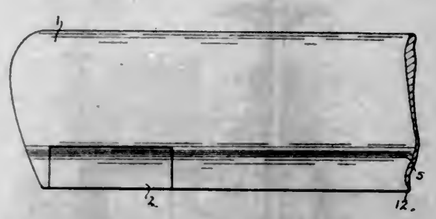
1. A water system comprising, in combination, a pump, a pressure storage tank, an air charger tank, a motor for operating the pump, a motor controller responsive directly to a certain high pressure in the system for causing the pump to stop and responsive to a certain low pressure in the system for causing the pump to operate, and means independent of said controller responsive to a high pressure for causing the charger tank to receive air and responsive to a low pressure for causing air to be trapped in the charger tank and the charger tank to be connected with the pump and storage tank.

1,786,469. NUT-FEEDING MECHANISM. JULIUS E. WILLIAMS, Willoughby, Ohio, assignor, by mesne assignments, to Republic Steel Corporation, a Corporation of New Jersey. Filed Nov. 4, 1927. Serial No. 231,118. 9 Claims. (Cl. 10—162.)



3. In a machine of the character described, the combination of a hopper having a slot in the bottom thereof, a chute extending from said hopper, a pick-up device for nuts oscillably mounted in the said slot and adapted to lift nuts from the hopper and to deliver them longitudinally of itself into said chute, a nut-reversing chute at the lower end of the former chute, and a reciprocating device arranged above the first mentioned chute and provided with a finger having an inclined surface adapted to ride over but without engaging the crowns of nuts presented upwardly in said chute and adapted to engage the sides of nuts delivered bottom side upward to said chute thereby to kick from the said chute into said hopper nuts so improperly delivered to said chute.

1,786,470. WINDOW-SASH FASTENER. HENRY WINTER, Baltimore, Md. Filed Dec. 16, 1927. Serial No. 240,505. 2 Claims. (Cl. 292—196.)

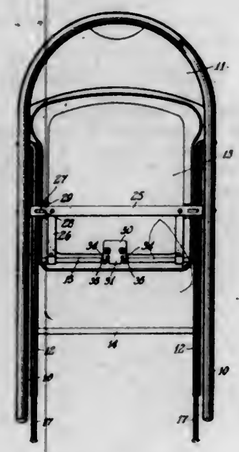


1. In a device of the class described, a support, a latch bolt fulcrumed intermediate its ends on the support, spaced lugs on the latch bolt, a spring mounted on the support and engageable with the lugs one at a time, to hold the latch bolt in advance and locked position and in retracted and unlocked position, and means for operating the latch bolt, said means comprising a lever fulcrumed intermediate its ends on the support, and a link pivotally connected with the inner end of the latch bolt and with the inner end of the lever.

1,786,471. VEHICLE SERVICE TRAY. ANDREW C. WOOD, Chicago, Ill., assignor, by mesne assignments, to Vortex Cup Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 31, 1927. Serial No. 179,819. 6 Claims. (Cl. 45—51.)

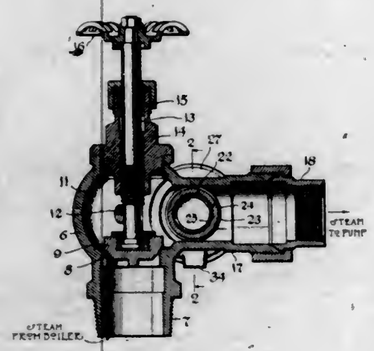
1. A vehicle service device comprising a tray, centainer holders mounted thereon, a supporting member having one end pivotally mounted on said tray, a cam formed on the pivoted end of said supporting member, a control cam pivotally mounted on said tray and coacting with said supporting member, a spring coacting with said control cam to hold the same in latching engagement with said supporting member cam, and an extension on said control cam for releasing the same to permit release of said supporting member.

1,786,472. AIRFOIL. PAUL C. YATES, Houston, Tex., assignor of one-fourth to Walter F. Woodul, Houston, Tex. Filed Nov. 2, 1928. Serial No. 316,726. 3 Claims. (Cl. 244—31.)



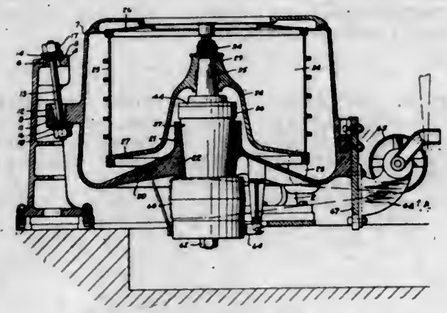
1. A thick airplane airfoil having a plurality of vacuum creating surfaces one of said surfaces including the leading edge of said airfoil and the thick portion of the wing, the other of said surfaces comprising a thin winged portion formed integral with said thick portion and adjacent the trailing edge thereof.

1,786,473. COLLAPSIBLE CHAIR. WILLIAM J. BAUER, New York, N. Y., assignor to Project Holding Corporation, New York, N. Y., a Corporation of New York. Filed May 5, 1928. Serial No. 275,333. 11 Claims. (Cl. 155—142.)



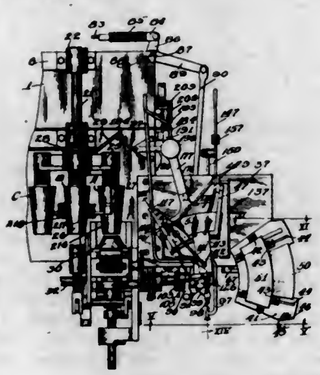
1. A collapsible chair, comprising a pair of front legs, a pair of rear legs pivotally secured at their respective upper ends to extensions of the front pair of legs and adapted to fit within the same, a seat swingably carried along its rearward portion by the rear pair of legs and movable longitudinally thereof, means slidable relatively to the re-

spective rear legs, projecting beyond their corresponding lower ends and adapted to support said seat, and a stop



bar pivotally secured to the front pair of legs and hingedly connected with the seat supporting means, said bar affording a support for an intermediate portion of the seat.

1,786,474. PUMP-REGULATING VALVE. HENRY F. BICKEL, Plainfield, N. J., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Aug. 15, 1928. Serial No. 299,795. 7 Claims. (Cl. 137—153.)

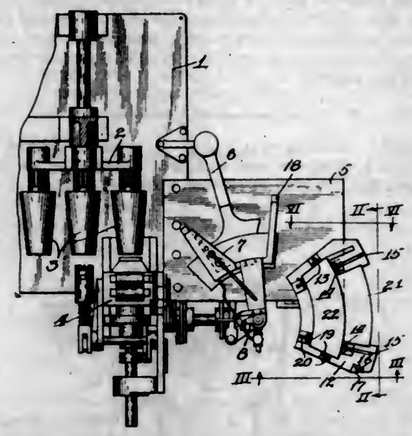


1. Means for controlling pressure motor actuated pumps which deliver normally against a back pressure, comprising in combination, a valve interposed in the path of motive fluid to said motor and having two positions, in one of which it limits the flow and in the other of which it permits free flow of the motive fluid; yielding means urging said valve to the first named position; a piston subject to said back pressure and connected to urge said valve toward the second named position; and means controlled by initial movement of the parts from the first named position toward the second named position to increase the effective area of said piston.

1,786,475. CENTRIFUGAL DRYING MACHINE. TANDY A. BRYSON, Troy, N. Y., assignor, by mesne assignments, to Tolhurst Machine Works, Inc., Troy, N. Y., a Corporation of New York. Filed Mar. 19, 1928. Serial No. 262,833. 20 Claims. (Cl. 210—63.)

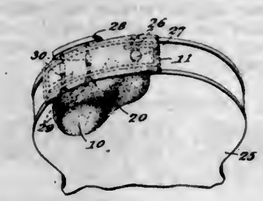
5. In a multi-point flexible suspension for the casing of a centrifugal machine a link connected to the casing and suspended to oscillate in an arc whose radius exceeds the actual link length.

1,786,476. BLANK FEEDING AND GLUING DEVICE. HAROLD CARLE, Buffalo, N. Y., assignor, by mesne assignments, to Vortex Cup Company, Chicago, Ill., a Corporation of Delaware. Original application filed Oct. 18, 1926, Serial No. 142,370. Divided and this application filed Dec. 12, 1927. Serial No. 239,436. 2 Claims. (Cl. 91—47.)



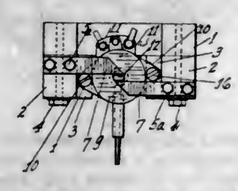
1. In an apparatus for applying adhesive to blanks, a vertically movable adhesive applying means, a laterally movable transfer arm including suction means for conveying a blank from a source of blanks and holding it in a substantially horizontal position above said adhesive applying means, means for actuating said adhesive applying means to apply adhesive to said blank, a second transfer arm movable into a position below said first mentioned arm and means for relieving the suction on said blank whereby it may be received by said second arm to be removed from said position.

1,786,477. BLANK-SEPARATING MECHANISM. HAROLD CARLE, Buffalo, N. Y., assignor, by mesne assignments, to Vortex Cup Company, Chicago, Ill., a Corporation of Delaware. Original application filed Oct. 18, 1926, Serial No. 142,370. Divided and this application filed June 25, 1928. Serial No. 288,039. 7 Claims. (Cl. 271—62.)



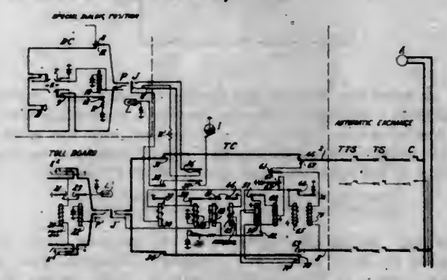
1. In a machine of the class described, the combination with a blank transfer mechanism, of a blank magazine

mechanism comprising a base section, a plate movably supported thereon, uprights secured on said base section to the outside of said plate, and to the outside of a stack of cup blanks, supported on said plate, resilient guide strips secured to the inner faces of said uprights, means for adjusting said guide strips to form a restricted passage through which the stack of cups is adapted to be



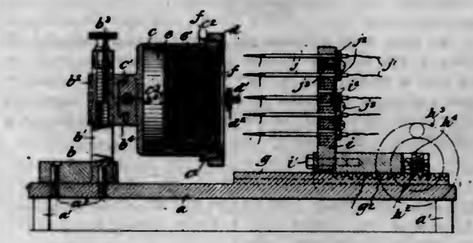
moved, resilient means for raising the plate and the stack of blanks thereon to cause the uppermost blank to be moved into engagement with said transfer means, control means for holding the blank supporting plate in a stationary position against the action of said resilient means, release mechanisms connected with said control means, and gears mechanisms for automatically operating said release mechanisms at predetermined times.

1,786,478. ATTACHMENT FOR VIOLINS. MARTIN F. CONNELL, Holliston, Mass. Filed Dec. 4, 1928. Serial No. 323,761. 3 Claims. (Cl. 84—280.)



1. An attachment for a violin comprising a shoulder rest and a shield for an end face of the violin, a skeleton sheet metal frame bent to provide perpendicular portions for supporting respectively said shield and shoulder rest, and means for securing said frame to a violin.

1,786,479. LOUD-SPEAKER MOTOR. RICHARD CONOVER, Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed July 16, 1928. Serial No. 293,028. 11 Claims. (Cl. 175—339.)

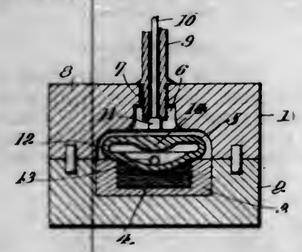


1. In a loud speaker motor, the combination of a magnet, pole spacers thereon having projections, an armature restoring spring mounted on the projections, said spring having secured thereto an armature, coils set around the armature at both sides of the restoring spring, and pole shoes mounted on the pole spacers in opposed pairs with their tips adjacent the said armature.

1,786,480. TOLL-SERVICE TRUNKING SYSTEM. THOMAS F. CROCKER, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Nov. 25, 1927, Serial No. 235,485, and in Great Britain Sept. 27, 1927. Renewed Apr. 9, 1930. 17 Claims. (Cl. 179—27.)

1. In a telephone system, a toll board at which incoming toll calls are received, an automatic exchange, a toll switching train comprising automatic toll switches at said exchange, a dialling operator's switchboard, a trunk extending from said toll board to said automatic exchange, a branch of said trunk line extending to said switchboard, means at said switchboard whereby the operator thereat may control the operation of said automatic toll switches over said trunk and said branch in accordance with the number of a called line as communicated to her by the toll operator at the toll board, and means at said toll board whereby the toll operator may complete the toll call over said trunk exclusive of said branch.

1,786,481. MACHINE FOR STITCHING PATTERNS ON FABRIC BASES. ALDO CURIONI, Larchmont, N. Y. Filed May 17, 1928. Serial No. 278,387. 3 Claims. (Cl. 112—79.)

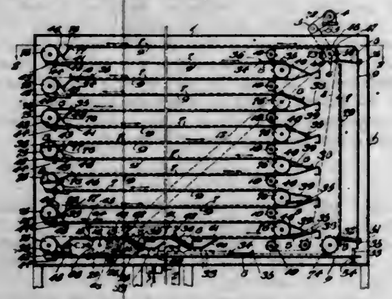


3. A machine of the character described comprising a fabric frame, a needle frame, a plurality of yarn carrying needles carried thereby, means to move one of the frames to cause the needles to penetrate the fabric, a brush on the fabric frame to hold the yarn after a needle has penetrated the fabric, means to maintain the bristles of the brush compressed, and means to move one frame relatively to the other in a plane parallel thereto.

1,786,482. RECRYSTALLIZED REFRACTORY COMPOSITION. THOMAS STANLEY CURTIS, Huntington Park, Calif., assignor to Vitrefrax Corporation, Huntington Park, Calif. Filed June 26, 1928. Serial No. 288,533. 2 Claims. (Cl. 106—9.)

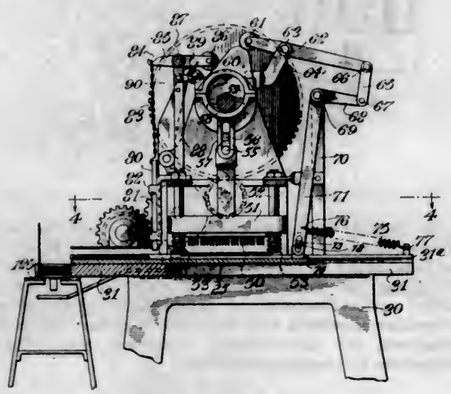
1. A refractory composition of the class described, consisting of a mullite aggregate incorporated into a bonding matrix of mullite in amorphous form.

1,786,483. APPARATUS FOR MAKING COMPOSITION RUBBER FLOAT VALVES. EDWARD L. DELANY, Brooklyn, N. Y. Filed Apr. 11, 1927. Serial No. 182,916. 10 Claims. (Cl. 18—35.)



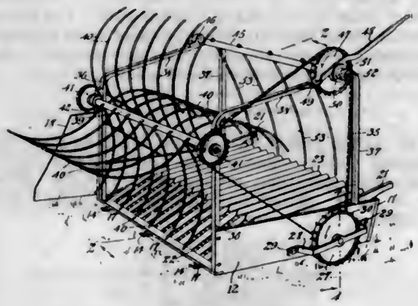
1. A mold for making composition rubber float valves comprising sections, one section having a removable member having a threaded portion extending into the cavity of the mold, and a rectangular member carried by the member at its lower end and independently movable.

1,786,484. REAMER. OSWALD DUDA, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed Apr. 2, 1927. Serial No. 180,577. 6 Claims. (Cl. 255—75.)



1. In deep well drilling apparatus, a head having pin guides, a pin slidable in said guides, a cutter carried by said pin, a cross-head carried by said pin, and a spring-pressed plunger mounted in said head, said plunger engaging said crosshead, to releasably lock the same in a predetermined position.

1,786,485. BAKING APPARATUS. WILLIAM EHRHART, Lancaster, Pa. Filed Aug. 1, 1928. Serial No. 296,675. 15 Claims. (Cl. 198—158.)

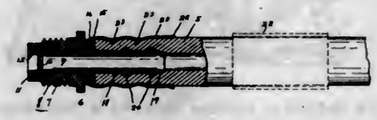


1. Apparatus of the character stated comprising a compartment, an endless conveyor operative for travel in a circuitous path through said compartment, a series of trays each pivotally mounted at one end to said conveyor and free at the other end, a track for guiding the free ends of said trays, means upon said track over which the free end of a tray may pass at proper intervals to maintain trays with loaded boards in constant horizontal position, means for feeding a board filled with dough to be proofed into the path of travel of a moving tray, means in the path of travel of said tray for supporting said board pending arrival of an empty tray, and means for causing an approaching empty tray to lift a board from off said temporary support.

1,786,486. MATCH MACHINE. SAMUEL M. FRIEDE and FRANK J. MCGUIRE, Sarasota, Fla. Filed May 19, 1928. Serial No. 278,972. 9 Claims. (Cl. 144—52.)

1. A machine for manufacturing matches comprising a carrier, means for feeding veneers onto the carrier, means for cutting the veneers on the carrier into matches, and means for operating the carrier, said carrier remaining stationary during the feeding and cutting of the veneers and being moved after the cutting to carry the matches out of the machine.

1,786,487. MOWER ATTACHMENT. RITCHARD W. GEORGE, Kelso, Tenn. Filed Aug. 10, 1928. Serial No. 298,719. 6 Claims. (Cl. 56—207.)

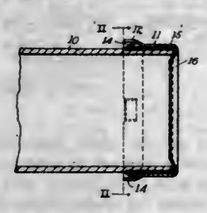


1. An attachment for mowing machines including a removable seed receptacle, a rearwardly extending riddle, means for pushing the harvested crop upon said riddle, and separate means for causing the discharge of said crop rearwardly from said riddle.

1,786,488. PROCESS FOR THE MANUFACTURE FROM BLOOD OF A MASS CAPABLE OF BEING COLORED. FELIX HOMBERG, Barmen, Germany, assignor to American Nuplax Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 9, 1925, Serial No. 74,399, and in Germany Dec. 11, 1924. 10 Claims. (Cl. 18—47.5.)

4. A process for the manufacture of moulded objects from dry blood comprising intimately mixing dry blood and an insoluble inorganic filling material adapted to render the object permeable after moulding, moulding the powdered mixture into a solid object by the application of heat and pressure, subsequently bleaching said moulded object, and treating the bleached object with a coloring agent.

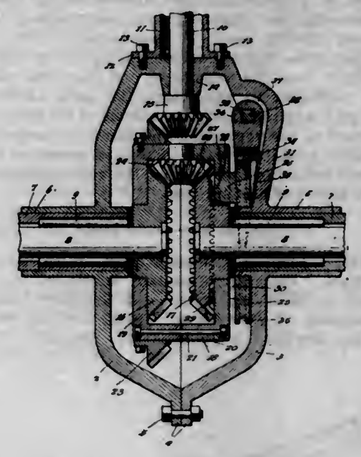
1,786,489. HOSE COUPLING. ARTHUR T. HOPKINS, Detroit, Mich., assignor of one-half to R. C. Hupp, Birmingham, Mich. Filed Mar. 28, 1925. Serial No. 19,091. 4 Claims. (Cl. 285—84.)



1. In combination with a hose end, a coupling member having an enlarged threaded body portion provided with a coaxial reduced, peripherally ribbed extension entering the hose end, and a nut like portion between said threaded portion and said extension, a groove forming shoulder upon the body portion concentric with and adjacent to said extension and spaced from said nut like portion, and a sheet metal cylindrical sleeve surrounding said hose end and extension, said sleeve being internally ribbed in staggered relation longitudinally with the ribs of the said extension, and having one end turned inwardly into the groove between said nut like portion and said shoulder for interlocking engagement with said coupling member.

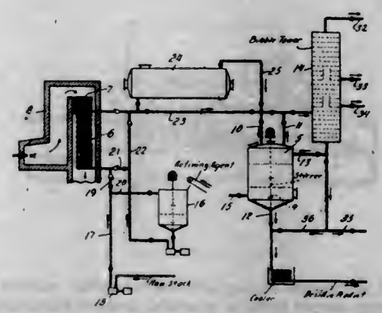
1,786,490. STABLE ALKALINE FERRIC SOLUTION. WILBERT J. HUFF, DAVID L. JACOBSON, and WILLIAM H. HILL, Pittsburgh, Pa., assignors to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 17, 1924. Serial No. 726,457. 19 Claims. (Cl. 23—234.)

1. The process for forming stable iron alkaline solutions which comprises: treating a carbohydrate with a soluble alkali metal compound having an alkaline reaction so as to effect a molecular transformation of the oxygen content of the carbohydrate, and adding to the so treated carbohydrate a soluble iron salt.



2. The process for forming stable iron alkaline solutions which comprises: treating a carbohydrate with a soluble alkali metal compound having an alkaline reaction; adding to the so treated carbohydrate a soluble iron salt; and aerating the solution during the addition of the iron to the solution.

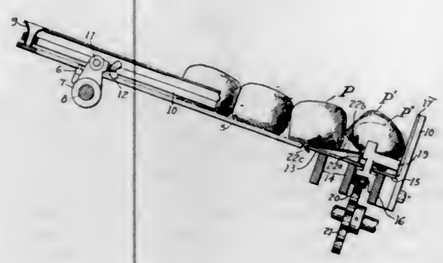
1,786,491. PIPE-THREAD PROTECTOR. PERCY E. HUNTER, Pittsburgh, Pa. Filed Aug. 16, 1928. Serial No. 299,893. 9 Claims. (Cl. 137—91.)



1. A thread protector comprising a collar formed to fit over the threaded portion of a pipe, and being slit to provide a tongue upon its inner end that is capable of being bent inwardly, and a key member adapted to have locking engagement with the pipe thread and to be positioned in abutting engagement with the bent-in tongue.

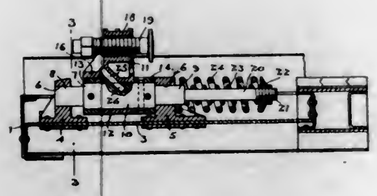
1,786,492. DIFFERENTIAL CLUTCH. JACOB T. HUSTVET, Lampson, Wis. Filed Dec. 19, 1929. Serial No. 415,274. 3 Claims. (Cl. 74—100.)

1. In a differential, a housing, a gear casing rotatable in said housing, shafts rotatably mounted in opposed side walls of said housing and extending into said casing, gears fixed upon said shafts within said casing, a pinion rotatably mounted in said casing and meshing with said gears, a clutch rotatably mounted in said housing and having arms extending through an adjacent side wall of said casing to effect rotation of the clutch with the casing, the said arms each having teeth at its free end disposed radially of the gears and the outer side face of the adjacent gear being formed with clutch teeth extending radially thereof throughout its circumference, and means to move said clutch towards said casing for interlocking engagement with the clutch teeth of said gear and cause the two shafts to rotate in unison.



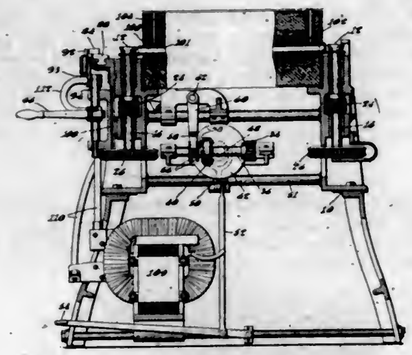
1,786,493. ART OF REFINING HYDROCARBONS. EDWARD W. ISOM, Scarsdale, N. Y., and ERNEST B. PHILLIPS, East Chicago, Ind., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Mar. 27, 1929. Serial No. 350,152. 3 Claims. (Cl. 196—79.)

1. In the manufacture of refined viscous petroleum oils, an improved combined operation which comprises sus-



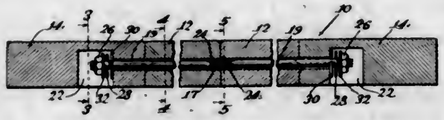
pending a solid absorbent refining agent in the raw stock, passing this absorbent-stock mixture through a heating zone as a rapidly flowing stream and heating it therein to a temperature not substantially exceeding 750° F. and less than that at which any substantial cracking takes place within the period of time the absorbent-stock mixture is flowing through the heating zone, discharging the absorbent stock mixture from the heating zone into a vaporizing and digesting zone, taking off vapors from the vaporizing and digesting zone, maintaining a substantial body of liquid at a temperature of approximately 620° F. in the vaporizing and digesting zone, maintaining the solid absorbent refining agent in suspension in this body of liquid during the operation, discharging the refined viscous oil product from the vaporizing and digesting zone as a residue including in suspension the solid absorbent refining agent, and regulating the volume of the body of liquid maintained in the vaporizing and digesting zone such that the residue product remains therein a period of time not less than five times as long as the raw absorbent stock mixture is in the heating zone.

1,786,494. ARTICLE FEED FOR WRAPPING MACHINES. CHARLES KEHLING, Brooklyn, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Oct. 29, 1929. Serial No. 403,237. 8 Claims. (Cl. 198—26.)



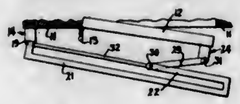
1. In an article feed, the combination with a runway for supplying articles in contacting row formation, of a conveyor arranged to successively withdraw articles transversely from said row, and means for relatively tilting the article next to be withdrawn and the adjacent article in the row to reduce the friction between said articles.

1,786,495. ADJUSTABLE SPRING JACK FOR CONTAINER RAILWAY CARS. WILLIAM PLATTS KELLETT, New York, N. Y. Filed Sept. 14, 1929. Serial No. 392,553. 6 Claims. (Cl. 105—366.)



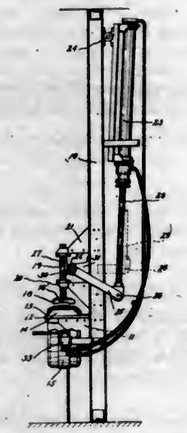
1. An adjustable spring jack for container railway cars, comprising spaced bracket supports, a shaft longitudinally slidable in said supports, a compression spring encircling said shaft, and a buffer member mounted on said slidable shaft.

1,786,496. METHOD OF FORMING MATERIAL. CUTLER D. KNOWLTON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 8, 1921, Serial No. 459,783. Renewed July 22, 1927. 16 Claims. (Cl. 153—16.)



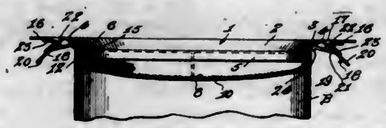
1. The method of forming material in accordance with a pattern, which consists in heating the material, thereafter supporting the pattern solely upon the heated material, feeding the heated material, and forming the material to the supported pattern.

1,786,497. TABLE CONSTRUCTION. GEORGE W. KRICK and DANIEL G. ANDERSON, Los Angeles, Calif. Filed Jan. 11, 1930. Serial No. 420,103. 1 Claim. (Cl. 20—92.)



A table top comprising a plurality of strips, a rod extending through apertures in alignment in said strips, said rod having a swaged portion resting in recesses formed in the abutting faces of the innermost pair of said strips, said rod having threaded ends projecting into recesses formed in the underside of the outermost pair of said strips, a plate mounted on each end of said rod and engaging the inner vertical face of the recesses formed in the outermost pair of said strips, a spring lock washer mounted on each end of said rod engaging said plates, and nuts on the threaded ends of said rod engaging said spring lock washers.

1,786,498. DRAPERY SUPPORT. FRANK V. MARONEY, Orange, Calif. Filed Dec. 17, 1928. Serial No. 326,500. 4 Claims. (Cl. 156—19.)

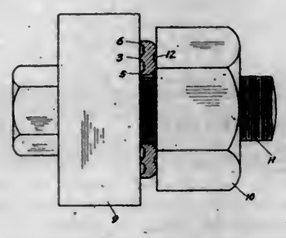


1. In a device of the class described, a bracket, a drapery rod pivotally secured to said bracket, said drapery rod having an arm rigid thereon and extending parallel thereto and means for maintaining the rod in proper position, said means being pivotally connected to said arm and being adapted to be secured to a window.

1,786,499. PRESS FOR TREAD SPLICES. CHARLES EDGAR MAYNARD, Northampton, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1929. Serial No. 355,779. 2 Claims. (Cl. 154—9.)

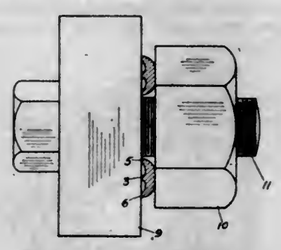
1. An apparatus of the character described comprising a pair of tread pressing plates adapted to press a narrow portion of a tire between them, a rack fixed to one of said plates, a gear meshing with the rack, and means for causing the rotation of the gear thereby moving the rack-bearing plate toward and away from the other plate.

1,786,500. SANITARY MILK STRAINER. MARY M. MCGONIGAL, Gannett, Idaho. Filed Oct. 14, 1929. Serial No. 399,604. 3 Claims. (Cl. 210—159.)



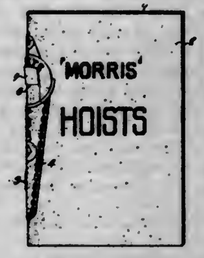
1. A strainer of the class described comprising a rim for disposal in the open top of a receptacle for the liquid to be strained having an outstanding circumferential flange to rest upon the upper margin of the wall of the receptacle, and a circumferential portion inclined downwardly and inwardly from said flange and provided with a depending flange having bayonet slots therein, a dished screen of fine mesh, a ring about the outer side of which the upper margin of the screen is fitted, and studs upon the inner side of the ring engaged in said slots to separably connect the ring with the flange of the rim.

1,786,501. WATER SOFTENING AND PURIFICATION. ARTHUR ROMAYNE MOBERG, Minneapolis, Minn., assignor to Fred O. Paige, Jr., Hammond, Ind. Filed Apr. 15, 1929. Serial No. 355,431. 9 Claims. (Cl. 210—23.)



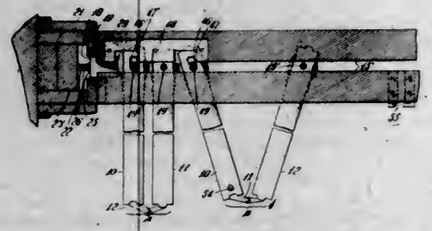
1. The method of purifying aqueous liquids to remove suspended impurities therefrom, which consists in subjecting the liquid to the action of a concentrated solution of ferric chloride containing peptized aluminum hydrates.

1,786,502. SPRING NUT-LOCK WASHER. HARRY G. NORWOOD, Baltimore, Md., assignor to Positive Lock Washer Company, Newark, N. J. Filed Aug. 10, 1929. Serial No. 384,857. 7 Claims. (Cl. 151—35.)



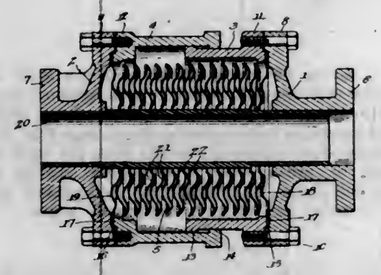
4. A spring nut lock washer having a pair of grooves on one face thereof and an abutment between said grooves, said abutment having a depth so as to come into engagement before the edges formed by the grooves.

1,786,503. SPRING NUT-LOCK WASHER. HARRY G. NORWOOD, Baltimore, Md., assignor to Positive Lock Washer Company, Newark, N. J. Filed Aug. 10, 1929. Serial No. 384,858. 7 Claims. (Cl. 151—35.)



4. A spring nut lock washer having a split and the ends adjacent the split offset a predetermined amount in opposite directions to give a certain spring effect, said washer having a cross-sectional shape such that the inner and outer edges normally contact with the work and are adapted to spread, whereby an annular central part between the edges is brought into engagement with the work to resist further spreading of said edges.

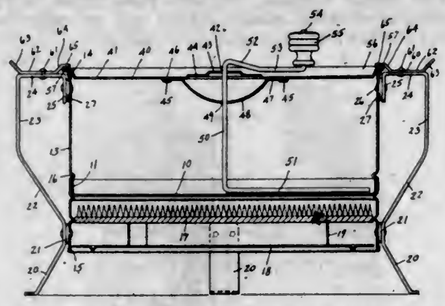
1,786,504. BOOKLET LABEL. DONALD EVANS PARRISH, Buffalo, N. Y. Filed Feb. 1, 1929. Serial No. 336,693. 4 Claims. (Cl. 281—29.)



1. A label for booklet covers secured only to the booklet back and of a width greater than the thickness of the booklet and freely extending from the back over portion of the outside of the booklet covers.

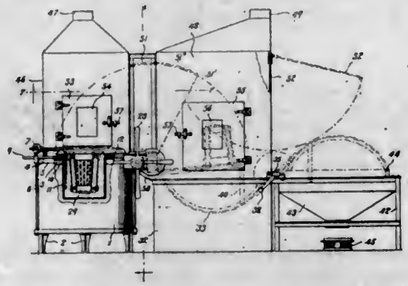
1,786,505. FOLDING PARTITION. ELLIS J. G. PHILLIPS, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Oct. 12, 1928. Serial No. 311,990. 18 Claims. (Cl. 20—20.)

18. The combination with a doorway having upper and lower guideways, of a series of folding partition sections movable along said guideways, locking means adapted to hold said partition sections in open position, and spring pressed jambs disposed at each side of said doorway resiliently engaging said partition sections when in either closed or open positions, said spring pressed jambs cooperating to urge said partition sections against said locking means when said partition sections are folded to open position.



1,786,506. EXPANSION JOINT. FREDERICK RAY, Short Hills, N. J. Filed Dec. 31, 1923. Serial No. 683,789. 12 Claims. (Cl. 285—90.)

1. In an expansion joint, the combination of means for attaching the joint to a pipe line, said means comprising two relatively movable parts, an expansion member, and means for fastening the expansion member removably to said parts, said means including two members movable to and from each other in overlapping relations and formed at their inner ends with opposed stop lugs adapted to engage each other and limit the relative outward movement of the members, said members being detachably fastened to said relatively movable parts with the outer ends of the expansion member clamped therebetween.

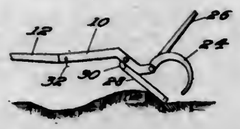


1,786,507. CORN POPPER. JAMES H. REICHART, Muncie, Ind. Filed Mar. 30, 1929. Serial No. 351,186. 6 Claims. (Cl. 53—4.)

1. The combination with a chamber and a cover therefor, of a handle comprsiing a strap having an end secured to the chamber adjacent the cover support and extending upwardly to the plane of the cover, an outward extension handle forming portion secured thereto and arranged for

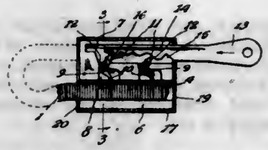
chamber support, and a cover lock pivotally supported by the outward extension immediately adjacent the chamber and cover connection.

1,786,508. APPARATUS FOR AND ART OF TREATMENT OF METAL WORK. HEYMAN ROSENBERG, New York, N. Y. Filed June 20, 1929. Serial No. 372,457. 21 Claims. (Cl. 266—4.)



1. In apparatus for case-hardening metal work, the combination, with a furnace and a vat located to be heated thereby, of a work carrier, a quenching vat disposed adjacent the work carrier, and means for shifting the work carrier from within the first-mentioned vat to a position above the quenching vat for delivering the work to the quenching vat at substantially the temperature of the contents of the first-mentioned vat.

1,786,509. GAS PURIFICATION. GILBERT E. SEIL, Newark, N. J., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 11, 1926. Serial No. 115,408. 35 Claims. (Cl. 23—225.)

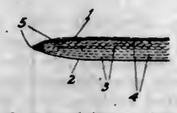


26. In the purification of gas of hydrogen sulphide the improvement which consists in washing the gas with an alkaline wash liquor containing iron sulphide and an oxidized starch to maintain the iron sulphide in stable solution.

1,786,510. COMBINATION HARROW AND SCRAPER. HERBERT A. SWENSSON, Rose Creek, Minn. Filed Mar. 27, 1929. Serial No. 350,318. 1 Claim. (Cl. 55—23.)

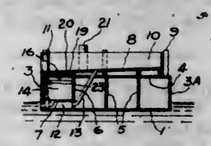
In a combination harrow and scraper, a main frame, and means pivotally connected to the frame for alternately harrowing and scraping the ground as desired, said harrowing means comprising a harrow frame, a plurality of harrow blades mounted on the harrow frame and an operating handle therefor, and a scraper element also pivotally mounted upon the frame, and means for positioning the scraper element operatively or inoperatively with respect to the ground, said means including a latch mounted upon the harrow frame, said scraper frame also including means for holding the harrow blades in inoperative position when the scraper element is in operative position, said means comprising a right-angled pivotal connection between the harrow frame and the scraper element, and an offset in the frame for conducting the scraper and holding the harrow blades raised in inoperative position when the scraper is in operative position.

1,786,511. LOCK. JULIAN K. WARREN, Saucier, Miss. Filed Aug. 14, 1929. Serial No. 385,729. 2 Claims. (Cl. 70—108.)



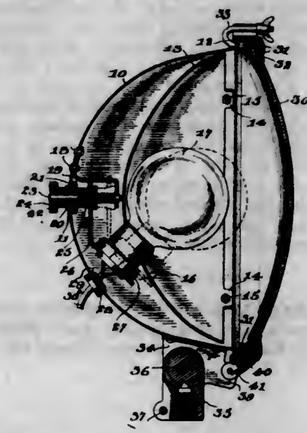
1. A lock comprising a lock body having a longitudinal key-way and a passage parallel with the keyway, a hasp having one end anchored in the body and its opposite end engageable in said passage in the body and including a series of closely nested disks, bell cranks mounted within the body and alined longitudinally thereof between the keyway and said passage and each having one end presented to the hasp to engage between the disks thereof and the opposite end disposed within the keyway in the body, and yieldable means for holding the bell cranks in engagement with the hasp.

1,786,512. AUTOMATIC SHADE-ROLLER STOP. BEVILL W. WHITWORTH, Omaha, Nebr. Filed May 28, 1929. Serial No. 366,712. 1 Claim. (Cl. 156—86.)



A spring actuated shade roller having a bore at one end and longitudinal slots opening into the bore, means for limiting the rotation of said roller in its winding direction, said means comprising a stationary shaft extending axially into the bore in the roller in which the stationary shaft is disposed, said shaft having right and left threaded portions, members slidably mounted in the bore and threaded on said threaded portions of the shaft, lugs carried by opposite sides of the slidable members and extending into the longitudinal slots in the roller end and into which the lugs extend and a coiled spring surrounding the shaft between the slidable members and axially movable on the shaft.

1,786,513. SPONGE PAD. ROSCOE C. ZUCKERMAN, Stockton, Calif. Filed Dec. 15, 1928. Serial No. 326,373. 8 Claims. (Cl. 87—23.)



1. A sponge pad comprising a top sheet impregnated with an antiseptic soap, and a pliable water absorbing pad under said sheet.

1,786,514. SCOW. WILLIAM ALBERT BICKNELL, Vancouver, British Columbia, Canada. Filed Mar. 8, 1929. Serial No. 345,519. 3 Claims. (Cl. 114—27.)

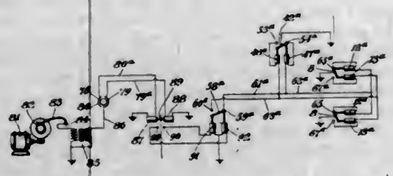
1. A self dumping scow comprising a decked hull, a water tight compartment along one side thereof and located above the no-load water line of the hull, a plurality of sea cocks controlled from the deck of the scow, said compartment having air outlet passages communicating with the atmosphere, normally closed hatches located at the opposite ends of the compartment, through which the air is allowed to escape when uncovered, one of said hatches providing for a rapid inflow of water into the compartment when the scow is initially tilted to a predetermined position, and thereby quickly tilt the scow to an angle in excess of the normal angle of repose of the load, and means for automatically discharging the water from the compartment on dumping of the load.

1,786,515. FLOOD LIGHT. JAMES L. BROWNELL, Kalamazoo, Mich. Filed Dec. 18, 1928. Serial No. 326,729. 5 Claims. (Cl. 240—44.2.)

1. In a floodlight, a semi-circular shell having a central aperture, a bracket secured to said shell and having a horizontal portion, a lateral bearing portion at the outer end of said bracket, a socket supporting bracket guided by said horizontal portion, a spaced reflector having an aperture below its center, a socket on said socket supporting bracket projecting through the aperture in said reflector, a source of light in said socket having its center line coincident with the center line of the shell and reflector, and means in part supported by said shell and in part by said bracket bearing portion for moving said socket supporting bracket, socket, and source of light along said line of centers.

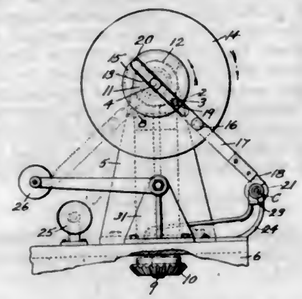
1,786,516. PROCESS FOR THE CONTINUOUS PRODUCTION OF FUSED CAUSTIC ALKALIES. ERNST BÜRGIN and WALTER SCHMID, Rheinfelden, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Feb. 21, 1929, Serial No. 341,823, and in Germany Feb. 29, 1928. 6 Claims. (Cl. 23—184.)

1. The process for the continuous production of fused caustic alkalies from concentrated caustic alkali lyes



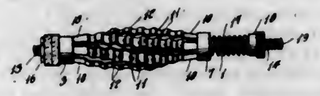
which comprises introducing same into a rotating inclined metallic tube which is externally heated, evaporating the lye therein, subjecting the resulting melt to a temperature sufficient to dehydrate the melt to the desired alkali content, and gathering the melt issuing from the tube.

1,786,517. SEWING MACHINE RUFFLER. ANDREW J. CARMICHAEL, New Haven, Conn., assignor to The Greist Manufacturing Company, a Corporation of Connecticut. Filed July 15, 1929. Serial No. 378,480. 2 Claims. (Cl. 112—135.)



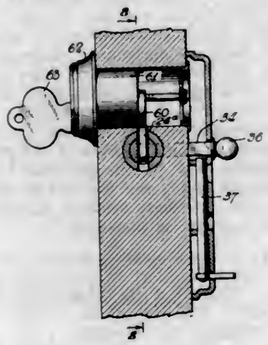
1. In a sewing machine ruffler, the combination with a suitable frame, of a ruffling blade, an operating lever pivoted to said frame and operatively connected to said blade, a pawl-carrier mounted on said lever and provided with a pawl, a ratchet-wheel to be engaged at times by said pawl and having deep and shallow notches, and a plate by which said ratchet-wheel is carried and which plate is adjustably mounted on said frame by a pivot located eccentric to said ratchet-wheel and below and rearward of the pivotal point of said operating lever; whereby, when said ratchet-wheel is in raised position to be engaged by said pawl the latter will act to hold or lock said plate in its adjusted position.

1,786,518. MEANS FOR LIGHTING MOTOR VEHICLES. KARL D. CHAMBERS, Montgomery, Ala. Filed July 1, 1924, Serial No. 723,539. Renewed Sept. 14, 1929. 6 Claims. (Cl. 88—1.)



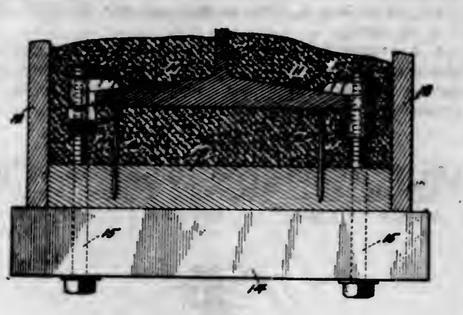
1. Means for lighting motor vehicles comprising complementary viewing filters, headlights having complementary projecting filters corresponding to said complementary viewing filters, and automatic means for putting one of said viewing filters into operative relation with the driver's eyes, and for causing light to be projected through the corresponding projecting filter according to the direction of travel of the vehicle.

1,786,519. CUT-OFF FOR CIGARETTE MACHINES. ROBERT JOHN ALEXANDER CHANDLER, London, England, assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Sept. 18, 1929. Serial No. 393,463. 12 Claims. (Cl. 131—37.)



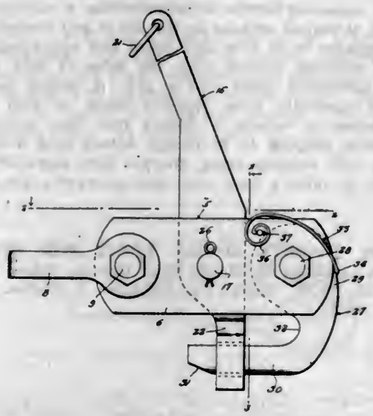
1. In a cigarette rod cutoff mechanism, the combination with a cigarette rod cutting element, of spaced pivots on which said cutting element is mounted, and means for imparting differential orbital movements to said pivots to produce rapid movement of said element across the path of the cigarette rod.

1,786,520. GUN CLEANER. LOUIS H. DARLING, Vallejo, Calif. Filed Apr. 11, 1929. Serial No. 354,361. 7 Claims. (Cl. 42—91.)



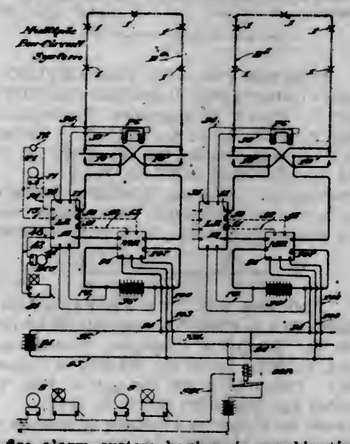
1. A gun cleaner comprising a stem, cleaner elements arranged lengthwise of the stem and grouped about the same, said cleaner elements being outwardly curved intermediate their ends, and confining means on the stem engaging opposite ends of the cleaner elements, one of said means being resilient and adjustable to admit of regulating the bulge of the cleaner elements.

1,786,521. LATCH. MICHAEL DERMODY, New York, N. Y. Filed Nov. 6, 1928. Serial No. 317,530. 3 Claims. (Cl. 70—46.)



1. In a latch an escutcheon plate, a sliding bolt, a laterally projecting actuating arm fixed to the inner end of the bolt and a sliding dog movable into the path of the arm to selectively dog the movement of the bolt to projected or retracted position, the slidable dog being normally gravitationally held out of dogging position and means integral with the escutcheon plate to support it in dogging position.

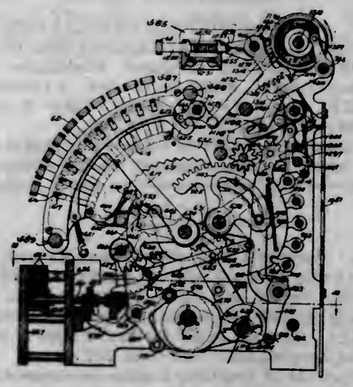
1,786,522. FORM SUPPORT. FRANK G. DICKMAN, Chicago, Ill. Filed Dec. 10, 1928. Serial No. 325,091. 2 Claims. (Cl. 25—131.5.)



1. A form support and insert comprising, in combination, a threaded body having a supporting projection adapted to rest on the flange of a beam, means on said body permitting rotation in one direction and preventing rotation in the opposite direction relative to an adjacent beam flange, and a bolt adapted to project through the bottom board of a form and engage said threaded body, said bolt being adapted to be removed to drop the form after the concrete is poured the threaded body remaining in the concrete and acting as an insert for the support of conduits or of a ceiling.

1,786,523. TRIP HOOK. GEORGE J. DOERING, Evanston, Ill. Filed Mar. 19, 1929. Serial No. 348,347. 3 Claims. (Cl. 294—83.)

1. In a trip hook of the character described comprising a body portion formed of a pair of complementary spaced plates, a clevis rockably mounted on one end of said plates, a tripping lever rockably mounted intermediate its ends between an intermediate portion of said plates, said tripping lever having an opening formed in one free end and an attaching ring on the other free end thereof, a hook member having one end rockably mounted between the other end of said plates, the free end of said hook member adapted for detachably seating in the opening in the tripping lever for detachably coupling the hook member and the tripping lever, and means for automatically retaining said tripping lever and hook member in coupled relation.



1,786,524. FIRE-ALARM SYSTEM. VERNON DUNBIN, Newton, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed June 23, 1922, Serial No. 570,393. Renewed May 19, 1928. 12 Claims. (Cl. 177—361.)

6. A fire alarm system having, in combination, a plurality of normally closed box circuits, a plurality of boxes in each box circuit, each box having provision for rendering it inoperative to send signals on reversal of the box circuit current, means for reversing the current after opening of the circuit, a non-interference relay in each box circuit adapted to be actuated on the pulling of a box in the circuit, a circuit opening relay for each box circuit, non-interference lines connecting the circuit opening relays for opening all other box circuits and causing reversal of the box circuit current, and means for energizing the non-interference lines upon actuation of any non-interference relay.

12. A fire alarm system having, in combination, a plurality of normally closed box circuits, repeating means for the box circuits operated upon opening of a box circuit, short circuiting contacts for short circuiting the loop containing the boxes of each box circuit, a trouble relay operable upon opening of a box circuit, and having a part movable to close the short circuiting contacts of an open box circuit after a predetermined time, and means for resetting said part upon closure of the box circuit.

1,786,525. COMPUTING MACHINE. MAXIMILIAN M. GOLDBERG, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed June 14, 1926. Serial No. 115,998. 181 Claims. (Cl. 235—7.)

1. In an accounting machine, the combination of a plurality of banks of depressible keys, a differentially movable

latch cooperating with each of said banks of keys, means for disconnecting each of said differential latches in its zero position, an additional bank of keys, and means adapted to be differentially positioned under control of said last mentioned keys for controlling said disconnecting means.

1,786,526. PROCESS FOR THE PREPARATION OF 4-HALOGEN-PARA-PHENYL-ORTHO-BENZOYL-BENZOIC ACID. PHILIP H. GROGGINS, Washington, D. C. Filed Aug. 8, 1929. Serial No. 384,506. 8 Claims. (Cl. 260—64.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A process for preparing 4-halogen derivatives of para-phenyl-ortho-benzoyl-benzoic acid which comprises condensing 4-halogen-diphenyl with phthalic anhydride.

1,786,527. PROCESS FOR THE PREPARATION OF 2-HALOGEN-PARA-PHENYL-ORTHO-BENZOYL-BENZOIC ACID. PHILIP H. GROGGINS, Washington, D. C. Filed Aug. 8, 1929. Serial No. 384,507. 8 Claims. (Cl. 260—64.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A process for preparing 2-halogen derivatives of para-phenyl-ortho-benzoyl-benzoic acid which comprises condensing 2-halogen-diphenyl with phthalic anhydride.

1,786,528. PROCESS OF PREPARING 4-AMINO-PARA-PHENYL-ORTHO-BENZOYL-BENZOIC ACID. PHILIP H. GROGGINS, Washington, D. C. Filed Aug. 8, 1929. Serial No. 384,510. 4 Claims. (Cl. 260—64.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

2. The process of preparing 4-amino-para-phenyl-ortho-benzoyl-benzoic acid which comprises heating 4-halogen-para-phenyl-ortho-benzoyl-benzoic acid with aqueous ammonia under pressure in the presence of a copper catalyst.

1,786,529. PROCESS FOR THE PREPARATION OF 2-AMINO-PARA-PHENYL-ORTHO-BENZOYL-BENZOIC ACID. PHILIP H. GROGGINS, Washington, D. C. Filed Aug. 8, 1929. Serial No. 384,511. 4 Claims. (Cl. 260—64.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

2. The process of preparing 2-amino-para-phenyl-ortho-benzoyl-benzoic acid, which comprises heating 2-halogen-para-phenyl-ortho-benzoyl-benzoic acid with aqueous ammonia under pressure in the presence of a copper catalyst.

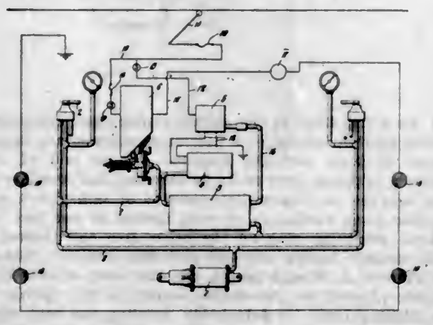
1,786,530. PROCESS FOR THE PREPARATION OF 4-AMINO-BETA-PHENYL-ANTHRAQUINONE BY AMINATION. PHILIP H. GROGGINS, Washington, D. C. Filed Aug. 8, 1929. Serial No. 384,516. 5 Claims. (Cl. 260—57.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. The process of preparing 4-amino-beta-phenyl-anthraquinone, which comprises heating 4-halogen-beta-phenyl-anthraquinone with aqueous ammonia under pressure.

1,786,531. PROCESS FOR THE PREPARATION OF 2-AMINO-BETA-PHENYL-ANTHRAQUINONE BY AMINATION. PHILIP H. GROGGINS, Washington, D. C. Filed Aug. 8, 1929. Serial No. 384,518. 5 Claims. (Cl. 260—57.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. The process of preparing 2-amino-beta-phenyl-anthraquinone which comprises heating 2-halogen-beta-phenyl-anthraquinone with aqueous ammonia under pressure.

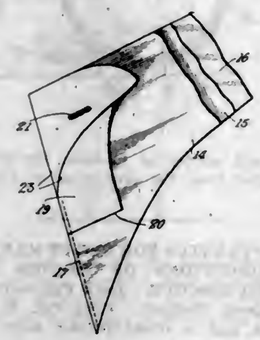
1,786,532. PREPARATION OF PARA-PHENOXY-ORTHO-BENZOYL-BENZOIC ACID. PHILIP H. GROGGINS, Washington, D. C. Filed Oct. 2, 1929. Serial No. 396,924. 7 Claims. (Cl. 260—64.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



1. A process for preparing the aluminum base of para-phenoxy-ortho-benzoyl-benzoic acid which comprises condensing diphenyl oxide with phthalic anhydride in the presence of aluminum chloride.

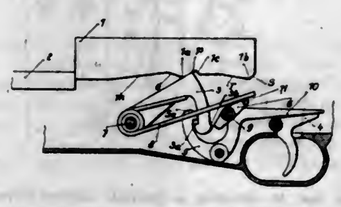
1,786,533. CLOTHES PROP. HARRY B. GRINER, Merchantville, N. J. Filed Sept. 6, 1929. Serial No. 390,678. 1 Claim. (Cl. 68—12.)

As an improved article of manufacture, a clothes prop having a V-shaped opening in the upper end thereof, and an attachment to fit over said upper end and comprising pendent portions secured over the sides of said upper end, a horizontal plate and a pair of spring tongues extended upwardly from opposite edges of said plate and adapted to receive a clothes line, said horizontal plate being adapted to fit snugly within said V-shaped opening, said tongues being directed first upwardly and inwardly to form a neck and then outwardly flared.



1,786,534. SAFETY SIGNAL LIGHT FOR STREET CARS. ASHLEY G. HALE, West Groton, Mass. Filed Oct. 30, 1929. Serial No. 403,628. 2 Claims. (Cl. 246—208.)

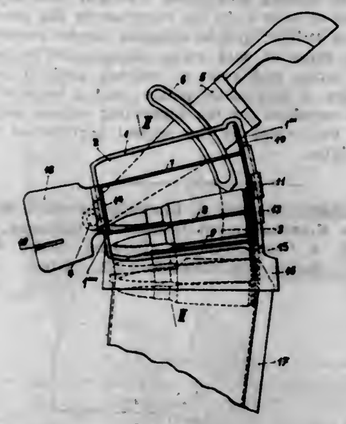
1. A signal apparatus for electric railway cars comprising, in combination with the air brake cylinder,



of the car and the hand lever for controlling the supply of air to the brake cylinder, an electric light signal, and a source of current supply in circuit therewith, and a pressure regulator in communication with the said air brake cylinder and embodying the usual switch in circuit with the signal and controlled by the pressure of air delivered to the brake cylinder, whereby to effect closing of the circuit through the signal upon operation of the hand lever to effect admission of air to the air brake cylinder.

1,786,535. SOFT COLLAR. JOSEPH HILLMAN, New York, N. Y. Filed Mar. 7, 1930. Serial No. 433,865. 9 Claims. (Cl. 2—132.)

1. In a collar having a band, a folded over top including a plurality of plies, and a fabric sleeve disposed between adjacent plies and near the front edges thereof, said sleeve and one of said plies having registered openings whereby a stiffening member may be inserted within the sleeve.

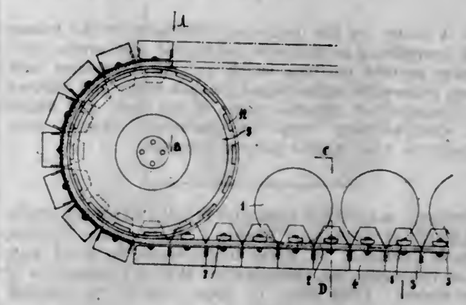


1,786,536. FIRING MECHANISM FOR AUTOMATIC FIREARMS. EMANUEL HOLEK, Brunn, Czechoslovakia, assignor to the Firm Ceskoslovenska Zbrojovka Akciova Spolecnost V Brne, Brunn, Czechoslovakia. Filed June 18, 1929, Serial No. 371,786, and in Czechoslovakia June 20, 1928. 14 Claims. (Cl. 42—3.)

1. A firing mechanism for automatic firearms having a breech which is retained in open condition by a device adapted to actuate the priming bolt, said mechanism comprising control means associated with said breech, said control means being adapted to prevent retention of said breech by said device during rapid closing motion of said breech.

1,786,537. APPARATUS FOR FILLING MAGAZINES FOR SELF-LOADING FIREARMS. VÁCLAV HOLEK, Brunn, Czechoslovakia, assignor to the Firm Ceskoslovenska Zbrojovka Akciova Spolecnost V Brne, Brunn, Czechoslovakia. Filed July 11, 1929, Serial No. 377,523, and in Czechoslovakia Oct. 15, 1928. 11 Claims. (Cl. 42—87.)

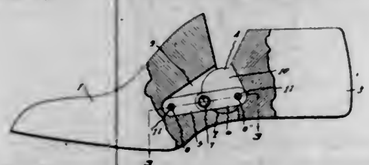
1. Apparatus for feeding cartridges to the magazines of fire arms consisting of a receptacle for the cartridges, said receptacle being apertured in one side wall above the bottom of said receptacle so as to permit of the passage therethrough of a cartridge, a feeder adapted to be moved towards and away from said apertured wall, means for connecting said receptacle with a magazine to be filled, and means in the receptacle adapted to pile



loose cartridges introduced into the receptacle in rows of superposed cartridges in such manner that when the feeder is moved towards the apertured side wall the cartridges in the lowermost row are transferred successively through the said apertured wall into the magazine.

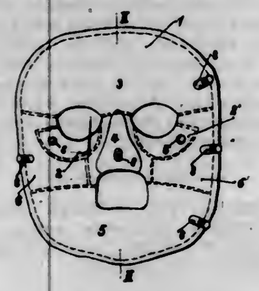
1,786,538. CHEMICAL-PULP PAPER-MAKING PROCESS. FRANK A. JOHNSON, Felts Mill, N. Y., assignor of one-fourth to John H. O'Connell, Springfield, Mass., one-fourth to John D. Haskell, Fulton, N. Y., and one-fourth to Dilts Machine Works, Inc., Fulton, N. Y., a Corporation of New York. Filed Oct. 15, 1927. Serial No. 226,526. 2 Claims. (Cl. 92—20.)

1. A process for treating chemical pulp for making paper, consisting in subjecting chemical pulp to a grinding operation as distinguished from a beating action varying the character of the grinding stones or the equivalent thereof in accordance with the nature and quality of the paper to be produced, applying freeness tests at the point of grinding, varying the pressure of the pulp against the grinders and introducing water in accordance with the requirements of the particular pulp under treatment and the product desired.



1,786,539. METAL AND RUBBER TRACK BELT. ADOLPHE KEGRESSE, Courbevoie, France. Filed Apr. 5, 1929, Serial No. 352,709, and in France Apr. 20, 1928. 3 Claims. (Cl. 305—10.)

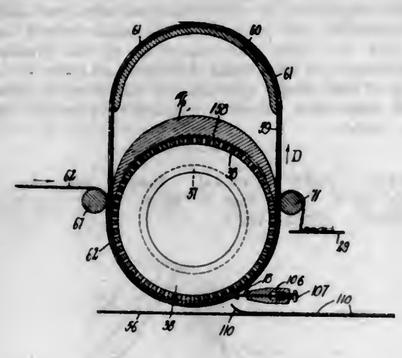
1. An endless track belt for use in connection with a driving pulley provided with peripheral recesses, and a



series of supporting rollers; said belt composed of a pair of endless strips arranged side by side in spaced, parallel relation; metal connecting plates arranged transversely of the belt in substantially contacting relation with one another along their longitudinal edges and fastened to the outer faces of said strips; a longitudinal row of driving projections arranged centrally on the inner face of each strip for reception in the recesses in the driving pulley; ground-engaging blocks connected to the outer faces of said metal plates; and bolts to connect the strips and rows of driving projections to the inner faces of said metal plates; and a longitudinal row of guide members for the supporting rollers secured between the two strips at the central portions of said connecting plates.

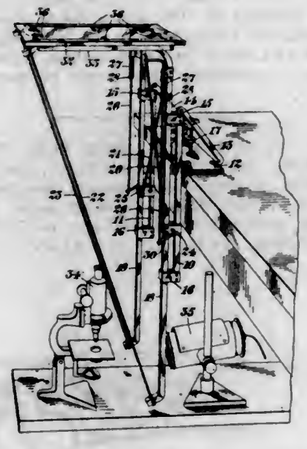
1,786,540. LAST. WALTER A. KRENTLER, Detroit, Mich., assignor to Krentler-Arnold Hinge Last Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 14, 1927. Serial No. 219,408. 12 Claims. (Cl. 12—136.)

2. A connecting device for hinged lasts including a plurality of link members having overlapping adjacent ends and formed with openings in said overlapping ends, and yielding means within said openings forming the whole connection between said members and exerting a force tending to move said members relatively in a longitudinal direction and to hold the last parts in yielding contact with each other.



1,786,541. DEVICE FOR THE DIATHERMIC TREATMENT OF THE HUMAN BODY. ERWIN LAST, Vienna, Austria. Filed Apr. 5, 1929, Serial No. 352,687, and in Austria, Feb. 21, 1929. 11 Claims. (Cl. 174—89.)

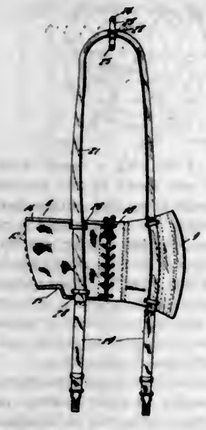
1. A device for the diathermic treatment of the human body comprising an electrode subdivided into several conductive surface portions which are insulated from each other, immovable with respect to each other and adapted for treatment of different parts of the body, and means for simultaneously supplying diathermic current individually to said several surface portions.



1,786,542. MACHINE FOR CUTTING ARTICLES FROM SHEET MATERIAL. FRANK J. MACDONALD, Newton, Mass., assignor, by mesne assignments, to Hood Rubber Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Sept. 17, 1928. Serial No. 306,308. 28 Claims. (Cl. 164—34.)

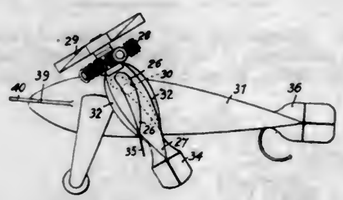
1. A cutting machine having, in combination, a carrier for sheet material provided with recesses, mechanism to move said carrier, means to force portions of said sheet material into said recesses, and a knife so positioned

adjacent to said carrier as to sever the sheet material in said recesses from the remainder of said sheet material.



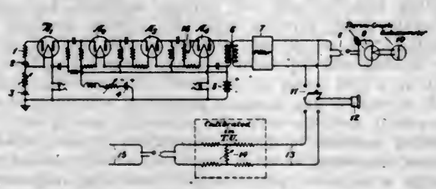
1,786,543. APPARATUS FOR USE IN MAKING GRAPHIC REPRODUCTIONS OF IMAGES PROJECTED FROM A MICROSCOPE. JOHN FREDERICK MARSHALL, Hayling Island, England. Filed Oct. 5, 1927, Serial No. 224,128, and in Great Britain May 21, 1927. 6 Claims. (Cl. 88—24.)

1. For use in making a graphic reproduction of an image projected from a microscope, apparatus comprising in combination a bracket, clamping means on said bracket arranged to enable the latter to be readily secured to an existing support, a movable carrier mounted upon the bracket, means for permitting rectilinear adjustment of the carrier in relation to the bracket, and an image-receiving sheet supported on the carrier with its plane perpendicular to the line of adjustment of said carrier on the bracket.



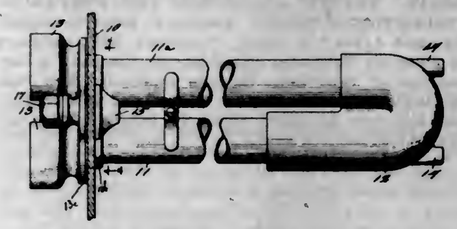
1,786,544. MATERNITY SUPPORTER. SARAH FRANCES MORGAN, Poughkeepsie, N. Y. Filed Oct. 17, 1929. Serial No. 400,380. 1 Claim. (Cl. 2—41.)

A maternity supporter comprising a body encircling band having an elastic front section, and an inelastic back section, the front and back sections being respectively provided on their outer faces, and adjacent each side of the supporter with a pair of upper and lower vertically alined guide loops, the loops of each pair being respectively located adjacent the top and bottom edges of the sections, a shoulder strap at each side of the supporter and slidably engaged in corresponding front and back



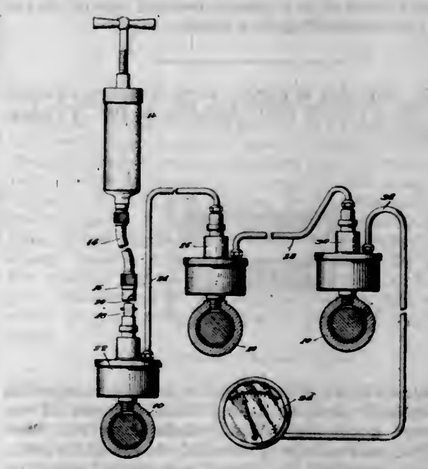
pairs of guide loops, each of said shoulder straps having their lower free ends provided with garment supporting means and their upper or right portion provided with retaining means for additional garment shoulder straps.

1,786,545. AEROPLANE FOR HORIZONTAL AND VERTICAL FLIGHT. JACOB EMIL NOEGGERATH, Berlin, Germany. Filed Apr. 26, 1926, Serial No. 104,640, and in Germany Apr. 29, 1925. 5 Claims. (Cl. 244—14.)



1. Aeroplane for horizontal and vertical flight comprising a supporting structure, a tiltable plane on each side of said structure, a separate propeller associated with each plane, ailerons on said planes, and additional steering means, said ailerons and said steering means being arranged in the propeller air blast and being adapted to be moved together with the planes and the propellers.

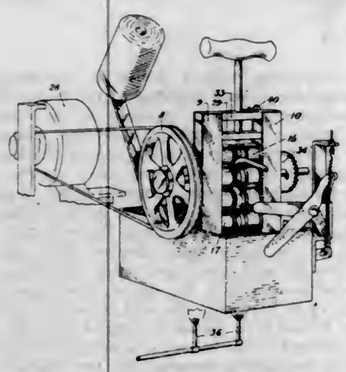
1,786,546. POWER-STANDARD DEVICE. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 20, 1928. Serial No. 271,544. 15 Claims. (Cl. 179—175.)



11. The method of generating a composite alternating current of definite power-frequency value over a definite range of frequencies which consists in holding a definite resistance at a definite temperature, and amplifying the voltage fluctations across its terminals due to thermal agitation within the resistance with the amplification ratio a definite function of frequency, whereby the amplifier output will be a fluctuating current of substantial definite power at each frequency of the frequency range.

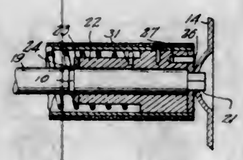
1,786,547. SECONDARY WATER HEATER. GUNNER OLSON and EUGENE H. KEHL, Chicago, Ill. Filed Sept. 8, 1928. Serial No. 304,798. 7 Claims. (Cl. 257—248.)

1. In combination with a boiler an auxiliary water heater comprising a head external of the boiler having a flange entering through an aperture of the boiler, and adjacent thereto a radial flange for external contact with the boiler; vertical openings in the face of the head; and vertical openings in the rear of the head—in the portion extending through the aperture into the boiler; a partition wall between the upper and the lower holes; tubular members fixedly positioned in the holes in the rear of the head; the lower of the tubes being shorter than the upper of the tubes, the said lower tube being devised to receive colder water as it enters the device, the upper of said tubes adapted to transport the said water out of the device after it has been raised in temperature by contact with the contents of the boiler; a member bent upon itself forming the connection between the two tubes at their outer end, the lower portion of said connecting member being a longer channel than the upper portion accommodating the difference in length between the lower tube and the upper tube.



1,786,548. PRESSURE LUBRICATING SYSTEM. EARL F. PIERCE, Winnetaka, and DONALD H. SWEET, Evanston, Ill., assignors to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 27, 1925. Serial No. 26,191. 26 Claims. (Cl. 184—7.)

1. A pressure lubricating system comprising a plurality of machine elements to be lubricated, a single conduit com-



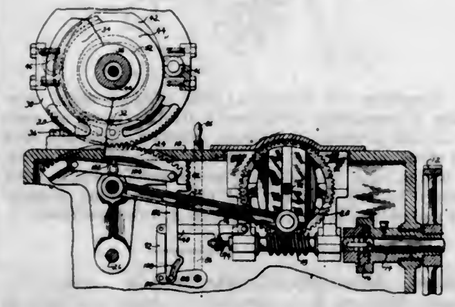
municating with all said elements, supply means for delivering lubricant under pressure to one end of said conduit, and valve control devices in the conduit adjacent each element, each device normally cutting off that portion of the conduit more remote from the supply and operating under a pressure impulse first to deliver a measured quantity of lubricant to its own element and second to cut off its element and simultaneously open the conduit beyond, and pressure indicating means at the end of the conduit beyond the last device.

1,786,549. METHOD AND MEANS FOR PREPARING INSULATING SLEEVES. THOMAS C. REED, Covington, Ky., and AUBREY D. ODELL, Cincinnati, Ohio, assignors to American Telephone and Telegraph Company, a Corporation of New York. Original application filed June 30, 1925, Serial No. 40,615. Divided and this application filed Sept. 22, 1926. Serial No. 137,084. 2 Claims. (Cl. 154—2.5.)

1. In a machine for producing insulating sleeves from a relatively long section of collapsed, flexible sleeving, the combination with a container for holding the fluid for impregnating the sleeving, of a mandrel to expand the sleeving, a plurality of grooved rollers to support the said mandrel, the said rollers being interconnected so that the movement of one effects the movement of the others, a framework supporting the said rollers, and guides fastened to the said container to slidably receive the said framework and to hold it in a desired position relative to the level of the impregnating fluid therein.

1,786,550. ROLLER SCREEN. JOHN H. STORY, Oakland, Calif. Filed Jan. 11, 1926. Serial No. 80,499. 4 Claims. (Cl. 156—39.)

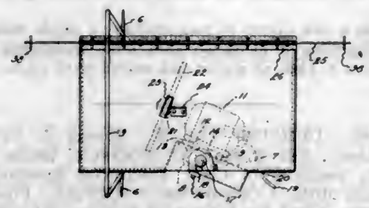
1. A screen roller of the character described comprising a non-rotatable shaft having an annular groove at one end thereof, a bushing rotatably mounted on said shaft intermediate said annular groove and the end of the shaft, a split ring seated in said groove, a spring influenced rotatable member surrounding said shaft and supported in spaced relation thereto.



1,786,551. GEAR-CUTTING MACHINE. FRANCIS T. SWAIN, Newcastle, Ind. Filed Mar. 26, 1927. Serial No. 178,594. 10 Claims. (Cl. 90—9.)

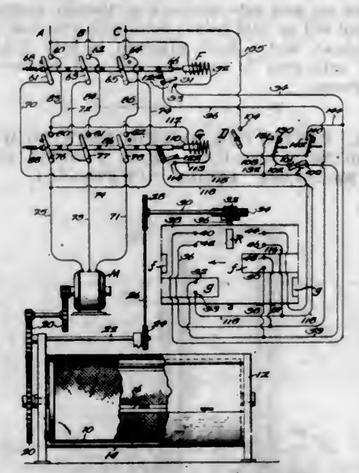
1. The method of cutting a gear which consists in cutting the face of one tooth in the direction of its roll, moving the gear away from one cutter during the return movement of the cutter to a position for cutting the face of another tooth by another cutter, cutting the opposite face of the other tooth in the direction of its roll and opposite to that of the first cutting operation, returning the gear to its first position during the return movement of the cutter after the second cutting operation, indexing the gear to cut a face of a tooth adjacent the tooth first cut, and repeating the aforesaid operations.

10. In a machine of the class described comprising, a gear supporting member, a gear secured to said member, a pair of cutting edges adjacent said support for cutting involute surfaces on the opposite faces of different teeth of said gear, an arm pivoted axially with said supporting member adapted for limited angular movement, a lock carried by said arm adapted for engagement with said toothed member, means for rocking said support thru said arm and lock in the direction of each cutting operation and before said cutting operation, means for rocking said support in the opposite direction to each of said cuts immediately after the cut has been made, means for indexing said support and gear, and means for disengaging said lock during the indexing movement of said support and gear.



1,786,552. GEAR-CUTTING MACHINE. FRANCIS T. SWAIN and MERLE C. ST. CLAIR, Newcastle, Ind. Filed Mar. 26, 1927. Serial No. 178,596. 9 Claims. (Cl. 90—9.)

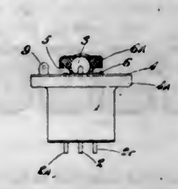
1. In a tool holder of the class described comprising, a pair of tool holding members pivoted on a common center, cutting tools in said tool holding members, an axially movable wedge between said tool holding members for moving them in opposite directions, and resilient means for holding said tool holding members against said wedge.



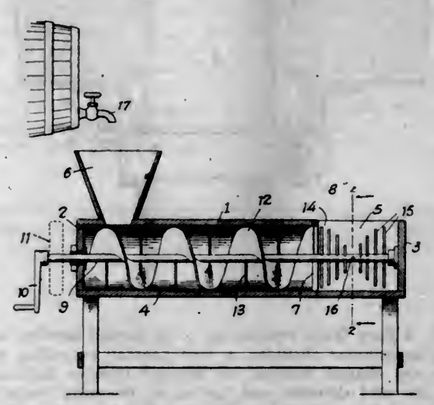
9. In a tool holder of the class described comprising, a pair of tool holding members pivoted on a common center, an axially movable wedge for angularly moving said tool holding members in opposite directions on their common center, angularly movable means for axially moving said wedge, a series of progressingly decreasing stops coacting between said angularly movable means and said axially moving wedge, and means for locking said tool holding members in adjusted position.

1,786,553. SKATE SHARPENER. HELMER THORNGREN, Detroit, Mich. Filed Apr. 11, 1927. Serial No. 182,646. 1 Claim. (Cl. 51—102.)

A skate sharpener comprising a frame, a motor adjustably mounted in said frame, an abrasive wheel mounted on the shaft of said motor, said abrasive wheel slightly extending through a slot in said frame, a guide plate spaced from said wheel and at a substantial acute angle to the axis of said wheel, said guide plate being formed with up-curved ends, a skate clamping member slidable on said guide plate and adapted to support the skate, the up-curved ends of the guide plate being adapted to rock the skate while in contact with said wheel, and a second guide member disposed adjacent said wheel for direct engagement with the skate.



1,786,554. MOTOR-CONTROL SYSTEM. HERMON L. VAN VALKENBURG, Wauwatosa, Wis., assignor, by mesne assignments, to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 19, 1926. Serial No. 142,026. 4 Claims. (Cl. 172—240.)

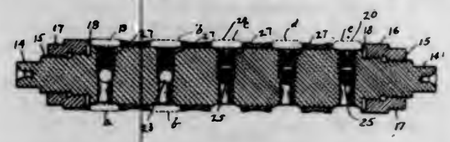


1. In a system for driving and periodically reversing a rotatable body, an electric motor for driving said body, magnetic switches, one for causing the motor to rotate forwardly and the other backwardly, a rotatable controller connected to said body to rotate therewith, the normal zone of operation of the controller being less than a complete revolution, and means controllable at will and independent of the controller for inching the motor to bring the controller back into the zone of operation in case it should over-travel.

1,786,555. RADIO CIRCUIT TESTING UNIT. THOMAS ALEXANDER DONALD WILSON and ERNEST REYNOLDS, Dunedin, New Zealand. Filed Mar. 12, 1926. Serial No. 94,238. 2 Claims. (Cl. 250—27.)

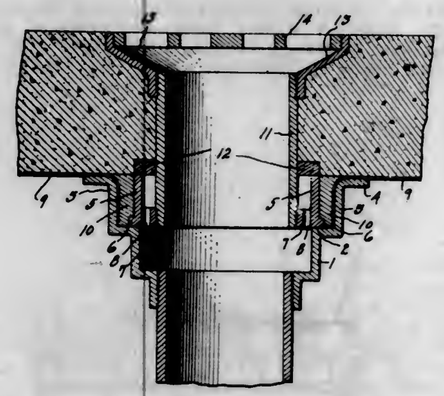
1. A testing unit comprising an insulating member adapted to cooperate with the vacuum tube socket of a radio set, four contact legs carried by said member and projecting below the same to electrically engage with the terminals of said socket, a metal plate carried by the upper surface of the member, a lamp socket on the upper surface of the member with one side in electrical connection with said plate and the other side in electrical connection with one of said legs, said plate being electrically connected with another of said legs, the remaining legs carried by the member being designed to electrically engage the grid and plate terminals of the socket respectively, contacts carried by and insulated from said plate and forming terminals of said last named remaining legs and of the leg connected to said plate, a polarity tester carried by and in electrical connection with said plate, and means also in electrical connection with said polarity tester and operative to selectively engage either of said contacts.

1,786,556. FEEDER AND DISINTEGRATOR OR MIXER. ROBERT V. ARNOLD, EMORY E. FLICKINGER, and SOLOMON E. WANTZ, Taneytown, Md. Filed July 3, 1929. Serial No. 375,714. 2 Claims. (Cl. 259—9.)



1. A device of the character described comprising a horizontal casing provided with a feed chamber having an inlet in its top at one end of said casing and a discharge chamber communicating with said feed chamber and having an outlet in its top at the opposite end of said casing, a feeder in the feed chamber for continuously forcing the material in a forward direction only therein from the inlet toward the discharge chamber, and means in the discharge chamber and arranged solely below the outlet in the chamber for moving the material back and forth in said chamber to give it a combined mixing and retarding action and to force its upward discharge through the outlet.

1,786,557. MEANS FOR MOUNTING BEARINGS ON ARBORS IN MULTIPLE. LOWELL C. BLOMSTROM, Detroit, Mich., assignor to Federal Mogul Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 6, 1927. Serial No. 211,088. 11 Claims. (Cl. 82—43.)

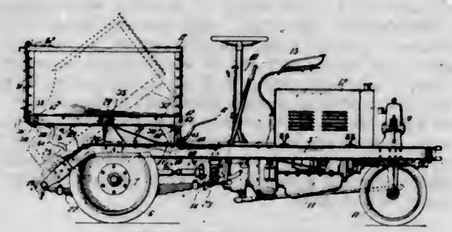


1. In combination with an arbor provided with oppositely threaded portions adjacent its ends, a supporting frame

provided with terminal abutments having seats wherein the ends of said arbor may be temporarily and non-rotatably positioned, a plurality of annular members adapted to be positioned about said arbor in alternating relation with bearing shells whose firm positioning for machining treatment is desired, and threaded terminal clamp members operatively engaging the correspondingly threaded

portions of said arbor and adapted to be moved toward and away from one another by induced rotative actuation lengthwise of said arbor, thereby forcing them and said annular members into marginal holding engagement with the edges of their adjacently positioned bearing shells, and holding the latter in temporarily immobile relation about the arbor.

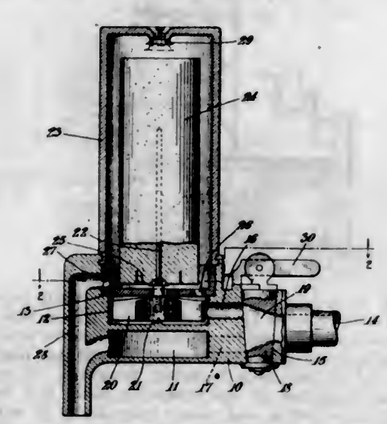
1,786,558. FLOOR DRAIN. EDWARD W. N. BOOSEY, Detroit, Mich. Filed July 20, 1927. Serial No. 207,068. 2 Claims. (Cl. 285—37.)



1. A floor drain comprising a cup shaped member having an annular shoulder, a lead flashing extending into the cup shaped member, an annular member positioned on the said shoulder and having an inwardly extending threaded flange provided with a series of apertures therethrough, a seepage ring positioned on the annular member, a nipple extending through the seepage ring and having one end threaded into the flange of the annular member a drainage head in threaded relation with the opposite end of the nipple, the seepage ring allowing seepage between the annular member and the nipple and through the apertured flange of the annular member, the space between the annular member and the lead flashing being filled with caulking to the level of the top of the cup shaped member securing the flashing and the annular member in position.

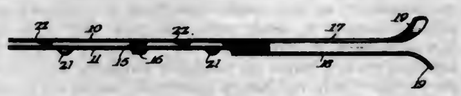
1,786,559. PROCESS FOR THE PRODUCTION OF SOLID MILK AND CREAM PREPARATIONS. PHILIPP BORN, Bad Homburg, Germany, assignor, by mesne assignments, to the Firm of Naamlooze Vennootschap Nederlandsche Gruyère-Blokmelk Fabriek, Zwolle, Netherlands. Filed Feb. 26, 1926, Serial No. 90,973, and in Germany Feb. 27, 1925. 11 Claims. (Cl. 99—5.)

7. Process for making solid, stable milk and cream preparations which consists in heating the milk, together with added sugar, with stirring in a vacuum until enough water is removed to cause the milk to form a mass capable of holding its shape, forming the resulting milk mass into blocks, and providing the blocks with a coating of cocoa-butter.



10. As a new article of manufacture, a stable milk product comprising a block of solid milk containing added sugar and 6–15% of water and coated with cocoa-butter.

1,786,560. DUMPING TRUCK. ROBERT J. BURROWS, Buchanan, and HARLOW D. BUANSIDE, Battle Creek, Mich., assignors to Clark Tructractor Company, Buchanan, Mich., a Corporation of Michigan. Filed June 9, 1926. Serial No. 114,670. 3 Claims. (Cl. 298—38.)

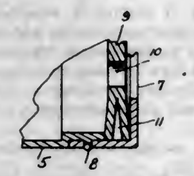


1. In a dump truck of the class described, a frame-work including side members, bosses attached to said side members, and projecting upward therefrom, a dumping bed pivotally mounted on said bosses, a counterweight attached to said bed, said weight being recessed to fit between and on said side members to thereby support one end of said bed on said frame, latch pins attached to said counterweight, and a latch attached to said frame and engaging said pins to hold the bed and counterweight on said frame.

1,786,561. DEVICE FOR SOAPING FLOWING WATER. EDWARD COLLENBURG, Corona, N. Y. Filed Feb. 16, 1928. Serial No. 254,639. 1 Claim. (Cl. 299—84.)

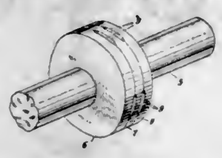
A device of the character described comprising a casing having a horizontal partition dividing it into upper and lower compartments, an impeller wheel rotatably mounted in the lower compartment, a soap carrier arranged in the upper compartment, means connecting said soap carrier to said impeller wheel for rotation therewith, a port connecting said compartments, an inlet conduit leading to said lower compartment and an outlet conduit leading from the bottom of said upper compartment, and a reversed relief valve for said upper compartment.

1,786,562. HEAT-INSULATING DEVICE FOR COOKING UTENSILS. CHARLES ENDORF, Chicago, Ill. Filed Aug. 17, 1927. Serial No. 213,487. 5 Claims. (Cl. 126—215.)



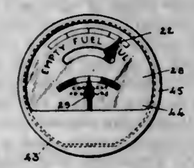
1. A device of the class described, comprising a plurality of rotatably related plates, one of said plates having a plurality of annularly spaced depressions formed therein, a plurality of annularly spaced lugs formed on the other of said plates and adapted to register with said depressions in a manner to permit the adjacent faces of said plates to contact each otber a pivot member operatively related to and connected with said plates, and means associated with said plates for relatively shifting the plates angularly with respect to each other in a manner to move said lugs out of said depressions for separating the adjacent faces of said plates and providing an air space therebetween.

1,786,563. CELLULAR COMPOSITION AND METHOD OF MAKING SAME. HARRY L. FISHER, Leonia, N. J., assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1926. Serial No. 157,617. 12 Claims. (Cl. 18—53.)



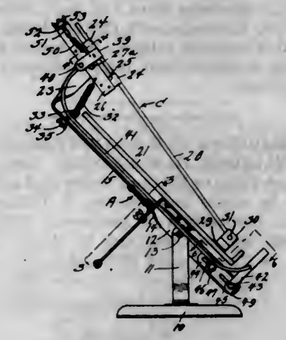
4. The herein described method of preparing a cellular composition by treating at elevated temperatures rubber containing sulfur with a substance of the generic formula $R—SO_2—X$.

1,786,564. COMBINED TAIL LIGHT AND LICENSE PLATE. THOMAS FISHER, Minatare, Nebr. Filed Apr. 30, 1930. Serial No. 448,571. 2 Claims. (Cl. 40—133.)



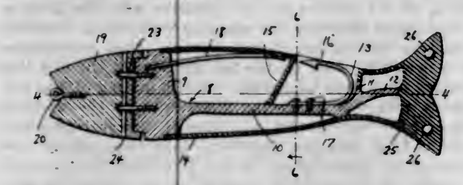
1. In an apparatus of the class described, a casing, a rim engageable over one edge of the casing, a panel held in place on said edge of the casing by said rim, said panel having its edge split with the parts immediately adjacent the split normally spread apart to be compressed together by the rim thereby preventing rattling of the panel.

1,786,565. THRUST BEARING. ALBERT E. FREEMAN, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 18, 1927. Serial No. 226,906. 2 Claims. (Cl. 308—164.)



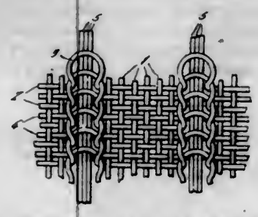
1. The combination of a plurality of self-lubricating bearings comprising a series of contacting disk-like members having flat surfaces with coinciding central apertures provided for a shaft, a plurality of wedge-shaped grooves extending in spaced relation from each other on the flat surfaces of the disk-like members from their peripheries to their central apertures, said grooves comprising beveled side portions and an intermediate depressed portion, said disk-like members being mounted to rotate at relatively different speeds to permit the periodic mating of the grooves of said members with the grooves of contiguous members whereby lubricant enters channels formed by the mating of said grooves, thus reestablishing a new film of oil on the flat surfaces of the disk-like members upon each succeeding periodic mating of the two grooves, said new film being maintained by the wedging action of the lubricant on both sides of the contacting surfaces of the disk-like members which counteracts the tendency of displacement of the lubricant which might be caused by the pressure exerted on the contacting surfaces of the disk-like members.

1,786,566. COMBINED LIQUID LEVEL AND PRESSURE GAUGE. HERBERT HASTINGS, Brighton, N. Y. Filed July 25, 1927. Serial No. 208,098. 32 Claims. (Cl. 73—82.)



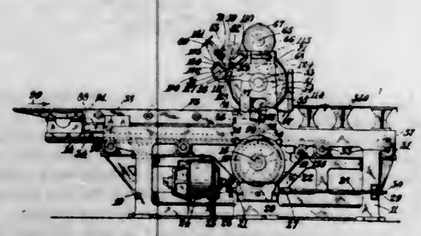
2. In a combined liquid level and pressure indicator adapted to be mounted on a tank and forming a pressure sustaining chamber therewith, and a dial chamber, there being an impervious wall between said chambers having a portion thereof that is pressure responsive with sufficient movement for operating the pressure indicator, a liquid level indicator and a pressure indicator in said dial chamber, means by which said pressure responsive portion of said wall transmits motion to said pressure indicator and magnetic means transmitting motion through said impervious pressure responsive wall to said liquid level indicator.

1,786,567. BOOKHOLDER. CHARLES JOSEPH HILKEY, Emory, Ga. Filed Sept. 14, 1928. Serial No. 305,926. 7 Claims. (Cl. 120—34.)



1. In a book holder, book supports, a supporting frame, a bearing carried by the frame, above the planes of the book supports near their upper ends, said bearing including spaced sleeves, a line guide including a guide bar and a guide rod secured to said bar and slidable in said sleeves, and a spacer comprising a jaw embracing the rod between the sleeves, and provided with a projecting portion, an actuating device positioned to exert a pull against the projecting portion of the jaw in such a manner as to twist the jaw into gripping engagement with the rod.

1,786,568. ARTIFICIAL BAIT. WALTER G. KUTZ, Toledo, Ohio. Filed June 13, 1929. Serial No. 370,631. 1 Claim. (Cl. 43—46.)

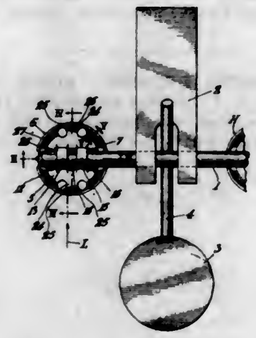


As a new product of manufacture, an artificial bait comprising a body portion including a rigid frame having an enlargement at one end defining the forward end portion of the body and having a right angularly extending longitudinal partition member, a compressible rubber casing attached to the enlargement and extending rearwardly over the partition member in spaced relation to the upper and lower sides thereof and in abutting engagement with the longitudinal side edges of said partition member and defining the intermediate and rear portions of the body and the tail, said casing cooperating with said partition member in forming a pocket, a hook concealed in said pocket, spring means carried by the enlarged end portion of the frame and bearing against the adjacent portion of the casing to yieldingly urge the same outwardly, eye bolts carried by said enlarged portion, and a head including a pivot pin pivotally connected with said eye bolts, said head being movable in a horizontal plane with respect to the body portion.

1,786,569. FABRIC. CHARLES F. LEE, Philadelphia, Pa., assignor of one-half to Warren P. Griffiths, Philadelphia, Pa. Filed Mar. 19, 1930. Serial No. 437,094. 6 Claims. (Cl. 139—383.)

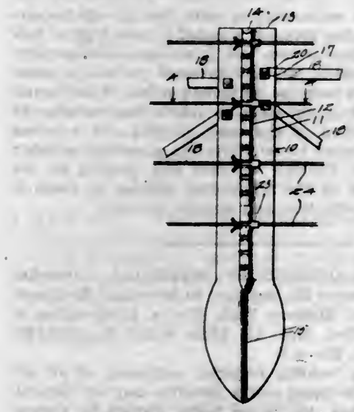
1. A fabric comprising warp and weft threads forming woven sections, alternate weft threads being interlooped to form knitted sections between the woven sections and the remaining alternate weft threads directly connecting the woven sections.

1,786,570. MACHINE FOR TRANSFERRING DESIGNS ON TO CYLINDRICAL SURFACES. LESLIE LINZELL, London, and THOMAS EWART PHYTHIAN, Leeds, England, assignors, by mesne assignments, to Lithoprintex Corporation, a Corporation of Delaware. Filed Sept. 20, 1929, Serial No. 393,882, and in Great Britain Oct. 24, 1928. 14 Claims. (Cl. 101—33.)



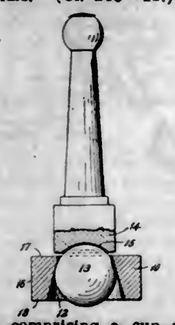
1. An offset printing machine of the character described, comprising in combination a reciprocatory bed having a flat surface for bearing a design to be transferred, a toothed rack movable with and extending in the direction of movement of said bed, a resilient cylindrically curved surface operatively related to said flat surface to receive an impression of the design therefrom, a mutilated gear wheel arranged to mesh with said rack and drive said curved surface, driving means for reciprocating said bed and said rack, a roller for rotatably engaging said curved surface to receive the design therefrom, means for producing a slight predetermined difference in the peripheral velocities of said roller and its engaging resilient surface, locking means arranged to lock said gear wheel against rotation during the return movement of the rack, and trip mechanism that is movable with said bed, which locking means comprises a stop carried by said gear wheel, a spring-controlled detent that is carried by said bed and is movable into and out of locking engagement with said stop, and a fixedly pivoted catch for holding said detent in its unlocking position, and which trip mechanism comprises two trip members, one at or towards each end of the bed, arranged respectively to coact one with said catch to release it from said detent, and the other with said detent to disengage it from said stop and engage it with said catch, at the two ends of travel of the bed.

1,786,571. METHOD OF MAKING HEAT-EXCHANGER TUBES. WILLIAM LONSDALE, Roselle Park, N. J., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1929. Serial No. 343,221. 17 Claims. (Cl. 29—157.3.)



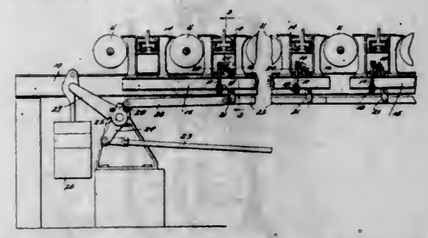
1. The method of making a seamless heat exchanger tube consisting in first reducing an end portion of an oversized tubular body to the desired transverse section of the finished tube, and then forming an integral fin in the oversized tubular body and in doing so reducing its transverse section to that of the previously reduced end portion thereof.

1,786,572. DOLL EYES. SAMUEL MARCUS, Riverdale, N. Y., assignor to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 25, 1929. Serial No. 334,896. 3 Claims. (Cl. 46—40.)



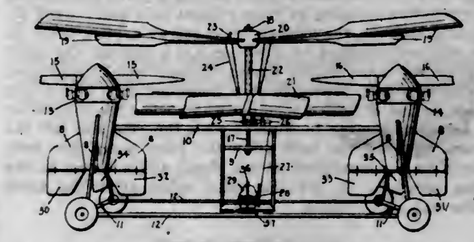
1. A doll eye set comprising a cross rod, means to rotatably support the cross rod, a pair of eyes, and means by which said eyes are connected with the cross rod, the means by which at least one of said eyes is connected with the cross rod consisting of a back plate formed as a part of the eye and having a plurality of yokes pressed therein projecting in alternate opposite directions to collectively form a bearing within which the cross rod frictionally engages, said yokes each being of resilient material and each being shaped to constitute two leaf-spring sections, each leaf-spring section having frictional engagement with the cross rod at the mid portion only of the length of the respective section, the opposite end portions of the respective sections projecting tangentially away from the cross rod, the bearing thus defined by said leaf spring sections providing four points of contact with the cross rod spaced substantially equi-distant circumferentially of the cross rod and being normally too small to receive the cross rod but the flexibility of the leaf spring sections enabling forced insertion of the cross rod.

1,786,573. FENCE-POST CONNECTION. JOHN B. MASBRANG, Belleville, Ill. Filed Mar. 2, 1929. Serial No. 344,076. 1 Claim. (Cl. 256—56.)



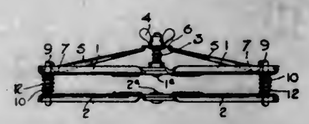
A fence post having longitudinal ribs one of which is formed with transverse wire receiving notches, each of said notches opening through the outer face of the rib in a narrow throat resulting in shoulders within the notch, said notch having upper and lower parallel walls and an inner arcuate wall, and a longitudinally split wedge member disposed transversely in the notch in engagement with said parallel walls, and bearing against said shoulders and said fence wire, the portions of the split being arranged to be spread, the inner wall of the notch being arcuate longitudinally of the rib whereby to maintain the wire against movement upwardly or downwardly from a position centrally behind within said notch.

1,786,574. VISCOMETER. ANTHONY G. M. MICHELL, Melbourne, Australia. Filed July 20, 1928. Serial No. 294,202. 6 Claims. (Cl. 265—11.)



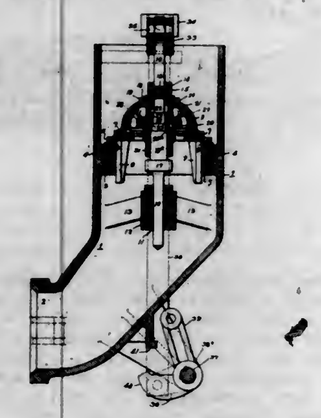
1. A viscometer comprising a cup and a ball having interfitting surfaces, said cup having a handle connected thereto, and a supplemental weight detachably carried by the ball and supported directly thereon.

1,786,575. CONVEYER TABLE. ERIK W. MIKAELSON, Easton, Pa., assignor to Treadwell Engineering Company, Easton, Pa., a Corporation of Pennsylvania. Filed Sept. 11, 1928. Serial No. 305,245. 13 Claims. (Cl. 80—44.)



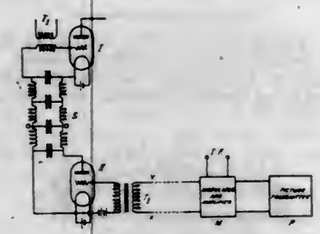
13. The combination with a run-out table for rolling mills having a series of rollers thereon for receiving and conveying metal blanks from a mill, of a cooling bed arranged laterally of said table, means for engaging and elevating the conveyed blanks to a position above said rollers, mechanism for moving said means through a curved path approximating the contour of the rollers into blank engaging position, and means for shifting said blanks onto said cooling bed.

1,786,576. HELICOPTER. HARRY TRACY NELSON, Dallas Tex. Filed Jan. 25, 1930. Serial No. 423,894. 3 Claims. (Cl. 244—19.)



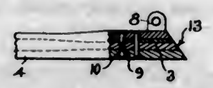
1. In a helicopter, the combination of a frame, motors with horizontal propellers mounted on opposite sides of the frame, a large horizontal propeller mounted on a vertical axis above the center of the frame, the lower hub of which is extended downward with a smaller propeller fixed near the lower end of the hub, said propeller being free to rotate horizontally with the large propeller, means for controlling the direction of the machine and means for varying the pitch of the large propeller.

1,786,577. PRESS FOR TENNIS AND LIKE RACKETS. REUBEN PURCELL, East Finchley, London, England. Filed July 11, 1928, Serial No. 291,845, and in Great Britain July 13, 1927. 4 Claims. (Cl. 273—74.)



1. A press for tennis rackets comprising two frames each consisting of a pair of rigid bars intersecting each other at about their centres so as to produce two X shaped frames, a pivot pin passed through the intersecting parts of each of the frames so that the ends of the bars of each frame may be moved towards and away from each other, an abutment threaded on one of said pivot pins, links connecting the outer ends of the two frames, abutments on said links, levers lying along the bars of one of the X shaped frames and engaged with said threaded abutment and the abutments of said links.

1,786,578. THROTTLE VALVE. MENAHEM RIVKIN, Philadelphia, Pa. Filed Sept. 25, 1929. Serial No. 395,097. 2 Claims. (Cl. 277—37.)

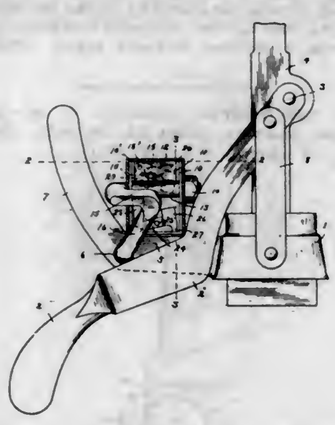


1. The combination in a throttle valve, of a casing; a seat in said casing; a multiple throttle valve, the outer section of the valve arranged to rest upon said seat, said outer section having two hubs, one located above the other, the said outer section having radial spaces between the two hubs, the outer section having a valve seat and an inner section adapted to close against said seat; a rod extending through the said throttle valve; a pilot valve on the said rod adapted to close against a seat on the inner section, the inner section having internal ribs bearing upon the valve steam, the valve stem being enlarged below said inner section to form a shoulder which when the valve stem is raised will come in contact with the ribs and lift the inner valve off its seat after the pilot valve has been raised on the movement of the stem; and a collar on the stem arranged to lift the main valve after the inner valve has been raised.

1,786,579. METHOD OF INTERMEDIATE FREQUENCY MODULATION INSIDE A RADIO-FREQUENCY MODULATOR TUBE. OTTO SCHRIEVER, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Nov. 21, 1928. Serial No. 320,827. 4 Claims. (Cl. 179—171.)

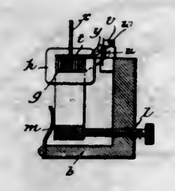
1. In a signal transmission system, a transmitter tube circuit including means for generating a carrier wave for the signals to be transmitted, a modulator tube circuit, and a source of intermediate frequency energy, means for modulating said intermediate frequency energy in accordance with signals desired to be transmitted means for impressing said modulated intermediate frequency energy on said modulator tube circuit, means comprising the modulator tube for demodulating said energy, means comprising said modulating tube for modulating said carrier wave with said demodulated energy and means intermediate said transmitted tube circuit and said modulator tube circuit for preventing said intermediate frequency energy from being impressed upon said transmitter tube circuit.

1,786,580. OPHTHALMIC MOUNTING. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 9, 1928. Serial No. 245,600. 6 Claims. (Cl. 88—52.)



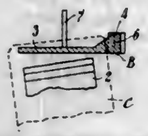
1. The process of making a part for an ophthalmic mounting comprising forming a metallic core with a flattened portion adjacent one end, pressing a non-metallic tube over the metallic core and flattened portion to cause the tube to flatten over the flattened portion of the metallic core, securing a non-metallic reinforcing member to the flattened portion of the tube, shaping out a recess for a metallic member therein, riveting a metallic member in the recess and through the core and shaping up the remaining portion of the reinforcing member to blend it with the non-metallic tube and metallic member.

1,786,581. ARC-QUENCHING MATERIAL. GODFREY STEERUP, Maywood, Ill., assignor to Electrical Engineers Equipment Co., Melrose Park, Ill., a Corporation of of Illinois. Filed Mar. 19, 1928. Serial No. 262,966. 6 Claims. (Cl. 23—8.)



5. A conductor bedding material composed of an arc quenching volatile liquid and a metallic soap of naturally solid consistency, the latter being jellified by absorption of the former at ordinary temperatures and the liquid being volatile at temperatures occurring adjacent to fuse elements as the latter heat up under load.

1,786,582. GRAVITY LOCK. PETER SWANSON, Ely, Minn. Filed Oct. 3, 1927. Serial No. 223,673. 5 Claims. (Cl. 70—128.)

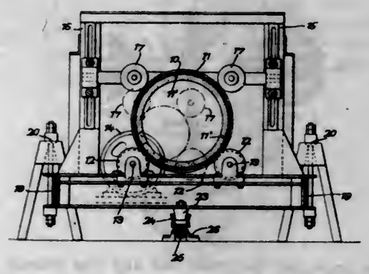


1. A gravity lock of the type described comprising a housing, a gravity bolt having pivotal connection within the housing, and means independent of the housing for automatically holding the bolt in unlocked position.

1,786,583. ELECTRICALLY-OPERATED VIBRATORY DEVICE. MAURICE TROUTON, Buckinghamshire, England, assignor to Wireless Music Limited, London, England. Filed Feb. 29, 1928, Serial No. 257,971, and in Great Britain Apr. 1, 1927. 12 Claims. (Cl. 175—336.)

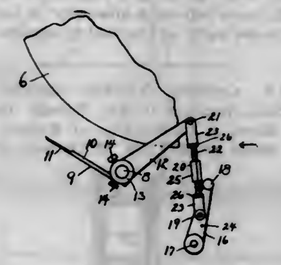
1. An electrical vibratory device comprising a magnet pole, a supporting bar clamped at both ends, and an armature of magnetic material projecting from said supporting bar, the co-operating surfaces upon the magnet pole and armatnre being inclined to one another when the magnetic force between said surfaces is reduced to zero, the inclination being such that if the armature is displaced to an extent which brings the co-operating surfaces into contact, the angle between said co-operating surfaces is less than it would be if no relative inclination were provided at zero magnetic force.

1,786,584. ELECTROMECHANICAL VIBRATION-TRANSLATING DEVICE SUCH FOR EXAMPLE AS LOUD-SPEAKERS. MAURICE TROUTON, Buckinghamshire, England, assignor to Wireless Music Limited, London, England. Filed July 19, 1928, Serial No. 293,961, and in Great Britain Aug. 5, 1927. 13 Claims. (Cl. 175—336.)



1. A vibratory device comprising an armature mounted for vibration about an axis, a magnet pole surface adapted to co-operate with a surface of said armature, means adapted to vary the force between the armature and magnet pole surface in accordance with electrical oscillations, a member adapted to be driven by said armature, and means connecting the armature with said member, said connecting means being attached to the armature at a point situated between the centre of said cooperating surfaces and the ends thereof nearer said axis.

1,786,585. DEVICE FOR HOLDING LOOMS ON CABLES. HERBERT E. WALKER, Los Angeles, Calif. Filed Nov. 26, 1927. Serial No. 235,765. 1 Claim. (Cl. 173—266.)

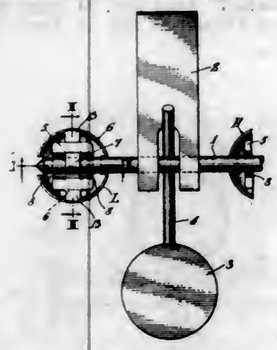


A means for protecting a flexible cable, said means comprising a pair of bendable metal sleeves slidably mounted on said cable, each of said sleeves having an enlarged socketed end, said sleeves being disposed with their socketed ends extending toward each other, and a flexible metal loom disposed on said cable between said sleeves, said loom being of less length than the flexible cable, the loom and the sleeves being adjustable along the cable, the ends of the loom engaging in the socketed ends of the metal sleeves and the smaller ends of said sleeves being adapted to be indented into the cable to retain the sleeves and the loom in immovable relation to said cable.

1,786,586. METHOD AND AN APPARATUS FOR MANUFACTURING HOLLOW BODIES. GEORGES WALTER, Perroy, Switzerland. Filed Aug. 14, 1929, Serial No. 385,934, and in Switzerland Aug. 18, 1928. 5 Claims. (Cl. 25—30.)

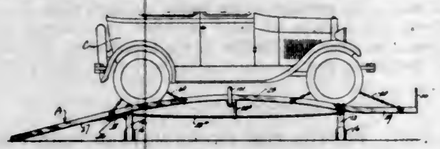
4. A machine for manufacturing hollow bodies centrifugally, comprising in combination, a mould adapted to permit passage of a liquid therethrough, means for imparting a rotation to said mould, and filter means detachably fixed to said mould and adapted to oppose a resistance to the passage of the liquid through them and to prevent the passage of solid particles, said means comprising a member non-flexible in the longitudinal direction and flexible in the circumferential direction, and a filter cloth.

1,786,587. DOCTOR FOR PAPER-MAKING MACHINES. JOHN WENZEL, Chillicothe, Ohio. Filed Nov. 11, 1929. Serial No. 406,275. 3 Claims. (Cl. 92—74.)



1. A doctor for paper making machines including a shaft, a doctor thereon, a lever connected to one end of said shaft, a handle pivoted at one end, an adjustable connecting rod having one end pivoted to the handle intermediate the ends of the latter and the other end pivoted to the lever and a stop pin on the handle to one side of the longitudinal center thereof and between its pivot point and the pivotal connection of the connecting rod with said handle.

1,786,588. DOLL EYES. JOHN H. WILHELM, Rockaway Beach, Long Island, N. Y., assignor to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 14, 1929. Serial No. 339,779. 5 Claims. (Cl. 46—40.)

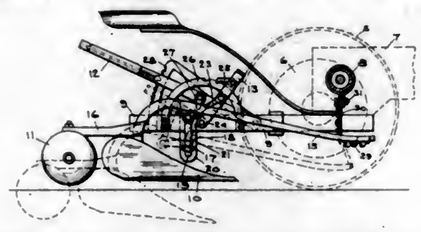


1. A doll eye set comprising a cross rod, means by which to rotatably support the cross rod in a doll head, a gravity control for the cross rod, and a pair of eyes connected with the cross rod, the means by which one of said eyes is connected with the cross rod consisting of a back plate carried by the eye having a plurality of oppositely disposed yokes pressed up from the material thereof col-

lectively providing a bearing within which the cross rod engages, and said yokes each being of double thickness one

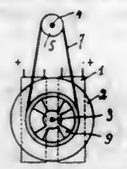
thickness engaging the cross rod and the second thickness being out of engagement with the cross rod and overlying and pressing against the first thickness.

1,786,589. TILTING DEVICE FOR VEHICLES. ALVA WILLIAMSON, San Bernardino, Calif. Filed Nov. 2, 1929. Serial No. 404,312. 6 Claims. (Cl. 214—1.)



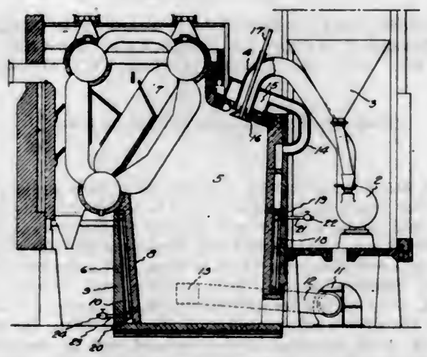
1. In a vehicle tilting device a base supporting construction having elevated tracks suported thereon in spaced substantial parallelism, said tracks having the portions thereof over which the vehicle wheels travel for the major distance convexed upwardly to facilitate clearance of the under parts of the vehicle chassis.

1,786,590. CASING RIPPER. ROBERT ALTHAUSEN, Ranger, Tex., assignor to The Eureka Tool Company, Augusta, Kans., a Corporation of Kansas. Filed Feb. 4, 1929. Serial No. 337,279. 3 Claims. (Cl. 81—188.)



1. A casing ripper comprising an elongated slotted body member, an eccentrically pivoted cutter in the body member having a cutting portion projectable through the slot, a spring for normally urging the cutter into cutting engagement, a bolt projectable into the end of the slot to retract the cutter within the slot and a latch bolt for holding the first named bolt in cutter retracting position.

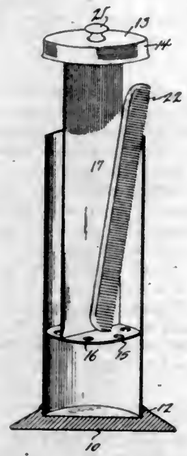
1,786,591. LISTER ATTACHMENT FOR TRACTORS. WILLIAM M. ANDERSON, Brownville, Nebr., assignor of one-half to Arch Hosterman, Brownville, Nebr. Filed Aug. 19, 1929. Serial No. 386,799. 5 Claims. (Cl. 97—47.)



1. In lister attachments for a tractor, buffer-bars secured to and projecting below a part of the tractor, a frame rigidly secured to the tractor, a crank shaft journalled to permit rocking movements of its arms at the sides of the frame, a pair of lister-beams provided with ground-engaging elements, each beam being journalled on an arm of the crank shaft and disposed with one of its ends below a buffer-bar, and a pair of chains connecting the beams with said buffer-bars.

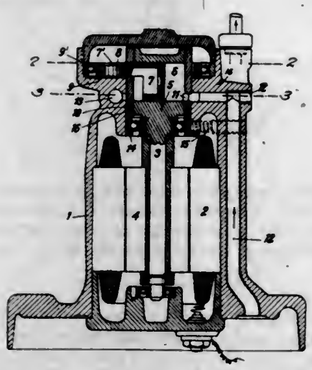
1,786,592. ELECTROPLATING APPARATUS. KAZIMIERZ BARANOWSKI, Paris, France, assignor to Wladimir J. Einstein, London, England. Filed Oct. 29, 1928, Serial No. 315,893, and in Great Britain Dec. 21, 1927. 4 Claims. (Cl. 204—5.)

1. In electro-plating apparatus the combination of an electrode, a rotatable cleaning brush in contact therewith and vanes upon the cleaning brush so located as to move the electrolyte radially through the brush bristles over the electrode surface.



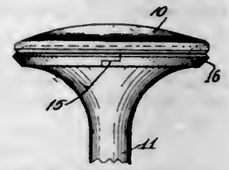
1,786,593. FURNACE. RAYMOND C. BENNER, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Dec. 13, 1927. Serial No. 239,724. 15 Claims. (Cl. 122—6.)

1. In a furnace, a combustion chamber having a wall with a refractory lining comprised principally of silicon



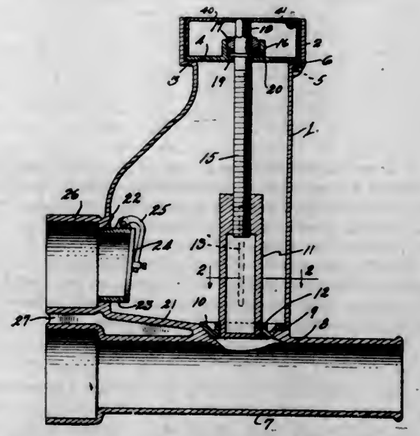
carbide, said lining having a thermal conductivity many times that of fire clay, water-tight conduits in said wall structure, an air passage in said wall structure, and means for forcing a current of air through said air passage.

1,786,594. STERILIZING CONTAINER FOR BARBERS. CECIL C. BETZER, Bronson, Iowa. Filed Jan. 7, 1929. Serial No. 330,828. 1 Claim. (Cl. 312—78.)



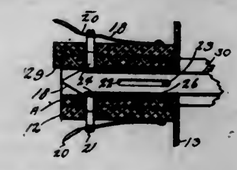
A sterilizing container for barber's instruments comprising a container proper of upright tubular form, a cover therefor, a perforated false bottom to support instruments within the container, and a partition member, extending substantially from side to side of the container proper, secured rigidly to the false bottom and to the cover, serving to support the false bottom from the cover, and dividing the container into plural compartments, whereby the instruments will be separated and held in nearly upright positions.

1,786,595. AIR COMPRESSOR. BERNHARD BISCHOF, Winterthur, Switzerland, assignor of one-half to Charles Haccius, Cologny-Geneva, Switzerland. Filed Nov. 12, 1927, Serial No. 232,884, and in Germany Nov. 15, 1926. 3 Claims. (Cl. 230—176.)



1. In an air compressor, in combination, a rotating shaft having a cross bore constituting a working cylinder, a piston reciprocable in said cylinder, an electric motor armature carried by said shaft, a stator casing, a shaft bearing containing radial fluid inlet and discharge ports, a ball bearing arranged on the shaft and including an outer ring fitting with small play into the bearing containing the ports, and a pressure device forcing said ring against that side of the bearing containing the discharge ports.

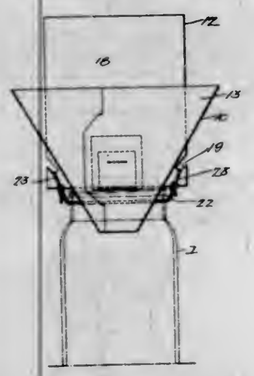
1,786,596. VALVE WITH REMOVABLE RING SEATING SURFACE. RICHARD E. BISSELL, Cleveland, Ohio, assignor to Thompson Products, Inc., a Corporation of Ohio. Filed Feb. 9, 1928. Serial No. 253,139. 8 Claims. (Cl. 251—159.)



1. A valve having a groove in the face portion thereof, and a split ring having overlapping ends and seating in said groove, said ring being initially formed as a helix whereby sealing pressure will be applied to the split when said ring is seated in said groove.

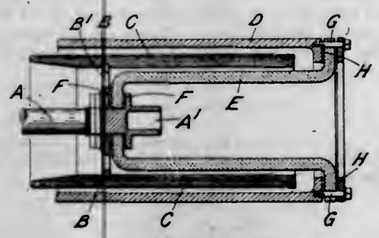
1,786,597. DRAINAGE FITTING. EDWARD W. N. BOOSEY, Detroit, Mich. Filed Aug. 22, 1929. Serial No. 387,572. 7 Claims. (Cl. 182—25.)

1. A drainage fitting comprising a chambered casing having an inlet on one side, a swing check valve adapted to prevent back flow from the casing through the opening, a conduit formed integrally with the bottom of the casing, there being an opening in the bottom of the casing providing for a discharge therefrom to the conduit, and a valve for controlling the opening.



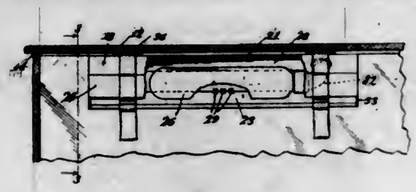
1,786,598. ELECTRICAL CONNECTER. WILLIAM H. BROER, Yankton, S. Dak. Filed Sept. 3, 1929. Serial No. 389,983. 6 Claims. (Cl. 173—330.)

1. In a safety electrical plug connecter, a socket, provided with a pair of opposed openings, a pair of contact



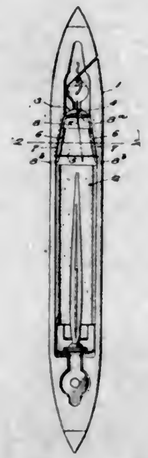
points mounted in said openings, in positions removed from the inner surface of the socket, resilient means supporting the contact points in said positions and allowing them to recede from said positions, a plug comprising a shaft, a handle on the shaft, a sleeve longitudinally slidable on the shaft, receivable in the socket, and provided with a pair of opposed openings adapted to register with the socket openings, a pair of contact points mounted in said openings, resilient means supporting the contact points, and current carrying devices on the shaft connected with the contact points of the sleeve, the shaft being provided with means to spread said last mentioned contact points while moving longitudinally in the sleeve.

1,786,599. BEETLE TRAP. EDWARD S. BULLOCK, Lansdowne, Pa. Filed Apr. 1, 1930. Serial No. 440,781. 5 Claims. (Cl. 43—107.)



1. A trapping element for a trap of the type described, comprising a cone having diametrically-opposed longitudinally-extending slots, a baffle comprising a sheet having a width slightly greater than the diameter of the cone at the lower ends of the slots and less than the diameter of the cone at the upper end of the slots, having its corners extending through said slots and seating on the lower end walls thereof, and means coacting with said corners for securing said baffle in position in the cone.

1,786,600. ELECTRIC COUPLING. FRANK COATES, Cleadon, England, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Jan. 3, 1929, Serial No. 329,991, and in Great Britain Mar. 6, 1928. 3 Claims. (Cl. 173—353.)

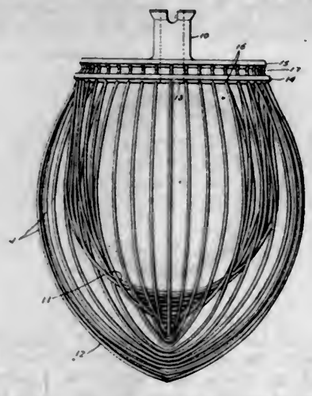


1. A metal-clad electric coupling of the condenser orifice type comprising a conductor, a tubular condenser supported around said conductor, a metal casing around said condenser, and an inner member of impervious insulating material separate from the condenser, said inner member being attached to said conductor and forming a closed joint with the outer end or mouth of said metal casing.

1,786,601. DISPLAY LIGHT FOR SHOW CASES. CLARENCE W. COLE, Los Angeles, Calif. Filed July 22, 1929. Serial No. 379,947. 2 Claims. (Cl. 240—6.)

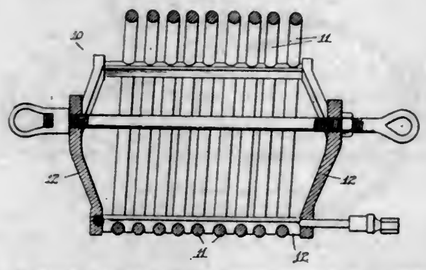
1. A reflector for show cases comprising a substantially U-shaped metal housing member having two of its walls bent at right angles to each other in order to snugly fit into a right angled corner of a glass show case, an auxiliary strip member having a loop formed therein secured to one of the longitudinal edges and extending upwardly and around the angled corner of said reflector housing, the end being disposed on the uppermost wall, and a bendable strip member for supporting the reflector formed of relatively thin metal adapted to be passed through the cemented edge of a wall of a show case, the outer end of said auxiliary strip being passed through the loop of the strip member and bent downwardly in the form of a tongue to engage the front vertical wall of the show case, its free end being secured to the forward edge of the housing member.

1,786,602. THREAD GUIDE FOR SHUTTLES. WILLIAM PINCKNEY CRAIG, Shelby, N. C. Filed May 15, 1930. Serial No. 452,762. 6 Claims. (Cl. 139—218.)



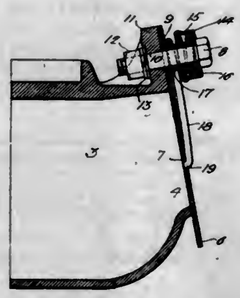
1. A shuttle having a bobbin chamber, a thread guide of flexible material extending transversely across said chamber, and a spring clip for resiliently gripping portions of said thread guide between itself and the side walls of the shuttle.

1,786,603. WHISK WHIP. ALBERT S. DAWSON, Glenville, Conn., assignor to Read Machinery Company, York, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1930. Serial No. 444,516. 2 Claims. (Cl. 259—144.)



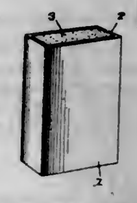
1. A whisk whip comprising a head and a series of bowed wires graduated as to length, each extending diametrically of the head and having its ends secured thereto, the ends of each wire when secured being adjacent to but circumferentially displaced from the ends

of the next shorter wire of the series and having the central portion of the bow thereof extending over the cor-



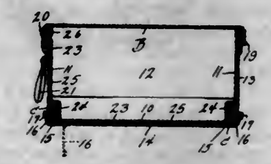
responding portion of the preceding wire, the side portions of each of the bows being radially spaced from the side portions of adjacent bows.

1,786,604. CHOKE COIL. ABRAHAM BERNARD DIBNER, Peekskill, N. Y. Filed Sept. 7, 1929. Serial No. 390,896. 3 Claims. (Cl. 175—356.)



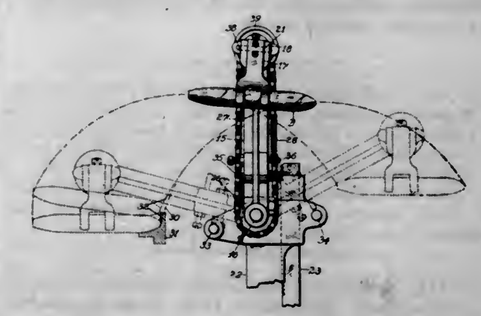
1. A choke coil of the character described, comprising a frame of non-conductive bronze consisting of copper, phosphorus, nickel, and silicon.

1,786,605. AXLE-BOX LID. EDWARD GROVER DURNING, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 19, 1929. Serial No. 341,166. 5 Claims. (Cl. 308—48.)



5. In a journal box having an opening therein, a closure for said opening, a pivot bolt carried by the journal box and extending through the closure adjacent the periphery thereof and a single means applying tension to the closure forcing it into engagement with the journal box, said means applying tension to the lid in surrounding relation to the bolt and at the center of the lid.

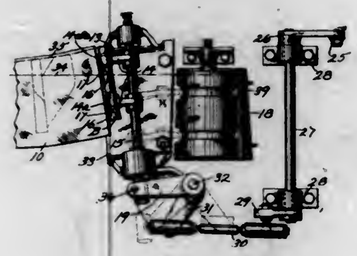
1,786,606. FROZEN CONFECTION. EDWARD L. GORDON, Pittsburgh, Pa. Filed Sept. 10, 1930. Serial No. 481,043. 6 Claims. (Cl. 99—16.)



3. A confection comprising a relatively flexible chewing gum casing and a mass of ice cream retained therein.

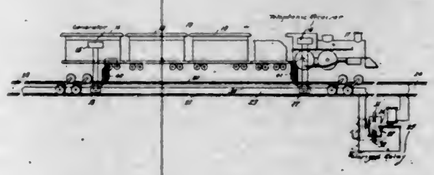
1,786,607. COMBINATION SUITCASE AND CARD TABLE. FRANK GUNCHICK, Walthill, Nebr. Filed July 27, 1928. Serial No. 295,682. 5 Claims. (Cl. 190—12.)

1. In a combination suit case and table, a receptacle body including side walls, end walls and a bottom wall of relatively thin material, said bottom wall having longitudinal openings separating it from the side walls, a lining of thin sheet material secured to the side walls throughout a portion of their height and spaced therefrom near the bottom wall to form longitudinally extending leg receiving pockets communicating with said longitudinal openings, a reinforcing rib secured to the side walls intermediate the ends thereof between the side walls and the lining, extending from side to side of the body between the bottom wall and the lining, and provided with arched portions following the contour of the pockets and supporting said pockets, a block secured to the body in the interior of an end corner thereof, extending transversely of the body and spaced from the side walls thereof to form sockets, and legs hingedly mounted in said sockets, braced against lateral movement by snug engagement with the ends of the block and with the side walls, and adapted to move through said longitudinal openings.



1,786,608. BUNCH TRANSFER FOR CIGAR MACHINES. JOHN F. HALSTEAD, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed Apr. 21, 1928. Serial No. 271,878. 10 Claims. (Cl. 131—39.)

1. In a cigar bunch transfer, the combination with an arm, of bunch grippers carried by said arm, means for

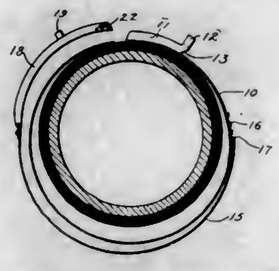


oscillating said arm to cause said grippers to transport a bunch, and spring actuated mechanism carried by the free end of said arm for quickly opening and closing said grippers.

1,786,609. BUNCH TRANSFER FOR CIGAR MACHINES. JOHN FREDRIK HALSTEAD, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed Dec. 21, 1928. Serial No. 327,512. 10 Claims. (Cl. 131—39.)

1. A cigar bunch transfer comprising a bunch support, and means for producing a movement of said support which is the resultant of an endwise movement and a traversing movement, to transport a bunch carried by said support from receiving position to a delivery position which is offset from and at an angle to said receiving position.

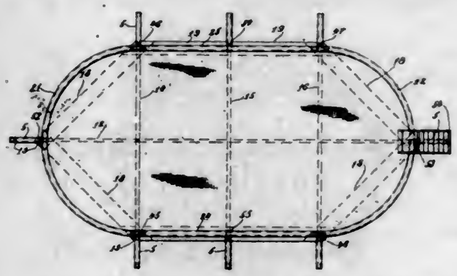
1,786,610. WIRELESS TRAIN CONTROL. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Aug. 17, 1922. Serial No. 582,342. 18 Claims. (Cl. 246—30.)



1. In a train control system, a train having a sender near one end for emitting high frequency waves, and a receiver near the other end for receiving the high frequency waves, a road bed for the train divided into blocks, guiding means for the high frequency waves extending along substantially the length of each block, and means controlled by train traffic conditions in blocks in advance of a given block to vary the electrical constants of the respective guiding means.

1,786,611. HALOGENATED SULPHONE PHTHALEINS. WILTON C. HARDEN, Baltimore, Md., assignor, by mesne assignments, to Hynson, Westcott & Dunning, Inc., Baltimore, Md., a Corporation of Maryland. Filed Apr. 4, 1928. Serial No. 267,473. 17 Claims. (Cl. 260—65.)

1. As a new product, a halogenated sulphone phthalein in which halogen is present in the sulfo-benzoic acid nucleus.

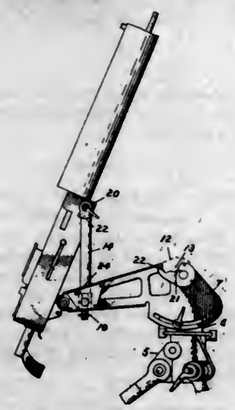


1,786,612. GARDEN-HOSE CLAMP. ARTHUR P. HESLOP, Bridger, Mont. Filed Apr. 8, 1930. Serial No. 442,669. 8 Claims. (Cl. 24—19.)

1. A hose clamp, comprising a metallic band, spaced guides at one end of said band, a bridge connecting the inner ends of the guides, a second band connected to the first-named band at a point intermediate the ends thereof, and a bar connected to the free end of the second band and adapted to extend between said guides and through

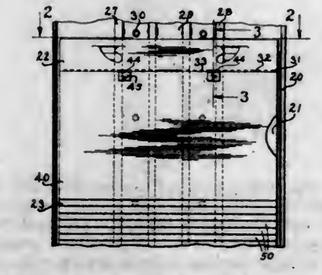
the bridge, the bar having a shoulder engageable simultaneously with the bridge by a tool to thereby force the bar through the bridge, and means for maintaining the bar in adjusted positions with relation to the bridge.

1,786,613. SWIMMING POOL. JAMES P. HOOPER, Ruxton, Md., assignor to Wm. E. Hooper & Sons Company, Baltimore, Md., a Corporation of Maryland. Filed June 2, 1928. Serial No. 282,415. 5 Claims. (Cl. 4—177.)



1. A portable swimming pool comprising a fabric bag and a knock-down frame supporting the bag, means for attaching the bag to the frame at the top, said frame comprising uprights in the form of separate trusses, tie rods at the bottom, each separably connecting a pair of opposite trusses, tie plates at the bottom separably connecting the adjacent trusses at an angle to the tie rods and means separably connecting the uprights at the top.

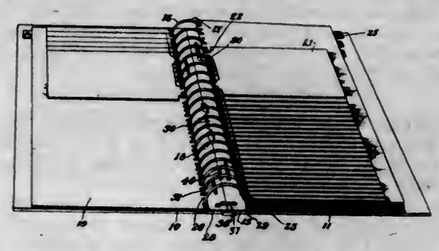
1,786,614. MARKSMANSHIP-TRAINING DEVICE FOR FIREARMS. DUDLEY B. HOWARD, Washington, D. C. Filed Oct. 8, 1929. Serial No. 398,168. 14 Claims. (Cl. 42—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



1. The combination with a firearm including a firing member, of means for locking the firing member against firing movement, means for shielding the locking means to conceal the operative condition thereof, and an adjusting member for the locking means, the adjusting member being of a construction and movable mounting to conceal changes in adjustment.

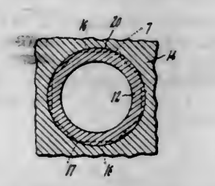
1,786,615. COMBINATION MOUNT FOR MACHINE GUNS. FORREST K. HOWARD, East Falls Church, Va. Filed May 18, 1929. Serial No. 364,256. 8 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

8. A mount for guns including a cradle, a standard pivotally mounted at the rear of the cradle and having a gun-connection at its free end, means on the cradle for supporting the free end of the standard and means for limiting movement of the standard to an upright position.



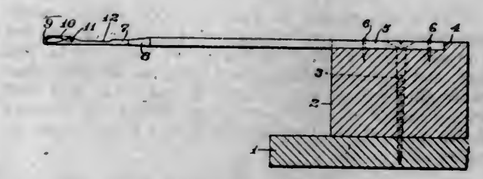
1,786,616. INDEX OR FILE. ALFRED E. HUNT, New Haven, Conn., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1924. Serial No. 687,314. 25 Claims. (Cl. 129—16.7.)

1. A reference card or the like, consisting of a base portion, a flap portion, means hingedly connecting said portions together, said connecting means being integral with both portions and spaced apart whereby elongated openings are provided between said portions, and means adapted to support an additional card, said means passing through one of the openings so formed.



1,786,617. LOOSE-LEAF BOOK. LE ROI E. HUTCHINGS, Buffalo, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed June 28, 1926. Serial No. 118,978. 19 Claims. (Cl. 129—9.)

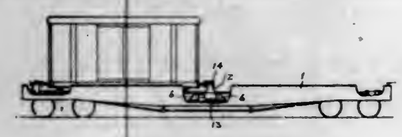
1. In a loose leaf book, adapted to contain record leaves, a pair of series of leaf posts, means for mounting and guiding said series of posts for independent movements in a plane both transversely and longitudinally, the move-



ments of said leaf posts being adapted to permit removal or addition of record leaves and the longitudinal shifting of groups of said leaves relative to other groups of leaves.

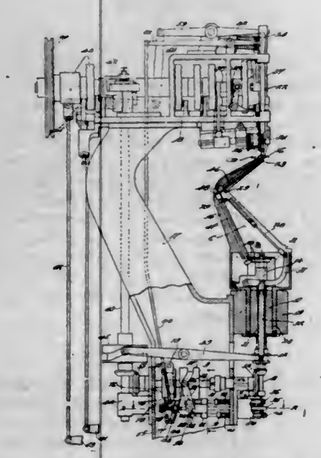
1,786,618. SEWING-MACHINE SHUTTLE BOBBIN. HENRY G. JOHNSON, East Hampton, Conn., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed Dec. 4, 1928. Serial No. 323,757. 1 Claim. (Cl. 112—251.)

A shuttle bobbin composed of a cylindrical cop tube, an annular thread mass wound on said tube, and discoidal heads of sheet material having central orifices receiving the ends of the tube, the heads being held against the annular ends of the thread mass by upset portions of the tube ends, and the margins of said head orifices each including a plurality of tube-gripping portions which exert greater pressure on the tube than other portions alternating with said gripping portions, the diametrical distance between the latter corresponding to the exterior diameter of the tube, whereby said gripping portions will exert a sufficient gripping pressure on portions of the periphery of the tube to prevent rotation of the tube and thread mass relative to the heads.



1,786,619. DEVICE FOR USE IN THE MANUFACTURE OF BOOTS OR SHOES. WILLIAM A. JOHNSON, Manchester, N. H., assignor to Woodbury Shoe Mfg. Co., Derry, N. H., a Corporation of New Hampshire. Filed June 6, 1929. Serial No. 368,838. 1 Claim. (Cl. 223—37.)

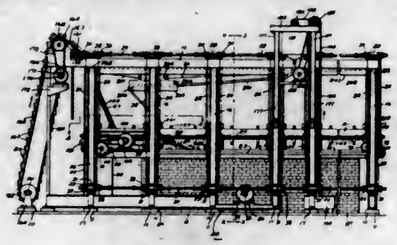
A needle for the purpose set forth comprising an elongated body portion of uniform cross sectional shape and area throughout its effective length, a relatively short extension of reduced cross sectional area at an end of said body portion, a connecting portion joining said extension with said body portion, said connecting portion flaring from said extension toward said body portion and having the same sectional shape and area at the points where



it joins said extension and said body portion as said extension and said body portion at said joints, respectively, and means carried by said extension for attaching a strip thereto, the maximum transverse dimension of said extension and the attaching means carried thereby being no greater than the minimum transverse dimension of said body portion.

1,786,620. CENTER JACK FOR CONTAINER CARS. WILLIAM PLATTS KELLETT, New York, N. Y. Filed Sept. 14, 1929. Serial No. 392,554. 6 Claims. (Cl. 105—366.)

1. A jack for container cars having buffers at the ends, comprising a buffer member pivotally mounted and adjustable longitudinally intermediate of the length of the car.

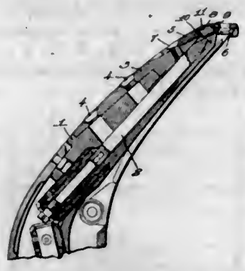


1,786,621. THREAD-MEASURING MECHANISM FOR SHOE-SEWING MACHINES. OSCAR L. LAWSON, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 26, 1926. Serial No. 111,859. 8 Claims. (Cl. 112—58.)

2. In a shoe-sewing machine, in combination, a work-engaging member, a thread pull-off member, a cam having a closed path, a lever having a cam follower in said path, and a slide guided on said lever for movement longitudinally thereof and operatively connected with said work-engaging member, said slide having an inclined groove, and said pull-off member having a projection engaging said groove.

1,786,622. BRICKLAYING MACHINE. FRANK C. LAYER, Algonquin, Ill. Filed Mar. 6, 1929. Serial No. 344,725. 4 Claims. (Cl. 72—129.)

2. In an improved brick laying machine the combination of a framework, a second framework slidably mounted thereon and movable vertically with respect thereto, a carriage mounted for reciprocating movement on said second framework, an endless conveyor mounted in the second framework and associated with the carriage, and

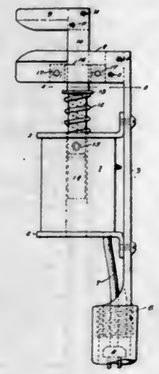


means for maintaining the upper reach of the endless conveyor stationary during the reciprocating movement of the carriage in one direction only.

1,786,623. WARNING MEANS FOR POISON GASES. HANS LEHRECKE, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of Delaware. Filed June 24, 1926, Serial No. 118,378, and in Austria July 18, 1925. 7 Claims. (Cl. 167—35.)

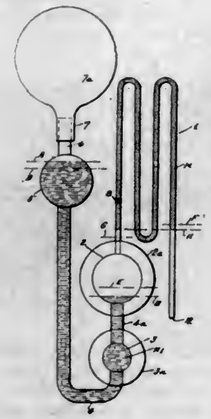
5. A composition of matter for fumigating, comprising hydrocyanic acid and chloropicrin in such proportion as to constitute when vaporized a warning of a toxic concentration of hydrocyanic acid.

1,786,624. HORN FOR SHOE-SEWING MACHINES. BERNARD T. LEVEQUE, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 10, 1928. Serial No. 305,000. 1 Claim. (Cl. 112—62.)



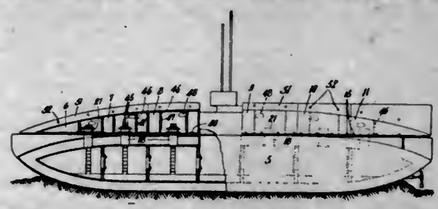
A work supporting horn for sewing machines of the McKay type having a tip comprising a whirl supporting block, a rotary whirl journaled therein, provided with gear teeth, a cap piece secured to the block and extending over the whirl, a whirl driving shaft provided with gear teeth, and a gear intermediate the shaft and whirl located between the cap piece and block, said gear consisting of a solid piece of material and being provided with an imperforate projecting hub journaled in the cap piece.

1,786,625. ELECTRIC PRUNING DEVICE. LINN OLAF B. LINDSTROM and DAVID G. SALA, San Francisco, Calif. Filed Aug. 12, 1929. Serial No. 385,371. 1 Claim. (Cl. 30—11.)



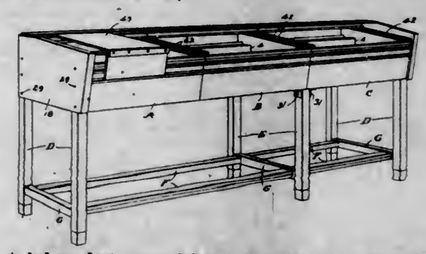
In an electric pruning device, the combination of an electric solenoid and pruning cutters comprising a supporting frame flared out to a hollow threaded pipe connection to admit the electrical conductor, a solenoid secured to said frame, a detachable cutter blade secured to said frame, a vertically reciprocable operating stem

coupled to the solenoid plunger and passing through a guide on the blade secured to the frame, a detachable cutter blade secured to said operating stem, and a spiral



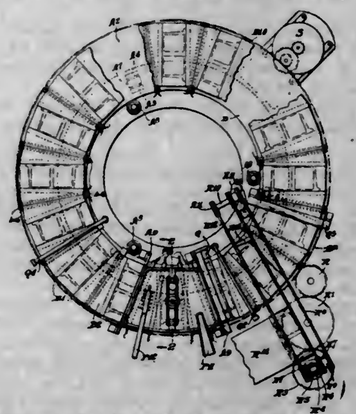
spring surrounding said operating stem between the top of the solenoid and the stationary blade secured to said frame, to hold the blades in an open position.

1,786,626. METHOD AND APPARATUS FOR FEEDING GASES OR VAPORS. RALPH W. LOHMAN, Los Angeles, Calif. Filed Nov. 1, 1926. Serial No. 145,670. 9 Claims. (Cl. 176—125.)



1. Apparatus for feeding of a gas or vapor comprising a tube having a plurality of vertical legs, a column of liquid balanced in said tube in its legs, a discharge tube connecting with one leg of the first mentioned tube at a point normally covered by the liquid column, said discharge tube having therein a plug of a material impermeable to liquid but permeable to gas, and said discharge tube being located at a point near the end of the liquid column in said mentioned leg, a gas containing vessel communicating with the end of said mentioned leg and adapted to hold a charge of gas which comes into contact with the end of the liquid column in said leg, and means for applying varying pressures to said gas in said vessel to move said liquid column in said leg to a point where said discharge tube is uncovered, said means for applying varying pressure to the gas in said vessel, comprising a U-tube connecting with said vessel, a column of liquid standing in said U-tube, and means for applying varying pressures to the end of said column of liquid.

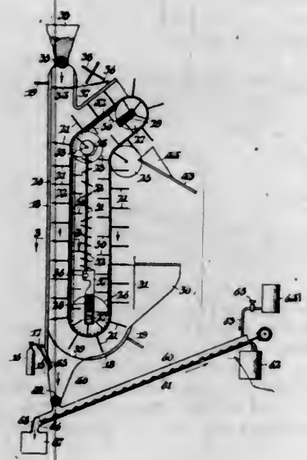
1,786,627. SUBMARINE LIFE-SAVING DEVICE. GEORGES MEISTER, New York, N. Y. Filed Mar. 17, 1928. Serial No. 262,570. 2 Claims. (Cl. 114—16.7.)



1. The combination with a submarine of a lifeboat secured thereon in inverted position and detachable therefrom, tubular members carried by said lifeboat and said submarine arranged to interengage to form a passageway between said submarine and said lifeboat together with means for closing one tubular member, air tubes extending through said closure member and a door through the side of said lifeboat whereby the lifeboat can be used as a trap to permit a diver to move to and from the submarine.

1,786,628. CARD-RECORD DESK. ENOCH OHNSTRAND, Mohawk, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1924. Serial No. 754,142. 8 Claims. (Cl. 45—6.)

1. A ledger desk comprising a plurality of card holding units, each unit comprising an open-top receptacle, reenforcing rails extending across the front and rear of the receptacle, rigidly connecting elements on certain of said rails arranged to extend into an opening in the adjacent receptacles and overlap against a rail therein, and means for detachably connecting the abutting portions of said rails.



1,786,629. CASTING MACHINE FOR BATTERY GRIDS. DAVID PEPPER, Philadelphia, Pa. Filed June 4, 1929. Serial No. 368,212. 14 Claims. (Cl. 22—57.)

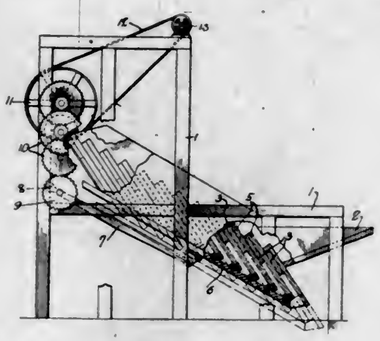
1. An open faced mold for casing electric battery grids consisting of a frame, a system of primary ribs and

a system of secondary ribs, said mold having a frame, a body portion located within said frame and made up of a series of plates inclined to the plane of the open face of the mold and alternately relatively movable with respect to adjacent plates, said plates having formed in their upper ends a series of vertical mold cavities which cavities extend transversely across the series of adjacent plates for casting the primary ribs of the grid and said plates being so conformed that when the mold is closed there is formed between adjacent plates mold cavities opening at their ends into the cavities provided for forming the primary ribs for forming a series of secondary ribs of the grid, the shape of the mold cavities for the secondary ribs and the thickness and inclination of the series of plates being such that when the mold is opened by moving the plates relatively to each other the casting can be freely lifted from the mold.

1,786,630. PERFUMERY. EBENEZER EMMET REID, Baltimore, Md. Filed Oct. 31, 1922. Serial No. 598,094. 14 Claims. (Cl. 87—28.)

1. The process of abstracting odors from flowers which comprises exposing divided adsorbent mineral gel in the presence of the flowers, thereby adsorbing the vapourous flower odors in the gel.

14. A preparation of the character described, comprising adsorbent silica gel impregnated with vaporous flower odors.

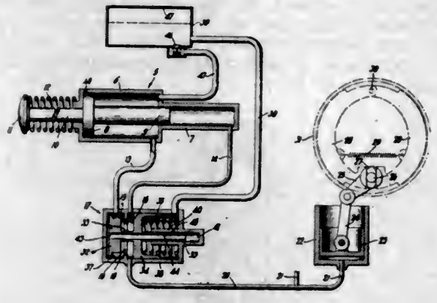


1,786,631. SUPPORTING POLE FOR ELECTRICAL CONDUCTORS. RALPH C. ROE, Englewood, N. J., assignor of one-half to Stephen W. Borden, Summit, N. J. Filed Apr. 25, 1928. Serial No. 272,841. 2 Claims. (Cl. 189—27.)

1. A pole, for supporting the outdoor electrical conductors of an electrical distribution system, which includes two or more exterior, hollow, compression members assembled end to end; insulating blocks between the compression members and extending into the interior of the pole; metal plates on the exposed ends of the two terminal compression members; tension members located inside the compression members, passing through the insulating blocks and attaching to the plates at either end of the assembly, each tension member containing

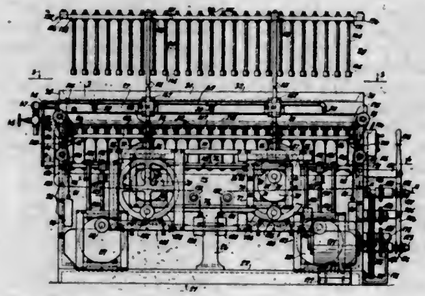
an insulating portion located between the portions of the tension member which are attached to the respective end plates.

1,786,632. FISH-CUTTING MACHINE. ARTHUR R. ROGERS, Jonesport, Me. Filed Aug. 21, 1929. Serial No. 387,427. 8 Claims. (Cl. 17—4.)



1. In a machine of the class described fish holding means, fish cutting means at a higher level than the holding means, stationary steps leading from the holding means to the cutting means, and means mounted for reciprocation between the steps for transferring fish from one stationary step to the other successively to elevate it from the holding means to the cutting means.

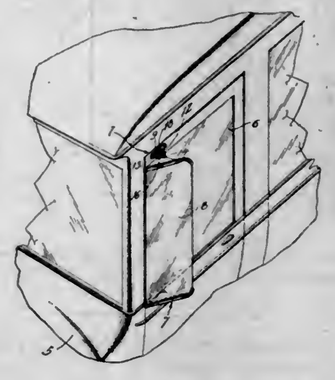
1,786,633. HYDRAULIC BRAKE. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Aug. 17, 1927, Serial No. 213,490. Renewed Sept. 15, 1930. 2 Claims. (Cl. 188—152.)



1. A fluid braking system, including brake operating means, a pump including a low pressure cylinder and a high pressure cylinder, a reservoir from which the fluid is supplied to the pump, a valve, ducts connecting the low pressure and high pressure cylinders with the valve through which the fluid may be supplied to the valve, a duct through which the fluid may be supplied from the valve to the brake operating means, said valve having two chambers, one connected with the duct of the low pressure, the other connected with the duct of the high pressure cylinder, and a valve head operable by said

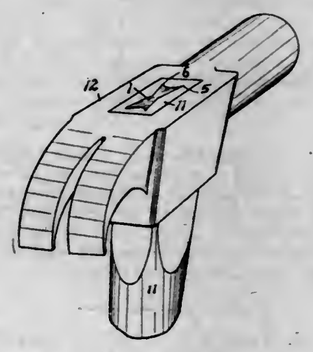
pump when a predetermined pressure is reached to separate the high pressure chamber from the low pressure chamber so that the brake operating means may be under the influence of the high pressure cylinder only, and a duct to return the fluid from the low pressure chamber to the reservoir to relieve the low pressure cylinder, and a valve stem; said valve having a port which is normally

closed by said stem, and said stem having an aperture to register with said port when the valve is operated to establish communication of the low pressure cylinder with the reservoir so as to relieve the low pressure cylinder of back pressure subsequent to the closing of the valve and while the high pressure cylinder is acting on the brake operating mechanism.



1,786,634. AUTOMATIC NIGHT-CANDLE-MOLDING MACHINE. ALFONSO SCRITTA, Brooklyn, N. Y. Filed Aug. 31, 1928. Serial No. 303,196. 5 Claims. (Cl. 18—27.)

2. A machine for molding candles, or the like, including a mold, the mold having a movable bottom closure, resilient means for moving the closure toward the mold, a core pin movable through said bottom closure and axially into the mold, means to strike a wick clip onto the end of the candle at the upper end of the mold, the last mentioned means causing the candle to momentarily depress said bottom closure against the force of the resilient means, and loosening the candle in the mold, said resilient means returning the closure member and candle upward, and means to move the bottom closure away from the mold to permit the candle to be removed therefrom.

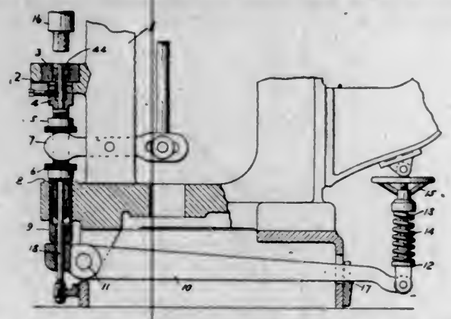


1,786,635. CLOSED-CAR WIND-WING BRACKET. WILLIAM E. SHEHAN and GODFREY BELL, Los Angeles, Calif. Filed July 17, 1928. Serial No. 293,426. 1 Claim. (Cl. 296—84.)

In a wind deflector for a vehicle, the combination of a pair of shield holding members adapted to be secured to the vehicle body in spaced relation, one of said holding members comprising a T shape attachment member with a leg, a supporting bracket having a leg and an outstanding ledge, said legs being provided with bolt holes, one of said bolt holes being elongated, a bolt

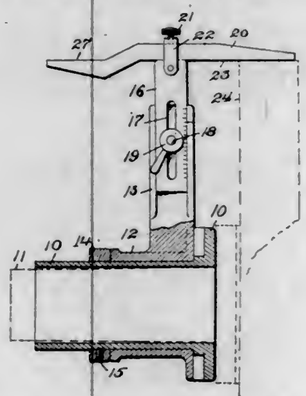
adjustably securing said legs together so as to adjustably position the ledge laterally of said supporting bracket, and shield carrier members pivotally secured to said supporting bracket at said ledge and to the other holding member.

1,786,636. WEDGE FOR TOOL HANDLES. JACOB J. SPRUNGER, Fort Wayne, Ind. Filed Nov. 26, 1928. Serial No. 321,783. 1 Claim. (Cl. 306—33.)



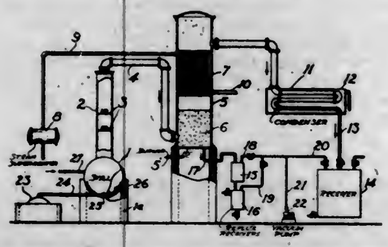
A wedge having a sharp edge at one end, the front, back and sides of said wedge extending divergently from said sharp edge and each having formed therein a longitudinally disposed chasm, the chasms in the front and back being spaced from said sharp edge and extending laterally at their upper ends to the corresponding sides of the wedge, and the chasms in the sides extending throughout the entire length of the wedge.

1,786,637. COMPRESSING MACHINE. FRANCIS J. STOKES, Philadelphia, Pa. Filed Sept. 12, 1929. Serial No. 391,995. 3 Claims. (Cl. 107—18.)



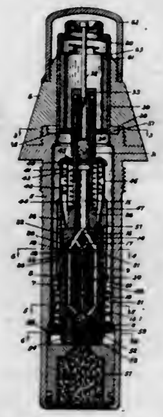
1. In a compressing machine for tablets and the like a fixed frame, a sleeve mounted to slide in respect to the frame, a bottom punch holder mounted to slide in

respect to the frame and sleeve, means for adjusting the punch holder in respect to the sleeve, and means arranged



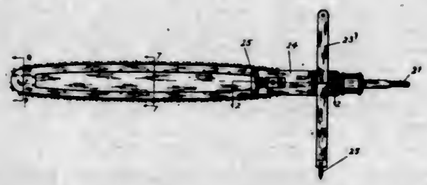
to position the sleeve and hold it against normal compression and adapted to yield under abnormal compression.

1,786,638. GAUGE FOR ADJUSTING BRAKE LININGS. ALBERT H. WADELL, Newark, N. J. Filed Apr. 28, 1928. Serial No. 273,448. 3 Claims. (Cl. 33—180.)



1. A gauge for adjusting brake linings comprising an arm, a hub for readily mounting the arm in order that it can rotate on an axle, an adjustable extension on the arm, and a finger secured to the extension, the finger having one end with a gauging edge at the bottom and having the other end with a gauging edge at the top, the two edges being substantially in line.

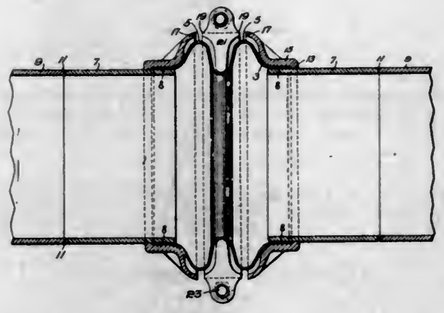
1,786,639. PROCESS FOR VACUUM DISTILLATION OF HYDROCARBON OILS. HARRY C. WIESS, Houston, Tex., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Sept. 25, 1925. Serial No. 58,501. 6 Claims. (Cl. 196—77.)



1. Process of distilling hydrocarbon oil, comprising heating the oil to a distillation temperature, injecting into the oil a light hydrocarbon, liquid under ordinary conditions, and having a vapor pressure less than that of water at the corresponding temperature of condensation, and reducing the absolute pressure upon the oil undergoing distillation to 50 mm. of mercury or less.

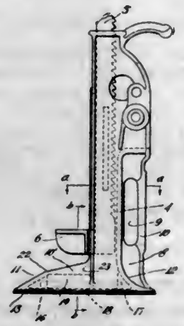
1,786,640. COMBINATION FUSE FOR PROJECTILES. HERMANN H. ZORNIG, Newhall, Iowa, and ALFRED F. TEITSCHEID, Wharton, N. J. Filed Aug. 13, 1928. Serial No. 299,382. 3 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A fuse including a tubular body, a head attached to the body, a casing secured in the rear portion of the body and having opposed longitudinal passages, a carrier fixed in the casing and having converging passages in communication with the passages in the casing, an axial explosive train in the carrier including a primer, a delay element and a detonator, the latter positioned between the converging passages, a flash tube mounted forwardly of the casing and having communication with the primer and the passages in the casing, a shutter interposed between the flash tube and casing for closing the passages in the casing, a plunger having a squared front portion mounted on the flash tube, a primer detonator in the plunger, means operable during flight for arming the plunger, a sleeve rotatably secured to the casing and connected to the shutter, fingers on the sleeve restraining movement of the flash tube and engaged with the plunger for rotary movement therewith, a setting disk fitting on the squared portion of the plunger, a setting sleeve rotatably mounted in the fuse head and engaging the setting disk and a striker mounted in the setting sleeve.



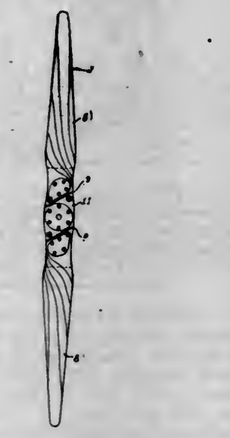
1,786,641. CHAIN SAW. KNUTE BERG, Spokane, Wash. Filed Sept. 4, 1928. Serial No. 303,845. 4 Claims. (Cl. 143—32.)

1. The combination in a sawing appliance with a supporting structure, of a vertically movable cross head and means for securing the cross-head in vertically adjusted position, a tubular coupling member supported in the cross head and adjustable for turning on its longitudinal axis,



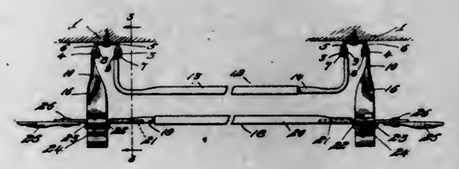
a motor fixed to the member at one side of the structure and a transmission housing fixed to the member at the other side of the housing, driving mechanism from the motor operating in the member and transmission mechanism in the housing, a saw frame supported on the housing, and an endless chain saw supported in the saw frame.

1,786,642. EXPANSION JOINT. DAVIS S. BOYDEN, Allston, Mass., assignor to E. B. Badger & Sons Company, Boston, Mass., a Corporation of Massachusetts. Filed May 15, 1926. Serial No. 109,390. 3 Claims. (Cl. 285—90.)



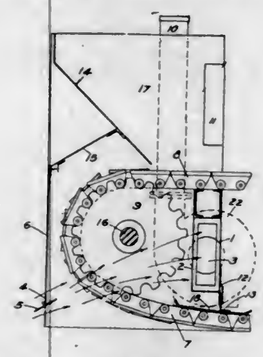
1. An expansion joint having an expansion member comprising a corrugated sleeve with cylindrical unflanged ends and separate tubular sleeves fitting within and projecting one from each opposite end of the corrugated sleeve and directly and integrally joined thereto as by brazing to form an integrally united expansion unit, and separate limiting devices for said expansion unit adapted to contact with each other when the joint is contracted but to separate when the joint is expanded, the same including for opposite ends of the expansion unit separate stop members movable relatively to each other on contraction and expansion of the joint, said stop members being concentric with each other and with the adjoining tubular sleeve and with the adjoining cylindrical end of the corrugated sleeve and fitting outside the latter and related to the tubular sleeve to be held thereby against endwise displacement when the joint is contracted independently of said corrugated sleeve.

1,786,643. LIFTING JACK. HAROLD W. CLARK, Alliance, Ohio, assignor to The Buckeye Jack Manufacturing Company, Alliance, Ohio. Filed Aug. 19, 1927. Serial No. 214,054. 1 Claim. (Cl. 254—1.)



A frame for a lifting jack comprising an oblong base of cored out section, a single web bottom plate with an opening formed therein, an oblique front wall, a toe formed by the junction of the oblique front wall and the bottom plate, and a rib formed within the toe and integral with the bottom plate, the said rib being located approximately in the center of the toe and in the plane of the opening in the bottom plate.

1,786,644. SCREW PROPELLER. DAVID R. DAVIS, Los Angeles, Calif. Filed Mar. 28, 1927. Serial No. 178,902. 6 Claims. (Cl. 170—161.)

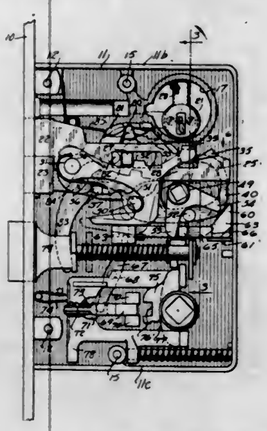


1. A screw propeller comprising a hub portion, relatively rigid blade portions spaced from the hub portion, and flexible plates jointing the hub portion with said blade portions, the adjacent edges of the hub portion and blade portions at the joints extending asiant outwardly toward the leading edges of the blades so that in part the centrifugal force of the rotating-blade portions and in part the resistance of the plates to bending counteract the air pressure tending to simultaneously reduce the pitch angle of said blade portions to zero.

1,786,645. CURTAIN-ROD STRUCTURE. GEORGE W. DOVER, Providence, R. I., assignor to Dovercraft Company, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 1, 1930. Serial No. 432,470. 6 Claims. (Cl. 156—22.)

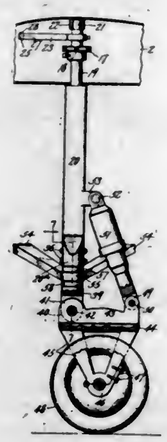
4. In a curtain rod structure, a composite curtain rod formed of telescoping sections, each of which frictionally engages a flat end section, the flat end sections being each provided with a portion offset laterally from the main portion thereof, and a bracket comprising a base portion and an extension arm secured to the base portion, said arm being provided with a slot for receiving the offset portion of said end section.

1,786,646. CHAIN OR TRAVELING GRATE STOKER. WILLIAM M. DUNCAN, Alton, Ill. Filed Nov. 29, 1927. Serial No. 236,526. 5 Claims. (Cl. 110—40.)



1. In a traveling chain grate stoker, upper and lower strands of grates and a suction chamber between the strands provided with an opening for the admission of air.

1,786,647. PROCESS OF PREPARING VINYL ESTERS OF ORGANIC ACIDS. HARRY B. DYKSTRA and CARYL SLY, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 22, 1928. Serial No. 307,777. 4 Claims. (Cl. 260—106.)



1. The method of preparing vinyl esters of organic acids in improved yield, which comprises passing an excess of acetylene through an agitated charge of an organic acid heated to reaction temperature in contact with a catalyst and an aliphatic hydrocarbon distillate having a boiling point above that of the acid used.

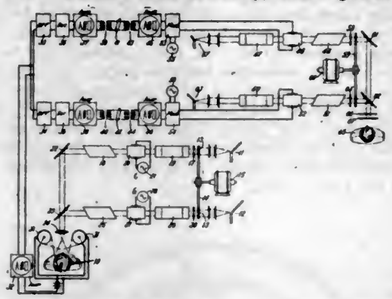
1,786,648. LOCK. SAMUEL P. GOLDBERG, Brooklyn, N. Y., assignor to Chantrell Lock Corp., a Corporation of New York. Filed Oct. 4, 1929. Serial No. 397,235. 23 Claims. (Cl. 70—92.)

2. A lock for use with a room key or an emergency key and having a two part dead bolt, a tumbler for each dead bolt part, a double sleeve key operable cylinder, each sleeve having a cam cooperative with one cam only, the room-key operating both cams for simultaneously protracting and retracting both dead bolt parts, and a thumb turn mechanism operable on both tumblers for retracting both dead bolt parts and on only one tumbler for protracting and retracting the corresponding dead bolt part only, the other cam being operable by the emergency-key for retracting and protracting said dead bolt part, whereby it may be retracted after having been protracted by the thumb turn.

1,786,649. AIRPLANE LANDING DEVICE. AUGUSTO C. GONZALEZ, Reno, Nev. Filed Apr. 26, 1928. Serial No. 273,106. 10 Claims. (Cl. 244—2.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A device of the kind described, comprising two landing gear frames, said landing gear frames being connected to a fuselage, each frame being formed with a bearing portion, said bearing portion supporting the lower end of a revolvable truss, and said revolvable truss having pivotally mounted thereon, yieldable wheel supporting frames revolving therewith.

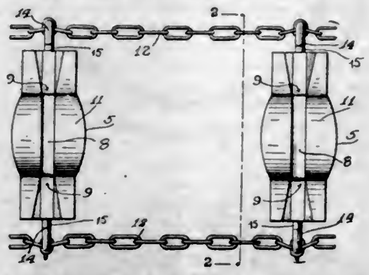
1,786,650. TREATING HYDROCARBON OIL. JOHN M. GOODWIN, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 16, 1928. Serial No. 262,318. 5 Claims. (Cl. 196—40.)



1. The process of stabilizing and purifying petroleum naphtha which comprises contacting the oil with a gas comprising hydrogen sulfide, whereby a relatively small quantity of hydrogen sulfide is absorbed by the oil, and then treating the oil with concentrated sulfuric acid.

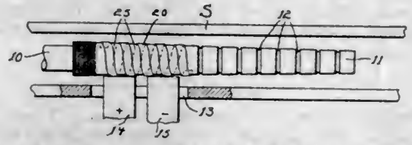
1,786,651. PROCESS OF MANUFACTURING A PHOSPHATE FOR FERTILIZING. ERNST HAMMEL, Berlin, Germany, assignor to Max Rauch, Berlin, Germany. Filed Dec. 23, 1926, Serial No. 156,755, and in Germany Aug. 19, 1926. 1 Claim. (Cl. 71—7.)

A method of making a fertilizer, consisting in producing albumin enzymes by peptonizing bone meal by disintegration with an acid, in adding a potassium fertilizer, in concentrating said albumin enzymes to rubber like consistency, in neutralizing the same with basic ammonia, and in finally drying the product.



1,786,652. ELECTROOPTICAL SYSTEM. RALPH V. L. HARTLEY, South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1928. Serial No. 312,761. 19 Claims. (Cl. 178—6.)

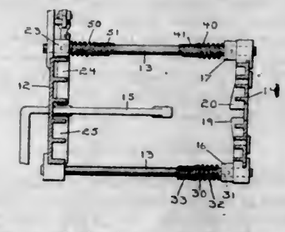
1. An electro-optical image producing system comprising means for successively scanning groups of elemental areas of a field of view an image of which is to be produced, each group comprising two separate elemental areas which are scanned simultaneously, and light-sensitive



means for producing a single photoelectric current having a component corresponding to the tone values of each of said simultaneously scanned elemental areas.

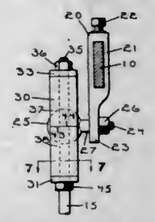
1,786,653. NONSKID DEVICE. GEORGE A. HATHORNE, Gloversville, N. Y. Filed Feb. 28, 1928. Serial No. 257,757. 2 Claims. (Cl. 152—14.)

2. As a new article of manufacture, a tire shoe for antiskid devices, consisting of a plate having a concave inner surface to fit a tire and having an outer face formed with a central longitudinal portion of convex form terminating in end extensions having central converging recesses, the convex surface of the plate being formed with a groove communicating with said recesses.



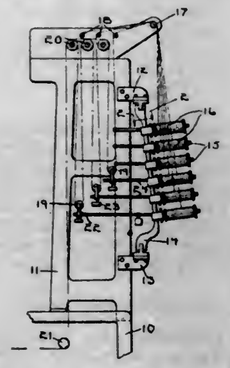
1,786,654. BOBBIN FOR ELECTRICAL FEELERS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 22, 1929. Serial No. 380,147. 7 Claims. (Cl. 139—289.)

1. A weft bobbin to cooperate with a pair of oppositely charged electrodes of an electrical weft detector, said bobbin having wound thereon a metallic tape formed of metallic yarns interwoven with yarns of textile fibre, and an adhesive to attach the yarns of textile fibre to the bobbin.



1,786,655. BOBBIN SUPPORT FOR WEFT-REPLENISHING LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1929. Serial No. 384,853. 9 Claims. (Cl. 139—251.)

1. In a weft replenishing mechanism having a rod, a bobbin support pivotally mounted with respect to the magazine, and a coil spring surrounding the rod and having coils of two different diameters, the larger coils being operatively connected to the support to yieldingly



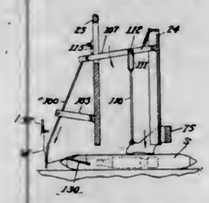
resist movement of the latter at the time of transfer, and the smaller coils fitting tightly over the tie rod to grip the same and to resist movement of the spring relatively to the rod at the time of transfer.

1,786,656. CONNECTING MECHANISM FOR JACQUARD LEVERS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 27, 1929. Serial No. 388,842. 5 Claims. (Cl. 139—59.)

1. In driving mechanism for a Jacquard loom having a driven lever element and a reciprocating driving rod element, a member secured in longitudinal adjusted position along one element, a ball secured thereto, and a socket member for the ball carried by the other element, said socket member comprising a pair of lubricant impregnated blocks, a pair of plates between which the blocks lie, and retaining means extending through both plates and blocks to draw the plates together and hold the blocks in position.

1,786,657. LET-OFF FOR NARROW-WARE LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1929. Serial No. 411,892. 7 Claims. (Cl. 139—103.)

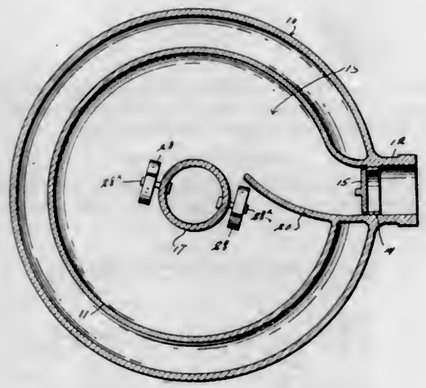
1. In a let-off for a narrow ware loom having a warp spool and a disk movable therewith and a friction ele-



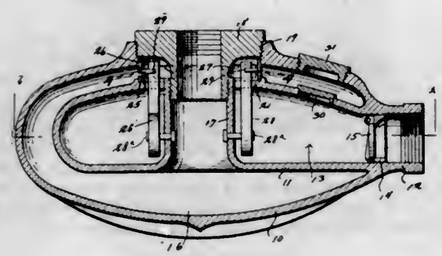
ment to cooperate with the disk, a fixed stud closely adjacent the disk, a lever pivoted to the stud, a second lever pivoted on the stud and adapted to have operative connection with the first named lever when the latter is in low position, friction means carried by the second lever to engage the disk and force the latter against the first named friction when the first lever is down, and means to lift the first named lever as the warp is consumed to break the engagement between the levers and thereby lessen the pressure exerted by the friction means.

1,786,658. PLEASURE BUOY FOR SEASIDE RESORTS. MAX WILHELM IBEN, Altona, Germany. Filed July 11, 1929. Serial No. 377,582. 5 Claims. (Cl. 272—32.)

5. A pleasure buoy including a guide, means for supporting the guide in substantially vertical position in the body of water, and a buoyant body mounted on the guide and capable of free vertical and free rotary movement with respect to said guide, said body being of hollow form with its upper surface arranged as a platform.

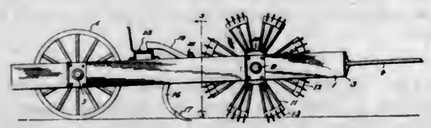


1,786,659. WEFT-REPLENISHING LOOM. VICTOR H. JENNINGS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1928. Serial No. 321,203. 18 Claims. (Cl. 139—259.)

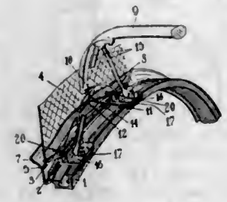


1. In a weft replenishing loom, a shuttle having a self-threading eye disposed at the end of the shuttle toward the adjacent cloth selvage when the shuttle is at the magazine side of the loom, a lay, a weft carrier magazine, means to transfer a selected weft carrier from said magazine to a shuttle on said lay, and automatic means to completely thread the replenished shuttle before said shuttle completes its initial flight after weft replenishment.

1,786,660. HOT-WATER AND STEAM GENERATOR. AUGUST M. KOLSTAD, Detroit, Mich. Filed May 9, 1929. Serial No. 361,704. 7 Claims. (Cl. 122—20.)

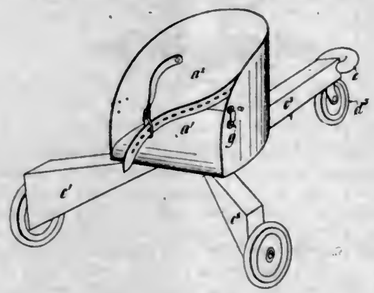


4. A water heater of the character described, comprising an inner chamber and an outer chamber spaced from each other, the inner chamber having an inlet at one end adapted to be connected to a source of supply, the inner chamber opening into the outer chamber, a rotatably shiftable valve controlling the passage of water from the inner chamber to the outer chamber, and thermostatic elements disposed within the inner chamber and actuating the valve to cause the valve to permit an increase in the flow of water within the inner chamber when the water within the inner chamber has its temperature raised and vice versa, the top wall of the inner chamber being provided with a safety blow-off plug and the top wall of the outer chamber having a removable inspection plug above the blow-off plug.



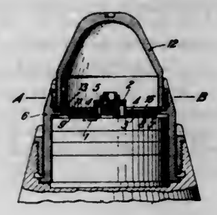
7. A water heater comprising the outer chamber and an inner chamber, the inner chamber having a cold water inlet and an outlet into the outer chamber and the outer chamber having an outlet, and means causing the water passing from the inner chamber to the outer chamber to circulate around the inner chamber before it can pass out through the outer chamber.

1,786,661. COTTON CHOPPER. JAMES A. LAIRD, Huntington, Tex., assignor of ten per cent to R. A. Courtney, Lufkin, Tex. Filed July 2, 1929. Serial No. 375,431. 2 Claims. (Cl. 97—22.)



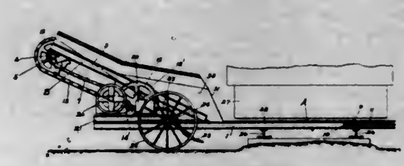
1. A cotton chopper comprising a frame, ground wheels supporting the rear end of the frame, a topping wheel supporting the front end of the frame and rotated by its tractive engagement with the ground, an inner frame between the sides of which the chopping wheel is mounted, and coverers pivotally mounted between the inner and outer frames and arranged to travel along the ground at the rear of the chopping wheel.

1,786,662. HOOD FOR AUTOMOBILES AND OTHER VEHICLES. FELIX JOHN LEATHER, London, England. Filed Mar. 8, 1928, Serial No. 260,205, and in Great Britain Apr. 29, 1927. 3 Claims. (Cl. 296—105.)



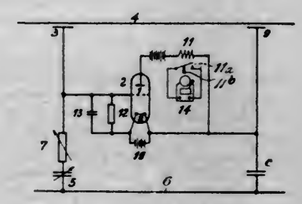
1. A hood for automobiles and other vehicles of the kind comprising cant rails secured to the body of the vehicle and extending from the front to the rear thereof, a plurality of hood sticks, shoes connected with said hood sticks and engaged with and slidable along said cant rails, a flexible covering associated with the hood sticks, endless flexible members connected to the hood sticks for use in raising and lowering the hood, grooves in the cant rails, means for assisting the engagement of the edge of the flexible covering in said grooves in raising the hood and means connecting the shoes associated with one hood stick to the shoes associated with an adjacent hood stick adapted to force, when lowering the hood, the flexible covering outward from between the hood sticks and assist in disengaging the edges of the flexible covering from the grooves.

1,786,663. BABY CAR OR CARRIAGE. JOHN WILLIAM LEEK, Sale, England. Filed Jan. 4, 1929, Serial No. 330,277, and in Great Britain Sept. 18, 1928. 3 Claims. (Cl. 155—22.)



1. A baby car or the like comprising a bucket-shaped chair, a single swivelling wheel arranged centrally behind the chair, two arms extending forwardly, one at each side of the chair, a non-swivelling wheel mounted on each arm, the said wheels being coaxial with each other and disposed so as to be on each side of an open and free space between them and in front of the chair for the occupant's legs, within which the occupant may propel the chair by his own feet from between the non-swivelling wheels and by crossing their common axis.

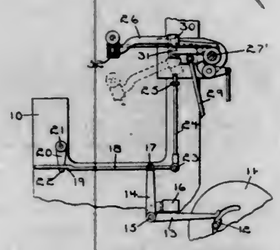
1,786,664. MECHANICAL TIME FUSE WITH CLOCKWORK. PAUL LIEBERGELD, Bad Thal, Germany. Filed Feb. 20, 1930. Serial No. 430,051, and in Germany Dec. 8, 1927. 4 Claims. (Cl. 102—36.)



1. A mechanical time fuse having clockwork, an indicator rotated by such clockwork, and timing rings for controlling the active position of said indicator with respect to the means for firing said fuse, and comprising means for varying the relative position of said rings.

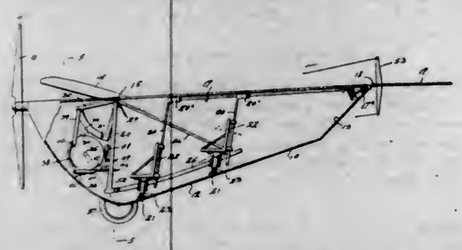
1,786,665. PORTABLE UNLOADING MACHINE. WILLIAM K. LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 8, 1923. Serial No. 644,169. 5 Claims. (Cl. 198—53.)

1. In a machine of the class described, the combination of a conveyor trough, means to propel material along said trough, and horizontally disposed rearwardly diverging material supporting shields extending inwardly over said trough in close relation to said propelling means.



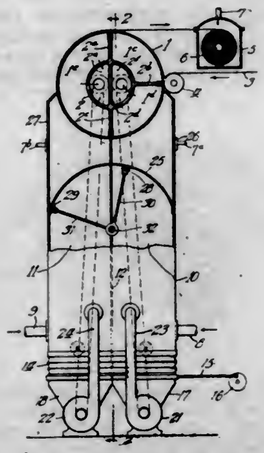
1,786,666. MEANS FOR INDICATING CURRENT IMPULSES. OTTO LOHAUS, Berlin-Schoneberg, Germany, assignor to Aktiengesellschaft Mix and Genest, Berlin-Schoneberg, Germany. Filed Sept. 30, 1926, Serial No. 138,677, and in Germany June 30, 1925. 2 Claims. (Cl. 179—171.)

1. A system for detecting current impulses present in an electrical conductor which comprises means for receiving



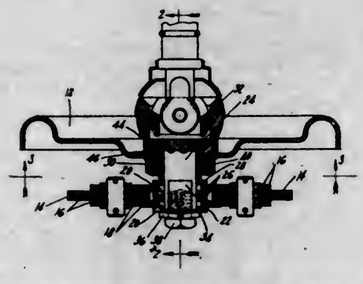
a momentary current impulse and conveying the same to the grid of an electron tube, the anode circuit of which is arranged to control an indicator, and means arranged in the grid circuit so that the momentary impulse received thereby causes a prolonged accumulation of electrons upon the grid which varies the electrical properties of the anode circuit and causes the said indicator to operate for at least a correspondingly prolonged period.

1,786,667. CLUTCH FOR AXMINSTER-LOOM TUBE FRAMES. JOHN LYLE, Philadelphia, Pa., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 11, 1929. Serial No. 406,277. 6 Claims. (Cl. 139—336.)



1. In an Axminster loom having a group of tube frames which are movable progressively to operative position, means to move the tube frames one at a time from the chain toward cloth forming position, a rotatable spool on each tube frame, a stop motion to stop the loom when a tube frame is improperly held in the chain, and a device acting simultaneously to offer resistance to rotation of the spool and also to co-act with the stop motion to prevent disabling thereof.

1,786,668. CONTROLLING MEANS FOR AIRPLANES. GEORGE WAYNE LYONS, Hayden, Colo. Filed Dec. 20, 1928. Serial No. 327,353. 9 Claims. (Cl. 244—29.)

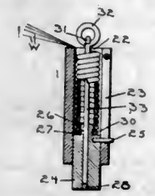


1. An airplane having a fuselage and oppositely disposed wings, each tiltable about the transverse axis to thereby change their angles of incidence, a pendulous, gravity and centrifugally affected element, levers independently operable operatively connected one to each wing and extending longitudinally along the fuselage, a transverse member connecting said levers, the pendulous element operating over and bearing upon said transverse member and causing the depression of one end or the other thereof as the element swings relative to the fuselage to thereby increase the angle of incidence of one wing or the other.

1,786,669. PROCESS OF AND APPARATUS FOR THE DRY DISINTEGRATION AND DEPOSITION OF FIBERS. FRED W. MANNING, Berkeley, Calif., assignor, by mesne assignments, to Filter Fabrics, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 23, 1928. Serial No. 272,336. 18 Claims. (Cl. 19—147.)

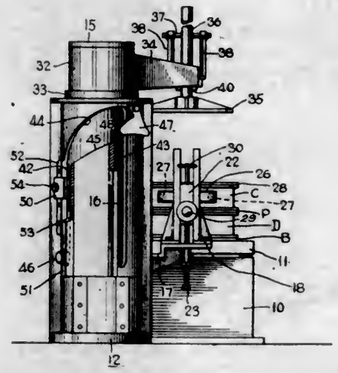
1. That improvement in methods of making filter sheets, which consists in depositing a finely divided filtering substance on a moving web of sheet material, and producing said depositing action against the influence of gravity.

1,786,670. BRAKE CONTROL. GUS F. MICHAEL, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Nov. 30, 1927. Serial No. 236,633. 15 Claims. (Cl. 188—94.)



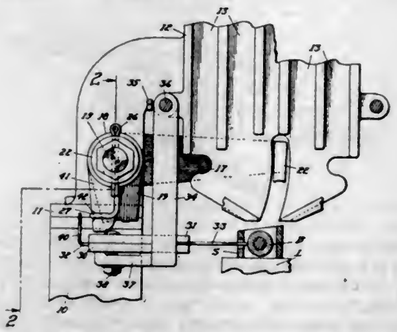
1. A brake control comprising, in combination, a brake backing plate, a bearing bracket having a shoulder engaging one face of the backing plate and having a portion extending through the backing plate and which is provided with a part engaging the opposite face of the plate and co-operating with said shoulder in securing the bracket to the plate, said bracket being formed with a shaft bearing extending through said portion, and a washer on said portion and which is formed and arranged to interlock with the backing plate.

1,786,671. THREAD HOLDER FOR WEFT-REPLENISHING LOOMS. ALFRED F. MORRELL, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 27, 1929. Serial No. 388,845. 6 Claims. (Cl. 139—247.)



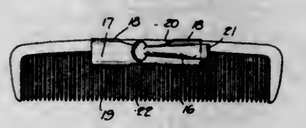
1. In a weft replenishing loom having reserve bobbins from which extend weft ends, a support, a weighted closed

coil spring movable vertically in the support, means for elevating said spring above the support and separating the coils thereof to receive the weft ends of the bobbins be-



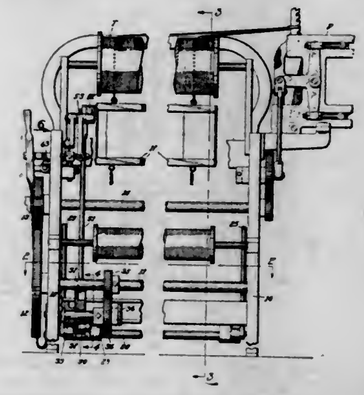
tween the coils, and means for limiting the vertical movement of said spring, the spring tending to move down under the action of gravity to keep the weft ends taut.

1,786,672. MOLDING MACHINE. THOMAS O. MORRIS, Easton, Pa., and JOHN J. LAWLOR, Plainfield, N. J., assignors to Automatic Molding Machine Corporation, Dover, Del., a Corporation of Delaware. Filed July 8, 1929. Serial No. 376,707. 9 Claims. (22—33.)



4. In a molding machine, a carrier, means for vertically reciprocating the carrier, a cam formed with two angularly spaced vertical grooves, a pin on the carrier adapted to ride in said grooves, means at the top of said grooves for swinging the pin from one groove to the other and vice versa and a stop removably secured adjacent one of the cam grooves for limiting vertical movement of the pin therein.

1,786,673. WITHDRAWING FEELER. OSCAR V. PAYNE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1929. Serial No. 332,640. 2 Claims. (Cl. 139—271.)

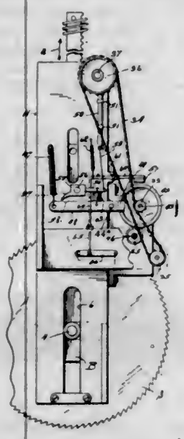


1. In a withdrawing device for side slip feelers, a pivoted transferrer arm having a pair of spaced legs to support a latch by means of which the transferrer may be actuated, a forwardly movable slide, a detector arm pivoted to the slide to move in a horizontal angular direction at the time of indication of weft exhaustion, guiding structure for the slide, the forward end of the slide being bent upwardly, and a finger formed on the transferrer arm lying substantially over the slide and in alignment with the bent end of the latter so that when the transferrer arm is actuated said finger will engage the bent end to move the slide forwardly.

1,786,674. POCKET-COMB CLIP. FRED D. PERRY, East Bakersfield, Calif., assignor to Harold R. French, East Bakersfield, Calif. Filed Oct. 30, 1929. Serial No. 403,561. 3 Claims. (Cl. 24—3.)

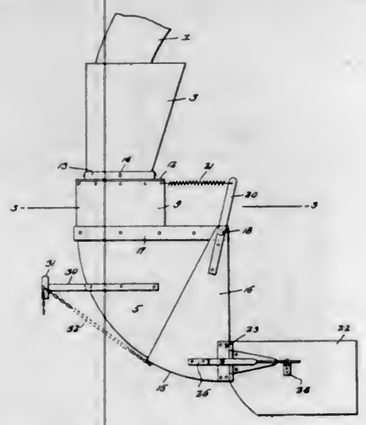
1. A clip for pocket combs comprising a clamp including spaced jaws and a bight portion resiliently connecting the jaws, said bight portion having an opening therein to divide the latter into two spaced parts, and a tongue resiliently connected to the clamp so as to be disposed at one side thereof.

1,786,675. WARP STOP MOTION FOR TERRY-TOWEL LOOMS. JOHN REGAN, New Bedford, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 17, 1928. Serial No. 306,324. 7 Claims. (Cl. 139—349.)



1. In a warp stop motion for a terry towel loom having a plurality of harnesses which complete the repeat of the pattern in three picks and all of which cross on one pick of the repeat, a terry forming member having one movement for each repeat of the harnesses, a warp stop motion, and an actuator for the stop motion operatively connected to the member and having a knocking-off stroke on that pick of the repeat when all the harnesses cross and effective to stop the loom when a fault occurs in the warp.

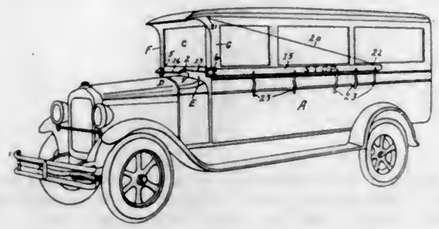
1,786,676. TRIMMING MACHINE. NATHAN EDWARD SARGEANT, Montesano, Wash. Filed Apr. 24, 1928. Serial No. 272,538. 10 Claims (Cl. 143—47.)



1. A wood working apparatus comprising a vertically disposed housing, a movable carriage mounted in the hous-

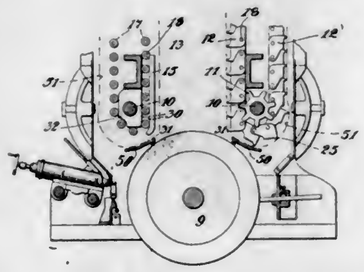
ing, operating means for moving the carriage upwardly in the housing, carriage stopping means carried by the housing and actuated upon movement of said carriage at

a predetermined point in the line of its travel in the housing, and carriage releasing means mounted on the housing and engaging said stopping means and adapted to permit the carriage to gravitate downwardly therein.



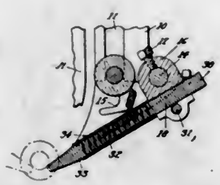
1,786,677. AUTOMATIC ENSILAGE DISTRIBUTOR. ALBERT A. SIEVERT, Kaukauna, Wis. Filed Oct. 17, 1929. Serial No. 400,263. 3 Claims. (Cl. 302—60.)

1. An ensilage distributor of the character described comprising an intake funnel adapted for connection with a blower pipe, an ensilage distributing elbow rotatably suspended from the funnel, an adjustable discharge lip pivotally mounted on the forward end of the elbow, and an adjustable actuating vane mounted on the discharge lip for engagement by the air blast and ensilage from the elbow for the purpose of rotating same on the funnel.



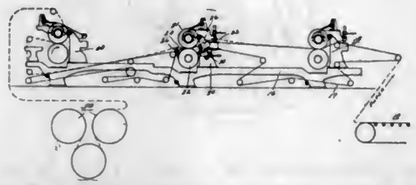
1,786,678. TRAFFIC STOP. EDGAR L. STANTON, Union County, Ind. Filed Mar. 19, 1930. Serial No. 437,250. 6 Claims. (Cl. 116—63.)

1. A traffic stop comprising a shaft, a lever secured to one end of said shaft, an elongated plate secured to the other end of said shaft with an aperture formed through each extremity thereof, which apertures are equidistant from said shaft, a rod pivoted in each of the said apertures in said plate and extending laterally and in directions opposite to each other, a bell-crank pivoted to be



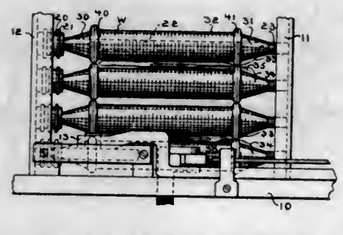
operated by the operation of said lever through said rods with said bell-cranks operating in directions opposite to each other, and an element adapted to be swung laterally by each of said bell-cranks.

1,786,679. WOOD GRINDER. WILHELM THALER, Heidenheim-on-the-Brenz, Germany, assignor to American Voith Contact Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1926. Serial No. 82,649. 10 Claims. (Cl. 83—75.)



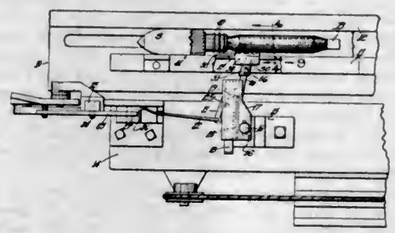
1. In a continuous grinder having upper and lower chain sprocket wheels, chain guiding means, including a fixed guide member for guiding the chain in a substantially straight line relation below the lower sprocket wheel and in close proximity to the grindstone.

1,786,680. BOBBIN SUPPORT FOR WEFT-REPLENISHING LOOMS. JOHN F. TINSLEY, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester Mass., a Corporation of Massachusetts. Filed Dec. 3, 1928. Serial No. 323,217. 18 Claims. (Cl. 139—251.)



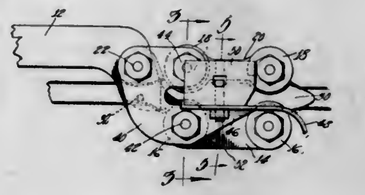
1. In a weft replenishing loom having reserve bobbins which are movable toward transfer position, a support to assist in holding a bobbin in transfer position, said support including a coil spring, and a resilient covering for said spring made of inherently elastic material to be engaged by the bobbin and the weft and extending therefrom as the bobbin moves toward transfer position.

1,786,681. METHOD OF AND APPARATUS FOR MANUFACTURING PAPER. JOHN TRAQUAIR, Chillicothe, Ohio, assignor to The Mead Pulp & Paper Company, Dayton, Ohio, a Corporation of Ohio. Filed July 31, 1926. Serial No. 126,230. 18 Claims. (Cl. 92—40.)



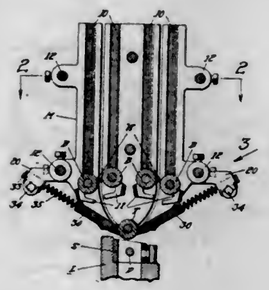
1. The method in the making of paper which comprises forming a sheet of wet paper and thereafter incorporating a paper surface layer of controlled characteristics upon such wet sheet of paper before it is passed to the driers by flowing a liquid stock suspension containing fibrous material thereon.

1,786,682. BOBBIN FOR WEFT-REPLENISHING LOOMS. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 3, 1929. Serial No. 360,244. 8 Claims. (Cl. 139—257.)



1. A pair of bobbins having the free weft ends thereof tied together, one of said bobbins being so wound that the main body of yarn thereon is held out of contact with but supported by the other bobbin to separate the bobbins and define a space between them in which the tied weft ends may lie.

1,786,683. WEFT DETECTOR. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 27, 1929. Serial No. 374,124. 10 Claims. (Cl. 139—287.)

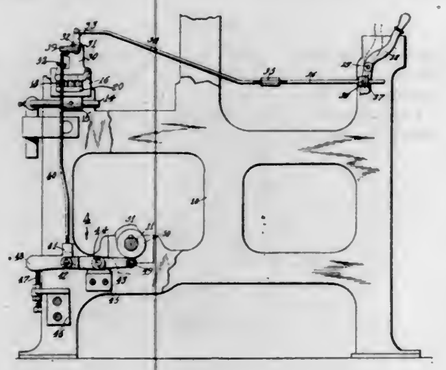


1. In a weft detecting mechanism to detect a mass of weft which decreases in diameter as it approaches exhaustion, a detector member, a pivot therefor around which the detector swings to give indication of weft exhaustion, said member having weft engaging elements offset in different degrees along the length of the mass of weft relatively to the pivot, one element being offset in less degree than the other and effective to engage a large diameter only of weft to prevent the other element from engaging the weft, the offset of the first element being too small to effect sliding of said element along the weft of large diameter, and the other element having a greater offset than the first element and effective to engage a relatively small diameter of welt and slide therealong to move the member around the pivot when insufficient weft remains.

1,786,684. TEMPLE FOR DOUBLE-FABRIC LOOMS. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 22, 1929. Serial No. 380,132. 3 Claims. (Cl. 139—294.)

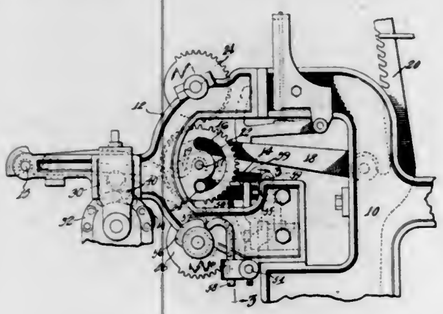
1. In a loom for weaving double fabric, a temple frame, a pair of upper temple rolls and a pair of lower temple rolls supported by said frame, and a rearwardly extending guiding and separating member positioned between said upper and lower rolls and supported entirely by said frame at a point forward of said rolls.

1,786,685. BOBBIN SUPPORT FOR WEFT-REPLENISHING LOOMS. KENNETH J. UNWIN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1928. Serial No. 321,240. 16 Claims. (Cl. 139—251.)



1. In a weft replenishing loom, means defining a guideway along which a plurality of bobbins may move toward transfer position, a bobbin support formed of a piece of wire coiled on itself, said support having some of the coils closely adjacent each other and having other coils open or separated with respect to each other, the open coils being located on that portion of the support which lies to that side of the guideway for the bobbins which is opposite the position occupied by a bobbin when in transfer position.

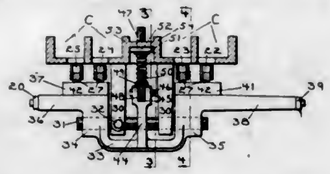
1,786,686. MECHANICAL WARP STOP MOTION. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1928. Serial No. 316,835. 5 Claims. (Cl. 139—360.)



1. In a warp stop motion, a detector rod to be oscillated about the axis thereof, a loom stopping mechanism, a reg-

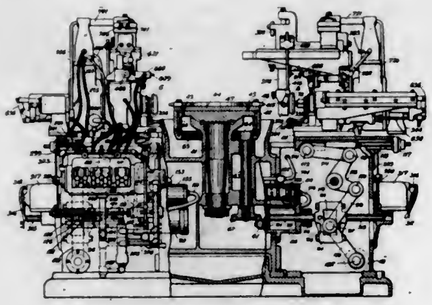
ularly moving driving means having a periodic movement, a weighted actuator pivotally mounted on the means and having operative connection with the detector rod, said actuator member moving toward the stopping device when

the means has a periodic movement and tending by its weight to move to one side of the stopping device and to oscillate the detector rod, the detector rod when held against movement causing engagement of the stopping device by the actuator member.



1,786,687. ATTACHMENT FOR REVERSIBLE DOBBY HEADS. WILLIAM M. WATTIE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 22, 1929. Serial No. 380,112. 4 Claims. (Cl. 139—77.)

1. In a dobby head, a plurality of vibrator levers, pattern means to support said levers in high, low and intermediate positions, and additional devices by which selected levers may be supported in intermediate position, said devices being removably mounted in said dobby head.

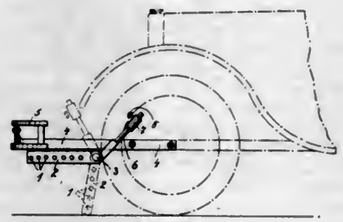


1,786,688. MULTICOLOR MAGAZINE FOR LOOMS. WILLIAM M. WATTIE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 13, 1929. Serial No. 385,596. 6 Claims. (Cl. 139—232.)

1. In a weft replenishing mechanism including a magazine having certical slides and shuttle feeler and transferrer latch elements to be controlled by the slides, a rocking member operatively connected to the said elements, a pair of spaced bearings between certain of the vertical slides, pivotal connections between the bearings and the rocking member, a spring actuated knuckle joint between the magazine and the rocking member to hold the member yieldingly in either of two positions, said joint being between the bearings, and two spaced shelves

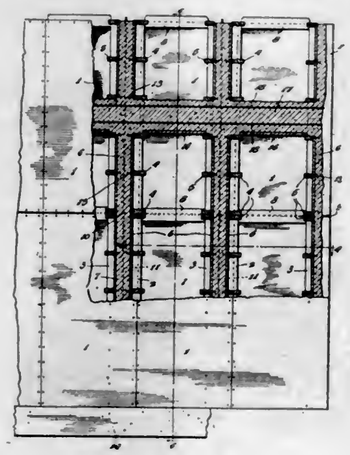
lying outside the bearings to cooperate with the vertical slides to move the member against the action of the spring actuated joint.

1,786,689. COMPLETELY AUTOMATIC GEAR-CUTTING MACHINE. HERBERT J. WHITE, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Dec. 13, 1928. Serial No. 325,841 58 Claims. (Cl. 90—3.)



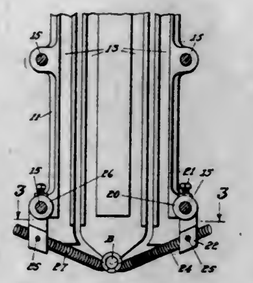
1. In a machine for producing gears, the combination with a tool mechanism, a work spindle, and means for securing a gear blank to the work spindle, of means for producing a partial relative withdrawal motion between tool and blank periodically for indexing and for effecting a complete relative withdrawal of the tool away from the blank after the cutting operation on the blank has been completed, said last named movement being in the same direction as the partial withdrawal movement and means actuated on the last named movement for releasing the blank securing means.

18. In a machine for producing gears, a work spindle, a magazine adapted to carry a plurality of gear blanks, a blank loading mechanism including a movable transfer arm adapted to be moved from a position of registration with the magazine to a position of registration with the work spindle, means for releasably holding a blank on said arm, means for reciprocating said arm in a direction at an angle to its transfer movement to position a blank on the work spindle and withdraw the arm after the same has been positioned, means for clamping a blank on the spindle and hydraulically operated mechanism for controlling the operation of said parts so that these operations occur in proper sequence.



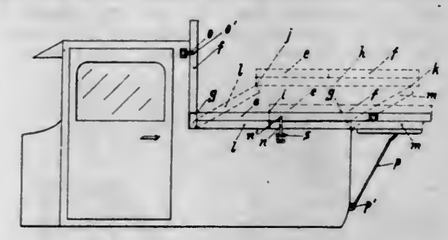
48. In a machine of the class described, a pair of supports, one of which is a work support, means for moving one of said supports toward the other to effect a working operation and for withdrawing said support away from the other to permit removal of a completed work-piece and chucking of a new blank, a blank holder, a transfer arm for transferring blanks from the blank holder to the work support, separate fluid-pressure operated means for reciprocating and oscillating said transfer arm to effect the transfer operation, a rotary member controlling the sequence of operation of the transfer mechanism, and means operable on movement of the movable support to loading position to actuate said rotary member.

1,786,690. SAFETY DEVICE FOR VEHICLES, PARTICULARLY POWER-DRIVEN VEHICLES. ALBERT ADDICKS, Boitwarden, near Brake, Germany. Filed Jan. 31, 1929, Serial No. 336,482, and in Germany Jan. 5, 1929. 8 Claims. (Cl. 293—34.)



1. A safety device for vehicles, specially power driven vehicles, comprising in combination a catching device oscillatably mounted under the vehicle frame in front of the two front wheels, and a counterweight device on the upper end of said catching device actuated by inertia when the vehicle is suddenly stopped or started.

1,786,691. BUILDING CONSTRUCTION. WILLIAM D. BELDING, Denver, Colo. Filed Nov. 27, 1929. Serial No. 410,237. 7 Claims. (Cl. 72—30.)

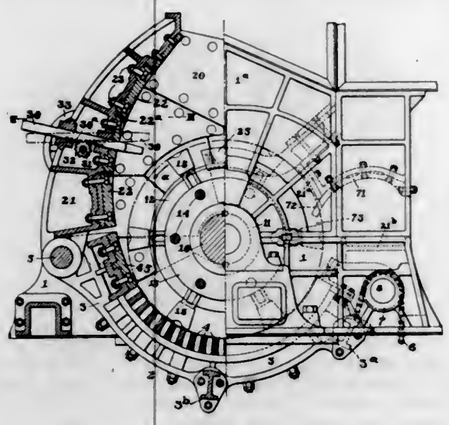


1. A building unit consisting of side plates, end frames disposed between the side plates and secured thereto, and end plates closing the outer sides of the end frames, one end frame projecting beyond the adjacent edges of the side plates and the other end frame being disposed inwardly from the adjacent edges of the side plates.

1,786,692. YIELDABLE SUPPORT FOR BOBBIN TIPS. CARL P. BERGSTROM, Millbury, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1928. Serial No. 321,205. 14 Claims. (Cl. 139—251.)

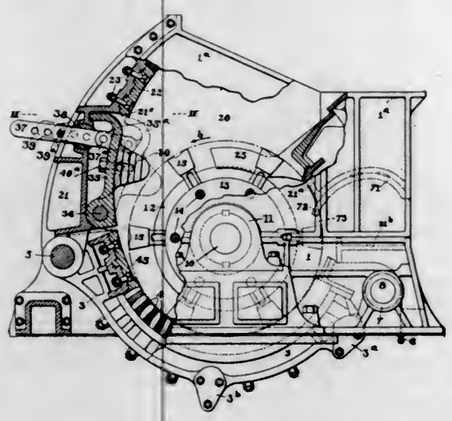
1. In a weft replenishing loom having a magazine, a lay, a substantially cylindrical bobbin support capable of bending on itself, and means on the magazine having a support engaging portion to hold said support so that the same projects downwardly and obliquely with respect to the movement of the lay.

1,786,693. TRANSFORMATION OF A MOTOR CAR WITH CLOSED CARRIAGE BODY INTO A PLATFORM LORRY. WILHELM BLASS, Hamburg, Germany. Filed Nov. 13, 1929, Serial No. 406,917, and in Germany Aug. 1, 1929. 1 Claim. (Cl. 296—108.)



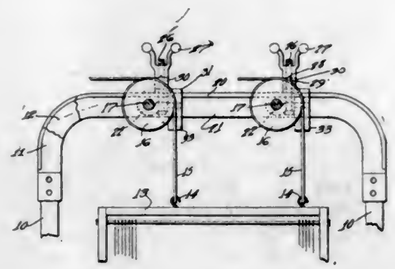
A motor car for passengers transformable into a platform lorry, comprising in combination with the stationary front part of the carriage body and the stationary lower portion of the rear part of the carriage body, hingedly mounted side walls adapted to be laid down in inward direction, hingedly mounted front and rear supporting frames of the roof, a double roof composed of a top roof consisting of two hingedly connected parts and of a lower roof hingedly connected at the front edge to the front edge of the front part of said top roof, stays hingedly mounted on the rear wall of the carriage body to support the collapsed parts of the roof forming a platform, and screw bolts and nuts for locking the platform in position.

1,786,694. HAMMER CRUSHER. GEORGE W. BORTON, New Lisbon, N. J., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Original application filed Aug. 25, 1928, Serial No. 302,080. Divided and this application filed June 6, 1929. Serial No. 368,819. 10 Claims. (Cl. 83—11.)



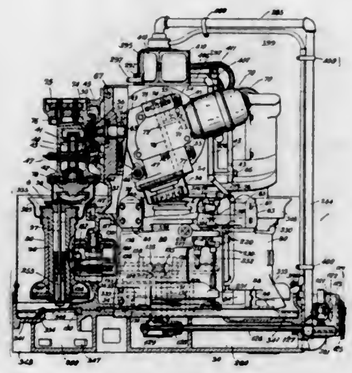
1. In a crushing machine, the combination with a frame having a hopper and a breaker wall structure pivotally connected to said frame and partly overhanging said hopper, a screen adjustably mounted in the lower portion of said frame and below said overhanging breaker wall structure, a rotor structure carrying hammers cooperating with said screen, and a series of grid bars in the lower portion

of said hopper above the screen, of adjustable bars projecting into said hopper in substantial alignment with said grid bars and serving with the latter to temporarily re-



tard the passage of material to be crushed whereby said material may be subjected to the action of said hammers in their up-running movement while temporarily retarded.

1,786,695. HAMMER CRUSHER. GEORGE W. BORTON, New Lisbon, N. J., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Original application filed Aug. 25, 1928, Serial No. 302,080. Divided and this application filed June 6, 1929. Serial No. 368,820. 8 Claims. (Cl. 83—11.)

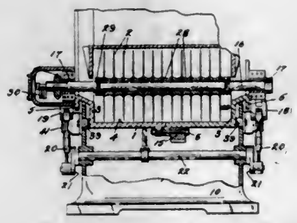


1. In a crushing machine, the combination with a frame having a hopper and a breaker wall structure pivotally connected to said frame and partly overhanging said hopper, a screen adjustably mounted in the lower portion of said frame and below said overhanging breaker wall structure, a rotor structure carrying hammers cooperating with said screen, and a series of grid bars in the lower portion of said hopper above the screen for temporarily retarding the passage of material to be crushed whereby said material may be subjected to the action of said hammers in their uprunning movement while temporarily retarded, of a wear member pivotally mounted in said breaker wall structure and arranged to be adjusted toward and from said grid bars.

1,786,696. HARNESS-SHEAVE STAND FOR LOOMS. ALLEN E. BRICKMAN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 19, 1929. Serial No. 393,823. 3 Claims. (Cl. 139—55.)

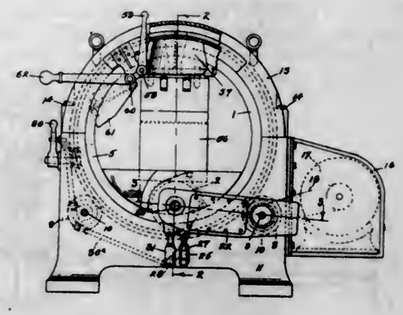
1. In a loom having harness sheaves on a shaft and arches having spaced vertical faces and spaced horizontal faces, a pair of members one to engage one vertical and one horizontal surface of the arch and the other to engage the other vertical and horizontal surfaces of the arch, said members having coacting surfaces which are inclined with respect to the horizontal and vertical surfaces of the arch, means to clamp the members against the arch and to hold the inclined surfaces in contact with each other, and a device supported by one of the members to hold the sheave shaft.

1,786,697. MACHINE FOR PRODUCING GEARS. EDWARD W. BULLOCK, ALBERT P. SCHAUSEIL, ALFRED W. DRAESEKE, CLARENCE T. GALLOWAY, and MAXWELL H. HILL, Rochester, N. Y., assignors to Gleason Works, Rochester N. Y., a Corporation of New York. Filed Aug. 8, 1928. Serial No. 298,320. 106 Claims. (Cl. 90—4.)



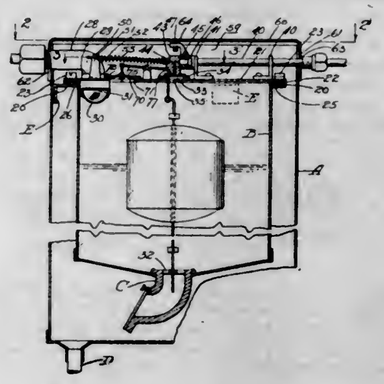
1. In a machine for producing tapered gears, a base, a turret rotatably mounted thereon, a plurality of work spindles rotatably mounted on the turret, a plurality of tool supports mounted on the turret, one for each work spindle, a rotary cutter journaled in each tool support which has its cutting edges extending in a direction generally parallel to its axis, means for adjusting the several tools into operative relation with the blank carried by said work spindles so that the axis of each work spindle is inclined to the axis of the corresponding tool at an angle determined by the root angle of the gear to be produced, means for rotating the cutters, means for rotating the turret, and means for feeding the blank relative to the tools during the rotation of the turret.

75. In a machine for producing gears, a base, a turret rotatably mounted thereon, a plurality of tools mounted on said turret, a plurality of work supports pivotally mounted on said turret one work support being paired with each tool, a work spindle journaled in each work support, means for moving the work pieces periodically toward and away from their respective tools during rotation of the turret to impart an alternate movement of feed and withdrawal to the blanks being cut, means for indexing the work spindles during each period of withdrawal, means for locking the work supports in operative relation with their respective tools during cutting, means for actuating the tools, means for rotating the turret continuously, means adapted to be actuated into position as the work supports successively reach a predetermined position and during the last feed movement of each support in the cutting of a blank to release the locking means on the subsequent withdrawal movement, and means for swinging the work supports about their respective pivotal axes when released to permit removal of the completed gear and positioning of a new blank.



100. In a machine for producing gears, a base, a turret rotatably mounted thereon, a plurality of work supports pivotally mounted on the turret, a work spindle journaled in each work support, a plurality of tools mounted on the turret, one of which is paired with each work spindle to operate on the blank carried thereby during rotation of the turret, means for adjusting the several tools and work supports into operative relation with each other with the axis of each work spindle angularly disposed to the plane of operation of the corresponding tool, means for actuating the tools, means for imparting an alternate movement of feed and withdrawal between each tool and the corresponding work spindle in the direction of the axis of the work spindle, means for indexing the work spindles during the periods of withdrawal, means for rotating the turret continuously, and means for atuomatically moving the work supports on their pivots successively as each reaches a predetermined position to permit removal of the completed gear from the work spindle and chuck of a new blank.

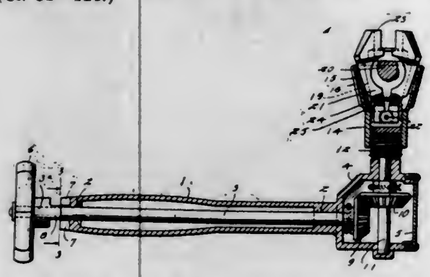
1,786,698. APPARATUS FOR CUTTING MATERIALS. EDWARD PARKER BURRELL, Cleveland, Ohio, assignor, by mesne assignments, to The Guardian Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 6, 1926. Serial No. 86,380. 13 Claims. (Cl. 146—67.)



13. In a cutting machine in combination, a housing, a drum, means for rotatably supporting the drum within the housing, means for variably maintaining the drum in spaced relation to the housing, cutting means disposed within the drum, means for maintaining the cutting means in spaced relation to the drum, and means for rotating the drum and cutting means.

1,786,699. APPARATUS FOR CUTTING MATERIALS. EDWARD PARKER BURRELL, Cleveland, Ohio, assignor, by mesne assignments, to The Guardian Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 8, 1926. Serial No. 86,771. 17 Claims. (Cl. 146—67.)

15. In a cutter, the combination of a housing, a drum rotatably mounted in the housing, a cutter shaft within the drum, an arm pivoted to said housing and supporting said cutter shaft, and means for rotating said cutter shaft housed within said arm.

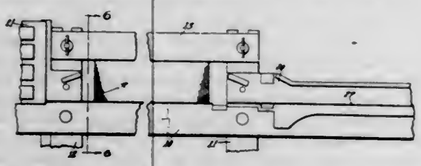


1,786,700. VACUUM-OPERATED FUEL-FEEDING APPARATUS. CHARLES S. BURTON, Oak Park, Ill. Filed Oct. 24, 1929. Serial No. 402,205. 7 Claims. (Cl. 103—236.)

1. In an apparatus for the purpose indicated comprising a vacuum chamber closed except as to the parts hereinafter mentioned; a liquid accumulating chamber having limited atmosphere vent at the top, and a third chamber over the vacuum chamber in free atmospheric communication with the accumulating chamber, the vacuum chamber having at upper and lower parts thereof respectively, a liquid inflow port and a liquid discharge port having respectively liquid supply connection for deriving supply from a source of liquid, and liquid discharge connection for delivering liquid to the accumulating chamber, the vacuum chamber having at the upper part a third port opening into said third chamber; a suction conduit arranged for connection with a source of suction, said suction conduit being mounted in said third chamber and comprising a terminal having an inlet port, said terminal being mounted for movement to carry said inlet port into and out of junction with the third port of the vacuum

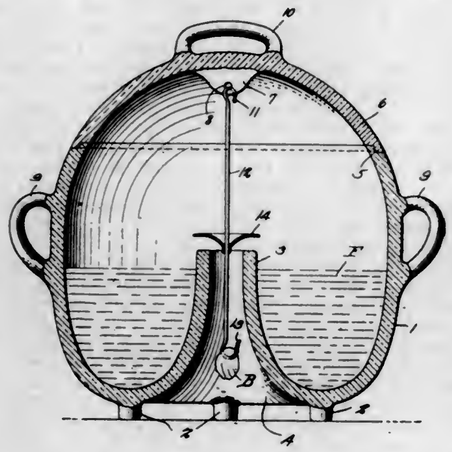
chamber; a float in the vacuum chamber, and means operated by the float for moving said terminal to carry its said inlet port into and out of junction with said third port of the vacuum chamber upon the descent and rise of the float due to the fall and rise of the level of the liquid content of the vacuum chamber to predetermined limits.

1,786,701. WRENCH. HILTON B. BUTLIN, Lapeer, Mich. Filed Nov. 15, 1929. Serial No. 404,998. 1 Claim. (Cl. 81—114.)



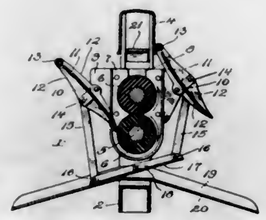
In a speed wrench of the character described, comprising a handle, a shank rotatably mounted in the handle and having a kerf in one end thereof, a pair of jaw members, means positioned in the kerf for pivotally securing the jaw members together, resilient means for moving the jaws away from each other, a bell member threadably mounted on the shank for moving the jaw members toward each other, a solid brace connecting the opposite sides of the kerf, said jaw members having inwardly extending nut engaging portions overlying said brace, said brace limiting the insertion of a nut between the jaws and coactively preventing twisting of the shank, and means mounted in the handle and engaging the shank for rotation thereof.

1,786,702. SHUTTLE-BOX CONSTRUCTION FOR LOOMS. JAMES F. COLGAN, Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 20, 1928. Serial No. 327,340. 15 Claims. (Cl. 139—183.)



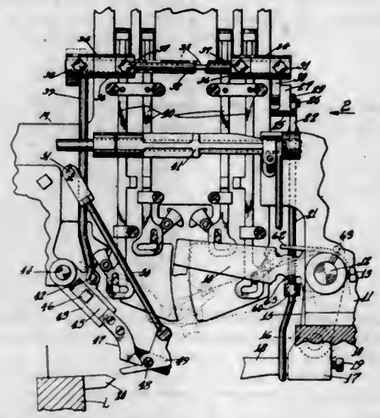
1. In a loom lay, a bottom box plate, a plurality of positioning elements normally fixed to the lay but movable with respect thereto and forming points of support for the bottom box plate, and means to hold said plate against said elements.

1,786,703. LAY AND SHUTTLE BOX FOR LOOMS. JAMES F. COLGAN, Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 20, 1928. Serial No. 327,341. 13 Claims. (Cl. 139—183.)



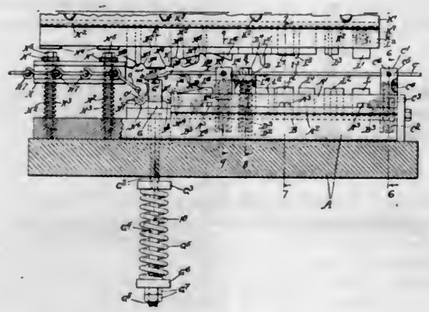
1. In a loom lay having a reed along which a shuttle may run, a member independent of the reed supported by the lay and in substantial alignment with the reed to guide the shuttle, a positioning device movable with respect to the lay and transversely of the reed to engage and position the member independently of the reed, and retaining means also movable with respect to the lay and transversely of the reed to hold said member against the positioning device.

1,786,704. INSECT TRAP. STANESLAUS DEIBELE, Woodburn, Oreg. Filed July 30, 1929. Serial No. 382,153. 2 Claims. (Cl. 43—122.)



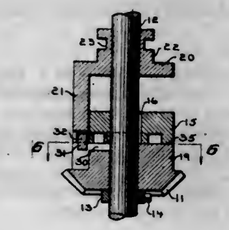
1. An insect trap including a bowl for holding a liquid, a tubular core opening upwardly into the bowl and downwardly through the bottom thereof, said core being flared downwardly, means for supporting the bottom of the bowl above a supporting surface, a lid removably mounted on the bowl, bait supporting means suspended from the lid and within the core, and a deflector carried by said means and overhanging but spaced from the core.

1,786,705. FEEDING TABLE FOR CLOTHES WRINGERS. WILLIAM C. F. DIETZ, Cincinnati, Ohio. Filed Oct. 10, 1928. Serial No. 311,638. 5 Claims. (Cl. 68—32.)



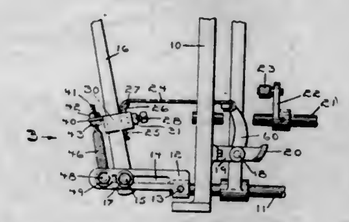
1. In a clothes wringer provided with upper and lower wringer-rolls, feeding tables located on opposite sides of the rolls and arranged to swing toward and away therefrom, the pivoted connections of said tables being located at a point above the lower of said rolls so that upon the presentation of the tables to the rolls the same will be directed downwardly and angularly toward the lower of said rolls, and a connection between the tables whereby as one of the tables is presented to the rolls the other is swung away therefrom.

1,786,706. RESETTING MECHANISM FOR WEFT-REPLENISHING LOOMS. PHILIP D. DOHERTY, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 14, 1929. Serial No. 347,094. 10 Claims. (Cl. 139—232.)



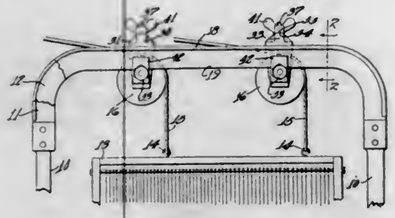
1. In a weft replenishing loom having a lay, a combined shuttle feeler and thread cutter, a transferrer arm, a latch operatively connected to the arm and capable of engagement with the lay, operating connections between the shuttle feeler and the latch to act on transferring beats of the loom to move the latter into operative relation with respect to the lay and also to move the shuttle feeler into shuttle detecting position in the path of the lay, and means movable with the transferrer arm independent of the latch to engage said connections and move the latter to move the combined shuttle feeler and cutter out of the path of the lay during the forward movement of the lay to prevent engagement of the lay and combined feeler and cutter.

1,786,707. APPARATUS FOR CHAIN MANUFACTURE. RAYMOND W. DULL, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed May 7, 1924. Serial No. 711,534. 40 Claims. (Cl. 59—6.)



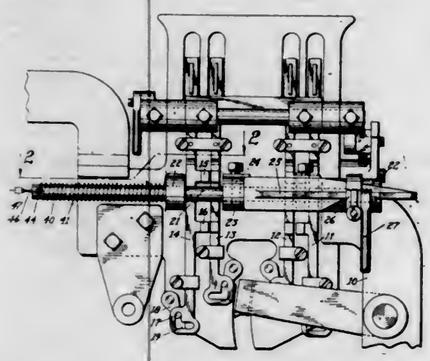
1. In a machine for making, from a continuous strip of sheet metal stock, chain links having pintles and hooks struck from the center of the link, comprising an opposed die and punch, having a plurality of elements positioned therein for progressive action upon the stock passing therebetween, longitudinal scoring knives adapted to score the link to outline the inner edges of the side bars, a knife element adapted transversely to sever the metal between said scores, means for indenting the link at the inside corners of the junction of the side bars and the hook end bar on the side of the stock from which the hook is bent, and means upon the punch adapted to contact the hook tongue and separate it from the side bars and bend it in relation to the link.

1,786,708. CLUTCH. ANTHONY D. GARGOLINSKI, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 11, 1929. Serial No. 362,355. 14 Claims. (Cl. 139—180.)



1. In a clutch mechanism, a shaft to be rotated, a driven clutch element secured to the shaft, a driving element, a coupling member movable to driving position to operatively connect the elements and movable also to non-driving position to operatively disconnect said elements, said elements capable of relative angular movement when the elements are operatively disconnected, a controller for the coupling member movable radially and peripherally with respect to the shaft out of and into the path of the coupling member, and means to cause radial movement of the controller when the elements move angularly relatively to each other.

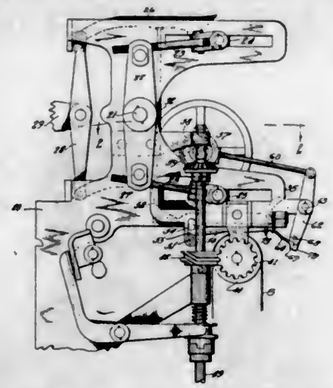
1,786,709. PICKER-STICK RETRIEVER FOR LOOMS. ANTHONY D. GARGOLINSKI, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 12, 1929. Serial No. 392,223. 6 Claims. (Cl. 139—147.)



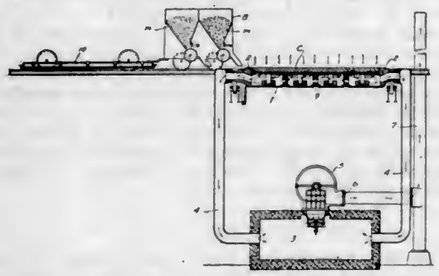
1. In a picking motion for a loom, a rocker foot having a substantially horizontal slot therein, a picker stick, a support for the picker stick secured to the foot and through the slot and adjustable along the latter, a power member to actuate the picker stick, a resilient element having one end secured to the rocker foot and having the main portion thereof extending substantially parallel to the picker stick, and a common support secured to and movable to different positions along the picker stick for the upper end of the resilient element and the power member, the resilient element acting in opposition to the power member and returning the picker stick to normal position after a picking stroke.

1,786,710. HARNESS-SHEAVE STAND FOR LOOMS. ANTHONY D. GARGOLINSKI, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 19, 1929. Serial No. 393,822. 8 Claims. (Cl. 139—55.)

1. In a loom having an arch and a shaft to support harness sheaves, a pair of members engaging opposite sides of the arch, means to clamp said members together, one of said members having a vertical recess extending therethrough surrounded on three sides by portions of the member, and a vertical threaded member lying in the recess and having supporting engagement with the sheave shaft and supported by one of the members.



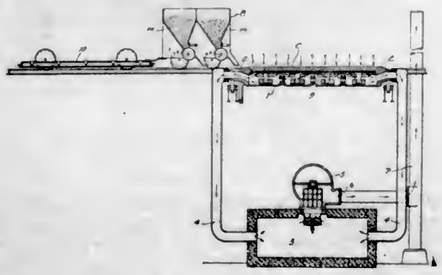
1,786,711. COLOR-SLIDE CONTROL FOR MULTICOLOR MAGAZINES. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 8, 1928. Serial No. 283,975. 3 Claims. (Cl. 139—232.)



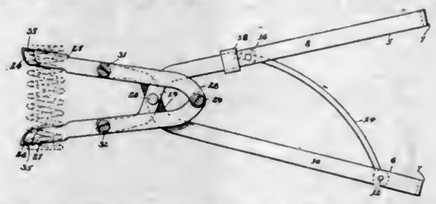
1. In a multicolor weft replenishing mechanism, an angularly and longitudinally movable color slide, a rod forming part of said color slide, an extension on said rod extended rearwardly and having a perforation therein, a bearing through which the rod passes, and a tension spring surrounding the extension of the rod and having the rear end thereof passing through the perforation and having the forward end attached to the bearing, said spring tending normally to move the rod yieldingly in one direction.

1,786,712. LOOM DOBBY. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 13, 1929. Serial No. 385,507. 7 Claims. (Cl. 139—74.)

1. In a dobby, a pattern cylinder having holes therein, means to intermittently advance said cylinder, a record sheet mounted on said cylinder and having transverse rows of perforations therein adapted to register with said holes, a plurality of dobby fingers, lifter mechanism therefor, a plurality of indicating members, a support on which said members are pivoted, and means to give said support intermittent regular movements, the resultant movement of said members being modified by the presence or absence of perforations in said record sheet.

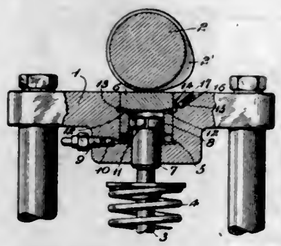


1,786,713. METHOD OF MANUFACTURING ARTIFICIAL AGGREGATE FOR MORTARS AND CONCRETES. JOHN E. GREENAWALT, New York, N. Y. Filed Feb. 16, 1929. Serial No. 340,642. 4 Claims. (Cl. 106—21.)



1. The process of manufacturing a concrete aggregate which comprises mixing finely crushed clay and cinders, charging said mixture in a suitable vessel, passing a combustion supporting gas therethrough, igniting the charge at its surface, and continuing to pass the combustion supporting gas through the charge until the same is sintered.

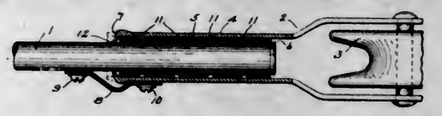
1,786,714. METHOD OF SINTERING CLAY. JOHN E. GREENAWALT, New York, N. Y. Filed Feb. 10, 1929. Serial No. 340,643. 7 Claims. (Cl. 106—21.)



1. The process of manufacturing an aggregate for mortars or concretes, which comprises reducing argillaceous material to a finely divided condition, adding water thereto to form an agglutinated mixture, converting said mixture into a homogeneous mass of small bodies, and arranging said bodies on a permeable hearth to form a charge, effecting a distribution of fuel throughout said charge, igniting the fuel at one surface of the charge, causing a supporter of combustion to pass through the charge away from said ignited surface, whereupon combustion of the fuel will proceed through the charge and produce a hard, porous, burnt product.

1,786,715. VALVE-LIFTING TOOL. ADOLPH KAUFMAN, Fairfield, Conn. Filed Feb. 13, 1930. Serial No. 428,032. 4 Claims. (Cl. 29—86.3.)

1. A valve lifting tool comprising a pair of handle members, each including two forwardly disposed portions which are deflected inward to cross each other and are pivotally connected together and have their end portions disposed forward in substantially parallel relation to each other, two pairs of jaw members having their ends disposed rearward of the pivot connecting the handle members and pivotally connected together, the two members of the upper pair of jaws being pivotally connected substantially midway of their length to the forward end portion of the lower handle members, the two members of the lower jaw being pivotally connected intermediate of their lengths to the end portions of the upper handle, the engaging ends of the jaws of each pair being disposed in spaced relation to each other and in substantially operatable alignment with that of the cooperating pair of jaws.

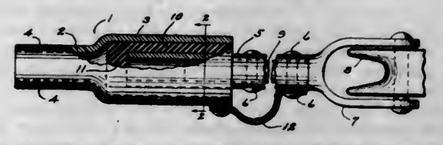


1,786,716. HYDRAULIC VALVE GEAR. LEROY A. KAUFFMAN and WINDSOR DAVIS, Washington, D. C., assignors to Warren Noble, Detroit, Mich. Filed Jan. 18, 1929. Serial No. 333,455. 6 Claims. (Cl. 123—90.)

1. In a hydraulic valve operating mechanism, an operating and an operated plunger, a hydraulic fluid chamber intermittently connected to a source of fluid supply, means outside of said chamber for collecting air accumulating therein, means for compressing air collected and means for releasing the pressure whereby said air is vented.

1,786,717. TROLLEY SILENCER. EDGAR D. MOORE and FRED R. DIPPMAN, Mansfield, Ohio, assignors to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 7, 1929. Serial No. 344,984. 19 Claims. (Cl. 191—64.)

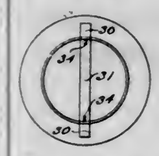
1. The combination of a current collector, a support member therefor and a hollow-support member for said first support, and the said support positioned in overlapping relation with a sleeve of resilient material between the said support members to prevent sound vibrations passing to the pole and having a surface union with one member and a mechanical interlock with the other member to prevent its separation from said members and a conductor connected to the support to conduct current away from the collector.



1,786,718. CURRENT-COLLECTOR SUPPORT. EDGAR D. MOORE and FRED R. DIPPMAN, Mansfield, Ohio, assignors to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 10, 1929. Serial No. 369,553. 19 Claims. (Cl. 191—64.)

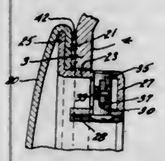
1. An insulating device for attachment to a trolley pole comprising a deformable insulating body of resilient rubber, a metal member provided with a receptacle therefor, a metal member embedded in and interlocked with the insulating body against separation therefrom, and projecting therefrom, means on one metal member for attachment to a pole and means on the other metal member for attachment to a collector support.

1,786,719. CURRENT-COLLECTOR SUPPORT. FRED R. DIPPMAN and EDGAR D. MOORE, Mansfield, Ohio, assignors to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed July 24, 1929. Serial No. 380,732. 11 Claims. (Cl. 191—64.)



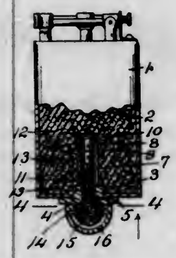
1. A trolley device comprising a pair of metal parts held out of contact and prevented from separation by a resilient rubber member vulcanized to the surfaces of the metal parts.

1,786,720. CURRENT-COLLECTOR SUPPORT. EDGAR D. MOORE and FRED R. DIPPMAN, Mansfield, Ohio, assignors to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 28, 1929. Serial No. 389,058. 10 Claims. (Cl. 191—64.)



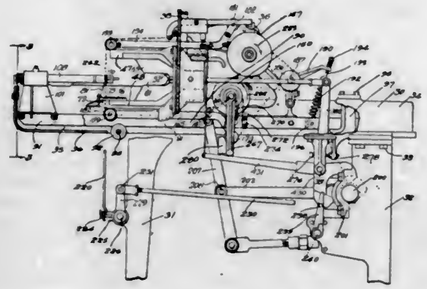
1. A trolley device comprising outer and inner members having lapping portions with a common longitudinal axis and out of direct engagement, means to hold the members in the relation to each other set forth above and prevent their longitudinal separation, the said means made of a yieldable material and tending to shift its position relative to the said members to offer increasing resistance to separation of the members as the separating force increases.

1,786,721. ATTACHMENT FOR TUBULAR MEMBERS. JAMES S. REID, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 25, 1926. Serial No. 137,685. 5 Claims. (Cl. 220—40.)



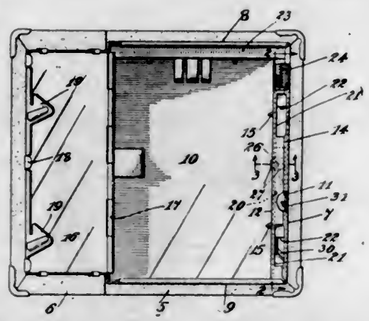
1. An extension attachment for tubular necks of the type having opposed locking portions adjacent one end thereof, comprising a tubular extension body member, a hollow supporting member secured to said body member and provided with a pair of opposed openings, and rod means mounted in said openings and having outwardly projecting locking end portions for bayonet-joint locking engagement with the locking portions of said neck, whereby said extension attachment can be detachably connected to said neck.

1,786,722. NECK AND CLOSURE STRUCTURE. JAMES S. REID, Cleveland, Ohio, assignor to The Eaton Axle and Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 15, 1929. Serial No. 340,102. 9 Claims. (Cl. 220—40.)



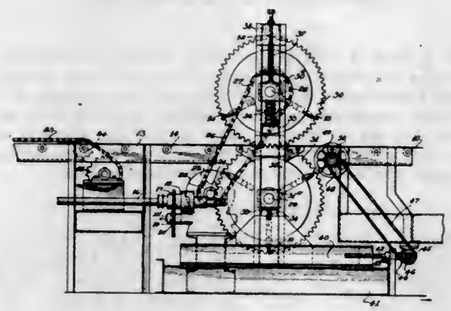
1. A neck and closure structure, comprising a tubular neck and a removable closure for one end thereof, said neck being provided at its end to be closed with a plurality of locking portions, said closure being provided with a plurality of independent locking members and a support therefor, each of said locking members having an elongated body portion and a locking portion at each of the two ends thereof, said support being provided with a tubular portion having a plurality of pairs of openings, the body portions of said locking members being arranged circumferentially around the inner surface of said tubular portion and the locking portions of said locking members projecting outwardly through the openings in said tubular portion, said projecting locking end portions being adapted for removable locking engagement with the locking portions of the neck when the closure is applied to the neck.

1,786,723. CLEANING IMPLEMENT. FREDERICK W. STEIN, Atchison, Kans. Filed May 9, 1929. Serial No. 361,622. 1 Claim. (Cl. 15—134.)



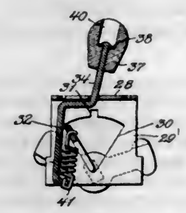
In a cleaning implement having a compartment adapted to hold a cleaning liquid and having a filling opening, a removable closure for said opening having an extension extending into said compartment, said extension having in its inner end a recess, and a removable cap on its inner end, said extension having between said recess and its outer end a passage communicating with said compartment and extending to the outer end of said closure, a wick extending through said passage into said compartment, and a rubbing member of absorbent material carried by and extending outwardly beyond said closure and contacting with said wick.

1,786,724. PEACH PITTER. GEORGE WILCOX, Riverside, Calif., assignor to California Canning Machinery Co., Los Angeles, Calif. Filed June 12, 1924. Serial No. 719,502. 59 Claims. (Cl. 146—28.)



1. In a pitting machine, the combination of: an incisor comprising a central blade, adapted to engage the pit of a fruit, and lateral incisor blades; means for impaling a fruit on said incisor; and flexible severers mounted to permit relative movement between said severers and said fruit.

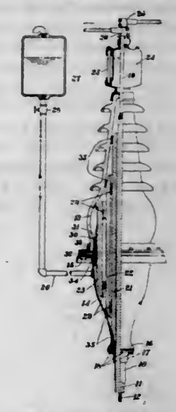
1,786,725. SAVINGS BANK. DAVID H. ZELL, Brooklyn, N. Y. Original application filed May 15, 1928, Serial No. 277,978. Divided and this application filed Dec. 10, 1929. Serial No. 412,966. 6 Claims. (Cl. 232—6.)



1. In combination with a rectangular casing body and a closure therefor hinged upon one marginal wall of the casing body, flexibly connected covers for said casing body and the closure, a metal strip attached to the cover for the casing body having angularly disposed portions representing the side and end edges of book leaves, said casing body having its other marginal walls engaged with the inner faces of said angular portions of the metal strip, and each of said metal strip portions having integrally formed means releasably engaging said body walls of the casing to rigidly and detachably secure said casing body and the cover member in fixed relation to each other.

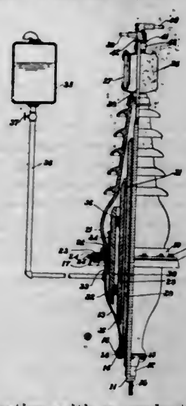
1,786,726. BOARD-CUTTING MACHINE. CARL ABSMEIER, Maywood, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1929. Serial No. 337,748. 4 Claims. (Cl. 164—68.)

1. In a cutting machine, means for advancing a continuous strip of sheet material, a shaft rotatably supported adjacent said sheet material, a plurality of cutting knives adjustably supported on said shaft, means for adjusting the position of one of said knives circumferentially with reference to a second knife and means for rotating said shaft so that said knives operate on said sheet material.



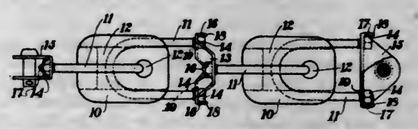
1,786,727. ELECTRIC SWITCH. FREDERICK B. ADAM, St. Louis, Mo. Filed Jan. 29, 1923. Serial No. 615,626. 7 Claims. (Cl. 200—67.)

7. A switch comprising a top having a slot therein, and sides, a bridge member carrying switch-blades, said bridge being supported by said frame, a one-piece switch-operating lever angularly bent to form a fulcrum portion adjacent said top, and extending through the slot therein, and a spring connecting the bridge member and the operating lever.



1,786,728. POTHEAD FOR CONDUCTORS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Jan. 16, 1925. Serial No. 2,752. 6 Claims. (Cl. 247—6.)

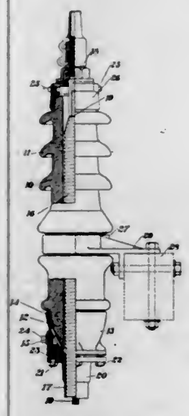
1. The combination with a conductor having a dielectric covering and an outer metal sheath, of means for preventing flashover at the termination of said sheath, said means comprising a closed casing having a portion of the outer wall thereof formed of conducting material surrounding said conductor and dielectric covering and connected with said sheath at points closely adjacent the outer surface of said dielectric covering, and forming a sharply acute angle with the surface of said covering and gradually tapered outwardly away from said surface, the divergence of said wall from said surface being



gradually increased at a distance from its point of closest approach to said surface to form an outwardly curved portion of said wall.

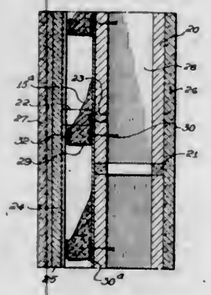
1,786,729. POTHEAD FOR INSULATED CONDUCTORS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Jan. 16, 1925. Serial No. 2,754. 6 Claims. (Cl. 247—6.)

1. The combination with a conductor having a dielectric covering and an outer metal sheath, of a pothead for said conductor comprising an inverted metallic bell having an opening through its lower end for receiving said conductor, means for securing said sheath to said bell adjacent said opening, resilient means for supporting the portion of said conductor within said pothead and a tubular dielectric member surrounding said conductor within said pothead and supported on said bell.



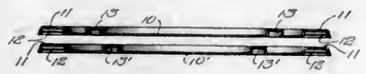
1,786,730. FITTING FOR INSULATORS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of Ohio. Filed June 1, 1926. Serial No. 112,745. 7 Claims. (Cl. 287—20.)

7. An insulator fitting comprising a threaded member and a nut thereon, a member cooperating with said thread-



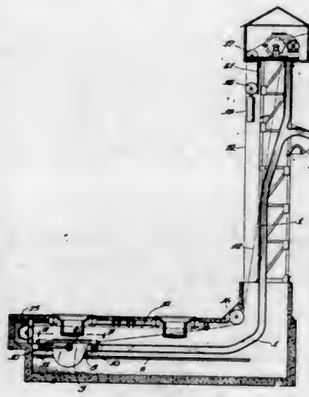
ed member and having a lug engaging said nut to prevent rotation of said nut relative to the second named member, said lug having means thereon for retaining said members against relative displacement in one direction longitudinally of said threaded member and for holding said lug and nut in cooperative relation.

1,786,731. TERMINAL HOUSING FOR CABLES. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of Ohio. Filed Aug. 5, 1926. Serial No. 127,436. 11 Claims. (Cl. 247—6.)



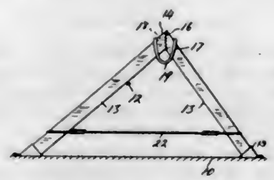
1. The combination with a cable having an insulating covering and an outer sheath of conducting material, of a rigid tubular member having fluid tight walls of dielectric material forming a weather proof casing member surrounding said insulating covering and having one end thereof tapered outwardly and disposed adjacent the end of said sheath, the outer tapered surfaced of said dielectric member being coated with conducting material electrically connected with said sheath.

1,786,732. BUILDING INSULATION. BRUNO E. BALDUF, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 21, 1929. Serial No. 401,165. 3 Claims. (Cl. 72—16.)



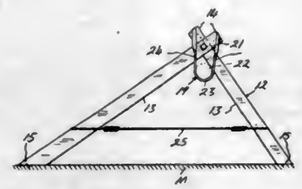
1. In an insulating wall construction, a pair of spaced, substantially parallel wall panels, cushioning means for connecting such panels together, a low density filling material in the space between said wall panels and shelves between said wall panels adapted to divide said filling material up into a plurality of independent bodies of material to prevent the settling thereof.

1,786,733. LID OR CLOSURE. LEON BENOIT, Chicago, Ill. Filed Dec. 30, 1929. Serial No. 417,309. 2 Claims. (Cl. 220—97.)



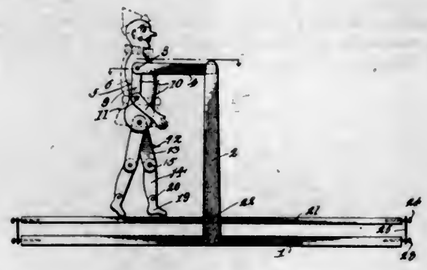
1. A stack of closures comprising closures of a plurality of series in alternate relationship, each closure of a series being superposed and in juxta-position to a closure of a different series, all the closures being provided with annular ribs spaced from the edges thereof, the diameter of the ribs being different in the closures of each series, whereby nesting of adjacent closures is prevented.

1,786,734. MATERIAL-HANDLING PLANT. CARL F. BLEDSOE, Chicago, Ill., assignor to Ogle Construction Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1929. Serial No. 372,626. 4 Claims. (Cl. 214—119.)



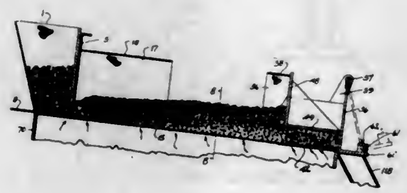
1. In a material handling plant, horizontal guides terminating in vertical guides, a pair of track members below the horizontal guides, a bucket having rollers traveling on said guides and forward rollers for traveling on said track, a bail having rollers traveling on said guides and links connecting said bail and bucket coaxially with said first mentioned rollers and means attached to said bail for operating the same.

1,786,735. DECKING DEVICE FOR FREIGHT CARS. ALFRED COPONY, Mount Clemens, Mich., assignor to Copony Auto Loading Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 24, 1930. Serial No. 430,888. 13 Claims. (Cl. 105—368.)



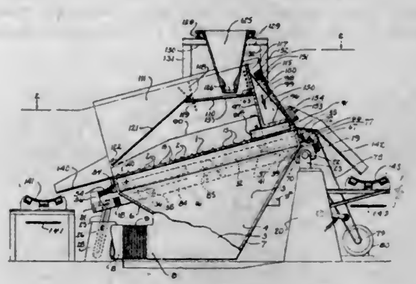
1. In an automobile decking device, a pair of downwardly diverging frame members having their upper ends arranged in abutting relation, and a hub supporting saddle having a portion substantially encircling the abutting ends of said frame members to support said saddle and to maintain said frame members assembled.

1,786,736. DECKING DEVICE FOR FREIGHT CARS. ALFRED COPONY, Mount Clemens, Mich., assignor to Copony Auto Loading Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 24, 1930. Serial No. 430,889. 6 Claims. (Cl. 105—368.)



1. In a decking device for automobiles or the like in freight cars, a pair of downwardly diverging frame members having their upper ends intersecting one another, a saddle strap having its ends engaging respectively the said ends of said frame members, and a fastening element extending through the intersecting ends of said frame members and the ends of said saddle strap.

1,786,737. MOTION TOY. CHARLES R. CREW, Edgewood, Md., assignor to Lloyd C. Adley, Llanerch, Pa. Filed May 29, 1928. Serial No. 281,446. 2 Claims. (Cl. 46—40.)

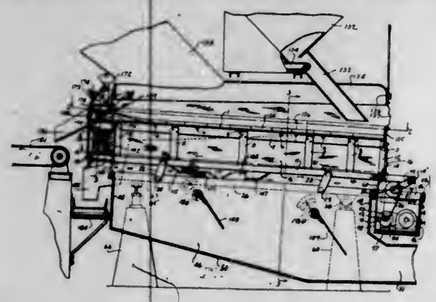


1. As an article of manufacture, a toy including a base, parallel uprights fixed to and extending upwardly from said base, a figure, means carried by said uprights and supporting said figure, an elongated platform extending between said uprights, means pivotally supporting said platform upon said uprights below said figure and above said base, a pin carried by each end of said platform and said base, and elastic bands yieldably connecting the pins of the platform to the pins of the base, as and for the purpose set forth.

1,786,738. PROCESS AND MECHANISM FOR DIVIDING INTERMIXED MATERIALS. KENNETH DAVIS, St. Benedict, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 15, 1922. Serial No. 553,250. 20 Claims. (Cl. 209—467.)

1. A mechanism for separating intermixed divided materials including in combination means for maintaining a bed of the materials, means for subjecting the rearward portion of the bed to the action of air pressure currents in a plurality of directions and for subjecting a more forwardly part of the bed only to air pressure currents upwardly therethrough to progressively stratify and separate the materials and means for continuously discharging the separated materials at different points by the action of the air and the motion of the table.

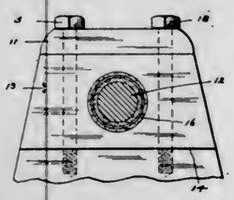
1,786,739. METHOD AND MECHANISM FOR SEPARATING DIVIDED MATERIALS. KENNETH DAVIS, Ebensburg, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del., a Corporation of Delaware. Filed June 7, 1922, Serial No. 566,639. Renewed June 9, 1926. 50 Claims. (Cl. 209—467.)



9. A mechanism for separating intermixed divided materials of different specific gravities, comprising an air-pervious table, transversely extending, material propelling projections on the upper surface of the table, means for passing air upwardly through the table, and means for vibrating the table in a direction having a component longitudinally thereof, the vibrating movement being short and quick in one direction, and slow in the opposite direction, whereby the materials are stratified and moved up and down the table to different places of discharge.

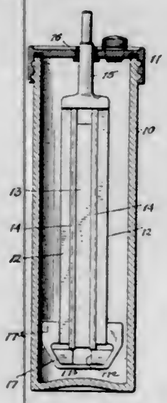
43. The process of purifying coal which comprises maintaining a continuous, traveling bed of substantial depth of raw coal which has not been subjected to close preliminary size classification, including in intermixture relatively large pieces and fine particles such as are present in coal as it comes from the mine, vibrating the bed, passing lifting and loosening air currents simultaneously through substantially all parts of the unsized bed to loosen the intermixture and to float the lighter material, and regulating the air action along the bed to effect a gradual and progressive sinking of the heavier impurities, continuing said vibration and air action throughout the travel of the bed until all sizes of heavier impurities have been settled to an inferior stratum and substantially all the coal is flotant as a superior stratum, and separately delivering said strata.

1,786,740. METHOD AND MECHANISM FOR SEPARATING INTERMIXED DIVIDED MATERIALS. KENNETH DAVIS, Ebensburg, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del., a Corporation of Delaware. Filed May 28, 1924, Serial No. 716,322. Renewed Sept. 24, 1929. 57 Claims. (Cl. 209—467.)



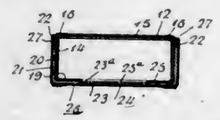
1. A mechanism for separating intermixed divided materials including in combination an air pervious table for a bed of the materials and material separating means comprising separating partitions in sets at either side

of the table and converging inwardly and forwardly of the table but terminating short of the center thereof, the



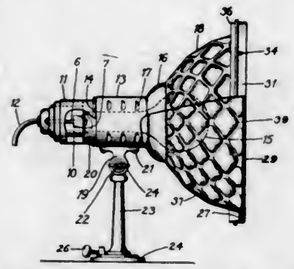
ends of the successive partitions being farther apart forwardly along the table to provide a forwardly widening passage for the heavier separated material along the table.

1,786,741. DEMOUNTABLE SHEAVE BEARING. SYLVANUS H. H. PARSONS, Coscob, Conn., assignor to Jacob Ruppert Schalk, Poughkeepsie, N. Y., Filed July 27, 1929. Serial No. 381,544. 1 Claim. (Cl. 308—18.)



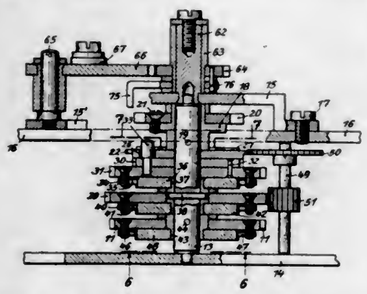
A demountable bearing for sheave blocks, comprising in combination with a housing having parallel sides formed with slots in their adjacent faces, of bearing blocks formed with alined bearings and adapted to be mounted within said slots, and retaining means for said blocks comprising bolts engaging both said blocks and the sides of the housing.

1,786,742. STORAGE BATTERY. CARL J. DUNZWEILER, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Mar. 3, 1924. Serial No. 696,510. 4 Claims. (Cl. 136—81.)



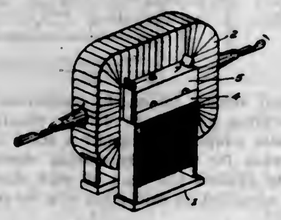
1. A storage battery comprising a container, a battery element including a plurality of plates suspended above the bottom of the container, and a clamp independent of the supporting means, said clamp being resilient and having a gripping engagement with opposite side faces of the element and having a portion extending across the bottom of the element, said portion being so formed as to prevent accumulation of material thereon.

1,786,743. BOX. MARTIN FEYBUSCH, New York, N. Y., assignor to New Jersey Machine Corporation, Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 6, 1929. Serial No. 352,938. 4 Claims. (Cl. 206—44.)



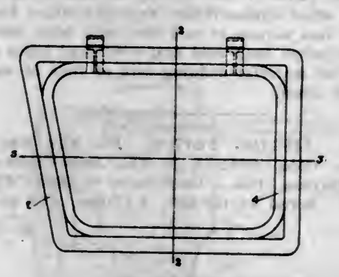
1. A container comprising a cover having a top and a side flange portion, said top being provided with a sight opening, a transparent element secured to the outer face of said top and closing said opening, and a relatively narrow binding strip secured to the outer face of said flange portion only along the upper edge portions thereof and to the marginal part of said transparent element in overlapping surface engagement therewith to hold the transparent element in position and to frame the same.

1,786,744. ILLUMINATING DEVICE. EDWARD M. GAREY, Brooklyn, N. Y. Filed Feb. 8, 1927. Serial No. 166,612. 4 Claims. (Cl. 240.—103.)



1. An illuminating device comprising a reflector having an inner polished surface formed with a plurality of protuberances forming substantially pyramidal reflecting surfaces arranged in quincunx formation.

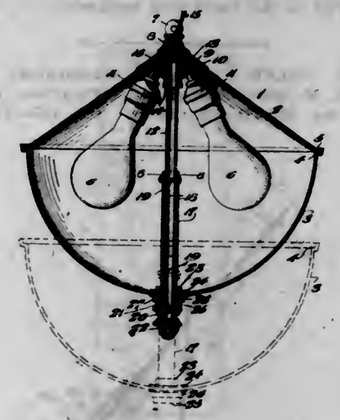
1,786,745. FARE INDICATOR. KARL GEHLEN, Villingen, Germany, assignor to Kienzle Uhrenfabriken Aktiengesellschaft, Schwenningen, A. N., Germany, a Corporation of Germany. Filed Mar. 1, 1928. Serial No. 258,207. 4 Claims. (Cl. 235—30.)



1. A fare indicator, comprising the figure wheels, a clock work for operating said figure wheels, a main mechanism intermediate said clock work and figure wheels including a part running idle for a certain period of time after throwing the clock work into operation, and a subsidiary gearing intermediate the clock work and figure wheels operative while the said part runs idle for advancing the figure wheels from the clock work.

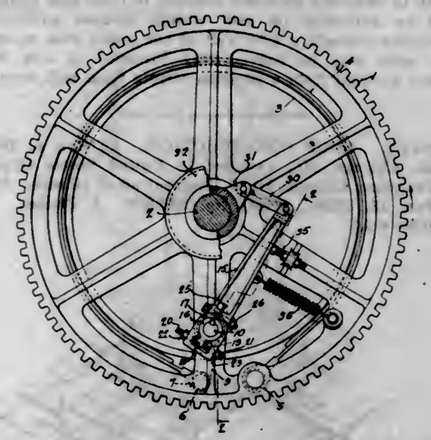
1,786,746. TERMINAL BLOCK FOR CURRENT TRANSFORMERS. JESSE B. GIBBS, Sharon, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 18, 1929. Serial No. 333,386. 5 Claims. (Cl. 200—2.)

1. A current-transformer terminal block comprising a base, secondary terminals and a spring-closed contact switch mounted on the base for short-circuiting said terminals, and a cover formed to be secured upon said base in either of two positions, said spring-closed contact switch being arranged to be automatically opened when said cover is positioned upon said base in one of its said two positions.



1,786,747. DOOR FOR RAILWAY HOPPER CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 5, 1929. Serial No. 397,592. 3 Claims. (Cl. 105—280.)

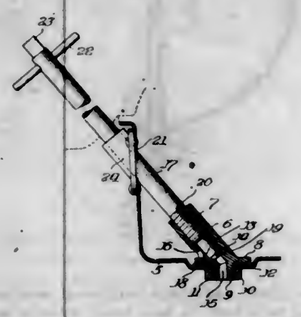
1. A hingeable door forming part of the load retaining means of a railway dump car comprising a marginal portion, a depressed portion in a spaced apart plane therefrom, and a web connecting said portions, said marginal portion being inclined downwardly toward the outer edges of the door.



1,786,748. LIGHTING FIXTURE. EDGAR A. GILLINDER, Philadelphia, Pa. Filed Dec. 21, 1928. Serial No. 327,501. 8 Claims. (Cl. 240—78.)

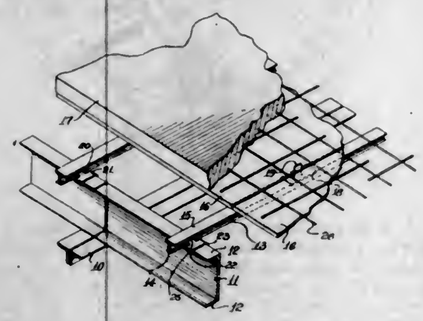
4. In a lighting fixture, an upper fixed conical closure of glass, a lower bowl of glass which is movable with respect to the fixed closure, an inner tubular member carried by said fixed closure and extending through said bowl, an outer lower tubular member having telescopic relation with the first mentioned tubular member, said bowl being carried by the lower of said members, means including a slot in said inner member and a transverse pin connection in said outer member for guiding said telescopic parts, resilient means acting as washers arranged

between the inner and outer surface of said bowl, means for securing said bowl to said outer tubular member, and means for clamping said bowl in elevated position.



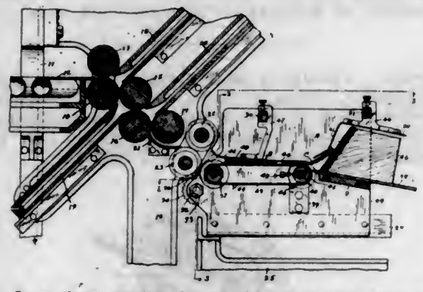
1,786,749. OPERATING MECHANISM FOR CLUTCH AND BRAKE BANDS. GEOFFREY M. HARRY, Milwaukee, and CHARLES STERNBERGER, West Allis, Wis., assignors to Harnischfeger Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 8, 1927. Serial No. 218,133. 6 Claims. (Cl. 192—36.)

1. A power clutch comprising a drum adapted to be driven, a rotary driving member therefor, a clutch band cooperable with said drum and having one end anchored on said driving member, a crank mounted on said driving member and engaged with the other end of said band, operating mechanism for the crank including a control drum, an operating lever for the crank, mechanical linkage interposed between the operating lever and the control drum and utilizing the initial relative movement between the driving member and the control drum to quickly impart operating movement to the operating lever, means cooperating with the operating lever to constrain it to partake of movement through its operating positions only, and adjustable fastening means between the operating



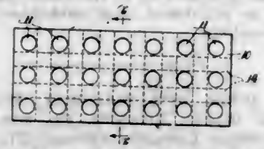
lever and the crank and providing, in its secured position, a positive connection between the lever and the crank but adjustable to shift the crank relative to the lever while leaving the lever stationary and in proper operative relation relative to the mechanical linkage.

1,786,750. VALVE. ALBERT A. HASSELQUIST and INGOLF H. M. ROGNLIE, Elgin, Ill. Filed Nov. 10, 1927. Serial No. 232,285. 3 Claims. (Cl. 137—21.)



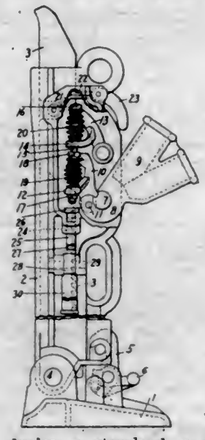
1. In combination with a crank case adapted to contain an oil bath and provided with an outlet opening on its bottom surface a substantial distance from the side wall of the case, a valve housing secured to the case and disposed over said opening for controlling the flow therethrough, the housing being provided with a passage in register with the opening, a valve seat in said passage inside of the crank case, a valve closure member threaded in said housing and adapted to cooperate with said seat when in inwardly threaded position to close said passage, and an extension on said closure member protruding upwardly through a side wall of the crank case whereby the same may be conveniently threaded to and from closed position from a position remote from said opening.

1,786,751. ROOF CONSTRUCTION. ARTHUR A. HEEREN, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1929. Serial No. 340,810. 4 Claims. (Cl. 108—6 5.)



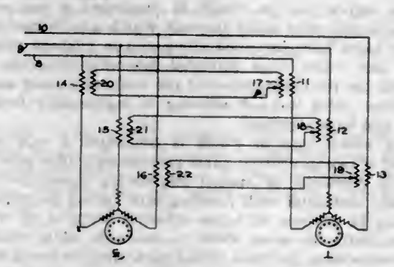
4. In a building construction, a series of beams in spaced, parallel relation, a series of metallic support members extending at right angles to said beams and connected thereto, said support members having flanges of greater area than the portion of the support members connected to the beams, and a cementitious slab supported by said flanges.

1,786,752. STACKER. REUBEN HITCHCOCK, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 23, 1928. Serial No. 321,352. 8 Claims. (Cl. 271—86.)



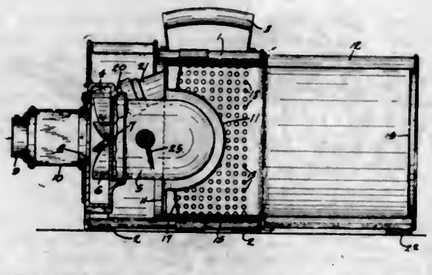
1. In a sheet stacker for use in connection with paper handling machines adapted to deliver sheets one after another, a table adapted to support a stack of sheets on edge, and means for positively moving sheets one at a time edgewise against the rear of said stack, whereby the latter is advanced on said table step by step.

1,786,753. TERRA-COTTA ARTICLE. ADOLPH F. HOTTINGER, Chicago, Ill., assignor to Northwestern Terra Cotta Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 3, 1927, Serial No. 223,542. Divided and this application filed Nov. 10, 1928. Serial No. 318,362. 6 Claims. (Cl. 72—18.)



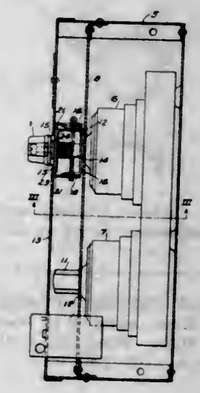
1. A terra cotta article having an imperforate front face, a plurality of symmetrically arranged round holes of uniform diameter each having its axis normal to said face and other symmetrically arranged round holes having their axes normal to said face, said other holes being of less diameter than said first-mentioned holes and disposd in the material defining sets of four of said first-mentioned holes.

1,786,754. LIFTING DEVICE. ION VON KERT HOTT, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 3, 1927. Serial No. 158,639. 7 Claims. (Cl. 254—111.)



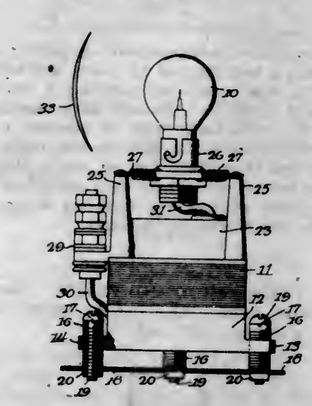
1. In a lifting device, a standard, a toothed element carried by said standard, a lifting pawl and a detent pawl supported on said standard and cooperating with said toothed element, means to actuate said lifting pawl, a rod connected with and capable of longitudinal movement with relation to said pawls, springs carried by said rod and acting on said pawls, means to control the longitudinal movement of said rod and thereby control the operation of said pawls, and other means to control the longitudinal movement of said rod to cause both of said pawls to assume inoperative positions with relation to said toothed element.

1,786,755. ROTARY EARTH-DRILLING SYSTEM. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 23, 1924, Serial No. 757,597. Renewed May 21, 1930. 3 Claims. (Cl. 172—239.)



2. The combination with a working tool, of an alternating-current-motor for operating the tool, a second alternating-current motor for feeding the tool against the work, a source of alternating-current power for the motors, individual circuits from said source to each motor, interconnected current transformers, connected in each of said individual circuits, for controlling the operation of the motor for feeding the tool in response to the load current of the motor operating the tool.

1,786,756. VACUUM CLEANER. EDWIN JUELSON, Chicago, Ill. Filed Nov. 24, 1928. Serial No. 321,618. 6 Claims. (Cl. 183—36.)

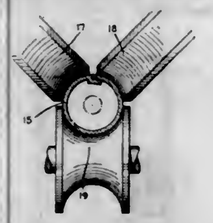


1. In a vacuum cleaner, in combination a cylindrical casing, floor engaging feet carried by one side thereof adapted to rest on the floor and thereby support said casing with its axis horizontal, a pump unit carried by one end of said casing, a dust receptacle carried by the other end of said casing, said pump unit comprising a fan casing having an inlet through the first mentioned end of said first casing, a fan in said fan casing, and an electric motor operatively connected to said fan and located between said fan casing and said dust receptacle, said dust receptacle comprising a cylindrical perforated side wall, an imperforate end wall, and filtering fabric covering the perforations, a discharge conduit leading from said fan chamber to said dust receptacle past said motor, a flexible hose communicating with said inlet, and a carrying handle attached to that side of said first casing which is opposite said feet.

1,786,757. SWITCH MECHANISM. HUBERT K. KRANTZ, Rockville Center, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1926. Serial No. 104,097. 5 Claims. Cl. 200—50.)

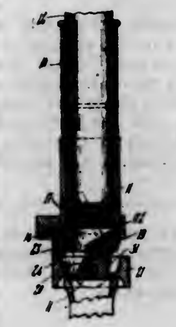
1. Switch mechanism comprising a housing having an opening, a cover for the opening, a current-controlling switch operable exteriorly of the housing, a reversing switch connected to the controlling switch to be inaccessible when the cover is closed and means interlocking the controlling switch with the cover whereby the latter is retained in closed position to prevent access to the reversing switch so long as the controlling switch is in closed position.

1,786,758. SIGNAL LAMP. CARL H. LARSON, Elkhart, Ind., assignor to The Adlake Company, a Corporation of Illinois. Filed Oct. 11, 1928. Serial No. 311,722. 5 Claims. (Cl. 240—44.2.)



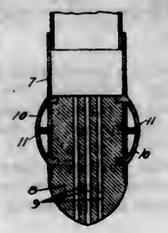
4. A lamp comprising a base having a plurality of apertured lugs, vertically adjustable tubular feet setting through the lugs, and in threaded engagement therewith, securing screws setting through the feet and in threaded engagement therewith, a plurality of posts rising from the base, a lamp socket positioned between the posts, and springs extending between the posts and the lamp socket for supporting the latter and protecting it from injury.

1,786,759. ELECTRIC WELDING. JOHN F. LAWSON, Brooklyn, N. Y. Filed June 24, 1927. Serial No. 201,047. 16 Claims. (Cl. 219—10.)



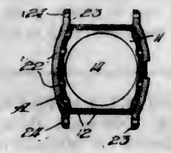
1. The method of electric welding which consists in depressing the metal at one side of the seam so as to lap

a broad surface of said metal across the edge surface of the metal at the opposite side of the seam pressing said edge surface to said board surface, and passing current



between said two surfaces, thereby welding said edge surface of the undepressed metal to said board surface opposed to it.

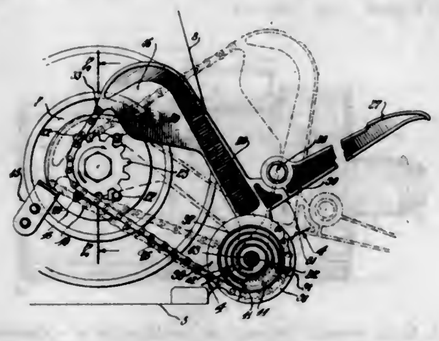
1,786,760. BOTTLE CAPPER. EUGENE R. LEIGHTON, North Andover, Mass., assignor to Jennie E. Leighton, North Andover, Mass. Filed Feb. 3, 1928. Serial No. 251,551. 6 Claims. (Cl. 226—92.)



1. A device of the class described, comprising a tubular member having a bore adapted to receive and hold a stack of milk bottle caps, means for removing a cap from the bottom of said stack, an apertured block adapted to rest on the top of a milk bottle with its aperture registering with the mouth of the bottle, said aperture having a diameter slightly less than that of a cap, and a plunger movable through said aperture, said block and plunger having cooperating guide surfaces for inverting a cap after its removal from the bottom of the stack.

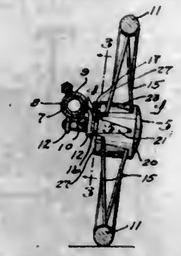
1,786,761. CASING SHOE AND VALVE. JOHN Q. LITTLE, Whittier, Calif. Filed Oct. 21, 1929. Serial No. 401,144. 6 Claims. (Cl. 166—1.1.)

1. A casing shoe formed of resilient material with combination guide and centering members on the outside of the casing and inserted through the casing and into said casing shoe and vulcanized thereto, for the purpose described.



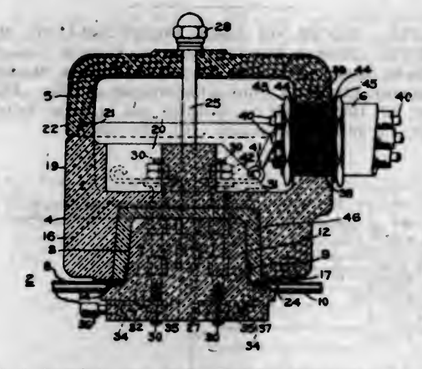
1,786,762. WATCHCASE. DANIEL P. LYONS, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Sept. 7, 1927. Serial No. 218,037. 8 Claims. (Cl. 58—88.)

2. A watch case in which is comprised a case center having double side walls through which are formed registering holes, bars extended along and in contact with the outer side walls, pins extended laterally from the bars through the proximate holes of the walls and upset against the inner faces thereof whereby to inseparably lock the walls and bars together.



8. A watch case in which is comprised a case center formed of two interfitted parts presenting double side walls with a plurality of spaced registering openings therethrough, and outer wall forming bars having portions conforming in contour with the external surfaces of, and of substantially the same width as said side walls, said contour conforming portions of the bars being in contact with said surfaces, and means on the bars received through the openings in the side walls to provide an inseparable connection between the bars and the two interfitting parts of the case center.

1,786,763. ENGINE STARTER. PERRY E. MACK, Milwaukee, Wis., assignor to Briggs and Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed July 18, 1928. Serial No. 293,721. 15 Claims. (Cl. 74—55.)

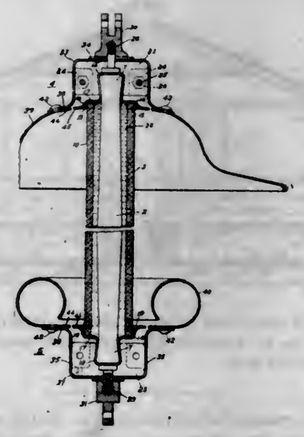


1. In a starting device for gas engines and the like having a shaft, a member for imparting rotation to the shaft, a flexible drive member engageable with said member, a pivoted lever, means connecting one end of the flexible drive member with the pivoted lever, means connected with the other end of the flexible drive member for yieldably holding said flexible member in an inactive position, movement of said pivoted lever engaging the flexible drive member with the rotation imparting member to turn the same, a foot pedal for moving the pivoted lever, and means pivotally connecting the foot pedal with the lever whereby the same may be folded therealong to an inactive position and extended to a position of use.

1,786,764. WHEEL AND WHEEL JOURNAL. JULIUS A. MAHR, Minneapolis, Minn. Filed Nov. 6, 1929. Serial No. 405,113. 6 Claims. (Cl. 301—108.)

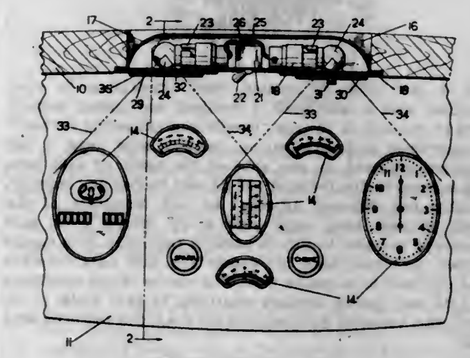
1. A box for encasing the hub of a wheel having wire spokes and comprising inner and outer caps provided with capping flanges telescoped the one on the other said inner cap having a spindle passageway.

1,786,765. TERMINAL STRUCTURE. RALPH E. MARBURY, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 22, 1927. Serial No. 200,640. 9 Claims. (Cl. 173—311.)



1. A terminal comprising a wall structure having an opening therethrough, a single homogeneous insulating bushing member disposed in the opening, a plurality of conductors extendng through said member, and an insulating structure having a portion of substantially cup-shape sealed to the wall structure in position over the outer end of said bushing member and providing terminal-supporting means for the conductors.

1,786,766. PROCESS OF MANUFACTURE OF PARANITRANILINE. HAMILTON MERRILL, South Orange, N. J., assignor to Tower Manufacturing Co., Inc., a Corporation of New York. Filed June 11, 1925, Serial No. 36,552. Renewed May 28, 1926. 12 Claims. (Cl. 260—130.5.)

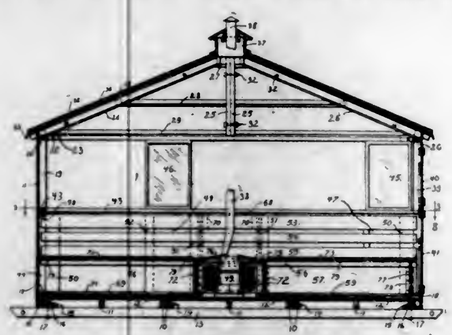


1. A process of manufacturing para-nitraniline which consists in heating para-nitro-chlor-benzol with ammonia, treating with an alkali, filtering the charge while hot enough to keep the nitraniline in solution, and recovering the purified product in the filtrate.

1,786,767. INSULATOR. FREDERIC H. MILLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1928. Serial No. 285,939. 8 Claims. (Cl. 173—318.)

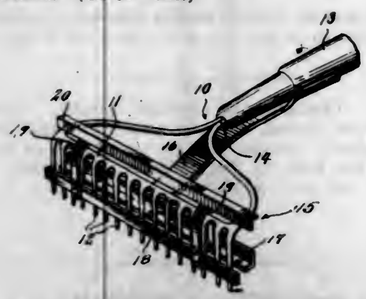
2. An insulator comprising a load-sustaining insulating member, a tubular member surrounding the same, an end-closure member for the tube having a substantially cup portion for an end of said load member and a terminal structure for the load member disposed in transverse gripping relation to said cup and to said end of the load member.

1,786,768. INSTRUMENT-BOARD LIGHT. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 28, 1928. Serial No. 308,954. 11 Claims. (Cl. 240—8.16.)



1. A lamp comprising a casing having a supporting flange, a support positioned transversely in the casing, lamp sockets on the support, lamps in the sockets, a switch on the support positioned intermediate the sockets and connected thereto, the operating lever for the switch depending from the support, a cover plate for the casing positioned on the flange, the cover plate having openings registering with the lamps and closures for the openings.

1,786,769. FARROWING HOUSE. EVAN B. MORRIS, Cedar Bluffs, Nebr.; Mary L. Morris administratrix of the estate of said Evan B. Morris, deceased. Filed Aug. 20, 1927. Serial No. 214,314. 12 Claims. (Cl. 119—16.)

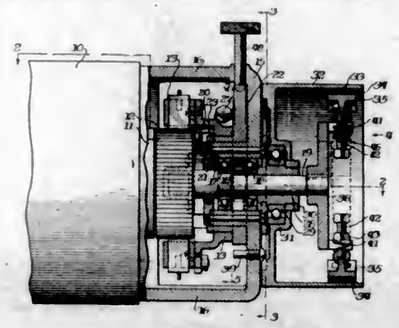


1. In a farrowing house, the combination with a suitable inclosure, of a plurality of partitions arranged to divide the space within said inclosure into a plurality of main pens, there being a laterally spaced pair of said partitions

between each pair of the main pens, the space intermediate said pairs of partitions forming litter-pens, there being open-

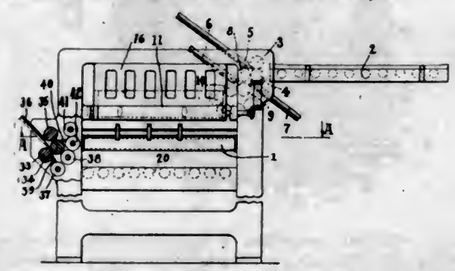
ings in the partitions to admit smaller animals from each main pen to an adjacent litter-pen, and removable covers for said litter-pens.

1,786,770. SELF-CLEANING RAKE. WILLIAM L. MYERS, St. Louis, Mo. Filed Nov. 5, 1927. Serial No. 231,234. 5 Claims. (Cl. 55—146.)



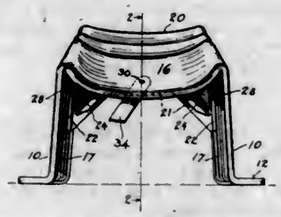
1. A self cleaning garden rake comprising in combination with a rake head, a resilient leaf spring support fixed at one end to the rake handle and extending forwardly therefrom and terminating short of said head, a bar disposed adjacent to one side of the teeth of said rake and secured to the forward end of said leaf spring support, another bar disposed adjacent to and forwardly of the teeth of said rake, said bars being spaced from said teeth and movable in planes parallel therewith, and means arched over said head for connecting said bars together whereby said bars can be moved by virtue of the resiliency of said leaf spring support relatively to said teeth to remove the material accumulated between the teeth of said rake.

1,786,771. DRAIN CONNECTION. EDWARD F. NIEDECKEN, Milwaukee, Wis. Filed Feb. 20, 1928. Serial No. 255,717. 3 Claims. (Cl. 285—49.)



1. A drain fitting for the outlet of a receptacle comprising an annular body fitted flush against the receptacle around the outlet opening and having an outwardly projecting peripheral flange, a weld between the outer periphery of the flange and the receptacle, said body having a portion lapping the outlet opening and providing a strainer seat, said body also having an annular groove underlying the margin of the outlet opening, and means in the groove for sealing the interstice between the margin of the outlet opening and the body of the drain fitting.

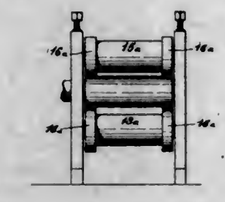
1,786,772. MOTOR-CONTROL MEANS. JOHN D. NIES, Chicago, Ill., assignor to Kimble Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 6, 1928. Serial No. 310,690. 9 Claims. (Cl. 171—221.)



1. In combination, an alternating current electric motor having series characteristics, said motor having a commutator and brushes cooperatively associated with said commutator, biasing means for said brushes, adjustable means for limiting the action of said biasing means, and speed responsive means for shifting said brushes to limit the speed of said motor.

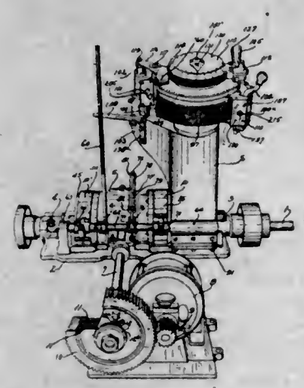
1,786,773. PAPER OR LIKE SHEET-FOLDING MACHINE. ERNEST EDWARD PALMER, Toronto, Ontario, Canada, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 10, 1927, Serial No. 218,762, and in Great Britain Sept. 13, 1926. 13 Claims. (Cl. 270—68.)

1. In a paper handling machine, a plurality of sheet feeding conveyors adapted to handle consecutively sheets passing through the machine single file, means at the delivery end of each conveyor for performing an operation upon the sheets, a sheet delivery conveyor, and a movable deflecting guide in connection with each of said operating means for feeding sheets onto said delivery conveyor without passing them over the succeeding sheet feeding conveyors.



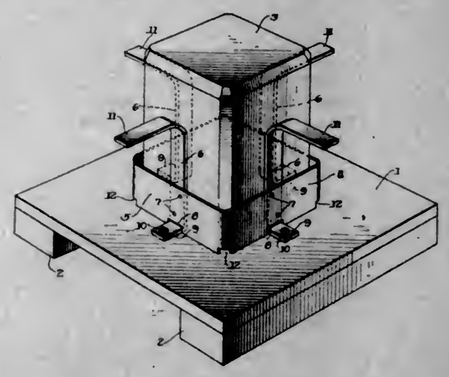
1,786,774. LOADING BLOCK. CARL B. PARSONS, Detroit, Mich., assignor to The Parsons Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 11, 1928. Serial No. 311,770. 10 Claims. (Cl. 188—32.)

1. A loading block formed of a single piece of sheet metal bent to provide an arcuate portion adapted to engage



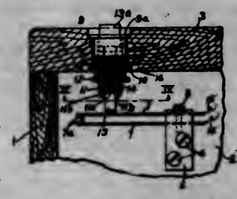
the tire of a vehicle wheel, said arcuate portion being formed on a radius substantially greater than that of the tire to be engaged thereby and corresponding more nearly to a distorted condition of such tire under heavy impact rather than normal load.

1,786,775. REDUCTION OF METAL BY ROLLING MILLS. ALEXANDER PATERSON, Buffalo, N. Y. Filed Oct. 27, 1928. Serial No. 315,488. 11 Claims. (Cl. 80—60.)



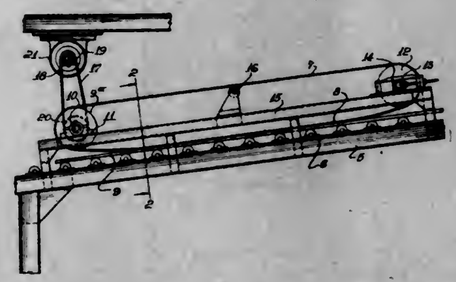
6. A multi-pass mill for reducing hot sheet metal comprising a housing, a plurality of rolls arranged on said housing to provide under operating conditions at least two passes of different convexity which are adapted to effect successive reductions of the sheet metal, one of the rolls being common to both passes.

1,786,776. SETWORKS. GEORGE M. PELTON, Milwaukee, Wis., assignor to The Filer & Stowell Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 2, 1928. Serial No. 289,881. 9 Claims. (Cl. 143—120.)



9. A sawmill setworks including a set shaft and means for abruptly checking the advance of the knees, planetary bear mechanism connected to said set shaft for rotating the same, said planetary gear mechanism having manually operable brake means controlling its operation, and a relatively light power high speed motor drive connected to and actuating said planetary gear mechanism.

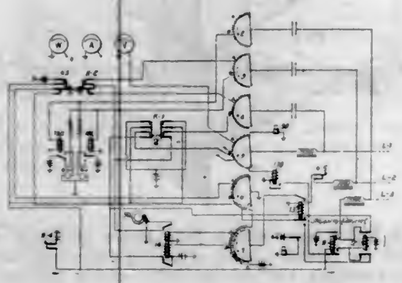
1,786,777. FEEDER. GROVER F. PFEIFFER, Quincy, Ill., assignor to Moorman Manufacturing Company, Quincy, Ill., a Corporation of Illinois. Filed Aug. 5, 1929. Serial No. 383,652. 11 Claims. (Cl. 119—51.)



1. A feeder comprising a base, means connected with the base for holding a block of food in place thereon, said means including resilient members bearing against the side walls of said block.

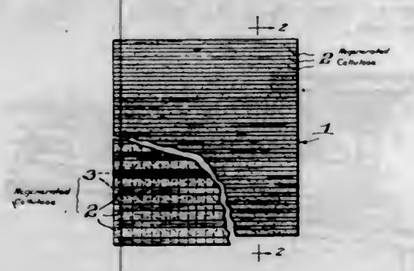
1,786,778. SWITCH MECHANISM. RAYMOND T. PIERCE, Milburn, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1928. Serial No. 254,246. 13 Claims. (Cl. 200—54.)

1. The combination with a supporting member having a passage, of a switch-actuating member disposed in said passage and movable longitudinally thereof, and a sleeve carried by said supporting member and within which said actuating member is disposed, said sleeve terminating interiorly of said passage.



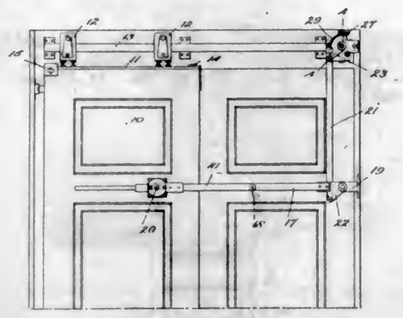
1,786,779. CONVEYER MECHANISM. FLOYD R. QUICK, Fort Dodge, Iowa, assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1929. Serial No. 355,690. 4 Claims. (Cl. 198—165.)

1. In a conveyer mechanism for plaster boards, a roller conveyer having rotatably mounted idler rollers associated



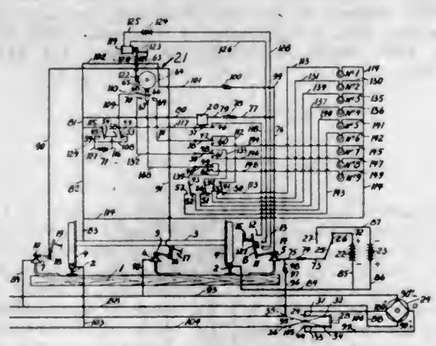
therewith, and a positively driven endless conveyer belt mounted above said roller conveyer, one reach of said endless conveyer being adapted to make frictional contact with articles on the rollers due solely to the weight of said reach, so as to cause the positive movement of said articles along said roller conveyer.

1,786,780. SUPERVISORY AND CONTROL SYSTEM. JUDSON O. SHEPHERD, Atlanta, Ga. Filed Dec. 17, 1925. Serial No. 76,026. 7 Claims. (Cl. 177—353.)



7. In a supervisory control system, a first station, a second station, a source of energy at each station, a step-by-step switch at each of said stations, a line connecting said switches, an electro-magnet at each of said stations comprising a first and second winding, means for connecting one terminal of the first winding at each station to all the odd contacts on the switches and one terminal of the second winding to all the even contacts on said switches, means for connecting the opposite terminals of the sources of energy and the opposite terminals of the second winding at each of said stations to opposite terminals of the sources of energy, a circuit connection between said sources of energy, stepping magnets for each of said switches, electro-magnetic means at each station for controlling the circuits of said stepping magnets, means whereby the electro-magnetic means at said first station controls the operation of said second station electro-magnetic mean, and means whereby said first station stepping magnet controls the circuit of said first station electro-magnetic means, whereby the stepping magnets are alternately energized and deenergized to operate the switches step-by-step in synchronism.

1,786,781. CLOTH-LIKE FABRIC. MILTON J. SHOEMAKER, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Filed Aug. 13, 1928. Serial No. 299,454. 21 Claims. (Cl. 154—2.)

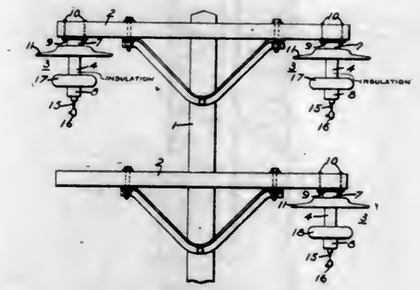


18. A fibrous sheet comprising water-absorbent cellulose fibers, fractional portions of individual fibers being cemented together by added regenerated cellulose into a supporting net-work to leave uncemented substantial portions of said cemented fibers.

1,786,782. AUTOMATIC DOOR CLOSER. HAROLD W. SHONNARD, Montclair, N. J., assignor to Elevator Supplies Company, Inc., a Corporation of New Jersey. Filed Nov. 2, 1925. Serial No. 66,206. 7 Claims. (Cl. 16—62.)

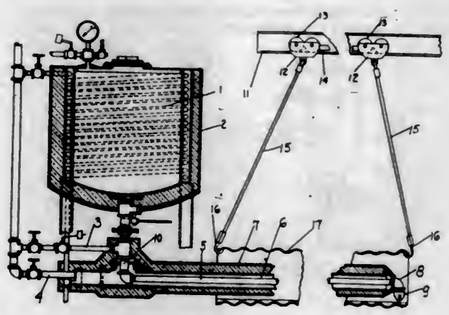
1. An automatic closing device for sliding doors comprising a vertical shaft provided with a toothed sector, an operating arm having a toothed sector adapted to swing in a vertical plane, an intermediate beveled gear meshing with said two toothed sectors and motive means for said vertical shaft.

1,786,783. AUTOMATIC TRAIN CONTROL. PAUL J. SIMMEN, Eden, N. Y., assignor to Simmen Automatic Railway Signal Company, Eden, N. Y., a Corporation of Arizona. Substitute for abandoned application Serial No. 650,247, filed July 9, 1923. This application filed Sept. 5, 1928. Serial No. 304,133. 7 Claims. (Cl. 246—49.)



1. In an automatic train control, in combination, a source of direct current, a second source of direct current, a source of alternating current of a plurality of phases, three ramps, connections between one of the ramps and the sources of direct current and between all of the ramps and the source of alternating current, switching means interposed in these connections, a vehicle, train control means on the vehicle, the means on the vehicle connecting at times with the ramps and connected to the vehicle control means whereby a plurality of conditions are created in the vehicle control means.

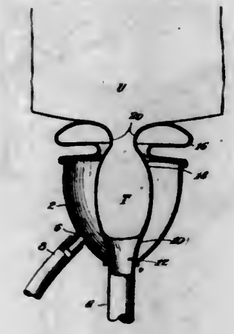
1,786,784. INSULATOR. HAROLD B. SMITH, Worcester, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 13, 1923. Serial No. 651,246. 3 Claims. (Cl. 173—318.)



2. In a high-potential insulator device, the combination with a main supporting structure, of a plurality of insu-

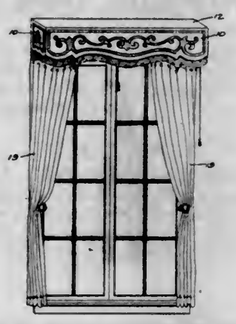
lators depending therefrom each comprising a grounded annular laterally-projecting upper electrostatic-field-controlling member of relatively great diameter, an elongated insulating member depending therefrom, a positive laterally-projecting lower electrostatic-field-controlling member of lesser diameter, disposed outside, and co-operating with,

said upper member to confine flash-over thereto to a position laterally between the outer perimeter thereof and the insulating member and to direct a weakened central field portion substantially parallel to said insulating member, and means for connecting all of said parts in fixed relative positions.



1,786,785. MACHINE FOR INTERNALLY COATING CULVERT PIPES. ARCH W. SPAULDING, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Aug. 5, 1925. Serial No. 48,400. 3 Claims. (Cl. 91—43.)

3. In a machine for internally coating culverts, the combination with a source of supply of heated bitumen, such as an asphaltic compound, a pipe projecting from the said supply sufficiently for a culvert to be placed over it, a spraying device at the outer end of said pipe for projecting a downward spray of the bitumen, a support movable in the line of said pipe, and means on the support for supporting a culvert pipe in a horizontal plane, with means of moving the support and the culvert pipe with relation to the spraying device, said means adapted to move the culvert pipe longitudinally, while inhibiting a rotary motion thereof.

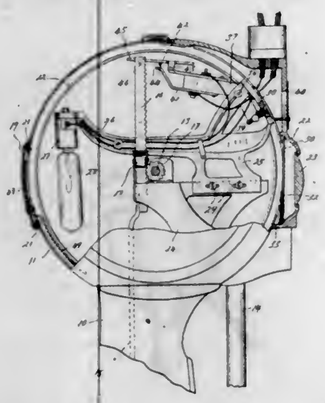


1,786,786. TEAT CUP. JACOB J. STAMPEN, Chicago, Ill., assignor to Babson Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1927. Serial No. 191,288. 9 Claims. (Cl. 31—85.)

1. A teat cup of approximately conical shape having a lower central opening and an upper open edge, a milk tube projecting through the lower opening, a pulsator tube connected with the interior of the shell and a flexible inflation having a lower tubular portion connecting with the upper portion of the milk tube, said inflation including a cylindrical central portion having its lower portion lying with in the shell, said central portion having a flexible tubular extension of appreciably larger diameter folding outwardly and over the upper central portion of

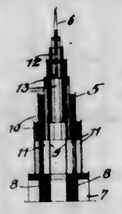
the inflation with the free edge of the enlarged portion connected in an air tight manner to the upper end of the shell and projecting appreciably above said upper end of the shell to form a collapsible member adapted to massage the udder.

1,786,787. WINDOW-DRAPE ILLUMINATOR. FRED W. STEINMEYER, Oakland, Calif. Filed Mar. 5, 1929. Serial No. 344,390. 4 Claims. (Cl. 240—1.)



1. An illuminating device of the character described, for use in combination with a window; said device comprising an oblong box-like frame mounted across the upper portion of the window; transparent material provided on said frame; window draperies provided between the front face of the frame and the window and adapted to extend downwardly therefrom; artificial illumination means provided between the front of the frame and the window and adapted to reflect light rays from the rear of the draperies through said draperies and transparent material on said frames; and means for fastening the device in front of the window.

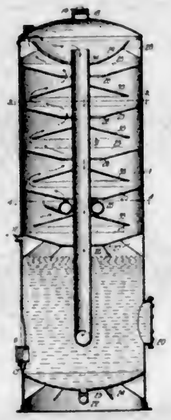
1,786,788. SCALE. WALTER F. STIMPSON and RICHARD L. SCHUHMANN, Louisville, Ky.; said Schuhmann assignor to said Stimpson. Filed Aug. 9, 1926. Serial No. 128,258. 5 Claims. (Cl. 240—2.11.)



1. In a scale, a housing formed with a pair of sight openings, a drum indicator having translucent portions,

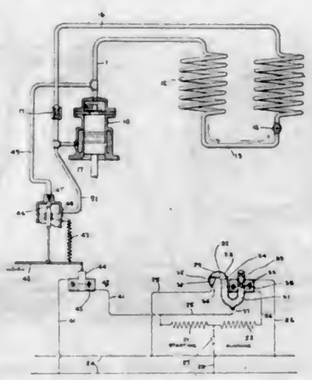
an indicator strip located adjacent one of said sight openings and provided with translucent portions and a

light arranged within said drum adjacent the other sight opening, for illuminating the drum at the sight openings and the translucent portions of said strip.



1,786,789. METHOD OF PRODUCING ILLUSORY ORNAMENTAL EFFECTS IN ARCHITECTURAL STRUCTURES. ROBERT M. SUTPHEN, Newark, N. J., assignor to American Enameled Brick & Tile Company, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1929. Serial No. 341,657. 3 Claims. (Cl. 41—17.)

1. That method of creating optical effects with architectural structures of buildings and the like, which consists in incorporating in the surface of a building predetermined black and white substantially vertical and substantially horizontal areas positioned in relation to the architectural structure of the building, and projecting the light rays of a source of illumination on said surface for respectively substantially wholly absorbing and substantially wholly reflecting the light rays of said source of illumination to optically produce predominance and deletion of desired portions of the building structure.

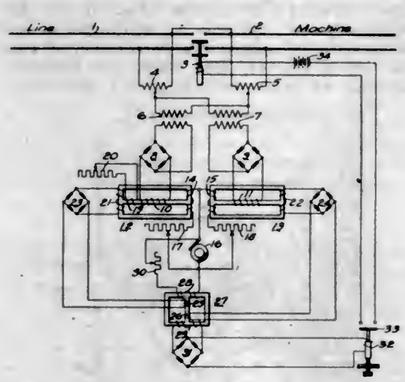


1,786,790. SEPARATOR. CLARENCE L. SUTTON, Tulsa, Okla. Filed Feb. 11, 1928. Serial No. 253,653. 1 Claim. (Cl. 183—2.7.)

A separator of the character described comprising a tank having a closed top, a series of baffle rings having outer peripheries sealed to the wall of the tank and inner peripheries forming an axial passage in the tank for restricting flow of fluid over said inner peripheries, a trap at the top of the tank spaced from the wall thereof, a gas outlet pipe in said passage spaced from the inner peripheries of the rings and having a gas inlet and extended into the trap, said pipe having an outlet adjacent

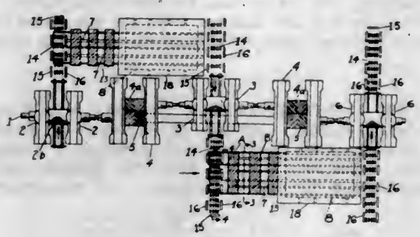
the lower end of the tank, and an inlet nozzle for mixed oil and gas arranged to discharge adjacent the outer periphery of the lowermost of said baffle rings.

1,786,791. REFRIGERATOR EQUALIZER VALVE. MATSON C. TERRY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1927. Serial No. 222,598. 14 Claims. (Cl. 62—115.)



1. In combination with a refrigerator system embodying a low-pressure portion including an evaporator, a high-pressure portion including a condenser, a compressor for circulating refrigerant fluid from the low-pressure portion to the high-pressure portion, a motor for driving the compressor, and means for supplying electrical energy to the motor, of means for equalizing the pressure difference between the high and low pressure portions of the system, and means responsive to the initial surge of current through the motor for rendering said equalizing means effective.

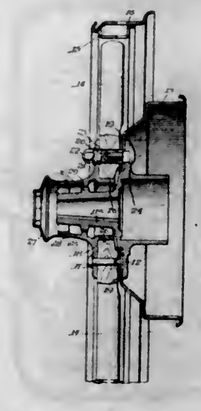
1,786,792. PARALLELING RELAY SYSTEM. PHILLIPS THOMAS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 1, 1928. Serial No. 251,076. 11 Claims. (Cl. 171—118.)



3. The combination, in a paralleling system for alternating-current circuits, with a circuit closer and means

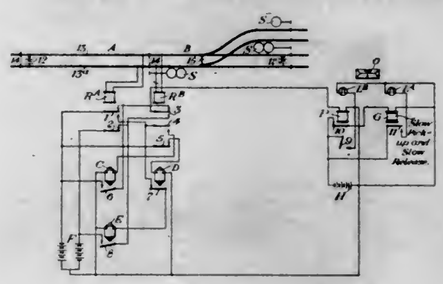
for operating it, of transformers having direct-current and alternating-current windings, means for energizing said direct-current windings in proportion to the vector difference of the voltages of said circuits to vary the voltage across the alternating-current secondary windings when the primary windings are energized, means

on one of said transformers for delaying the variations in the voltage across the alternating-current secondary winding thereof and means responsive to equality of the voltages across the alternating-current secondary windings of said transformers for causing the energization of the circuit-closer-operating means.



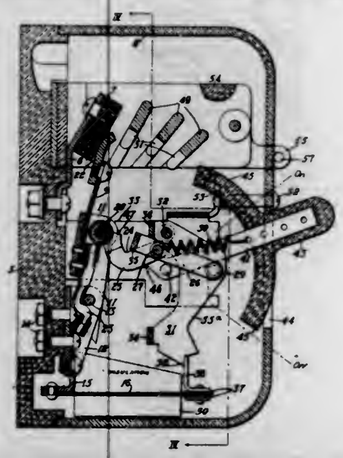
1,786,793. ROLLING MILL. JOHN B. TYTUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed May 20, 1925. Serial No. 31,609. 4 Claims. (Cl. 29—17.)

1. In combination in a sheet mill a series of stands of plain faced rolls for successive reduction of hot metal, arranged end to end, and driven alternately in opposite directions, and a transfer device arranged to move the piece sidewise from one stand to the next, and a furnace surrounding said transfer device between two of the stands at least.



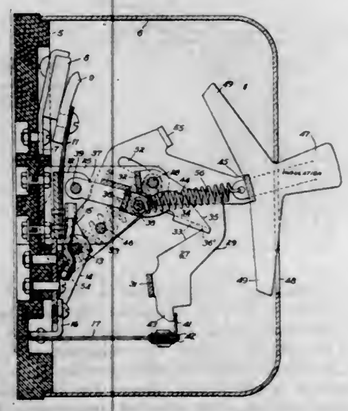
1,786,794. DEMOUNTABLE WHEEL SPIDER. ANDREW S. VAN HALTEREN, East Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Jan. 21, 1929. Serial No. 333,762. 8 Claims. (Cl. 301—9.)

1. The combination with the permanent barrel and flange of a vehicle hub, of a skeleton wheel for interchangeably mounting thereon comprising a radiant series of spokes, a shell enveloping the hub barrel and having intermediate its two ends a flange overlying the front face of the spokes, the shell barrel extending to the rear within the central spoke opening and forming an inner abutment for the spokes, the shell having an internal rib approximating contact with the hub barrel, an annular series of attaching members permanently connecting the shell flange and spokes, and an annular series of members detachably connecting the shell flange and hub flange, the permanent and detachable connecting members alternating, the permanent flange provided on its front face with an annular seat for the skeleton wheel.



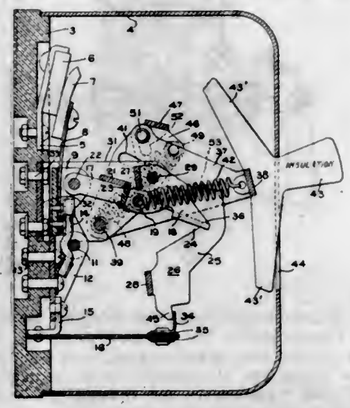
3. The combination with the permanent barrel and flange of a vehicle hub, of a skeleton wheel for interchangeably mounting thereon comprising a radiant series of spokes, a shell enveloping the hub barrel and having intermediate its two ends a flange overlying the front face of the spokes, the shell extending to the rear within the central spoke opening to a distance short of the spoke width and forming an abutment for the spokes, the shell and hub barrel having opposed ribs approximating but normally out of contact, an annular series of attaching members permanently connecting the shell flange and spokes, and an annular series of members detachably connecting the shell flange and hub flange, the permanent and detachable connecting members alternating, the permanent flange provided on its front face with an annular seat for the skeleton wheel.

1,786,795. RAILWAY-TRAIN-INDICATING APPARATUS. JAMES J. VANHORN, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 9, 1929. Serial No. 398,312. 12 Claims. (Cl. 246—124.)



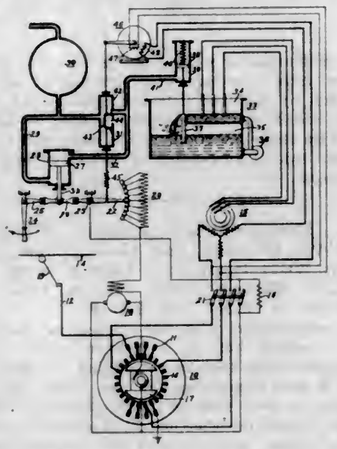
7. In combination, two sections A and B of railway track, a polarized relay P, means for supplying said relay P with current of normal polarity when sections A and B are both unoccupied, means for supplying relay P with current of reverse polarity when section B is occupied and section A is unoccupied, means for de-energizing relay P when section A is occupied and section B is unoccupied, and indicating means for said sections controlled by said relay P.

1,786,796. CIRCUIT BREAKER. FRED G. VON HOORN, Bridgeport, Conn., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 11, 1927. Serial No. 212,288. 12 Claims. (Cl. 200—116.)



6. A circuit breaker comprising a carrier movable to set and inoperative positions, and normally biased to inoperative position, a contact member, a movable contact member, an operating member therefor comprising a multiple link toggle for maintaining the movable contact in engagement with the said contact member when in the made position and for moving the movable contact to open position when collapsed, the said toggle being supported upon the carrier and movable to made and collapsed positions when the carrier is in the set position, and movable bodily to separate the contacts when the carrier is moved to inoperative position, means for yieldingly moving the toggle to made and collapsed positions, current responsive means for releasably retaining the carrier in set position, manually operable means for actuating the toggle moving means and for returning the carrier to set position.

1,786,797. CIRCUIT BREAKER. FRED G. VON HOORN, Bridgeport, Conn., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 11, 1927, Serial No. 212,289. Renewed July 16, 1930. 9 Claims. (Cl. 200—116.)

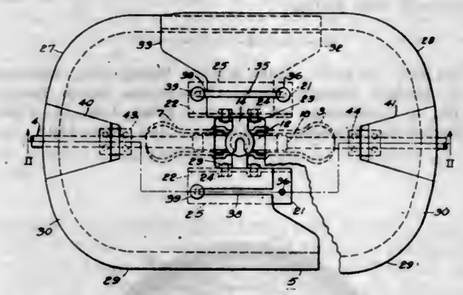


1. The combination with a switch contact supported in closed position by a releasable carrier controlled by a current-responsive element and movable relative to the carrier to open and closed positions, of means for automatically returning the carrier to set position after the latter has been released by the said element.

1,786,798. CIRCUIT BREAKER. FRED G. VON HOORN, Bridgeport, Conn., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 11, 1927, Serial No. 212,290. Renewed May 19, 1930. 4 Claims. (Cl. 200—116.)

1. The combination with a switch contact supported in closed position by a releasable carrier that is retained in set position by a current-responsive element and which causes opening movement of the switch contact when released, and an operating means for moving the switch contact to open and closed positions while the carrier is in set position, of means for automatically returning the carrier to set position, after it has been released by the current-responsive element comprising a movable member for engaging the carrier and an over-center spring for actuating the last said member when the latter has been moved a predetermined distance by the operating means.

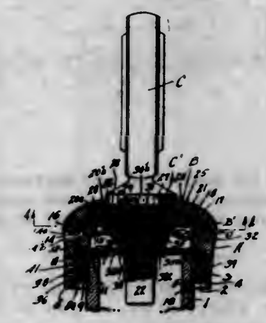
1,786,799. CONTROL SYSTEM. KALMAN VON KANDÓ, Budapest, Hungary, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 27, 1927, Serial No. 208,802, and in Hungary July 31, 1926. 4 Claims. (Cl. 172—274.)



1. In a control system, a source of single-phase alternating-current power, an alternating-current phase converter for changing said single-phase alternating-current power to polyphase alternating-current power, said converter having a direct-current field winding, a wound-rotor polyphase alternating-current motor disposed for energization by said converter with polyphase-current power, a variable rheostat connected to the windings of the rotor of said motor, an exciter-generator for supplying the field windings of said converter with direct current, voltage-regulating means for said exciter whereby the excitation of the converter may be varied to control the power-factor thereof, pressure-responsive means for actuating said variable rheostat and voltage-regulating means simultaneously whereby the resistance of the rotor and the voltage of said exciter may be adjusted to effect operation of the converter at a predetermined power factor, and means operable in response to the value of current traversing said polyphase motor for actuating the pressure-responsive means.

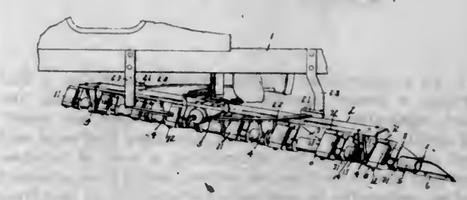
1,786,800. METHOD OF PRODUCING INDIGO BY ARYLGLYCINE FUSION. JUSTIN F. WAIT, New York, N. Y., assignor to National Aniline & Chemical Co., Inc., a Corporation of New York. Filed Dec. 18, 1924. Serial No. 756,797. 2 Claims. (Cl. 260—51.)

1. In the process of producing indigo, the steps which comprise fusing the potassium salt of phenylglycine with a mixture containing potassium and sodium hydroxides and sodamide, dissolving the fusion mass in sufficient water to form a dilute caustic alkali solution, precipitating indigo, separating caustic alkali liquor from said indigo, concentrating said liquor to a water content of less than 10 per cent., removing material that remains solid above 230° C. from said liquor, and fusing the resulting concentrated caustic alkali with sodamide and the potassium salt of phenylglycine.



1,786,801. TRANSMISSION-LINE DEVICE. NILS A. WAHLBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 2, 1927. Serial No. 230,459. 9 Claims. (Cl. 173—318.)

1. In a transmission-line device, the combination with an insulator, of an electrostatic-field-control structure including a portion for mounting the structure relative to the insulator and an extensible field-control element surrounding the insulator axis on said portion.

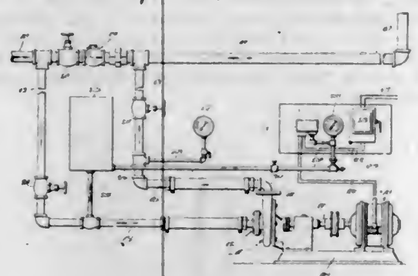


1,786,802. COVER ATTACHING AND LOCKING MEANS. EUGENE C. WAMELINK, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 13, 1927. Serial No. 191,221. 14 Claims. (Cl. 220—24.)

8. The combination with an externally threaded tubular member, of a base member having an annular recess in the inner surface thereof, a sleeve within said recess and threaded upon said tubular member, said base member being normally rotatable about said sleeve, means whereby a driving engagement may be obtained between said base member and said sleeve whereby said base member may be applied to and removed from said tubular member, and means for effecting a tight joint between the base member, the sleeve therein, and the upper end of said tubular member said means comprising a ring angular in section and having a horizontal flange adapted to overlie the tops of said tubular member and said sleeve and having a vertical flange surrounding the upper outer portion of said sleeve.

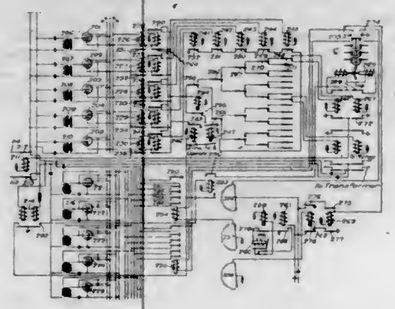
11. A closure structure, comprising a base provided with an opening to be closed, a cap mounted for swinging movement at one side thereof into open and closed positions, said closure structure including relatively rotatable parts for producing a sealing effect, and means engageable with one of said parts for preventing relative rotation between said parts when the cap is in open position.

1,786,803. ROAD SCRAPER. ERNEST A. WEEKS, Kalamazoo, Mich., assignor to Root Spring Scraper Company, Kalamazoo, Mich. Filed Nov. 7, 1929. Serial No. 405,386. 6 Claims. (Cl. 37—155.)



6. In a scraper structure, the combination of a scraper, a rockshaft having pivoted supporting arms therefor, actuating arms for the said scraper arms, and springs of block rubber interposed between the said actuating arms and the scraper arms.

1,786,804. CONSTANT WATER-SUPPLY SYSTEM. MAURICE I. WEIL, Chicago, Ill., assignor to Chicago Pump Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1928. Serial No. 264,817. 3 Claims. (Cl. 103—25.)

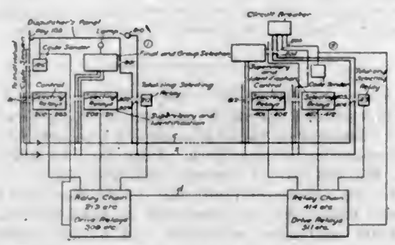


1. A water supply system comprising, in combination, a water supply pipe, two branch pipes leading therefrom, a motor operated pump having its suction end and its

discharge end connected to said branch pipes, there being a check valve in said water supply pipe between its con-

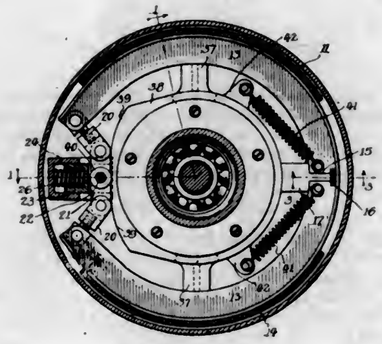
nections with the suction end and discharge end of the pump, and a motor controlling pressure operated switch, in communication with the suction end of the pump.

1,786,805. SUPERVISORY CONTROL SYSTEM. ROY J. WENSLEY, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 14, 1926. Serial No. 129,167. 5 Claims. (Cl. 177—353.)



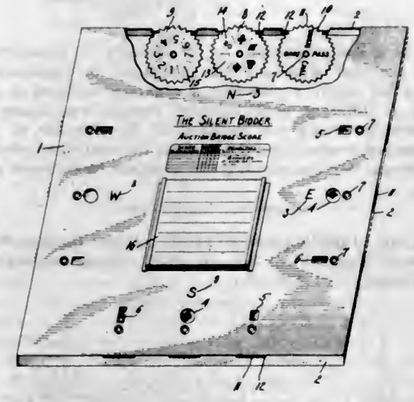
1. In a supervisory control system comprising a first station, a second station, a line connecting said stations, apparatus units at said second station, an operating circuit for each of said units, signalling devices at said first station, means for transmitting a code of impulses over said line to said second station, means at said second station responsive to said code for selecting an operating circuit of an apparatus unit individual to said code, means operated in response to said selection for switching said line to control said operating circuit, means for transmitting over said line an operating impulse from said first to said second station, means responsive to said impulse for completing the selected circuit to operate the apparatus unit individual to said selected circuit and means for transmitting a supervisory code over said switched line to operate a signalling device individual to said operated unit.

1,786,806. PROCESS OF REFINING IRON AND STEEL. SIGURD WESTBERG, Germantown, Pa. Filed Oct. 21, 1924. Serial No. 745,011. 18 Claims. (Cl. 75—27.)



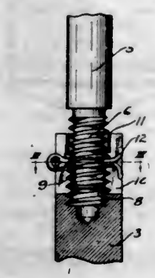
1. A process of refining steel which comprises introducing it into a hearth, adding an excess of gas containing hydrogen, removing impurities of said metals as compounds of hydrogen commingled with an excess of said hydrogenous gas, and regenerating hydrogen by causing said compounds of hydrogen to react with a silicide of an alkaline earth metal.

1,786,807. SUPERVISORY CONTROL SYSTEM. THOMAS U. WHITE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 2, 1926. Serial No. 91,713. 14 Claims. (Cl. 177—353.)



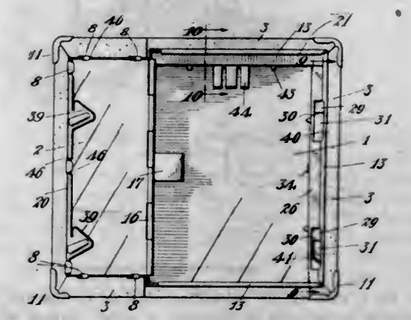
11. In a supervisory control system, a first station, a second station, apparatus units at said second station, selecting mechanism at said second station for selecting one of said aparatus units at one time for operation, means at said first station for controlling the selecting operation of the selecting mechanism to select a particular unit, said first station means including means for simultaneously conditioning an operating circuit individual to said selected unit, means at said first station operated by the selection of said apparatus unit for identifying the unit selected, and means controlled by said last-mentioned means for completing said prepared individual operating circuit, whereby said unit is controlled from said first station.

1,786,808. BRAKE. JOHN WHYTE, Beloit, Wis., assignor to Warner Electric Brake Corporation, South Beloit, Ill., a Corporation of Illinois. Filed July 13, 1928. Serial No. 292,335. 10 Claims. (Cl. 188—140.)



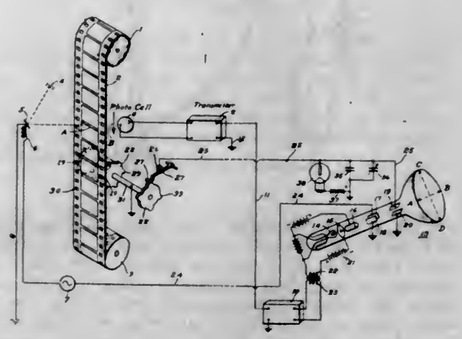
1. An electric brake of the momentum type comprising, in combination, a drum rotatable with a part to be braked, braking means within said drum, a toggle associated with said braking means near the periphery of said drum, a pair of annular friction elements arranged for axial gripping engagement upon the energization of a winding magnet carried by one of them, one element being rotatable with said drum, the other being mounted for oscillatory movement about the drum axis, and means rigid with said oscillatory element and operable in either direction of movement thereof away from the normal brake-released position to flex said toggle in a direction to expand said braking means and thereby set the brake.

1,786,809. SILENT BRIDGE BIDDING DEVICE. DAVID F. WOLYN, Woodmere, N. Y. Filed Apr. 12, 1930. Serial No. 443,727. 3 Claims. (Cl. 273—148.)



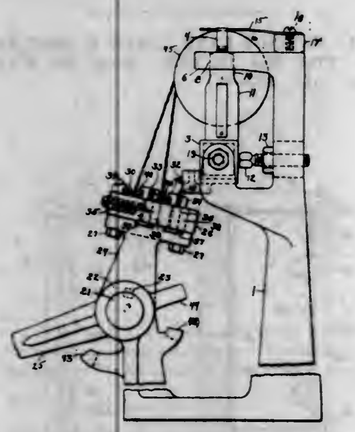
1. A bridge bidding device comprising a plate of quadrangular configuration having a group of apertures adjacent each edge thereof corresponding to the location of four players around a card table, and a disk rotatably mounted on the underface of said plate adjacent each aperture, one disk of each group bearing trump indicating means adapted to be displayed through the respective apertures, another disk in each group bearing indications of the number of tricks to be bid, said indications being adapted to be displayed through the respective apertures, and a third disk of each group carrying indications of other bids to be made, said indications being also adapted to be displayed through the respective apertures.

1,786,810. FLEXIBLE COUPLING FOR PUMPS. HOWARD D. YODER, Detroit, Mich., assignor to Penberthy Injector Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 29, 1927. Serial No. 243,264. 3 Claims. (Cl. 64—91.)



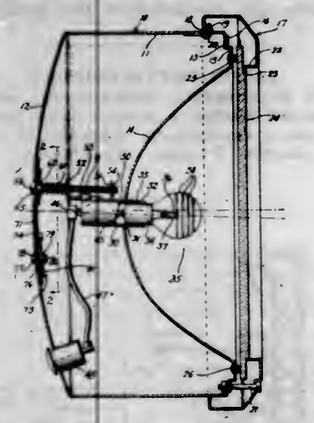
1. In a flexible coupling, a rotatable driven element having a bifurcated end, a driving element for rotating said driven element and threadedly engaging the same, and means passing through one of said elements and positioned in the bifurcated end of said driven element to maintain said engagement.

1,786,811. SAVINGS BANK. DAVID H. ZELL, Brooklyn, N. Y. Filed May 15, 1928. Serial No. 277,978. 5 Claims. (Cl. 232—6.)



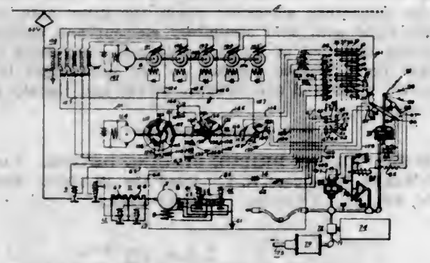
1. A coin bank comprising a casing, a closure hinged to one of the marginal walls of the casing, a housing within the casing and engaged with the opposite marginal wall thereof, lock mechanism for the closure within said housing, said housing having a flange extending upwardly against the inner side of the marginal wall of the casing, and an ornamental metal strip extending over the outer face of said casing wall and having its upper edge bent inwardly and clinched upon said housing flange.

1,786,812. FACSIMILE-TRANSMISSION SYSTEM. VLADIMIR K. ZWORYKIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 26, 1929. Serial No. 349,956. 7 Claims. (Cl. 178—6.)



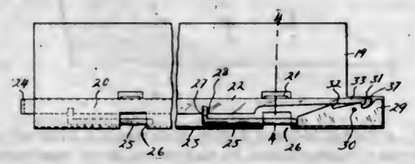
1. In a television system, means for causing a local scanning operation in synchronism with a distant scanning operation and means for modifying said local scanning operation in accordance with a movement of an object subjected to said distant scanning operation.

1,786,813. TUFT-FRAME-THREADING DEVICE. CLINTON ALVORD, Worcester, Mass., assignor to Worcester Loom Works, Worcester, Mass. Filed Mar. 12, 1928. Serial No. 260,963. 16 Claims. (Cl. 28—56.)



1. In a tuft frame threading device, means for longitudinally registering a plurality of comb clamps whereby the spacing of contiguous comb clamps will register each with the other in predetermined continuity, said clamps being laterally offset relative to each other.

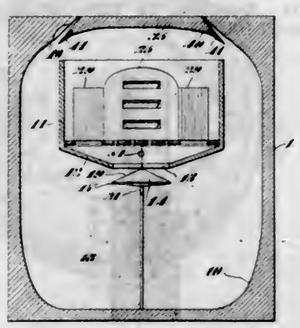
1,786,814. LAMP FOCUSING MECHANISM. SAMUEL F. ARBUCKLE, Highland Park, Mich., assignor to Monogram Lens Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,106. 7 Claims. (Cl. 240—44.2.)



1. In a lamp adjusting mechanism, the combination of a casing; a reflector positioned within the casing; a socket positioned in an aperture formed in the axis of the reflector; a lamp bulb within the socket and reflector; means for axially adjusting said bulb within the reflector; means for vertically adjusting said bulb within the reflector, said last mentioned means being operable from without the casing and comprising a resilient plate connected to and movable with said axial adjusting means and adapted to have a normal curvature different from that of the casing, said plate being insertable intermediate a struck-out adjacent portion of the casing and a non-struck-out portion of the casing whereby the resilient plate is maintained in flexed position producing frictional contact with the casing.

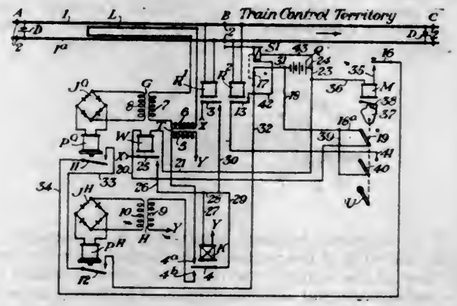
1,786,815. TRAIN-CONTROL SYSTEM. LOUIS M. ASPINWALL, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1928. Serial No. 254,236. 27 Claims. (Cl. 172—179.)

1. In a control system for a plurality of locomotives, each provided with control apparatus, in combination, means for supply a plurality of separate impulses of currents of different predetermined frequencies, means responsive to preselected impulses of the currents of predetermined frequencies for actuating the control apparatus, and means for preselecting the impulses of currents supplied.



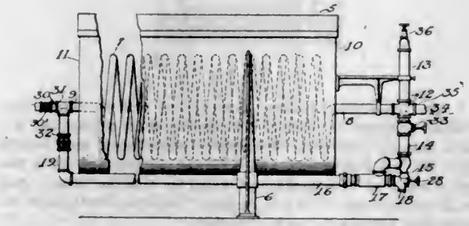
1,786,816. LOOSE-LEAF BINDER. JAMES BARKER, Kalamazoo, Mich. Filed Feb. 16, 1928. Serial No. 254,826. 9 Claims. (Cl. 129—8.)

1. In a looseleaf binder, a guide, a locking bar slidable therein, a latch carried by said locking bar, a keeper having a plurality of latch recesses engageable by said latch and means for disengaging said latch from one of said latch recesses.



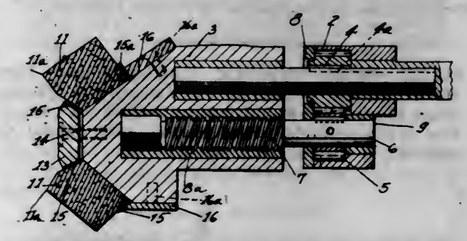
7. In a loose leaf binder, a locking bar construction including a guide, a slidable bar mounted in said guide, and a locking pin detachably engageable with said sliding bar, said locking pin being held in engagement with said bar by said guide.

1,786,817. REFRIGERATOR. GERALD S. BATAILLE, Somerville, Mass. Filed Jan. 26, 1927. Serial No. 163,052. 10 Claims. (Cl. 62—46.)



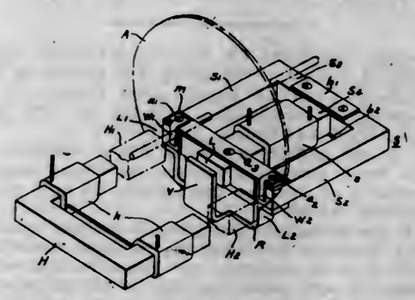
1. A refrigerator comprising a casing forming a chamber having rounded corners adjacent the top thereof to minimize the formation of eddy currents in the air circulating therein, refrigerating means in said chamber adjacent said rounded corners, and means arranged to promote uniform air circulation adjacent said refrigerating means.

1,786,818. TRACKWAY APPARATUS FOR AUTOMATIC TRAIN-CONTROL SYSTEMS. GEORGE W. BAUGHMAN, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 28, 1928. Serial No. 322,455. 14 Claims. (Cl. 246—143.)



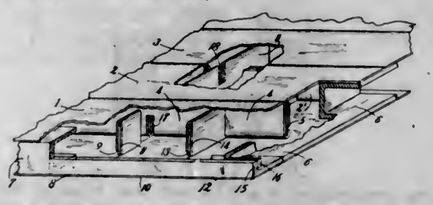
14. Trackway apparatus for an automatic train control system comprising a trackway loop located at the entrance to train control territory and adapted when supplied with periodically interrupted alternating current to cut the train carried portion of the system into service, an auxiliary circuit, a code transmitter having a front contact which is periodically closed while the transmitter is in operation and a back contact which is closed each time the front contact is open, means including said front contact for supplying alternating current to said loop, means including said back contact for supplying alternating current to said auxiliary circuit, two slow releasing relays one receiving energy from said loop and the other from said auxiliary circuit and each arranged to remain closed while said code transmitter is in operation, a signal governing the entrance of trains into said train control territory and controlled by said relays and by traffic conditions.

1,786,819. PASTEURIZING APPARATUS. ARTHUR H. BOILEAU, Cedar Rapids, Iowa, assignor, by mesne assignments, to Cherry-Burrell Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 4, 1928. Serial No. 282,751. 2 Claims. (Cl. 257—198.)



1. A pasteurizer comprising a tank, a coil in said tank, a brine line connected to one end of said coil, an outlet at the other end of said coil, and a water line connected to said brine line and said outlet around said coil, means for selectively putting either of said lines into operation, a steam injector connected to said water line for heating the water and causing circulation thereof, means for closing said brine line connection to the coil, and means for regulating the amount of steam passing through said injector.

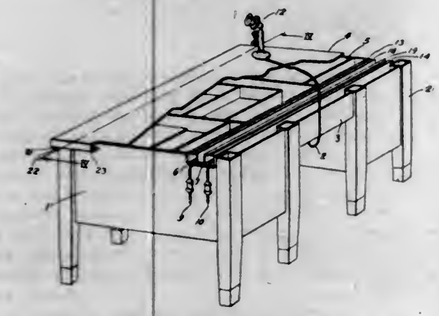
1,786,820. ROLL-POLISHING DEVICE. JAMES R. BYRUM, ROY V. RUSSELL, and ASA MEEKS, Middletown, Ohio, assignors to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Mar. 24, 1928. Serial No. 264,425. 1 Claim. (Cl. 51—251.)



In a roll polishing device an operating handle, and a divided body, one of said body divisions comprising a grinding or polishing head, the other of said divisions comprising a support-engaging member, and means operatively connected with said handle for separating or approaching said divisions, said means comprising a screw member whereby the separation may be made gradually and positively against pressure, said screw member separated from said operating handle, but connected therewith by gears, both journaled in said second division, and said screw member operating in a threaded portion of said first division.

1,786,821. INDUCTION METER. ALBERT CALLSEN, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 30, 1928, Serial No. 303,013, and in Germany Aug. 4, 1927. 3 Claims. (Cl. 171—264.)

1. The combination with an induction meter including relatively movable magnetic-flux co-acting members disposed in slightly-spaced substantially parallel surface-to-surface relation to provide a narrow air gap therebetween, of a temperature-compensating element embodying a magnetic portion in said gap, and supporting means therefor exterior to the gap.

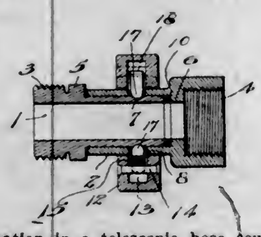


1,786,822. METALLIC STRUCTURE. MAURICE L. CARR, New York, N. Y. Filed Apr. 30, 1928. Serial No. 273,904. 6 Claims. (Cl. 189—34.)

1. In a double metal structure, sides or faces composed of a plurality of sheet metal sections united and held to-

gether by standing seams projecting inwardly at right angles to the face, the seams of one face being disposed traversely to and half lapped into the seams of the other face to cross brace the door and to form a plurality of completely closed cells, channel members fitted at the edges of the structure to close the space between said faces, and means for holding said faces together.

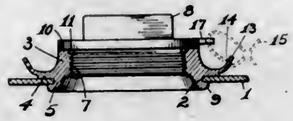
1,786,823. DESK. MALCOLM CARRINGTON and JOHN HENRY KLINCK, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 17, 1927. Serial No. 176,034. 6 Claims. (Cl. 45—6.)



5. A desk for office use comprising a body portion, a channel member for receiving auxiliary apparatus in the body portion and a top portion disposed to cover the body portion and the channel member therein, said channel member comprising a channel shaped conduit open at its ends and provided with apertures in its bottom portion.

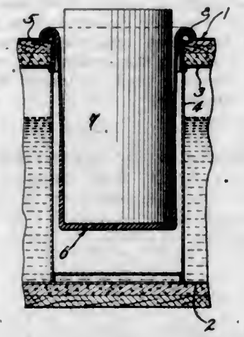
1,786,824. PROCESS OF DRYING VARNISH FILMS. PAUL B. COCHRAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1928. Serial No. 247,265. 14 Claims. (Cl. 91—70.)

1. In the method of treating fibrous insulation, the steps which comprise preheating the fibrous insulation in ozonized air and then impregnating the same with an insulating varnish.



12. The method of treating fibrous-insulated conductors which comprises preheating the insulated conductor in ozonized air to strengthen the fibrous material and to saturate it with ozone, applying an insulating varnish containing asphalt, a vegetable drying oil and a volatile thinner, and then continuing the heating at an elevated temperature, the ozonized air and ozonated fibers acting to expedite the oxidation of the oil and the drying of the insulating varnish.

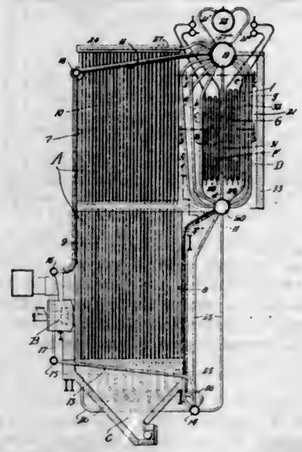
1,786,825. PIPE COUPLING. FLOYD E. COMER, Bristol, Ind. Filed Feb. 10, 1927. Serial No. 167,232. 1 Claim. (Cl. 285—189.)



The combination in a telescopic hose coupling with a nipple having an exterior annular groove and a socket member having a pair of diametrically opposed holes therein, said socket member also having a pair of diametrically opposed exterior recesses, of a separate locking collar U-shaped in cross section, a pair of diametrically opposed pins supported transversely of the collar, a pair of pawls within said collar having their outer edges in frictional contact with the pins and retaining lugs at the ends of said pawls to limit their movement, lugs on said pawls having pivotal engagement in the recesses of the socket member, and a locking lug on each pawl for co-action with a hole and the annular groove.

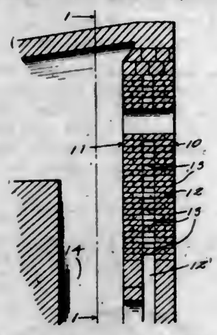
1,786,826. BUSHING. EARL COOPER, Decatur, Ill., assignor to Chambers, Bering, Quinlan Company, Decatur, Ill., a Corporation of Illinois. Filed Nov. 27, 1928. Serial No. 322,172. 12 Claims. (Cl. 220—39.)

1. A container bushing comprising in combination a body, an integral flange thereon in contact with the outer surface of the container wall, one or more normally upturned ears integral with the flange and projecting from the plane of the flange, being an extension thereof and made of material possessing flexible characteristics; said ears each provided with a hole therein transverse to the plane of the ear.



1,786,827. METHOD AND APPARATUS FOR POSITIONING AND SEALING ICE-CREAM CANS IN ICE-CREAM CABINETS. LLOYD G. COPEMAN, Flint, Mich., assignor to Copeman Laboritories Company, Flint, Mich., a Corporation of Michigan. Filed Dec. 10, 1928. Serial No. 324,830. 6 Claims. (Cl. 220—9.)

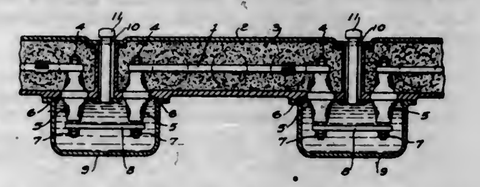
1. An ice cream cabinet comprising one or more containers adapted to receive ice cream cans or similar articles having a flexible receptable normally of less length than the ice cream can and adapted to contact with the upper edge of the container whereby the ice cream can when positioned in its lowermost position will tend to place said receptacle under tension.



1,786,828. HIGH-PRESSURE-BOILER INSTALLATION. JOSEPH B. CRANE, New York, N. Y., and LEONARD J. MARSHALL, Westwood, N. J., assignors to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 17, 1928. Serial No. 306,313. 4 Claims. (Cl. 122—235.)

1. In a high pressure boiler installation, a combustion chamber largely defined by radiant heat tubes the amount of evaporating surface of which is such that all of the steaming capacity of the installation is developed thereby; an outlet for said chamber; a relatively small boiler unit in said outlet, said unit comprising an upper and a lower drum each of which is small relative to the pressure carried; a bank comprising a relatively small number of riser tubes connecting said drums, and a second bank comprising a relatively small number of downcomer tubes

connecting said drums, said banks being spaced apart; a superheater and a reheater in said space; the amount of evaporating surface presented by said riser tubes being approximately just sufficient to lower the temperature of the gaseous products and combustion to protect the superheater and reheater elements against excessive temperature; and means for introducing the fuel to be burned into the lower part of the combustion chamber.

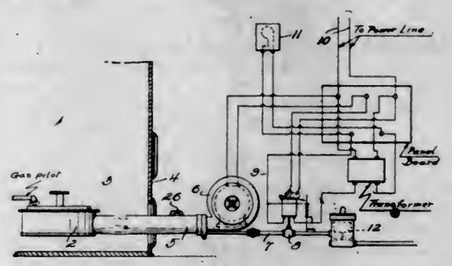


1,786,829. FURNACE CONSTRUCTION. HARRY DAUM, Pittsburgh, Pa. Filed July 10, 1928. Serial No. 291,560. 6 Claims. (Cl. 263—15.)

1. The step in the making of furnaces, which comprises installing a wall containing vitrifiable material, and placing a temporary wall in position to deflect a portion only of the gases from contact with the first-named wall, the temporary wall being of such character that it will not be destroyed by the said gases until after a glaze has formed on the first-named wall.

1,786,830. SECTIONAL ELECTRICAL BUS CAR. DAVID REGINALD DAVIES, Didsbury, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 7, 1927, Serial No. 173,296, and in Great Britain Mar. 23, 1926. 3 Claims. (Cl. 173—268.)

1. A liquid-tight receptacle having a pair of insulated conductors extending through a wall thereof and having link attaching means thereon, a bus bar within the receptacle connected to and supported on said conductors, a connecting link for connecting one of said conductors to an



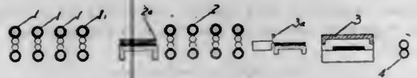
adjacent conductor of a similar receptacle and a liquid-tight receptacle enclosing the link and the last said conductors.

1,786,831. MODIFIED GUM AND ITS MANUFACTURE. CHARLES E. DELLENBARGER, Chicago, Ill., assignor to Paul Carpenter, Glenview, Ill. Filed Apr. 24, 1922. Serial No. 556,333. 7 Claims. (Cl. 99—11.)

1. The process of rendering rubber tasteless, which includes the step of heating a composition of rubber and wax gradually to a temperature between limits of approximately 132° to 145° C.

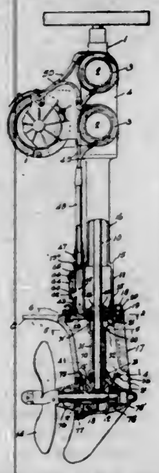
1,786,832. OIL-BURNING APPARATUS. HAROLD B. DONLEY, AUGUSTUS J. FRAME, and JACKSON G. GILMORE, Columbus, Ohio, assignors to Franklin Oil Heating, Incorporated, Columbus, Ohio, a Corporation of Ohio. Filed Sept. 4, 1928. Serial No. 303,672. 2 Claims. (Cl. 158—28.)

2. Apparatus of the class described comprising a pot, means to supply oil thereto comprising a duct, a valve therefor, air supply means communicating with said pot and including a fan, a motor actuating said fan, means comprising a branch duct connecting said air supply means and said oil duct at a point between the discharge end of the latter and said valve adjacent said discharge end and nearer thereto than to said valve, and means to continue said motor in operation for a desired period of time after the closure of said valve, whereby oil in said duct between the point of connection of said branch duct therewith and said pot will be discharged into said pot, said branch duct having a portion thereof lower than said fuel duct adjacent its communication therewith whereby oil may drain from said fuel line into said branch duct upon cessation of operation of said fan.



1,786,833. MUSICAL WIND INSTRUMENT. HARRY DYTCH, Daytona Beach, Fla. Filed June 4, 1928. Serial No. 282,845. 13 Claims. (Cl. 84—384.)

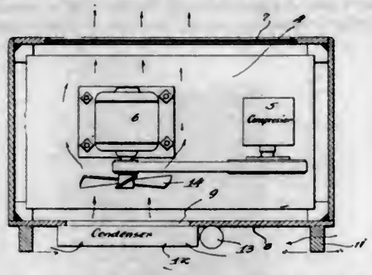
1. In a keyed wind musical instrument, a key, a pad for said key composed of yieldable material having a face for



attachment to said key and an opposite face for engaging the edge of a tone hole structure, said opposite face being formed to present a substantially toroidal surface to the edge of the tone hole structure and having a centrally hollow portion, and adhesive means for attaching said pad by the first-mentioned face to said key.

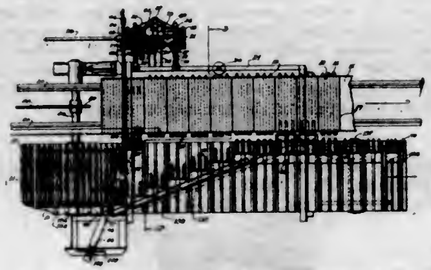
1,786,834. ROLLING METAL. DANIEL EPPELSHEIMER, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Dec. 10, 1927. Serial No. 239,213. 7 Claims. (Cl. 29—18.)

1. A process for rolling metal, which consists in continuously rolling single thickness hot metal, doubling the product or sections thereof, and cold rolling the doubles with the doubled edges first.



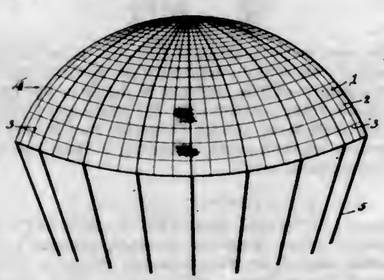
1,786,835. WATER-COOLING SYSTEM FOR OUTBOARD MOTORS. OLE EVINRUDE, Milwaukee, Wis., assignor, by mesne assignments, to Outboard Motors Corporation, a Corporation of Michigan. Filed Oct. 20, 1928. Serial No. 313,737. 15 Claims. (Cl. 115—17.)

1. In combination with an outboard motor having jacketed cylinders, a drive shaft actuated from the motor a propeller shaft geared to the drive shaft and having a propeller fixed thereto, a housing for the drive and propeller shafts and the gearing, said housing including sections having coacting means defining a pump chamber, an impeller in said chamber actuated from the drive shaft, the lower section of the housing having an inlet to the pump chamber opening forwardly at a point adjacent the propeller shaft whereby to be well submerged, the other section having an outlet leading therefrom, and means connecting the pump outlet with the jackets of the cylinder.



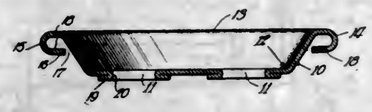
1,786,836. REFRIGERATING APPARATUS. PATTERSON FARMER, Detroit, Mich. Filed Nov. 18, 1927. Serial No. 234,071. 2 Claims. (Cl. 62—116.)

1. A refrigerating apparatus comprising in combination, a cabinet having a storage compartment with cooling means therein and a compartment positioned adjacent the first named compartment, spacing means for spacing the back of the cabinet from the room wall, a motor and compressor positioned in said second named compartment, a small aperture in the rear wall of said second named compartment and positioned at one end thereof in alignment with said motor and a relatively large aperture in the front wall of said second compartment, condensing means positioned between the spacing means and over said aperture in the rear wall and spaced from the bottom of said second named compartment, and means adjacent



the small aperture in said compartment for inducing a current of air through said aperture and through said condenser, whereby during the operation of said air inducing means the air passing firstly through the condenser and then over the motor and compressor will come from the outside of second named compartment.

1,786,837. MOLDING MACHINE. MERTON W. FARNHAM, Batavia, N. Y., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed June 8, 1929. Serial No. 369,368. 14 Claims. (Cl. 25—99.)

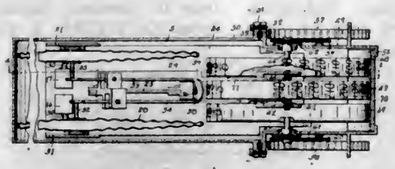


1. In a molding machine, a series of molds adapted to move in a continuous path and being also adapted to receive cementitious material so that said material is molded into building blocks, a core pole associated with a mold, means for loosening said core pole, and reciprocating means adapted to completely remove the core pole from said block.

1,786,838. PARACHUTE. CHARLES FISHER, San Francisco, Calif. Filed July 24, 1928. Serial No. 295,053. 4 Claims. (Cl. 244—21.)

8. A single ply of fabric fashioned into parachute formation, said fabric having reinforcing threads formed therein and disposed substantially radially and concentrically of a central point.

1,786,839. BUTTON. IRA D. FORD, Roseland, Ontario, Canada, assignor to Universal Button Fastening & Button Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 18, 1929. Serial No. 393,328. 2 Claims. (Cl. 24—90.)

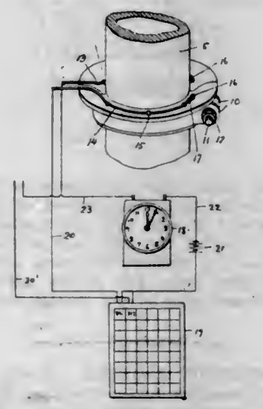


1. As an article of manufacture, a sew-on button formed of relatively thin sheet metal having a centrally depressed thread receiving portion provided with thread holes, and having the metal of its margin turned over to simulate a thick button edge, the turned edge of said metal being substantially parallel with the button face and terminating a distance from said centrally depressed portion and leaving the hollow space of said button edge open for the free escape of liquids employed in connection with the finishing of said button.

1,786,840. BUTTON. IRA D. FORD, Roseland, Ontario, Canada, assignor to Universal Button Fastening & Button Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 18, 1929. Serial No. 393,329. 1 Claim. (Cl. 24—90.)

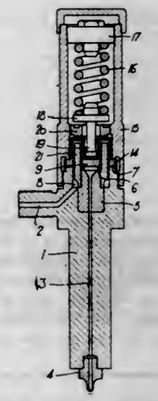
As an article of manufacture a sew-on button made of thin ductile sheet metal shaped to provide a substantially spherical upper surface which extends downwardly to the edge of the button, the curvature of said spherical surface being sufficient to provide a button of substantial depth so as to simulate a thick solid button, the margins of metal at the edge of the button being curled beneath the button, and an elliptical depression in the top of the button the bottom of which depression lies within the plane of the curled edge of said button thereby permitting the edge of said button to hug the cloth to which it is attached, said depression having thread holes in the bottom thereof.

1,786,841. AIR-SPEED INDICATOR. WALTON GILBERT, Pasadena, Calif. Filed May 28, 1925. Serial No. 33,426. 7 Claims. (Cl. 177—311.5.)



1. In an air speed measuring device for airplanes, the combination of two dynamic pressure heads disposed equal distances from the center line of an airplane and outside of the propeller disturbance area, a static pressure head, an airtight casing containing two similar barograph cells and having a transparent wall portion, tubular means connecting each cell with one dynamic head and the casing with the static head, a speed indicator pointer in said casing, means pivotally mounting said indicator pointer so that it is visible through said transparent portion, lever means connecting said barograph cells to said indicator to produce turning moments on said indicator by the pressure in said cells respectively which are additive in the direction away from zero, and means producing a turning moment on said indicator pointer in the opposite direction toward the zero position.

1,786,842. REFRIGERATING COMPOSITION. OSCAR HANNACH, Wilmersdorf, near Berlin, Germany, assignor to Wilhelm Kash, Wilmersdorf, near Berlin, Germany. Filed June 2, 1926, Serial No. 113,824, and in Germany Nov. 21, 1925. 4 Claims. (Cl. 252—5.)



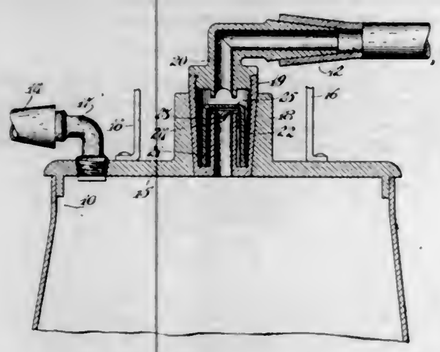
1. A refrigerating mixture consisting of a mixture of ammonium-chloride with an excess of sodium-carbonate, adapted to produce a decrease of temperature upon being dissolved.

1,786,843. LEAK DETECTOR. HANS N. HEDEBY, Youngstown, Ohio. Filed Oct. 7, 1929. Serial No. 397,941. 4 Claims. (Cl. 200—52.)

1. A circuit closer of the type described comprising an annulus for circumscribing a liquid conduit, said annulus being constructed to provide a trough for collecting liquid escaping from the said conduit, and contacts mounted within the trough of the said annulus.

1,786,844. FUEL-INJECTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. KNUT JONAS ELIAS HESSELMAN, Saltsjo-Storangen, Sweden. Filed Nov. 22, 1926, Serial No. 149,970, and in Sweden Dec. 4, 1925. 6 Claims. (Cl. 251—119.)

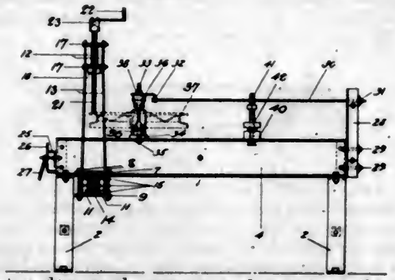
2. In a device for injecting liquid fuel under pressure into internal combustion engines, the combination of a valve casing, a plane valve seat in said casing surrounding a liquid outlet channel, a liquid inlet channel outside said valve seat, a surrounding surface in the same plane as said valve seat, an annular diaphragm formed integral with an imperforate disk shaped rigid central portion to act as a valve in engagement with said valve seat and



a rigid circumferential portion in the plane of the valve to be clamped against said surrounding surface, and means to produce a pressure acting on said diaphragm to hold said central portion in engagement with said valve seat, said pressure being adapted to be overcome by the pressure of the liquid fuel to open the valve.

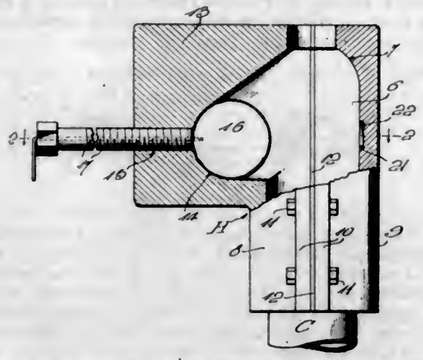
1,786,845. TAPE MEASURE. GEORGE R. HIPPLE, Pottstown, Pa. Filed Nov. 13, 1930. Serial No. 495,526. 3 Claims. (Cl. 33—137.)

1. In a tape measure, the combination with a tape having a loop attached to the end thereof, of a hook formed of a single strand of wire bent intermediate its ends to form a pair of arms, the free ends of the arms being disposed laterally in opposite directions and terminating in object-engaging teeth, one of the laterally disposed ends being formed with a ring portion linked with the loop.



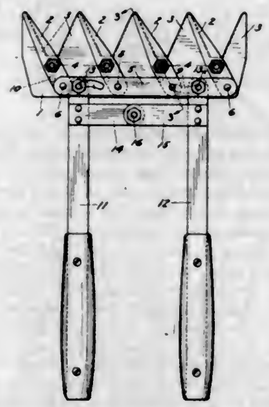
1,786,846. MILKING MACHINE. FLOYD G. HODSDON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Mar. 2, 1928. Serial No. 258,503. 10 Claims. (Cl. 31—58.)

7. A valve plug having a top end carrying a nipple, a bottom end, said plug being hollow to form an inner trap chamber, an upstanding tube formed on the bottom end and extending to a point adjacent the top end of the plug, a check valve loose on the top end of the tube, and a trap valve surrounding the tube and having one end thereof resting loosely on the bottom end of the plug.



1,786,847. MECHANISM FOR OPERATING UPON METAL PARTS OF AUTOMOBILES AND THE LIKE. GEORGE L. HUNT, Davenport, Iowa, assignor to Geo. L. Hunt Automotive Equipment Co., Davenport, Iowa, a Corporation of Iowa. Filed Mar. 1, 1929. Serial No. 343,732. 9 Claims. (Cl. 153—32.)

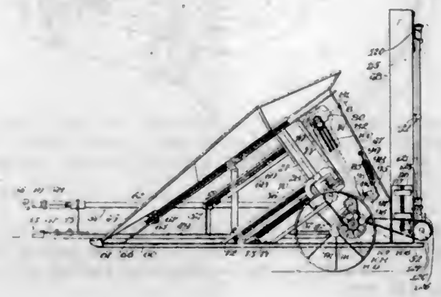
1. In a wheel straightening machine, a supporting frame having longitudinal flanges, a second frame transverse to the first frame, mounted on the flanges and slidable thereon, said second frame having a part spaced upwardly from the first frame and extending transversely thereof, a screw extending through said part and operable therein



to exert a downward pressure, and means on the first frame to rigidly support a wheel thereon in position to have pressure exerted thereon by the screw.

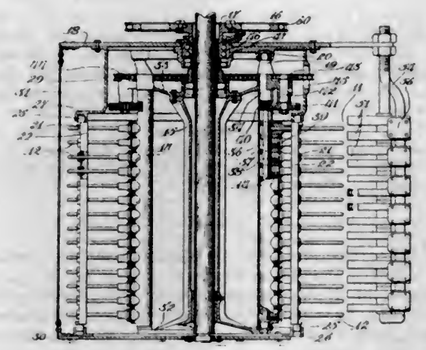
1,786,848. WELL-CAPPING DEVICE. JOSEPH O. JOHNSON, Coalinga, Calif. Filed Jan. 7, 1929. Serial No. 330,908. 5 Claims. (Cl. 166—15.)

1. A well capping device comprising a vertical passage member having a downwardly facing valve seat at its interior and a lateral internal recess below said seat, a ball valve normally disposed in said recess, and tubular means extending from the exterior to the interior of said passage member for forcing said ball valve out of said recess and for then conducting fluid from said passage member, said valve being co-operable with said seat.



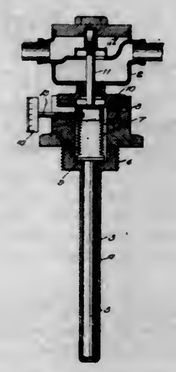
1,786,849. TRIMMER. OTIS O. JOHNSON, Moline, Ill. Filed June 28, 1929. Serial No. 374,513. 2 Claims. (Cl. 30—11.)

1. In a structure for the purpose indicated, a body having forwardly tapered projections along the front edge



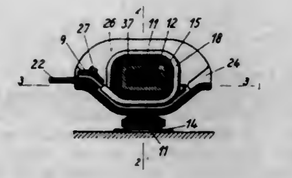
thereof, cutting blades pivoted upon the body and adapted to cooperate with said projections, resilient means tending to press the pivoted blades toward the said body and projections, means for moving the blades about their pivots, and means for tilting the blades transversely to keep their edges in point engagement with the projections at all times in their operative engagement therewith.

1,786,850. ENSILAGE HARVESTER. EDWARD A. JOHNSTON, GEORGE M. MERWIN, and HARRY A. WATCHEK, Chicago, Ill., assignors to International Harvester Company, a Corporation of New Jersey. Filed Dec. 8, 1927. Serial No. 238,477. 12 Claims. (Cl. 56—16.)



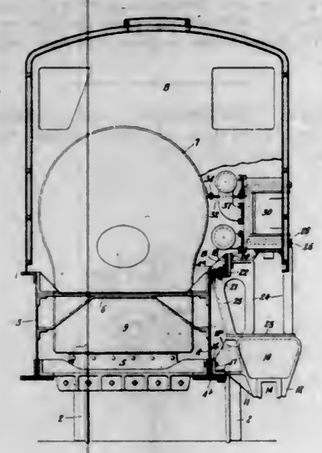
1. A harvester comprising an ensilage forming cutter, stalk guides forming a stalk passageway leading to the cutter, an abutment for guiding the stalks toward the cutter, and distributor means operated laterally with respect to the abutment for uniformly spreading stalks across the face thereof.

1,786,851. COTTON PICKER. EDWARD A. JOHNSTON, Chicago, BERT R. BENJAMIN, Oak Park, and DAVID B. BAKER and CLARENCE R. HAGEN, Chicago, Ill., assignors to International Harvester Company, a Corporation of New Jersey. Filed Sept. 4, 1928. Serial No. 303,646. 4 Claims. (Cl. 56—47.)



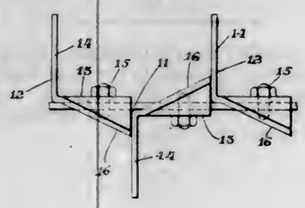
1. A cotton picker comprising, in combination, rotatable picker stems, a body affording a plant passage, upright supports carrying the picker stems in separate groups, a carrier for the supports, means for revolving the carrier, means for angling the supports and the picker stems relative to the carrier during movements of the picker stems into and out of the plant passage, doffer sleeves continuously surrounding the individual picker stems and slidable with respect thereto, vertical bars connecting the sleeves in groups, and means for moving the bars relative to each other to successively slide the sleeves from the bases of the picker stems to their tips and back again to the bases.

1,786,852. THERMOSTAT. JOHN J. KENNEY, Pittsburgh, Pa. Filed Dec. 12, 1928. Serial No. 325,421. 7 Claims. (Cl. 236—102.)



1. A thermostat, comprising a supporting body, a member movably carried thereby, a solid heat responsive device for actuating said member, and means of substantially constant over-all dimensions having flow characteristics for transmitting operating pressure from said solid device to said member.

1,786,853. CURRENT TRANSFORMER. HANS KLEMM, Dresden, Germany, assignor to the Firm Koch & Sterzel Aktiengesellschaft, Dresden, Germany. Filed Aug. 14, 1929, Serial No. 385,779, and in Germany Aug. 15, 1928. 8 Claims. (Cl. 175—358.)



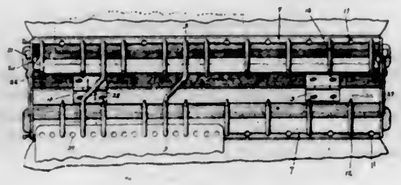
1. A current transformer having a casing and a tunnel in said casing for the reception of the secondary coil and the iron core of said transformer, and for winding the primary coil on the outside of said tunnel, and a channel being formed by the lower wall of said tunnel and said casing and adapted to receive the lower portion of said primary coil.

1,786,854. LOCOMOTIVE FRAME AND ENGINE SUPPORTING STRUCTURE. ROBERT B. KRUEGER, Lima, Ohio. Filed June 22, 1928. Serial No. 287,459. 19 Claims. (Cl. 105—42.)

1. A geared locomotive frame and engine support including a row of truss-like braces secured at the top and bottom of a member of the frame.

1,786,855. TRACTION WHEEL. EARL LONDON, Chapman Ranch, Tex., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 29, 1929. Serial No. 366,815. 5 Claims. (Cl. 301—44.)

2. A wheel tread structure comprising a radially extending flat rim, and lugs having elongated flat plates secured to the opposite faces, alternately, of the rim in offset relation and with the longitudinal sides of the respective plates approximately in the same transverse radial plane, the ends of said plates being alternately bent in opposite directions to set the outer edges thereof obliquely across the plane of the rim plate.

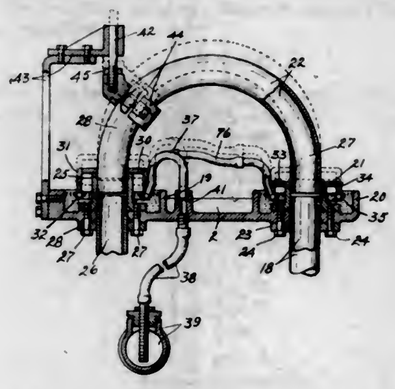


1,786,856. VEHICLE BRAKE. EDWARD J. MADDEN, Detroit, Mich. Filed Oct. 13, 1926. Serial No. 141,258. 5 Claims. (Cl. 188—152.)

5. In a fluid pressure brake, a fixed plate, a brake drum, a brake band and actuating means therefor including a fluid pressure cylinder and piston, means for supporting said band and actuating means within said drum, said supporting means including parts adapted to move

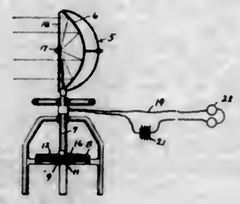
around the center of the drum, and means carried by said plate for limiting the movement of the supporting means and parts.

1,786,857. VISIBLE-INDEX BINDER. JOHN L. MCMILLAN, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 16, 1928. Serial No. 270,423. 3 Claims. (Cl. 129—17.)



1. In a device of the class described, a pair of opposed back members hingedly connected together, a member carrying a plurality of spaced prongs and having apertures between adjacent prongs affixed to each of the back members and an arcuate rod having relatively laterally offset end portions and having one end removably positioned in an aperture in one prong-supporting member and having its other end similarly positioned in the other prong-supporting member.

1,786,858. TREATMENT OF MILK POWDER. IRVING S. MERRELL and HELGE SCHIBSTED, Syracuse, N. Y., assignors, by mesne assignments, to Merrell-Soule Company, Inc., New York, N. Y., a Corporation of Delaware. Filed July 23, 1925. Serial No. 45,609. 9 Claims. (Cl. 226—20.)

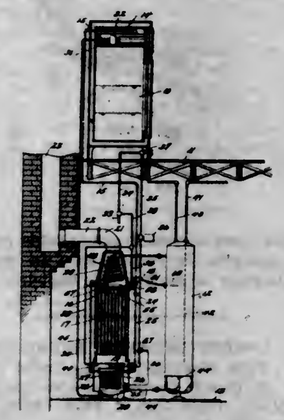


7. In an apparatus of the character described, a tank, means for producing vacuum therein, means for admitting a treating gas thereto, and means in communication with the tank capable of maintaining a substantially perfect vacuum therein while permitting the escape of gas

therefrom when the pressure in the tank reaches a predetermined amount, said latter means including a U-tube,

the leg which is connected to the tank being at least thirty-two inches in length and of slightly less diameter than the opposite leg and a liquid within the U-tube.

1,786,859. SOUND-SOURCE-LOCATING MEANS. LELAND FISKE MERRILL, Oakland, Calif. Filed Sept. 28, 1927. Serial No. 222,557. 3 Claims. (Cl. 181—26.)



3. In a device for locating a source of sound from a ship, concave sound reflectors disposed at spaced and fixedly related observation points on said ship and adjusted about vertical pivotal axes with the axes of curvature limited to movement in a plane perpendicular to said first axes, means including a microphone for ascertaining the variations in the intensities of sound at the focal points of said reflectors during the adjustment thereof whereby they may be set in such positions that the intensities of sound at their focal points are maximums and their axes of curvature are directed in a plane including their focal points and said source of sound, and means for ascertaining the angular dispositions of said axes of curvature with respect to a base line fixedly related to aline joining said observation points.

1,786,860. METHOD AND MEANS FOR REMOVING CARBON DEPOSITS FROM CYLINDERS. THOMAS MIDGLEY, JR., and CARROLL ALONZO HOCHWALT, Dayton, Ohio, assignors to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 2, 1926. Serial No. 85,579. 12 Claims. (Cl. 87—5.)

3. The process of cleaning a carbon deposit from a metal surface of a combustion chamber, which comprises heating the metal to above 150° F., applying to the carbon deposit a mixture of a high boiling organic compound which removes varnish and a lower boiling varnish remover, until the tarry-binder in the deposit is softened, and removing the carbon deposit.

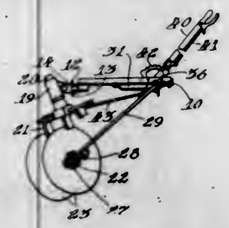
10. A composition of matter for removing carbon comprising aniline, alcohol, benzol, and naphthaline.

1,786,861. COMBINATION REFRIGERATING AND WATER-HEATING UNIT. ERNEST B. MILLER and WILLIAM H. GABELER, Baltimore, Md. Filed Dec. 14, 1927. Serial No. 240,052. 24 Claims. (Cl. 62—118.)

1. Apparatus for refrigerating and for heating water including in combination, a water storage tank, an adsorber, means to supply heat to said adsorber to activate the adsorbent therein and means to transfer unused heat from the said heat supply means directly to water in said storage tank.

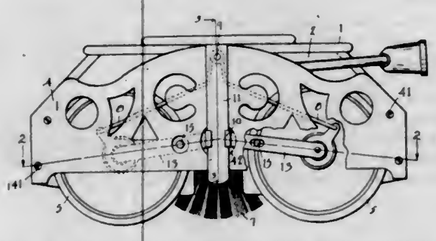
15. A method of refrigerating and heating liquid comprising, adsorbing vapor from a liquid refrigerant into an adsorbent, supplying heat to said adsorbent to drive off said vapor and subjecting liquid from an independent source to heat escaping from said activating process.

1,786,862. VARICOSE STOCKING. AUGUSTE MOUTHE, Lyon, France, assignor to Francisque Damon, Lyon, France. Filed Feb. 7, 1928, Serial No. 252,575, and in France Apr. 11, 1927. 4 Claims. (Cl. 66—178.)



1. A knitted varicose stocking, embodying a two-ply heel portion provided with a heel opening which is formed in the course of the knitting operation and a single edge of which is fastened by chain-stitching which passes through the loops of the knitting and forms a loose knot at each loop.

1,786,863. DISK HARROW. WALTER R. PETERSON, Park Ridge, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Aug. 11, 1928. Serial No. 299,019. 2 Claims. (Cl. 55—81.)



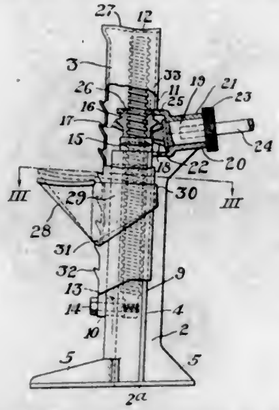
1. A harrow comprising, in combination, a support, a plurality of disk gangs, an axle for each disk gang, a gang frame mounting the axle of each gang and normally arranged in upright position, means connecting each gang frame with the support so that the associated gang may turn upon an upright axis to be angled and may turn upon a transverse axis to be tilted, means connecting each disk frame and the support for angling a gang,

and means connecting each gang axle and the support for tilting the gang, said last named means including

an adjustable limit stop lock and slidable connections for enabling a gang to be turned upon its transverse axis by the application of draft to the support.

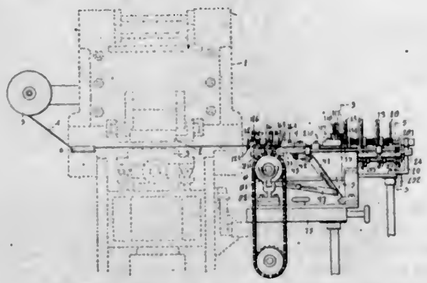
1,786,864. CARPET-SWEEPER BRUSH-DRIVE MECHANISM. FRED WALTER PULLEN, Grand Rapids, Mich., assignor to Bissell Carpet Sweeper Company, Grand Rapids, Mich. Filed June 4, 1928. Serial No. 282,580. 3 Claims. (Cl. 15—41.)

2. In a carpet sweeper structure the combination of a case having an end plate, a slide, a brush pivot secured to the said slide on which the carpet sweeper brush journals, a carpet sweeper brush with drive pulley journaled on said pivot, a blade spring serving as a way for the said slide secured at one end to the end plate to yieldingly support the slide in position, floor wheels for the said carpet sweeper and means for maintaining yielding contact between the floor wheels and the drive pulley of the brush, and levers having their mid-portions pivoted to said plate and their ends connected to said floor wheels and the brush, as specified.



1,786,865. BUMPER FOR MOTOR CARS AND AUTOMOBILES. RICHARD REYNOLDS, Nashville, Tenn. Filed July 11, 1929. Serial No. 377,558. 8 Claims. (Cl. 293—55.)

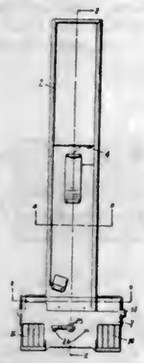
1. A bumper including a wing swiveled to swing in two different planes to adapt it to be moved out of interlocked engagement with the bumper of another vehicle.



1,786,866. JACK. CLARENCE J. RODMAN, Alliance, Ohio. Filed June 9, 1926. Serial No. 114,682. 3 Claims. (Cl. 254—100.)

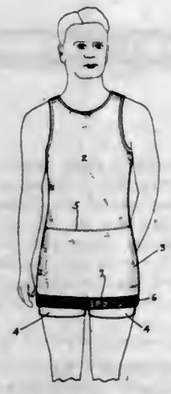
2. A jack comprising a base having an upstanding post with an open sided recess therein, a screw lying in the recess and projecting from the upper end thereof, a bearing mounted on top of the post and surrounding the screw,

a nut on the bearing, a lifter guided in the post and operatively connected to the screw, and means for rotating the nut.



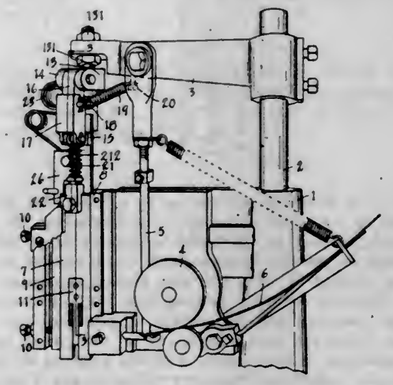
1,786,867. LABEL PRINTING, FEEDING, AND CUTTING MACHINE. ARTHUR ROSENTHAL, Grand Rapids, Mich. Filed Jan. 10, 1929. Serial No. 331,663. 8 Claims. (Cl. 101—292.)

1. In a label printing, feeding, and cutting machine, the combination of a printing press, a plurality of label strip feed reels, a guide for the label strips to the press, a feed and cutting means comprising a frame with a main holding jaw, an auxiliary holding jaw in spaced relation therefrom to embrace and hold said plurality of label strips under tension, a cam trip means for opening and closing the holding jaws comprising a slide with actuating stops, a cam for actuating said slide to open and close the holding jaws independent of the motions of the feed mechanism, a reciprocating feed carriage, a main feed jaw for engaging the ends of label strips disposed on said carriage and adapted to engage the ends of the label strips, an auxiliary feed jaw disposed in spaced relation to said main feed jaws and adapted to reciprocate and act between the said holding jaws, cam actuating means for simultaneously actuating the said jaws and tripping the same to close comprising a slide with stops for actuating and tripping the said jaws, a cam for actuating said slide timed to close said jaws during the feeding operation and open the same on return movement, a plurality of parallel cut off shears one of which is disposed in proximity to the main holding jaws and provided with a wiping rib to wipe the ends of the strips upwardly into projecting position, cam means for actuating said shears timed to act simultaneously and shear the tensioned strips between the main holding and main feed jaws, a tripper finger to discharge severed labels from the main feed jaws, a cam



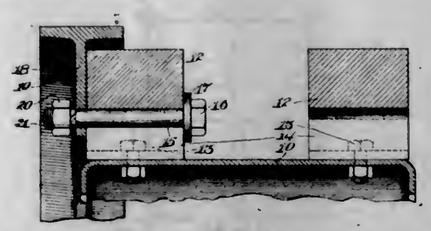
to actuate the same, endless belt delivery means adjacent each shear to receive the cut off labels and discharge the same, and cam means for reciprocating the feed carriage with the feed jaws timed to cooperate with said holding jaws, as specified.

1,786,868. VENDING MACHINE. WALTER S. RUNNELS, Kalamazoo, Mich. Filed Feb. 28, 1929. Serial No. 343,491. 14 Claims. (Cl. 194—58.)



14. In a coin controlled vending machine, the combination with a plurality of magazines, of a slidably mounted ejector adapted to be alternately brought into receiving position relative to said magazines, means for actuating said ejector, a coin controlled locking dog operatively associated with said ejector and provided with a pair of spaced detents, and a pair of coacting stops operatively connected with said ejector, said ejector also having ratchet teeth operatively connected thereto and with which said detents on said locking dog coact to prevent return movement of the parts until completion of the stroke of the ejector in one direction.

1,786,869. BATHING SUIT. GEORGE E. RUTLEDGE, Chicago, Ill., assignor to The Munsingwear Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed Nov. 6, 1929. Serial No. 405,125. 2 Claims. (Cl. 2—67.)



1. A bathing suit consisting of a body and skirt portion made of a single piece of relatively flimsy, slightly stretchable, textile material extending slightly below the upper hip portion, a trunk portion made separate from the one piece combined body and skirt portion, said trunk portion also made of flimsy, slightly stretchable, textile material and having leg portions extending slightly below the skirt portion, the trunk portion being stitched to the inner face of the one piece body and skirt portion, the skirt portion having at its lower edge an elastic element stitched thereto by elastic stitching, said elastic element when unexpanded being of slightly less length than the adjacent lower part of the skirt portion, whereby when the garment is applied to use the elastic element will be slightly expanded by that portion of the body of the wearer below the hips and thus placed under sufficient tension to cause the skirt portion and the elastic element to cling snugly to the lower part of the leg portions to insure that the skirt portion and the legs of the trunk portion when wet be situated in smooth relation with the body of the wearer.

1,786,870. STAPLING MACHINE. ALBERT H. SCHMIDTKE, St. Joseph, Mich., assignor to St. Joseph Iron Works, St. Joseph, Mich. Filed Jan. 18, 1929. Serial No. 333,348. 4 Claims. (Cl. 1—2.)

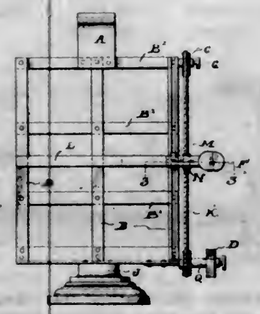
1. In a stapling machine, the combination of the reciprocating driver head, an adjustable socket piece secured thereto having laterally projecting ears, a staple driver, a staple driving slide plate having a laterally projecting lug and having a guide pin adapted to reciprocate in the said socket, a trip toggle connection between the ears and lug on said socket and slide plate, a spring to hold the toggle in actuating position, a staple former cooperating with the said staple driver, and a projecting trip pin on said staple former timed to trip the said toggle connection and release the pressure after a staple has been driven, as specified.

1,786,871. OVERTIRE FOR LUGGED TRACTION WHEELS. OTTO ROBERT SCHOENROCK, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Feb. 19, 1927. Serial No. 169,451. 2 Claims. (Cl. 301—39.)

1. In combination with a wheel tire carrying V-shaped lugs, each of said lugs being arranged transversely of the rim and provided with a transverse channel, of a T-bar overtire for the lugs, in which the leg flange of the T-bar

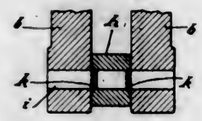
lies flatly against the outer face of the lugs, while the head flange of the T-bar overhangs the lugs and extends laterally beyond the said outer face of the lugs, and fastening means passed through the channel of certain of the lugs and through the leg flange of the T-bar.

1,786,872. CAR-COUPLING PIN. WILLIAM J. SIMMONS, Sr., Coaldale, Pa., assignor of one-third to William J. Simmons, jr., and one-third to Mike Pavlik, jr., Coaldale, Pa. Filed Oct. 8, 1929. Serial No. 398,226. 6 Claims. (Cl. 213—188.)



1. A car coupling pin for use in a car buffer, said pin having on its upper end a part for supporting the pin in vertical position in the buffer, a locking latch pivotally mounted on the lower end thereof, and a gravity actuated device carried by said pin and formed separately from said latch for normally holding said latch in position to permit insertion and withdrawal of said pin from a car buffer, when the first named end of the pin is up, said device acting to move said latch into position to lock the pin in the buffer when the lower end of the pin is turned up.

1,786,873. PHARMACEUTICAL PRODUCT AND PROCESS OF MAKING SAME. EMIL STARKENSTEIN, Prague, Czechoslovakia, assignor to the Firm Chemische Fabrik auf. Actien (vorm. E. Schering), Berlin, Germany. Filed Feb. 16, 1927, Serial No. 168,831, and in Germany Feb. 26, 1926. 11 Claims. (Cl. 167—67.)



1. As a new composition of matter for use as a pharmaceutical product, a mixture of hyoscyamin and scopolamine.

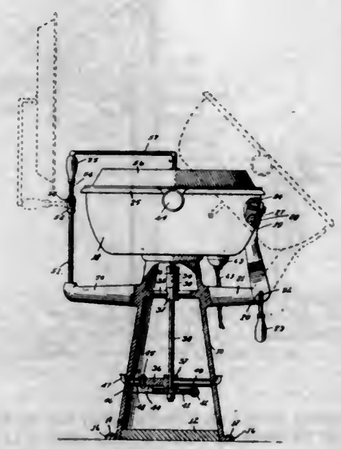
1,786,874. INDICATING COPYHOLDER. CAMILO TALARN, Rosario de Santa Fe, Argentina. Filed Oct. 4, 1929, Serial No. 397,343, and in Argentina Aug. 17, 1929. 1 Claim. (Cl. 129—33.)

A copy holder including a frame, a sliding block on said frame, an indicating bar pivoted to said block, one end of said bar extending across the frame and the other end extending laterally from said block to form a lever end adapted to be depressed to move the first mentioned end away from the frame to facilitate the introduction of a copy sheet under the bar, freely rotatable supporting pulleys, and a cord connected at one point to said bar for actuating the latter and normally retaining the bar in position upon the frame.

1,786,875. SAFETY DEVICE FOR CAM-CONTROLLED MECHANISMS. KARL TESSKY, Esslingen-on-the-Neckar, Germany. Filed Nov. 26, 1927, Serial No. 235,906, and in Germany Dec. 24, 1926. 1 Claim. (Cl. 74—1.)

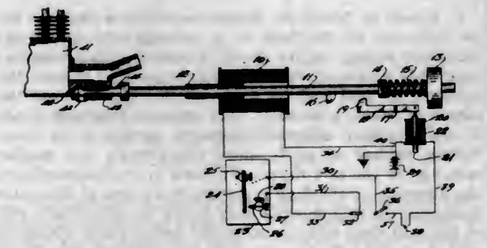
The combination of a rotary cam, a lever having one arm provided with a terminal fork, a pin extending transversely of the space between the members of said fork, a roller mounted on said pin within the fork so as to be engaged by its members at either end and projecting from the lever into the path of the cam, so that normally the lever will be rocked at each rotation of the cam, the roller supporting pin having two annular grooves formed therein and so related that both grooves are within the bore of the roller, with tapering surfaces extending from the lowest point of each groove to the adjacent end of the bore in said roller, substantially as and for the purpose described.

1,786,876. FEEDING DEVICE FOR MACHINE TOOLS. KARL TESSKY, Esslingen-on-the-Neckar, Germany. Filed Mar. 21, 1929, Serial No. 348,804, and in Germany Mar. 28, 1928. 2 Claims. (Cl. 82—38.)



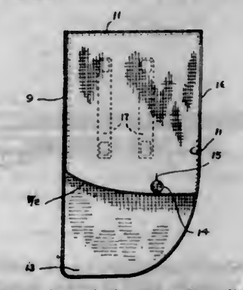
1. Tubular guide for feeding bars to machine tools comprising a guide tube and a lining in this tube having the shape of a coiled spring the diameter of which varies in the axial direction of the coil, some coils being in contact with the inner wall of the tube, others in contact with the bar to be fed, and the rest of the coils intermediate said first and second mentioned coils being neither in contact with the bar nor with the tube.

1,786,877. CORN POPPER. ELMER B. THOMPSON Des Moines, Iowa, assignor to National Sales and Manufacturing Company, Des Moines, Iowa, a Corporation of Iowa. Filed Feb. 20, 1928. Serial No. 255,648. 4 Claims. (Cl. 53—4.)



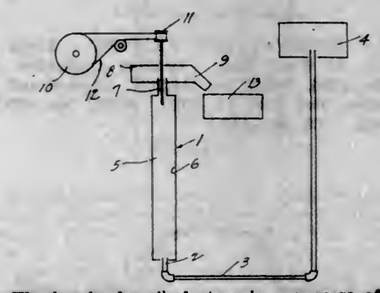
1. A corn popper comprising an upright hollow conical base, a popper kettle supported on the upper end of said base, said kettle including a skillet and a heating unit, means for pivotally connecting said kettle to swing

from an upright position to an inverted position, a stirring device within said skillet, electrical means support-



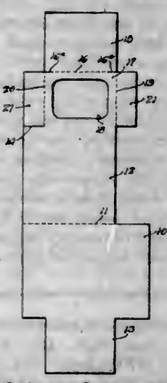
ed in said base for actuating said stirring device, and means for detachably connecting the stirring device to said electrically operating means.

1,786,878. ELECTROMAGNETIC DRAINING DEVICE. HERBERT VAN KEUREN, Kingstree, S. C., assignor to The Electro Automatic Drainage Company, Columbia, S. C., a Corporation of South Carolina. Filed Aug. 7, 1929. Serial No. 384,207. 6 Claims. (Cl. 137—34.3.)



2. The combination with a water receptacle having a drain opening, a valve controlling said drain opening, a stem on said valve, a solenoid core carrying said stem, a solenoid winding associated with said core to open the valve upon energization of the winding, a thermostatic circuit closer, circuit connections between said circuit closer and winding, releasable latch means engaging and holding said valve in open position upon opening thereof, and electro-magnetic means for moving said latch to release position and including a normally open circuit and means to close the same.

1,786,879. SAFETY POCKET. LOUIS VINEBERG, Windsor, Ontario, Canada. Filed Nov. 13, 1929. Serial No. 406,851. 2 Claims. (Cl. 2—254.)

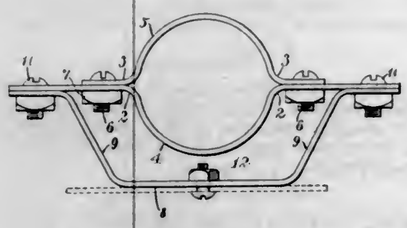


1. In a safety pocket of the type described, the combination of a pocket, elastic bands secured at their ends to the inside of said pocket, adjacent the top thereof, and an inner lining suspended from the top of said pocket in covering relation to said elastic bands, the bottom of said lining being open.

1,786,880. PROCESS OF TREATING TANNING SOLUTIONS. ANDREAS GUSTAV WACKENREUTER, Chicago, Ill. Filed Apr. 30, 1928. Serial No. 274,100. 2 Claims. (Cl. 149—4.)

1. The herein described steps in a process of treating a tanning solution which consists in submitting the solution to the selective action of hides, separating the hides from the solution, removing solids from the solution, and concentrating it.

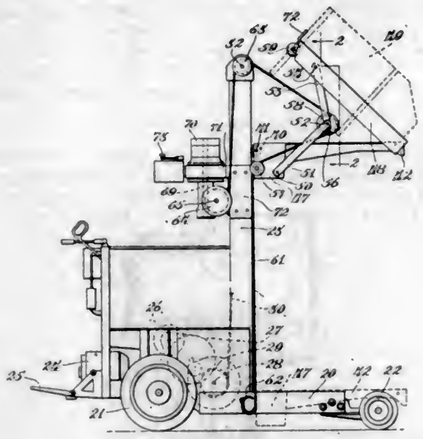
1,786,881. HAIR-WAIVING WRAPPER. WARREN S. WATTS, Louisville, Ky., assignor to Arlette, Inc., Louisville, Ky., a Corporation of Delaware. Filed Mar. 21, 1929. Serial No. 348,867. 12 Claims. (Cl. 132—36.2.)



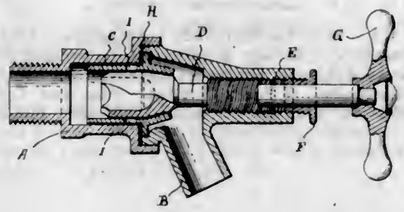
3. A sachet for hair waving comprising sheet material providing a casing having a window, and additional openings in said sheet cooperating with said window to allow the escape of moisture.

1,786,882. SUPERHEATER TUBE. WILLIAM B. WHITSITT and WALTER R. HEDEMAN, Baltimore, Md. Filed Nov. 8, 1926. Serial No. 147,160. 4 Claims. (Cl. 137—100.)

1. In a tubular superheated steam boiler, and in combination with a smoke tube, a steam superheater tube arranged within the smoke tube and heated by the products of combustion flowing therethrough, said superheater tube having a flow-change wall surface comprising double, short-pitch, shallow helical corrugations operating to effect a whirling motion of the flowing steam in a helical path and to mix the superheated steam lying next to the tube wall with the core of saturated steam surrounded thereby and to project the mixed steam by centrifugal force against the wall surface to produce a rapid and substantially uniform superheating of all the steam flowing through the tube.



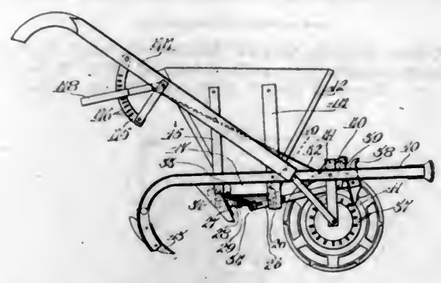
1,786,883. HIGHWAY-SIGN BRACKET. LOUIS W. ZAHONYI, St. Paul, Minn. Original application filed June 28, 1926, Serial No. 118,965. Divided and this application filed Feb. 24, 1930. Serial No. 430,587. 2 Claims. (Cl. 40—145.)



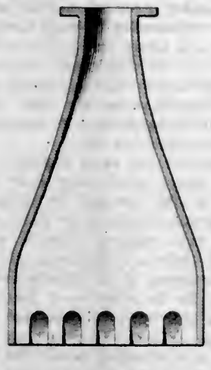
1. A sign bracket of the class described, including two members, said members being formed with central, outwardly curved post encircling portions and ends extending outwardly from said centrally curved portions, means for adjustably connecting said members on opposite sides of said centrally curved portions, and a sign supporting portion carried by one of said post encircling members, said sign supporting portion extending outwardly from the ends of the supporting post encircling member and across the face of said encircling member, said sign supporting portion being centrally spaced from the post encircling portion to centrally support a sign in spaced relationship to the post supported portion.

1,786,884. MATERIAL-HANDLING APPARATUS. JAMES R. ALLAN, Oak Park, Ill. Filed Dec. 5, 1928. Serial. N. 323,839. 27 Claims. (Cl. 214—121.)

1. The combination with a shop truck having a main frame and a vertical upright, a lift element movable along the upright, of a tiltable platform adapted to carry a material handling skid, said tiltable platform having pivotal connection with said lift element, a toggle link connected between the lift element and platform for operating the tilting of said platform, a pulley carried by the toggle link at its breaking point, a cable trained around said pulley, and means for actuating the cable.



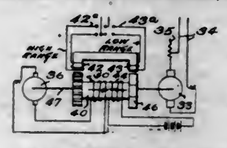
1,786,885. COCK OR FAUCET FOR FLUIDS. NATHANIEL WASHINGTON BANCROFT, Buenos Aires, Argentina. Filed July 31, 1929, Serial No. 382,425, and in Argentina July 4, 1929. 3 Claims. (Cl. 251—167.)



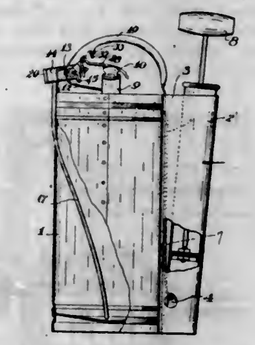
1. A cock or faucet for fluids comprising a chamber for the entrance of the fluid of a substantially cylindrical form and having on its insnde a hollow cylindro-conical fixed body arranged with its open larger end toward the entrance of fluid and its open smaller end towards the escape of same; a movable body slidably arranged inside of the said fixed body and having a portion of its outer surface formed so as to close hermetically the smaller open end of the said fixed body when moved outwardly in the direction of the fluid pressure; a portion of the outer surface of the said movable body fitting the cylindrical wall of the said fixed body, a flange for hermetically attaching said fixed body to the said entrance chamber, said flange being placed substantially at the point of separation between the cylindrical and the conical part of the said fixed body an annular space between the rear part of the said fixed body and the inner wall of the said entrance chamber, for the admission of water or fluid under pressure, the walls of the said fixed body having openings so arranged as to be hermetically closed by the cylindrical part of the said movable body, and opened only when said movable body is moved inwardly against the fluid pressure until its conical part corresponds with the said openings thus leaving them open and admitting the fluid from the said annular space, through the said opening; and the said movable body forming the head of a plunger the stem of which extends outwardly through a suitable packed passage in the chamber.

1,786,886. FERTILIZER DISTRIBUTOR. WILLIAM L. BEALL, Chattanooga, Tenn., assignor to International Harvester Company, a Corporation of New Jersey. Filed Aug. 24, 1928. Serial No. 301,789. 4 Claims. (Cl. 275—2.)

1. A vibrating delivery chute distributor comprising, in combination, a wheel supported frame and hopper, links pivotally supported by the frame, a structure connecting said links, a discharge chute supported by said structure beneath the discharge end of the hopper, a stop formed at one end of said structure, means for intermittently jerking the discharge chute and said structure in one direction, means for quickly returning the discharge chute, and said structure after each of said actions, an abutment fixed relative to the hopper and the frame which the stop engages to abruptly limit each of said returning movements.



1,786,887. METHOD AND APPARATUS FOR BURNING PULVERIZED FUEL. JOHN E. BELL, Brooklyn, N. Y., assignor to Combustion Engineering Corporation, a Corporation of New York. Filed Apr. 13, 1922. Serial No. 552,258. 2 Claims. (Cl. 110—104.)



2. The method of delivering a mixture of pulverized fuel and air to a combustion chamber which consists in causing the mixture to move in a stream circular in cross section, in gradually changing the stream in cross-section from circular to a thin wide sheet of approximately the same area in cross-section, and then in causing the sheet to expand at a multiplicity of spaced points along its wide dimension and delivering it into the chamber.

1,786,888. ALTERNATING-CURRENT GENERATOR. THEODORE S. BINDSCHEDLER and WILLIAM A. WOOD, Detroit, Mich., assignors to The Steel Penetrometer Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 5, 1928. Serial No. 267,574. 4 Claims. (Cl. 172—137.)

1. Means for generating an alternating current variable in frequency, with voltage varying at a predetermined ratio, said means consisting of an alternating current generator, an exciting coil therefor, means for supplying to said coil a constant excitation current, means for varying the speed of said generator, and means for varying the effect of the excitation current inversely to the variation in speed of said generator.

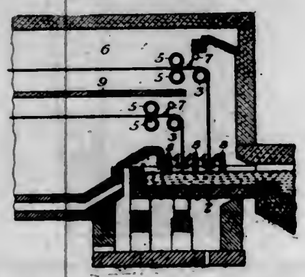
1,786,889. SPRAYER. HENRY E. BRANDT, St. Paul, Minn., assignor to The Dobbins Manufacturing Company, North St. Paul, Minn., a Corporation of South Dakota. Filed June 6, 1927. Serial No. 196,875. 1 Claim. (Cl. 299—89.)

A spraying apparatus having in combination, a tank adapted to contain the liquid to be sprayed and air under pressure, a discharge nozzle carried by said tank, comprising a body having a removable plug in its front end with a small central aperture and a central bore extending rearwardly from said aperture, an annular chamber about said plug, said plug having passages substantially tangential to said bore connecting said bore and chamber, a plunger movable in said bore and of smaller diameter than said bore there being at all times a passage in said bore around said plunger throughout the length of said bore, means at the forward end of said plunger for closing said aperture, a chamber in the rear of said plug communicating at all times with said annular chamber about said plunger, a conduit leading from the liquid in said tank connected to said annular chamber, a conduit leading from the air space in said tank connected to said rear chamber and a valve in said last mentioned conduit for regulating the flow of air therethrough.

1,786,890. METHOD OF MANUFACTURING CELLULOSE AND TEXTILE FIBERS FROM VEGETABLE MATTER. CARL ALFRED BRAUN, Munich, Germany. Filed Aug. 15, 1927, Serial No. 213,194, and in France July 4, 1927. 3 Claims. (Cl. 92—11.)

1. The method of manufacturing cellulose and textile fibers from vegetable material, consisting in treating the vegetable material, at boiling temperature and corresponding pressure, with a sulphite solution initially containing caustic alkali and alkali salts of weak acids.

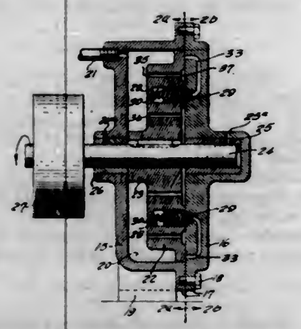
1,786,891. VIOLIN. HENRY P. BROWN and PETER FRANK TRUSCINSKI, South St. Paul, Minn. Filed Mar. 22, 1930. Serial No. 438,159. 5 Claims. (Cl. 84—275.)



1. In a violin construction of the class described, a hollow body including a marginal rim, a top fastened on

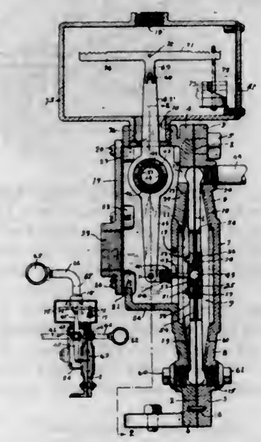
said rim, and a multiple element sounding post assembly comprising a pair of longitudinally spaced upper post portions formed integral with the underside of said top

and depending into the body, a third post portion connected with said first named post portions and having its lower end resting on the interior of the bottom of said body.



1,786,892. METHOD AND APPARATUS FOR THE MANUFACTURE OF SHEET GLASS. CLARENCE P. BYRNES, Sewickley, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Original application filed Mar. 2, 1920, Serial No. 362,844. Divided and this application filed July 5, 1924, Serial No. 724,255. 4 Claims. (Cl. 49—17.)

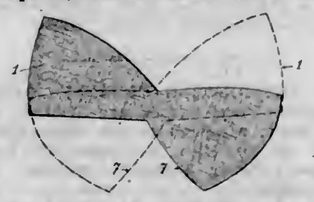
1. In an apparatus for simultaneously producing a plurality of sheets of glass, a horizontal leer, a series of conveyors for carrying the separate sheets in parallel horizontal planes through the leer, and means positioned between each pair of conveyors for protecting the lower sheets from falling material.



3. The process of producing sheet glass, consisting in providing a mass of molten glass, skimming the molten glass by drawing the surface therefrom in sheet form, and then drawing a sheet from the skimmed glass.

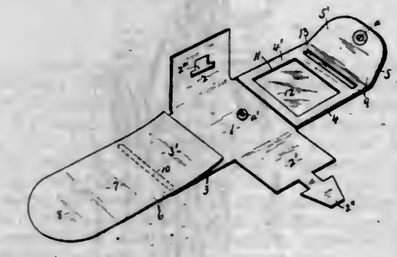
1,786,893. ROTARY FLUID COMPRESSOR. AUGUSTUS T. BURGER, Delano, Calif. Filed July 24, 1928. Serial No. 295,051. 7 Claims. (Cl. 230—152.)

1. A rotary fluid compressor comprising a stator having spaced channels therein concentric of the stator axis, intake and exhaust ports communicating with the channels, and a rotor having abutments movable successively in the channels to expel fluid therefrom in advance of the abutments and into the exhaust ports and to simultaneously induce fluid into the channels at the rear of the abutments, and means for closing the exhaust ports while the abutments are passing from one channel to the other to prevent back flow of the fluid into the channels.



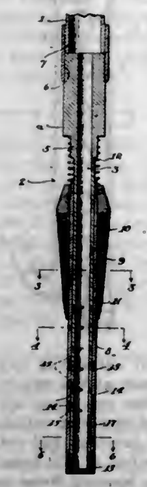
1,786,894. FLUID CONTROLLER. CHARLES ARTHUR BROWN, Lorain, Ohio. Filed Jan. 29, 1926, Serial No. 84,547. Renewed Nov. 7, 1928. 11 Claims. (Cl. 50—27.)

1. In a controller of the class described, a rotatable valve, a cylindrical concentric seat for the valve, said valve and seat each having a pair of alignable openings through their walls, a pair of fluid pressure cells, a diaphragm dividing the cells and exposed to the pressures of fluid contained in the cells, one of the cells being adapted to contain a liquid under pressure, a fluid passage adapted to convey, in a continuously upward direction, air from the liquid in the said liquid containing cell from all portions of that side of the diaphragm contacting with the liquid to one of the said valve openings, said one valve opening being disposed above the level of the topmost portion of the diaphragm surface in engagement with the liquid in the liquid containing cell.



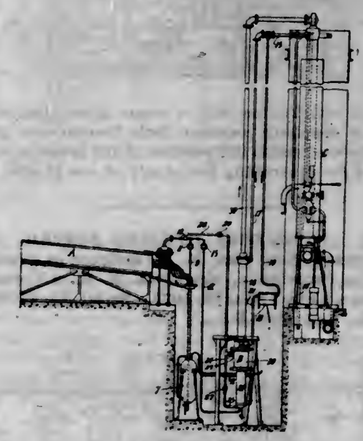
3. In a controller of the class described, the combination with a fluid casing, of a rotary valve and diaphragm disposed therein, a link adapted to communicate movements of the diaphragm to rotate the valve, said valve having at least one port opening thereof, when in opened position, disposed above a cylindrical co-axial projection of the effective periphery of the diaphragm when the diaphragm periphery is disposed in a vertcial plane, said casing providing a gas-conducting passage between the diaphragm periphery and the valve opening, having no portion of its upper wall disposed below the uppermost portion of such a cylindrical projection of the diaphragm periphery.

1,786,895. BUST BODICE. MARCEL CADOLLE, Paris, France. Filed Oct. 7, 1929, Serial No. 397,999, and in France Sept. 21, 1929. 2 Claims. (Cl. 2—42.)



1. In a bust bodice, the combination of two pieces each having the shape of two opposed trianges connected at their apices, the straight of the fabric constituting these two pieces being directed lengthwise of the same, and said two pieces being placed cross-wise against each other with their adjacent edges sewn together, the whole of these two pieces being adapted to fit in the middle of the chest and on the inner portions of the breasts.

1,786,896. POCKETBOOK. CLARENCE G. CONGER, Syracuse, N. Y. Filed Dec. 7, 1929. Serial No. 412,494. 1 Claim. (Cl. 150—39.)

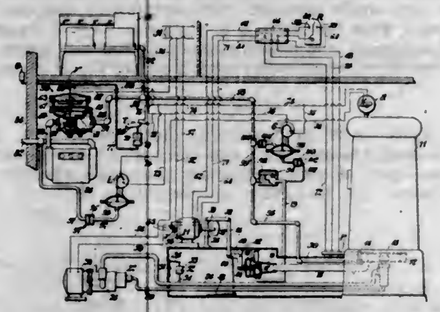


A folding pocketbook comprising a cruciform sheet of flexible material having a rectangular main body portion, opposite end wings of unequal length, the shorter wing being adapted to fold over and upon the body portion to form a pocket, opposite side wings adapted to fold over and upon the shorter end wing to form a second pocket, the longer end wing being adapted to fold over and upon the outer faces of the side wings and provided with an end flap adapted to fold over and upon the outer face of the main body or into the second pocket, an extension part secured to the outer end of the shorter wing and having its other end extended to approximately the junction of the shorter wing with the main body and free to open and close to form a secret pocket, the open end of which is closed by the fold at said junction.

1,786,897. OIL-WELL-TESTING DEVICE. ERNEST H. COX, Duncan, Okla. Filed Feb. 4, 1927. Serial No. 165,984. 2 Claims. (Cl. 166—1.)

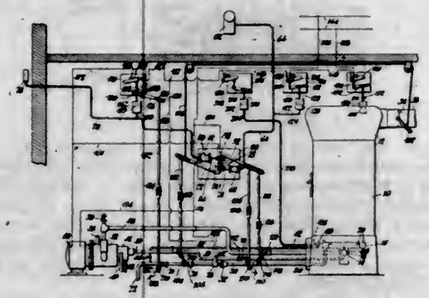
1. In a device of the class described a tubular member adapted to be secured to the lower end of a drill stem, a sleeve encircling said tubular member and mounted for sliding movement with respect thereto, a stopper and packer element also encircling said tubular member and secured to the upper end of said sleeve, said tubular member and sleeve provided with perforations adapted to register when the sleeve is at the upper limit of its sliding movement, and means normally holding said sleeve in a position in which said perfotations are out of register.

1,786,898. ART OF LIQUEFACTION. WILLIAM L. DE BAUFRE; Lincoln, Nebr., and JOHN W. DAVIS, Washington, D. C. Filed Dec. 29, 1923. Serial No. 683,274. 5 Claims. (Cl. 62—122.)



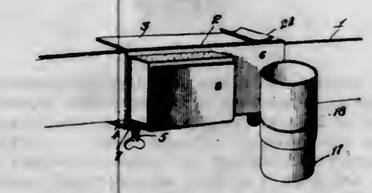
5. In the art of liquefaction, the liquefying of the major portion of the undesired constituents by an internal cycle of refrigeration and the liquefying of the remaining undesired constituents by an external cycle employing liquefied nitrogen as the refrigerating medium, without materially reducing the pressure of the gas being processed, the liquefied constituents being employed as return fluid in the internal cycle.

1,786,899. ELECTRIC TRANSFORMER. SEBASTIAN ZIANI DE FERRANTI, Hollinwood, England, assignor to Ferranti, Limited, Hollinwood, England. Filed Feb. 11, 1926, Serial No. 87,691, and in Great Britain Mar. 12, 1925. 2 Claims. (Cl. 175—356.)



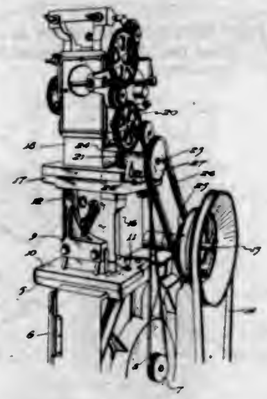
1. An electric transformer including in combination an inherently rigid openwork bobbin framework formed on a plurality of longitudinal ribs, two end flanges and one or more intermediately disposed rings, a plurality of radial projections disposed at points of intersection of the ribs and rings, a jointless winding wound in sections upon said bobbin, said sections being mutually separated axially by air spaces and by said radial projections, a plurality of metal soldering lugs rigid with said bobbin serving as terminal posts for the winding ends, and notches formed in said bobbins adjacent said soldering lugs serving to accommodate and mechanically to shield the wire.

1,786,900. HOUSE-HEATING SYSTEM. HENRY L. DOHERTY, New York, N. Y. Filed Dec. 18, 1925. Serial No. 76,152. 32 Claims. (Cl. 158—11.)



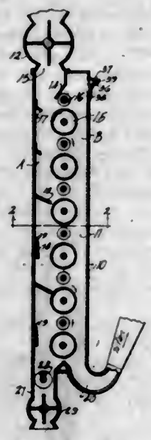
30. The combination with a steam generating boiler of means for supplying separate fuels thereto and pressure responsive mechanism independent of the pressure of steam generated for controlling the supply of one of said fuels.

1,786,901. FLUID-FUEL HEATING SYSTEM. HENRY L. DOHERTY, New York, N. Y., assignor to Combustion Utilities Corporation, New York, N. Y., a Corporation of Maine. Filed Dec. 23, 1925. Serial No. 77,252. 19 Claims. (Cl. 236—9.)



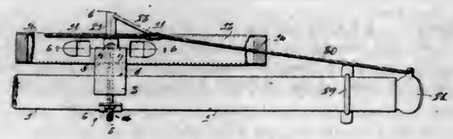
1. In a fluid fuel heating system, in combination, two fluid fuel burners, one adapted to burn a base fuel and one adapted to burn a secondary fuel, normally inoperative means for supplying fuel to said secondary fuel burner, and mechanism responsive to changes in temperature operable to place said means in operation and to simultaneously restrict the supply of fuel to said base fuel burner.

1,786,902. SMOKER'S ARTICLE. JAMES P. DOUGHTY, Jr., Augusta, Ga. Filed Sept. 17, 1928. Serial No. 306,573. 4 Claims. (Cl. 131—51.)



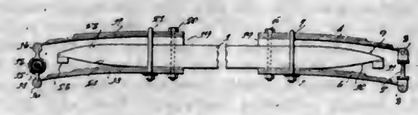
1. In a device of the class described, a support engaging member, an arm pivotally mounted thereon, a bracket mounted to swing on said arm at right-angles to the axis of movement of the arm and toward and away from the pivotal mounting of said arm, and an ash receptacle carried by said bracket.

1,786,903. COMBINED MOTION-PICTURE PROJECTOR AND PHOTOGRAPHIC SOUND-REPRODUCING MACHINE. CHARLES W. EBELING, New York, N. Y., assignor to General Talking Pictures Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 27, 1929. Serial No. 410,233. 3 Claims. (Cl. 88—16.2.)



1. In a machine of this character, the combination of a supporting base, a photographic sound apparatus casing mounted thereon, and having a film progressing mechanism and a main drive shaft, a motion picture projecting apparatus casing mounted upon and carried by the first casing and having a film progressing mechanism, a driven shaft operably connected to the latter film progressing mechanism, and means for operably connecting the drive shaft to the driven shaft so that both film progressing mechanisms are operated in time relation.

1,786,904. COTTON-BOLL EXTRACTING AND CLEANING DEVICE. GEORGE E. EVANS, near Waco, Tex. Filed Oct. 25, 1929. Serial No. 402,449. 6 Claims. (Cl 19—37.)



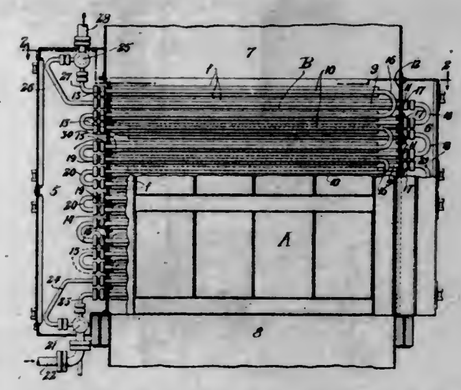
1. In a cottom boll extracting and cleaning device, a vertical housing, means at the upper end of the housing for dropping bur-cotton out of an air line into the housing, a vertical train of revolving cotton extracting elements dividing the housing into bur and cotton lanes extending from the top to the bottom of said housing, deflectors hinged in the bur lane of the housing, links connected to alternate deflectors for swinging them, a lever pivoted intermediate its ends and connected to said links at opposite sides of its pivot, and a cam controlled connection for oscillating said lever.

1,786,905. EXHAUST WHISTLE. JERIE EVICH, Santa Barbara, Calif. Filed Aug. 8, 1930. Serial No. 474,051. 5 Claims. (Cl. 116—138.)

1. In exhaust whistles, the combination with the exhaust pipe having a port in its wall, a whistle clamp block secured thereto over said port and itself having a port registering with said exhaust pipe port, a whistle pipe secured to said clamp block, a whistle controlling valve mounted on said pipe and registering with said clamp block port, a whistle dividing block having a seat for said valve, said whistle pipe having an opening at each end of said dividing block, and said dividing block having air passages to each opening controlled by said valve, plugs in the ends of said whistle pipe, and means to operate said valve.

1,786,906. FRAME AND SPRING SUSPENSION FOR MOTOR VEHICLES. CLAYTON E. FREDERICKSON, Moline, Ill., assignor, by mesne assignments, to Thompson Motor Corporation, Muscatine, Iowa. Filed June 15, 1929. Serial No. 371,219. 6 Claims. (Cl. 280—106.5.)

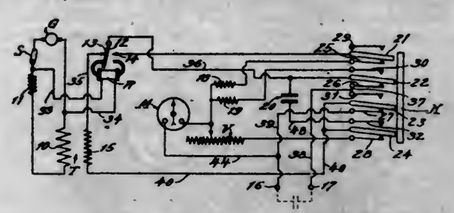
1. A frame including longitudinal beams having the upper and lower surfaces at their ends convexed, upper and lower leaf spring packs secured each at one end to the frame to project beyond the ends of the frame beams and cooperate with said convexed surfaces, front and rear axle structures, upper and lower shackle eyes carried by said structures to which the outer ends of said spring packs are pivotally secured the ends of said frame projecting between the spring packs.



1,786,907. METHOD OF REPAIRING APPAREL SHOES. CLARK H. GEPPERT, Des Moines, Iowa. Filed July 2, 1929. Serial No. 375,588. 1 Claim. (Cl. 12—142.)

The method of repairing apparel shoes, which consists in applying to the sole of the shoe a semi-liquid mass containing rubber dissolved in a solvent such as benzine, and also containing a quantity of builders' cement, then applying the mass to a shoe sole, and then applying water to cause the cement to set and harden upon the evaporation of the solvent and the water.

1,786,908. PROCESS FOR THE SEPARATION AND PURIFICATION OF METALS AND METALLIC ALLOYS. ALBERT HANAK, Philadelphia, Pa. Filed Aug. 8, 1928. Serial No. 298,405. 6 Claims. (Cl. 75—15.)

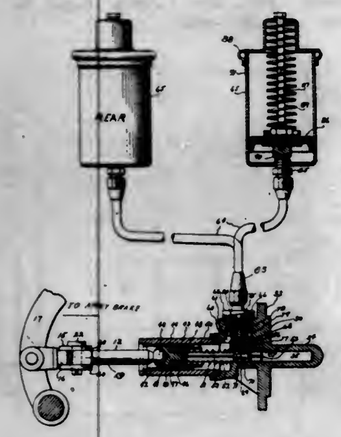


1. The process of separating antimony from lead alloys which comprises treating the alloy with an alkali metal to form a less fusible alloy of antimony and alkali metal dissolving same in caustic alkali in the molten state, separating the caustic melt and treating it with water thereby separating antimony in the metallic state.

1,786,909. ECONOMIZER. GEORGE P. JACKSON and KURT TORNSFELDT, Flushing, N. Y., and HARRY STEELE, Newark, N. J., assignors to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed June 1, 1929. Serial No. 367,669. 14 Claims. (Cl. 257—230.)

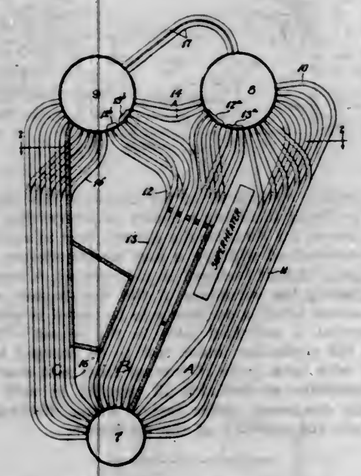
1. An economizer comprising, in combination, a casing having inlet and outlet for a heating medium, a plurality of rows of U-bent tubes in said casing, means for connecting the open ends of the U-bent tubes of each row for back and forth traverse therethrough, and means for supporting the tubes, said rows of tubes being arranged in interspaced relation with the U-bends of the tubes of adjacent rows at opposite ends of and within the casing.

1,786,910. TESTING INSTRUMENT FOR ELECTRICAL CONDENSERS. CHARLES C. JONES, Phoenix, Ariz. Filed Apr. 1, 1929. Serial No. 351,734. 9 Claims. (Cl. 175—183.)



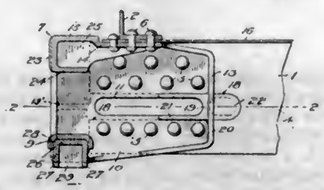
1. A testing instrument of the character described comprising a circuit including a source of alternating current supply, means for limiting the current flow in said circuit to a predetermined wattage, a step up transformer having the primary thereof included in said circuit, a second circuit including the secondary of the transformer and terminals across which a condenser to be tested is adapted to be connected, a polarized relay in the second circuit for causing the condenser under test to be charged and discharged with each cycle of current from said source, and a galvanometer so included in parallel in said circuit when the condenser under test is being discharged, as to indicate the capacity of the condenser.

1,786,911. PROCESS FOR THE MANUFACTURE OF TRANSPARENT PAPERS, PARTICULARLY THOSE USED FOR THE PACKING OF EDIBLE ARTICLES. OTTO KLOTZ, Goppingen, Germany. Filed Feb. 25, 1927, Serial No. 171,071, and in Germany Oct. 9, 1926. 1 Claim. (Cl. 91—68.)



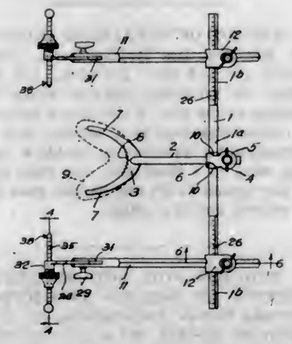
A process for producing a transparent paper particularly for packing edibles, which comprises in coating the outside of both sides of a translucent paper with a solution of gelatine to render it transparent.

1,786,912. VEHICLE BRAKE. EDWARD J. MADDEN, Detroit, Mich. Filed Oct. 21, 1927. Serial No. 227,712. 5 Claims. (Cl. 60—546.)



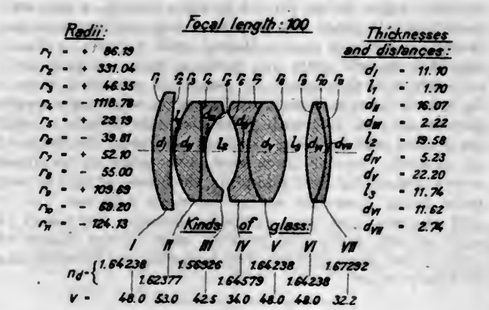
3. In hydraulic vehicle brakes, a master cylinder, a piston therein movable to actuate the brakes, a reserve tank, a conduit from said tank to said cylinder, means for forcing liquid to flow from said tank to said cylinder, a valve operable to close said conduit and having a stem portion, a cam member carried by said piston, and acting on said stem to close said valve during initial movement of said piston.

1,786,913. BENT-TUBE BOILER. LEONARD J. MARSHALL, Westwood, N. J., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 21, 1929. Serial No. 348,807. 6 Claims. (Cl. 122—302.)



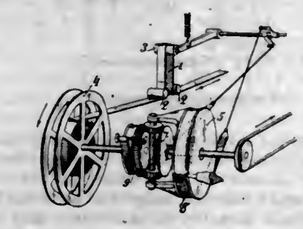
1. In combination, a bent tube boiler having a plurality of relatively large thin walled steam and water drums, a mud drum, and connecting banks of tubes, each bank consisting of non-staggered tubes, every alternate row of the first bank being connected to the first steam and water drum in a different region than the other rows circumferentially of the drum, and every row of the second bank having part of its tubes connected with the first and part with the second steam and water drum but with alternate rows connected to said drums at different regions circumferentially from the other rows thereof, and the alternate rows of the third bank being connected with the second drum at regions circumferentially different from the other rows thereof.

1,786,914. DRAFT MEMBER. MARK H. MARTIN, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Aug. 24, 1925. Serial No. 52,062. 2 Claims. (Cl. 213—50.)



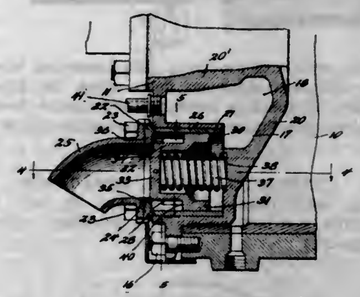
2. An integral draft casting adapted for connection to sills of a car and comprising a striking portion having an outer face, a coupler carrier portion, and side portions, the outer ends of which side portions are widened and formed with forward faces in approximate alinement with said outer face of the striking portion, said side portions extending rearwardly and adapted for connection to the inner faces of draft sills to form cheek plates terminating in draft lugs, said cheek plate portions being slotted with the rear ends of the slotted portions reinforced by bosses, the inner portions of said bosses reinforcing the draft lugs and tapering forwardly to merge into the inner faces of the cheek plate portions, the outer portions of said bosses being adapted to extend through corresponding slots in the sills and tapering forwardly to merge into the outer faces of said cheek plate portions, the widened portions at the front of the side portions of the casting being reinforced by means extending from the outer faces of said side portions, a top shelf portion on the casting extending rearwardly from and reinforcing the striking portion thereof, means connecting the upper ends of said draft lugs with said shell portion, the lower portions of said draft lugs being reinforced by tapering flanges extending along the lower edges of the side portions toward the coupler carrier portion thereof.

1,786,915. DENTAL APPARATUS. DAVID W. MCLEAN, Los Angeles, Calif. Filed May 9, 1928. Serial No. 276,209. 4 Claims. (Cl. 32—1.)



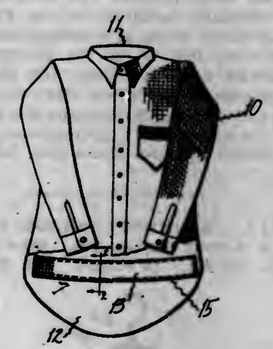
1. A dental face bow comprising a transverse member, a bite plate projecting rearwardly from said transverse member and provided with means rotatably supporting said bite plate on said transverse member so as to permit relative rotation of said transverse member with respect to said bite plate about an axis parallel to said transverse member, means for clamping said transverse member and bite plate in fixed relative position, side arms projecting rearwardly and upwardly from the respective ends of said transverse member, means connecting said side arms to said transverse member and slidably but nonrotatably engaging both the transverse member and the respective side arms, so as to permit independent relative sliding movement of each side arm with respect to the transverse member, longitudinally of said transverse member and longitudinally of the side arm, while preventing relative rotation thereof about an axis extending longitudinally of the side arm and also about an axis extending perpendicular to both the transverse member and the side arm, means for clamping said connecting means to hold said transverse member and side arms in fixed relative positions, and axis locating members mounted at the rear ends of the respective side arms.

1,786,916. OBJECTIVE CORRECTED SPHERICALLY, CHROMATICALLY, ASTIGMATICALLY, AND FOR COMA. WILLY MERTÉ, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Sept. 7, 1928, Serial No. 304,470, and in Germany Sept. 29, 1927. 6 Claims. (Cl. 88—57.)



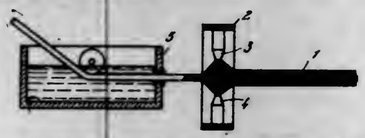
1. Photographic objective corrected spherically, chromatically, astigmatically and for coma, consisting of four lenses separated by air, of which the two outer ones are collective, while the two inner ones are dispersive and distinctly menisci whose concave surfaces face each other, of the two collective lenses the one facing the image being distinctly biconvex and the proportion in which, in the other collective lens, the curvature radius of the strongest curved boundary surface stands to the curvature radius of the other boundary surface, being algebraically larger than the corresponding proportion of the collecting lens facing the image.

1,786,917. DEVICE FOR THE AUTOMATIC ADJUSTMENT OF THE TENSIONS OF FILMS. ETIENNE OEHMICHEN, Valentigney, France. Filed Aug. 9, 1927, Serial No. 211,803, and in France Aug. 17, 1926. 5 Claims. (Cl. 242—75.)



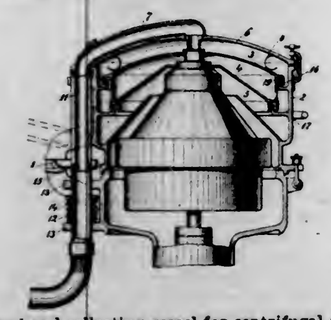
4. In a cinematographic apparatus or the like, the combination of a film spool, driving means for rotating this spool, braking means for braking the said spool, and means controlled by the variations of tension of the film and adapted to control both the said driving means and braking means, so as to apply the one while the other is released.

1,786,918. RELIEF VALVE. EDWARD BRUCE RANCK, Altoona, Pa. Filed May 16, 1928. Serial No. 278,228. 10 Claims. (Cl. 121—184.)



2. In a steam engine, in combination, a cylinder, a cylinder head, a chamber integral with said head, a sleeve passing thru the outer wall of said head into said chamber and dividing the same into two compartments, one connected to the cylinder space, means to supply steam at substantially boiler pressure to the other compartment, the outer end of said sleeve being open to atmosphere, a valve seat adjacent the open end, a piston operable in said sleeve, and exposed on opposite faces to the respective pressures in said compartments, means on said piston to cooperate with said valve seat and to reduce the area of piston exposed to cylinder pressure and means providing communication between said compartment connected to the cylinder and the interior of the sleeve adjacent said valve seat.

1,786,919. SHIRT. GEORGE A. RIPLEY, Dallas, Tex. Filed Dec. 26, 1928. Serial No. 328,347. 1 Claim. (Cl. 2—116.)



As an article of manufacture, a shirt having a collar of the same material as the shirt and provided with a strip of the same material as the collar stitched transversely on the tail of the shirt and forming a part thereof, said strip having its face exposed and being of such shape as to be utilized to recover the collar.

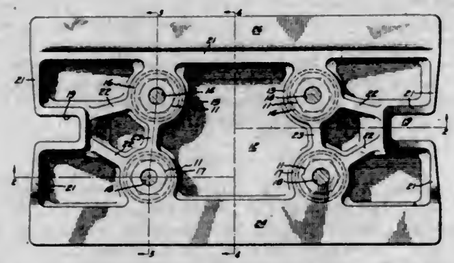
1,786,920. PROCESS FOR PRODUCING THIN INSULATING LAYERS UPON WIRES. REINHOLD RÜDENBERG, Berlin-Grunewald, and WALTER SCHOTTKY, Berlin-Charlottenburg, Germany, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Jan. 10, 1929, Serial No. 331,685, and in Germany Jan. 16, 1928. 4 Claims. (Cl. 91—68.)

2. In the process of producing thin insulating layers of less than 0.01 mm. thickness upon wires, the alternate precipitation of different insulating substances from the gaseous state upon the surface of the strongly cooled wire.

1,786,921. CENTRIFUGAL-BOWL SEPARATOR. CARL SCHMITZ, Oelde, Germany. Filed Apr. 22, 1929, Serial No. 357,159, and in Germany Apr. 27, 1928. 4 Claims. (Cl. 233—28.)

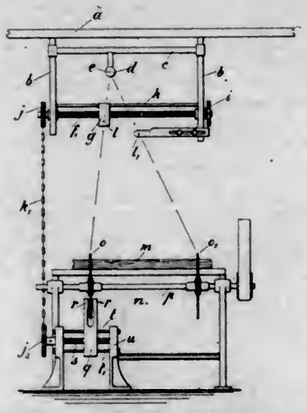
1. A feed and collecting vessel for centrifugal apparatus, comprising an integral outer casing having a plurality of troughs one over the other and decreasing in size from the bottom to the top; a collecting chamber lid for each trough; a pipe connected to each trough decreasing in size from the top to the bottom; a cover for the casing; and a pipe secured to the center of the cover.

1,786,922. PRODUCTION OF THYMOL. WALTER SCHOELLER, Berlin-Westend, and HANS JORDAN, Berlin-Steglitz, Germany, assignors to the Firm Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed June 20, 1927, Serial No. 200,297, and in Germany June 29, 1926. 2 Claims. (Cl. 260—154.)



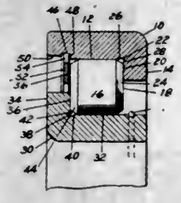
1. The process of producing alkyl isopropyl phenols comprising acting on an alkyl-isopropylene phenol at about 160° C. in the presence of a hydrogenation catalyst with hydrogen, until 2 hydrogen atoms have entered into combination.

1,786,923. GARMENT-HANGER ATTACHMENT. GEORGE E. SCRUBY, Dallas, Tex. Filed Nov. 14, 1927. Serial No. 233,254. 10 Claims. (Cl. 223—62.)



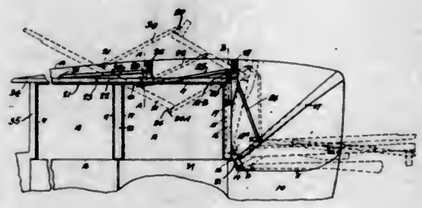
1. The combination with a wire garment hanger having inclined top members and a transverse bottom member, of an attachment comprising a sheet folded over the hanger having shoulder supports overlying the top members of the hanger and provided with a flap overlying the bottom member of the hanger and a garment opening contiguous to the flap.

1,786,924. TRACK SHOE. WILLIAM TURNBULL, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a Corporation of California. Filed June 8, 1927. Serial No. 197,325. 1 Claim. (Cl. 305—10.)



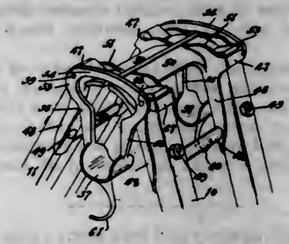
As an article of manufacture, a track shoe comprising an integral structure including a substantially flat, rectangular plate having lateral recesses therein, a side wall bounding said plate and also bounding said recesses and providing inclined seats adjacent said recesses, a flange spaced from said plate and merging with one portion of said side wall throughout the length of said track shoe, a lip spaced from said plate and merging with the opposite portion of said side wall throughout the length of said track shoe, said lip being arranged to overlap the flange of an adjacent, similar track shoe, two pairs of apertured bosses upstanding from said plate, the bosses of each of said pairs being unequally spaced from an adjacent one of said recesses, and webs extending between the bosses of each of said pairs and between each of the bosses of each of said pairs and the wall bounding the adjacent one of said recesses.

1,786,925. DEVICE FOR PRODUCING SHADOW LINES ON WORK PIECES. HUBERT WIEGELMANN, Neheim, Germany. Filed Sept. 11, 1928. Serial No. 305,281. 2 Claims. (Cl. 143—168.)



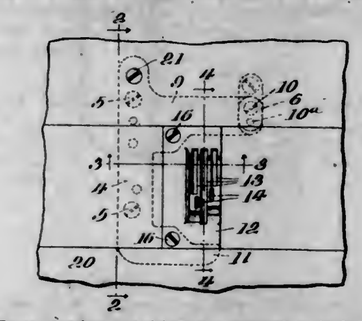
1. A device for producing shadow lines on work pieces of sawing machines comprising a carrying frame; a stationary light mounted on said frame; an adjustable wire mounted on said frame and adapted to be moved laterally; a stationary wire mounted on said frame, said adjustable wire cooperating with a movable saw of the sawing machine and the stationary wire with a stationary saw; means for mounting the adjustable wire and the movable saw so that said saw and wire can be adjusted toward or away from the stationary wire and saw to laterally move the shadow line caused by the adjustable wire and light; and means for moving the wire and saw laterally at a speed which is proportional to their distance from the source of light.

1,786,926. ROLLER BEARING. REGINALD E. WELLS, East Orange, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 17, 1925. Serial No. 69,635. 7 Claims. (Cl. 308—213.)



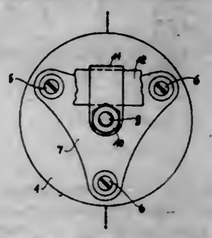
1. In a roller bearing or the like, a race-member having a bearing-surface, a roller having a cooperating bearing-surface, and means for limiting play of said roller, said race-member being provided with a grinding-relief recess between its said bearing-surface and said limiting means, and said bearing-surface of said roller ending at a point short of said recess when said roller is at the limit of play defined by said limiting means, whereby in said position a portion of said bearing-surface of said race-member projects beyond said bearing-surface of said roller, substantially as described.

1,786,927. COLLAPSIBLE ROOF BODY FOR AUTOMOBILES. CARL E. E. WOLFERMANN, New York, N. Y. Filed Jan. 28, 1928. Serial No. 250,178. 3 Claims. (Cl. 296—116.)



1. In a collapsible roof for automobiles and similar vehicles the combination with a car body, having a downwardly extending recess at its rear end, of a double bent brace hingedly secured to the car body by its short arm and having its long arm disposed perpendicularly, a rear bow hingedly secured to the rear side of aforesaid short arm, a horizontally disposed brace hingedly secured to the outside and shortly below the upper end of aforesaid perpendicular arm, having an upwardly disposed projection at its front end, and an extension brace linearly arranged with aforesaid horizontal brace having a downwardly extending projection at its rear end, a horizontally disposed link hingedly connecting both the aforesaid horizontal rail and the extension brace, a double bent lever hingedly secured at its bend to the inside of the upper end of aforesaid brace, and with its front end to aforesaid extension braces at the end of its downwardly extending projection, a link hingedly connecting the rear bow with the end of the short arm of aforesaid lever, and a link hingedly connecting the upper end of the upwardly projection of the horizontally disposed rail with the extension brace.

1,786,928. TENT. SYLVANUS E. WRIGLEY, Sturgeon Creek, Manitoba, Canada. Filed Nov. 7, 1929, Serial No. 405,502, and in Canada May 27, 1929. 12 Claims. (Cl. 135—4.)

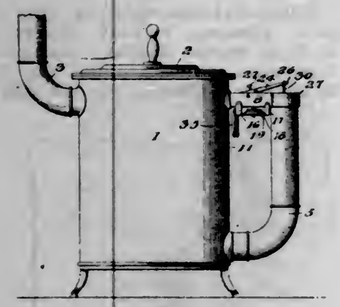


1. A tent frame structure comprising a ridge pole, pairs of pivotally connected legs and ridge pole receiving and clamping means carried by the pairs of legs and embodying cradles and jaws between which the ends of the ridge pole are passed.

1,786,929. THROAT-PLATE SUPPORT FOR SEWING MACHINES. FREDERICK F. ZEIER, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1928. Serial No. 302,874. 5 Claims. (Cl. 112—260.)

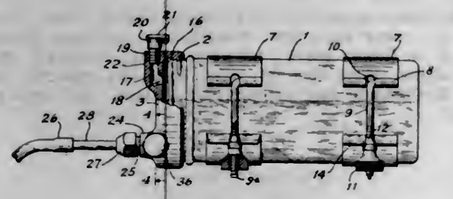
1. In a sewing machine a supporting bed, a bracket formed integral therewith and disposed at one side of the line of feed, a supporting post disposed at the other side of the line of feed and in rear of the needles, a supporting member mounted on said bracket and having an integral lateral projection in rear of the needles resting thereon and secured to said supporting post and bridging the feed bar of the machine, said support having a laterally projecting portion in front of the needles overhanging the bracket, a throat plate secured at its rear end to the laterally projecting portion of the support in rear of the needles and at its front end to the laterally projecting portion of the support in front of the needles.

1,786,930. ACOUSTIC SIGNALING APPARATUS. GUSTAV ADOLF ZEININGER, Oberesslingen, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Mar. 31, 1928, Serial No. 266,260, and in Germany May 21, 1927. 5 Claims. (Cl. 177—7.)



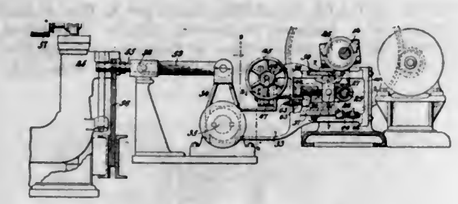
1. The combination, with acoustic signaling means including a vibratory sound-producing member, and sup-

porting means to which said signaling means is to be connected, of a resilient member, connected substantially at its center to one of said means and adjacent its periphery to the other means, for supporting said signaling means, the center of said resilient member lying substantially on the axis of the vibratory sound-producing member.



2. The combination, with acoustic signaling apparatus including a housing and a sound-producing diaphragm, of means for mounting said apparatus on a vehicle, comprising resilient means secured to the vehicle and to the said housing, said resilient means being so located as to permit substantially equal movement of all parts of said housing.

1,786,931. AUTOMATIC DRAFT REGULATOR. CAMB J. ASHLEY, Goodloes, Va. Filed Apr. 29, 1929. Serial No. 359,082. 6 Claims. (Cl. 236—15.)



1. The combination with an air-tight stove having a down draft pipe extending along the side thereof and spaced therefrom, an automatic damper control secured to the stove and having a cap embracing the upper end of the down draft pipe, a damper carried thereby and adapted to auotmatically control the down draft in said pipe.

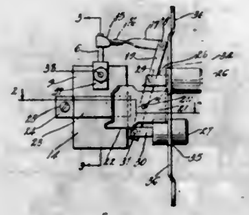
1,786,932. WINDSHIELD-CLEARING DEVICE. ALBERT W. BECKER, Hartford, Conn. Filed June 29, 1928. Serial No. 289,298. 18 Claims. (Cl. 20—40.5.)

1. A windshield clearing device having a reservoir provided with a closed and an open end, a cover on said open end and a pipe line connected to said cover, said reservoir being transparent and said cover non-transparent.

1,786,933. SHAKE MECHANISM. FREDERICK A. BOWMAN, Wilmington, Del., assignor to The Pusey & Jones Corporation, Wilmington, Del., a Corporation of Delaware. Filed Aug. 24, 1928. Serial No. 301,865. 19 Claims. (Cl. 92—45.)

1. A shake mechanism comprising a power shaft, a rocking member pivoted to the frame and receiving a reciprocating motion from said shaft, a vibratory lever, and connecting devices between said rocking member and said lever comprising a pivot and a carrier therefor slidably mounted in ways on one of said members, bearings for said pivot slidably mounted in ways on the other member, and hand operated adjusting means for said movable parts, operable while the machine is running.

1,786,934. CONNECTING ROD. BURDETT B. BRIGGS, Chicago, Ill. Filed Apr. 29, 1926. Serial No. 105,605. 12 Claims. (Cl. 74—108.)



1. A connecting rod having a rod body and an eye at one end thereof, said eye and body having a kerf leading from the eye into said body, means to force the sides of the kerf toward each other and thereby contract the eye, a bushing having a slot extending longitudinally thereof and fitting in said eye and provided with circumferentially spaced longitudinal grooves, and a removable and replaceable shim held in said kerf and slot and having an edge coincident with and conforming to the inner surface of the bushing.

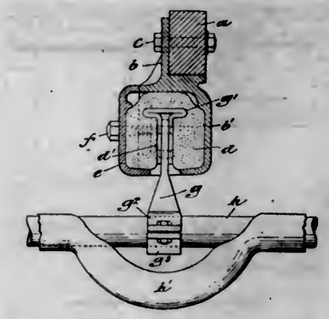
1,786,935. ELECTRIC SWITCH. GALUSHA A. BURGESS, Long Beach, Calif. Filed June 20, 1928. Serial No. 286,974. 7 Claims. (Cl. 200—153.)

1. In a noiseless electric wall-switch for closing an electric circuit, the combination of a wall-plate, a switch-

casing, a movable switch-member for opening and closing the circuit, hand actuated means supported on the wall-plate, and non-extensible means connecting the same with the switch-member to operate it, said parts being freely

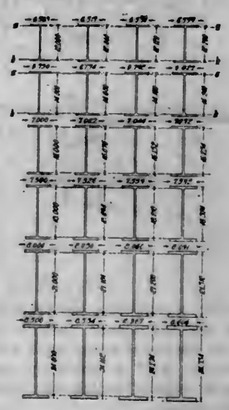
movable from their position of rest in a direction to close or open the switch and operating to hold the switch closed or open by reason of the inertia of rest of the parts in the position in which they are left.

1,786,936. TAPERED WIRE ROPE AND METHOD OF MAKING THE SAME. WILLIAM E. CRAIG, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed July 7, 1928. Serial No. 291,015. 5 Claims. (Cl. 117—59.)



1. The method of tapering a wire rope of the type having a core, which consists in successively decreasing the number of strands and substituting each dropped strand for the core through a substantial portion of the length of the rope.

2. A tapered wire rope having a successively decreasing number of strands.

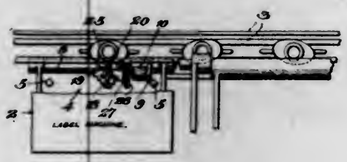


1,786,937. MOUNTING FOR ELECTRIC CONDUCTORS. WILLIAM R. EDSON, New York, N. Y., assignor, by mesne assignments, to The Rubber Shock Insulator Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 17, 1926. Serial No. 116,521. 1 Claim. (Cl. 173—366.)

Means for supporting a wire composed of a core and a jacket comprising supporting means, a housing carried thereby, a cover for the housing, yielding non-conducting cushioning means carried by the housing, means to secure the cover plate to the housing and to place the

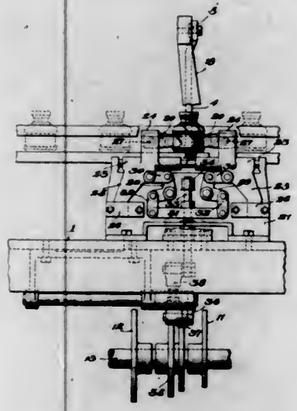
cushioning means under compression, and means carried by said cushioning means for engaging the core of the wire, the jacket thereof forming a by-pass around the engaging means.

1,786,938. SERIES AND GROUPS OF I-BEAMS. JAMES H. EDWARDS, Passaic, and FREDERICK T. LLEWELLYN, Montclair, N. J.; and ROBERT A. MARBLE, Ben Avon, Pa. Filed May 16, 1925, Serial No. 30,688. Renewed Sept. 21, 1929. 7 Claims. (Cl. 189—37.)



1. A series of rolled sections whose depths, weights per unit of length and strengths in the direction of their depths progress by a constant geometrical ratio.

1,786,939. BOTTLE-STRAIGHTENING DEVICE. ARVID P. EKVALL, Worcester, Mass., assignor to Economic Machinery Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 27, 1928. Serial No. 257,314. 12 Claims. (Cl. 216—9.)

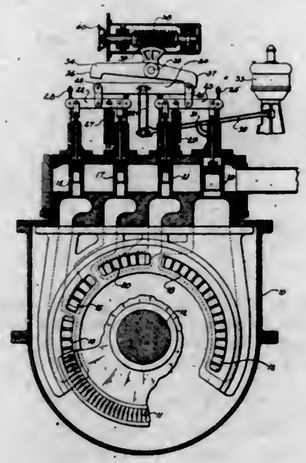


1. In combination with a conveying trough or guideway having article conveying means therein, an article

straightening device comprising a pair of relatively separated fingers, and means to bring said fingers into en-

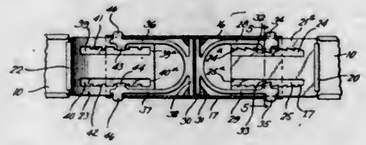
gagement with the article within the trough or guideway when the article is released by the conveying means to correctly align said article therein.

1,786,940. LABEL WIPER. ARVID P. EKVALL, Worcester, Mass., assignor to Economic Machinery Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 27, 1928. Serial No. 257,315. 9 Claims. (Cl. 216—38.)



1. A label wiping mechanism comprising a pair of oppositely disposed slidable wipers, positive actuated means for advancing said wipers towards each other, and means for feeding a bottle with a partially applied label to the action of said wipers during the advancing sliding movements of the latter.

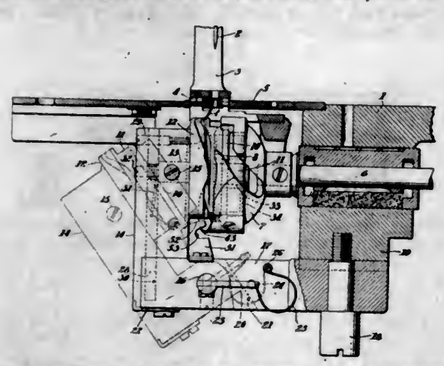
1,786,941. PROCESS FOR DESULPHURIZING ARTICLES CONSISTING OF REGENERATED CELLULOSE. WILHELM ELLER and TOTILA MADLUNG, Dessau in Anhalt, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 7, 1928, Serial No. 275,957, and in Germany July 13, 1927. 4 Claims. (Cl. 18—54.)



1. The process which comprises desulphurizing articles, consisting of regenerated cellulose and obtainable by coagulating a viscose solution, by treating them with a solution of the strongly colored by-products contained in crude cellulose xanthate.

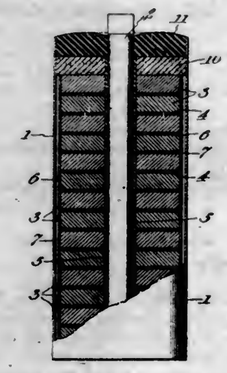
1,786,942. ELASTIC-FLUID TURBINE. LINDSEY C. FLETCHER, Moores, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 25, 1929. Serial No. 395,086. 5 Claims. (Cl. 137—158.)

2. In a steam chest for an elastic fluid turbine, the combination of a first valve means adapted to admit the required amount of motive fluid for carrying a relatively light load, a second valve means adapted to admit the required motive fluid for a relatively greater load, governor mechanism responsive to the speed of the turbine, and means whereby the governor mechanism may be selectively caused to operate either valve means.



1,786,943. BRACELET CONSTRUCTION. OVE L. GAMMELL, Attleboro, Mass., assignor to Smith & Crosby, Attleboro, Mass., a Copartnership composed of Alfred D. Crosby and George H. Crosby. Filed July 13, 1927. Serial No. 205,359. 12 Claims. (Cl. 24—206.)

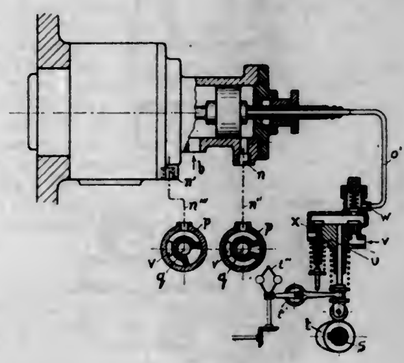
1. In bracelet construction, in combination, a pair of coacting bracelet members relatively slidable in a direction lengthwise of the bracelet to change the length of the bracelet, said members having plate-like portions overlapping one another, a plate-like member on the underside of one of said members and having formed therein a plurality of notches, and means secured to the other of said members for selectively engaging said notches, said notched plate-like member being received between said last-mentioned means and said overlapping plate-like portions.



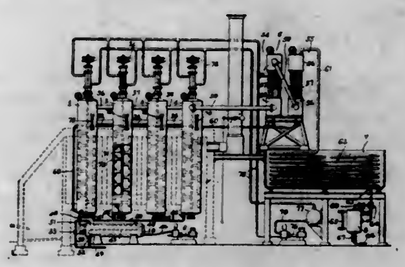
1,786,944. LOCK-STITCH SEWING MACHINE. MARTIN HEMLEB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 30, 1928. Serial No. 322,603. 8 Claims. (Cl. 112—181.)

1. In a sewing machine, in combination, a reciprocating needle, a cup-shaped rotary hook having an open-sided raceway, a bobbin-case in said raceway, a bobbin-case retainer movable from sewing position adjacent said hook to open position more remote therefrom, manually operated seizing means on said retainer for removing the bobbin-case from the hook when the bobbin-case retainer is shifted to open position, and a stationary rest mounted in

a fixed position to engage and support the bobbin-case on the opened retainer after the bobbin-case is removed from the hook and released by said seizing means, said rest being out of engagement with the bobbin-case when the latter is in working position in said hook.



1,786,945. METHOD OF MAKING DRY CELLS. WILLIAM FERRIS HENDAY, Ossining, N. Y., assignor, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Original application filed July 30, 1923, Serial No. 654,611. Patent No. 1,637,446. Divided and this application filed June 16, 1927. Serial No. 199,341. 3 Claims. (Cl. 136—175.)

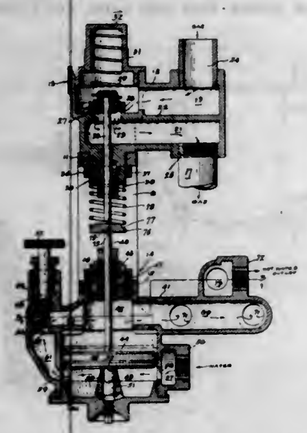


3. The method of making dry cells which comprises compacting a mixture of depolarizing and carbonaceous materials into a plurality of tablets, moving at least one side of each of said tablets in contact with powdered conductive material so as to produce a conductive layer thereon having less resistance to the flow of electric current than the body of the tablet, assembling said tablets to form a bobbin so that the adjacent sides of each adjacent pair of tablets are separated by at least one of said layers, and placing said bobbin in a container electrode.

1,786,946. FUEL-INJECTION DEVICE FOR EXPLOSION ENGINES. FRIEDRICH HOFMANN, Mulheim-on-the Ruhr, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed May 13, 1927, Serial No. 191,109, and in Germany Apr. 4, 1927. 8 Claims. (Cl. 60—41.)

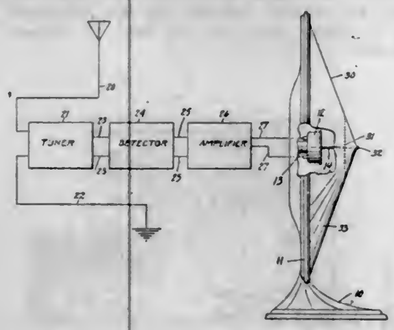
2. A device for injecting air and fuel into a combustion chamber, comprising a casing provided with a connection for the admission of compressed air, with an outlet for the discharge of such compressed air, and with a valve seat between said connection and said outlet, a valve adapted to engage said seat and to establish or interrupt the passage of compressed air to said outlet, a tubular stem movable in unison with said valve, the latter being provided with a passage communicating with the interior of said stem for discharging fuel adjacent to said air outlet, a pump for supplying fuel to said stem, a scavenging air valve surrounding said casing and slidable thereon, and an outer valve casing provided with a seat for said scavenging air valve and with a connection for the supply of scavenging air.

1,786,947. METHOD OF CRACKING OILS. RALPH C. HOLMES, New York, N. Y., and FREDERICK T. MANLEY, Houston, Tex., assignors, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Original application filed June 26, 1919, Serial No. 306,936. Divided and this application filed Apr. 9, 1926. Serial No. 100,790. 13 Claims. (Cl. 196—49.)



1. A process of cracking oil that comprises charging the oil into a plurality of series-connected vertical converters through which it passes in succession, heating the converters intermediate their ends to a cracking temperature and supplying most heat to the first converter of the series, maintaining the liquid level in the converters above the heated intermediate portions thereof, separating out the heavier constituents of the evolved vapors by condensation, and returning the condensate to the first converter receiving the most heat.

1,786,948. AUTOMATIC WATER-HEATER CONTROL VALVE. ROBERT C. HOYT, Oakland, Calif. Filed Apr. 22, 1927. Serial No. 185,864. 7 Claims. (Cl. 236—25.)

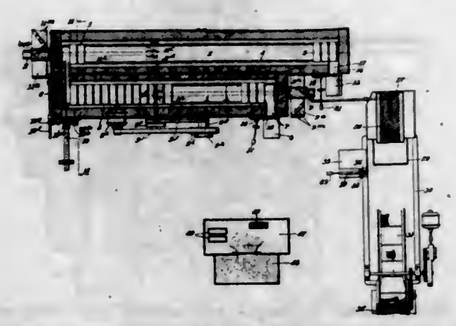


1. In combination with a self-closing fuel valve of an automatic water heater, a rod member longitudinally

reciprocable to open said valve, water pressure controlled means for actuating said rod, a helical spring axially operative against said rod to resiliently urge it to maintain an inoperative relation with respect to said valve,

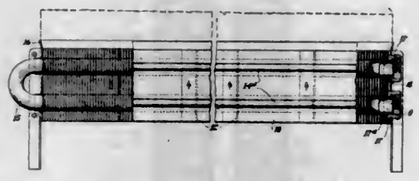
and a member providing a seat for said spring operatively interposed between said spring and rod and arranged for a freely pivotal and rocking engagement with said rod whereby the pressure of said spring will be exerted entirely axially of said rod.

1,786,949. SOUND-PROPAGATING DIAPHRAGM. MILLER REESE HUTCHISON, Llewelyn Park, West Orange, N. J., assignor to Premier Laboratory Company, a Corporation of Delaware. Filed May 2, 1928. Serial No. 274,528. 1 Claim. (Cl. 181—31.)



A sound propagating diaphragm comprising a cone having a circular line of closely adjacent apertures symmetrically arranged, the center of curvature coinciding with the center of said cone, the radius of said circle being approximately one fourth the radius of the cone.

1,786,950. CATALYTIC OXIDATION OF ANTHRACENE. ALPHONS O. JAEGER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Original application filed Aug. 8, 1927, Serial No. 211,638. Divided and this application filed Mar. 29, 1928. Serial No. 265,819. 18 Claims. (Cl. 260—57.)

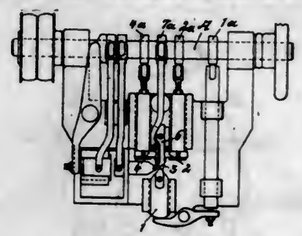


1. A method of oxidising anthracene to anthraquinone, which comprises vaporizing anthracene and causing the vapors to react with an oxidising gas in the presence of a contact mass containing at least one non-silicious base exchange body.

1,786,951. METHOD OF OPERATING CARBURIZING APPARATUS. RICHARD KAIER, Cranford, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Original application filed Oct. 3, 1927, Serial No. 223,544. Divided and this application filed Aug. 18, 1928. Serial No. 300,565. 2 Claims. (Cl. 263—1.)

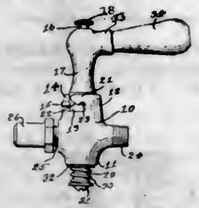
1. Method of operating carburizing apparatus comprising, packing the work-pieces and fresh carburizing compound in a cold dummy box of a size to nest with a work-box, removing a hot work-box from the furnace with the carburized work therein, dumping the hot work-box, nesting the hot empty work-box and packed dummy box, relatively separating said boxes leaving the packed contents of the dummy box, undisturbed in the work-box, and restoring the hot work-box to the furnace.

1,786,952. RADIATOR. JOHN KARMAZIN, Detroit, Mich. Filed Aug. 25, 1927. Serial No. 215,283. 18 Claims. (Cl. 257—136.)



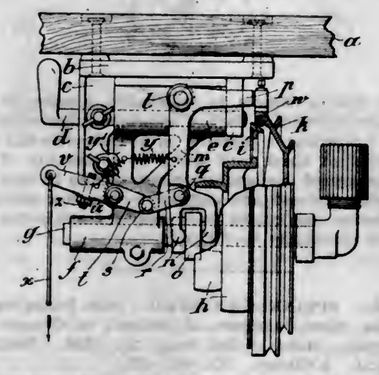
6. A room heating radiator of the class described, comprising a plurality of superposed fin elements having tubular projections in parallel spaced relation extending transversely from one side thereof, the tubular projections on one element being nested within the juxtaposed element to form a plurality of continuous tubes, and yokes connecting the ends of said tubes to form a continuous conduit, and means for connecting the ends of said conduit into the fluid containing system, said elements extending in a horizontal position and of large enough capacity to heat the room.

1,786,953. MACHINE FOR THE PRODUCTION OF MESH FABRIC AND CHAINS. KARL KINDL, Grafenhausen, near Neuenburg, Germany, assignor to Ernst Dideon Bek, Pforzheim, Germany. Filed June 1, 1927, Serial No. 195,633, and in Germany June 2, 1926. Renewed June 17, 1930. 5 Claims. (Cl. 140—3.)



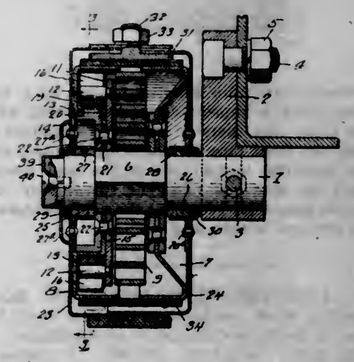
1. In the production of ring mesh fabric and chains in machines of the type in which rows of links are produced at a time, the method involving the steps of producing open links on a separate link forming device collecting and arranging said links as they are formed in co-incident relation on a temporary support, removing said support,

together with the open links thereon, from the said device, into association with a magazine support in the mesh-fabric or chain making machine and feeding the



links from said temporary support to the magazine support in said machine wherein they are operated on to form the mesh fabric.

1,786,954. GAS-VALVE LOCK. ARTHUR E. KRAMER and JOHN WHITE PLATT, Waterville, Conn. Filed Mar. 15, 1929. Serial No. 347,239. 6 Claims. (Cl. 251—164.)

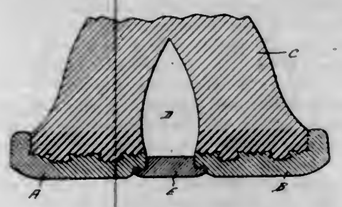


1. In a gas valve cock, a casing, a valve plug fitting within said casing, a transverse handle secured to said plug, a depressible plunger slidably mounted within said plug and carrying a laterally extending locking pin near its lower end, said casing having an open slot in its upper edge for detachably interlocking with said pin when the valve is closed, a spring pressing upwardly upon said plunger to cause said pin to snap into said slot automatically during the closing of said valve, said plunger having a manipulating knob extending above the top of said plug, said locking slot having an enlarged seat and an inclined wedge-shaped section to depress said pin during the closing of the valve whereby the moving of said handle will cause said pin automatically to pass over said wedge section and to snap into said seat.

1,786,955. FRICTION-CLUTCH-DRIVING MECHANISM. KARL MAIER, Stuttgart, Germany, assignor to Union Special Maschinenfabrik G. m. b. H., Stuttgart, Germany. Filed Sept. 2, 1927, Serial No. 217,222, and in Germany Sept. 11, 1926. 1 Claim. (Cl. 192—17.)

A friction clutch driving mechanism including in combination an element to be driven, a driving member movable into frictional engagement therewith, an engaging lever having connection with said driving member for shifting the same into and out of engagement with the driven member, a brake carried by said engaging lever and adapted to engage the driven member when the driving member is released therefrom, a spring for moving said engaging lever so as to disengage the driving member from the driven member, a rocking lever, a link interposed between said rocking lever and said engaging lever, said link and rocking lever being movable into alignment when the driving member is in engagement with the driven member for holding said members in engagement, a stop for limiting the movement of said rocking lever when said link and lever are in alignment, a spring for moving said rocking lever to throw the link and lever out of alignment, and a manually operated device connected to said rocking lever for moving the same to bring the link and lever into alignment and the driving member into clutching engagement with said driven member.

1,786,956. SHOCK ABSORBER. BONNIE L. MALLORY, Cleveland Heights, Ohio, assignor to The Cleveland Shock Absorber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 1, 1928. Serial No. 296,642. 20 Claims. (Cl. 267—10.)

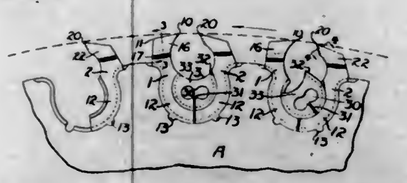


20. A shock absorber comprisisg a shaft adapted for connection with a vehicle axle and having a non-circular portion, a casing rotatably mounted on said shaft, a coil spring encircling said shaft and having one end connected therewith, a brake drum mounted on the non-circular portion of said shaft, a brake band extending about said brake drum and having one end connected with said casing and its opposite end connected with the other end of said coil spring through a circumferentially extending opening in said brake drum, a belt extending about said casing and having one end connected with said casing and its opposite end adapted for connection with a vehicle axle, the said brake drum consisting of a pair of sections, one of which is non-rotatably connected with the non-circular portion of said shaft and means connecting the other section with the non-circular portion of said shaft in such a manner as to permit a limited rotary movement of the same with respect to the shaft and means for adjusting the relative position of said shaft to vary the tension of said coil spring.

1,786,957. BRIDGING RING FOR CUSHION-TIRE BASES. HOMER L. MUELLER, Lakewood, Ohio, assignor, by mesne assignments, to The Cleveland Welding Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 19, 1925. Serial No. 70,017. 5 Claims. (Cl. 152—1.)

2. A transplit bridging ring for cushion tire base members, said ring having a greater initial circumference than

the base members with which the ring is to be used, the ends of the ring being bent radially inward and the abut-



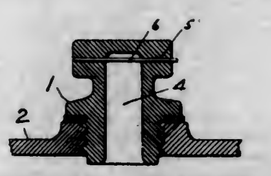
ting faces of the ends of said ring being complementarily beveled, said ends adapted to be forced outwardly whereby the ends of said ring interlock one with the other.

1,786,958. TRAFFIC-SIGNAL REFLECTOR. VICTOR L. OESTNAES, Westfield, N. J., assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 11, 1927. Serial No. 198,072. 4 Claims. (Cl. 88—1.)

2. A reflector structure adapted for use as a highway signal comprising a supporting casing having an opening in the front face thereof, a reflector mounted within said casing, the front face thereof being exposed, adhesive cushioning material located within the said casing and surrounding the side end and rear surfaces of the said reflector, and means for retaining the said cushioning material and reflector within said casing.

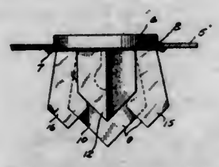
1,786,959. INSERTED TOOTH FOR SAWS. ELIJAH C. ORR, Seattle, Wash., assignor to Orr Saw Tooth Grinder Co., Seattle, Wash., a Corporation of Washington. Filed Dec. 10, 1928. Serial No. 324,841. 3 Claims. (Cl. 143—141.)

1. A saw tooth having its peripheral edge centrally grooved lengthwise of its line of travel to form two parallel side-cutting edges, said cutting edges being inclined in a front to rear direction with their rear ends projecting farther than their forward ends to make a low angle with their direction of travel, whereby they produce a draw cut which smoothly severs the fibers at the side edges of the cut, said cutting edges having an overhang projecting rearwardly of the general axis of the tooth, and a raker tooth immediately succeeding said tooth and overhanging forwardly the gullet formed between the first mentioned tooth and the raker tooth.



1,786,960. ALL-WEATHER DOUBLE-SERVICE WRAP. MABLE B. PARADISE, Atchison, Kans. Filed Sept. 30, 1927, Serial No. 222,999. Renewed May 26, 1930. 2 Claims. (Cl. 2—88.)

1. As a new article of manufacture, a double service wrap, comprising a single piece body provided at its upper corners with integral waist tabs, sets of leg fastening devices within the marginal edges of and on said body a considerable distance from its side edges and at its lower

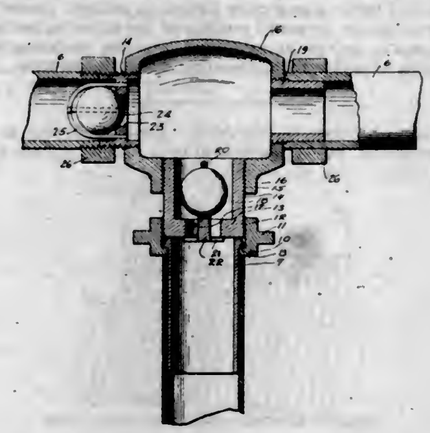


edge, and each set of leg fastening devices adapted to secure a portion of said body bag-like around a leg with the foot projecting below and free of said body, substantially as shown and described.

1,786,961. VENT FOR STORAGE BATTERIES. GEORGE E. PETROSKY, Philadelphia, Pa. Filed Apr. 30, 1928. Serial No. 273,842. 2 Claims. (Cl. 136—177.)

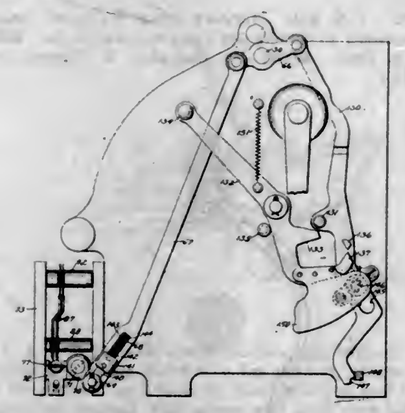
1. Venting means for a storage battery cell in a charged and dumped condition having a passage for the escape of gases from the cell under operating conditions, a removable pliable member sealing said passage, and a fine wire inserted between contiguous surfaces of the passage and the pliable member to provide a minute vent from the interior to the exterior of the cell.

1,786,962. LIGHTING FIXTURE. LINDSLEY SCHERMERHORN, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Feb. 15, 1929. Serial No. 340,133. 13 Claims. (Cl. 240—7.1.)



2. In lighting fixtures, in combination, a source of light, and light-distributing means associated therewith, said means comprising a plurality of spaced plate-like members arranged about said source in a plurality of relatively staggered overlapping groups, certain of said members being disposed and adapted to function principally by reflection and others being disposed and adapted to function principally by diffusion.

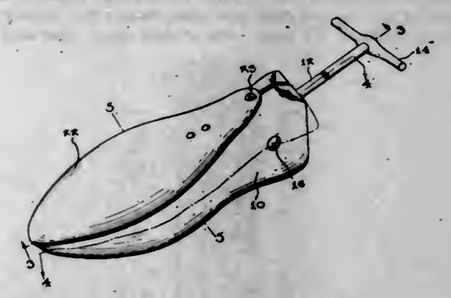
1,786,963. SPRINKLER SYSTEM. PAUL SCHOENBERGER, Belton, Mont., assignor of one-half to Chester Yale, Whitefish, Mont. Filed Sept. 22, 1926. Serial No. 137,124. 3 Claims. (Cl. 137—78.)



1. In a sprinker system for fighting forest fires, in combination, a main line adapted to be connected with a

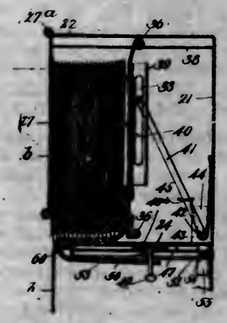
source of water under pressure, and comprising a plurality of line sections and valve bonnets intermediate said sections and coupled therewith, each bonnet being provided with extensions, a valve seat arranged in one extension, a ball valve adapted to coact with said valve seat, the main line sections being connected to other

extensions of each bonnet, branch lines connected to said first extensions, and means to open a branch line to the main line comprising a spider carried at the end of the branch line, said spider having a projection adapted to pass into said extension operative to unseat the ball valve.



1,786,964. CASH REGISTER. BERNIS M. SHIPLEY, Dayton, Ohio, assignor, by mesne assignments to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Original application filed Jan. 16, 1924, Serial No. 686,564. Divided and this application filed June 18, 1925. Serial No. 37,951. 17 Claims. (Cl. 235—130.)

1. In a machine of the class described, a release shaft, a lock shaft, and a flexible connection between said shafts for rendering the lock shaft effective to prevent a machine release movement of said release shaft while permitting movement thereof in an opposite direction.



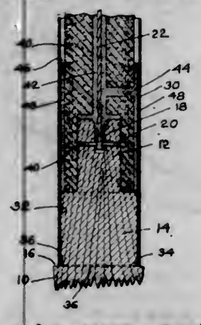
1,786,965. SHOE STRETCHER. JAMES SMART, Orlando, Fla. Filed Oct. 12, 1929. Serial No. 399,292. 2 Claims. (Cl. 12—128.5.)

1. A shoe stretcher comprising a body consisting of pivotally connected side elements, a spreader wedge enclosed by the same, a nut seated jointly in said elements, a wedge actuating screw threadingly engaged with the nut and having a swivel connection with the wedge, and

a spreader plate spanning the two side members of the body, the wedge being provided with an adjustable member having a slide bearing with the under surface of said stretcher plate.

1,786,966. TOWEL CABINET. CHARLES W. THOMPSON, Wollaston, Mass., assignor to Harvey C. Wheeler, Boston, Mass. Filed July 27, 1928. Serial No. 295,639. 5 Claims. (Cl. 312—37.)

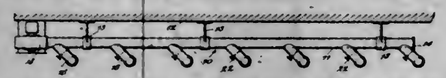
1. A towel cabinet comprising a shelf dividing the cabinet into upper and lower chambers, a door for the upper chamber, a follower, a presser member in back of said follower, and spring actuated means to urge said presser member forward slidably mounted in said follower and located in said upper chamber.



1,786,967. PROCESS OF EXTRACTING PYRETHRUM. WILLIAM J. TREVILLIAN, Freeport, Ill., assignor to The W. T. Rawleigh Company, Freeport, Ill., a Corporation of Illinois. Filed Apr. 14, 1929. Serial No. 352,616. 2 Claims. (Cl. 167—24.)

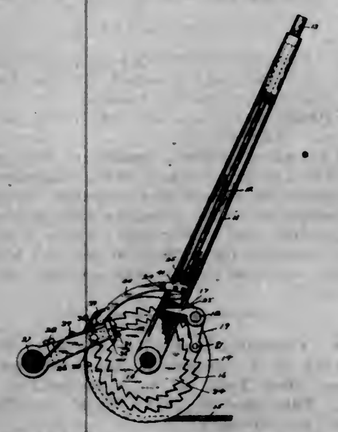
1. The process of obtaining pyrethrum from pyrethrum flowers by an extraction process which comprises subjecting the pyrethrum flowers to a petroleum distillate solvent to extract the active principles and drawing off the active principles and solvent and forming a marc, and thereafter expelling the residual solvent and active principles in the resultant marc by high pressure and a twisting motion.

1,786,968. COMPOSITE PILE. MAXWELL M. UPSON, Englewood, N. J., assignor to Raymond Concrete Pile Company, New York, N. Y., a Corporation of New Jersey. Filed May 19, 1928. Serial No. 278,942. 5 Claims. (Cl. 61—53.)



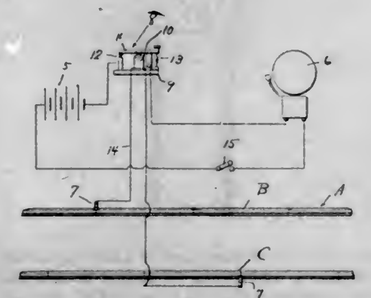
1. In a composite pile, in combination, a lower section having a tenon on its upper end, a hollow upper section

having a lower end adapted to surround said tenon, a sleeve closely surrounding said lower section below said tenon and extending upwardly around said upper section but spaced therefrom to form an annular space between said upper section and said shell, means for sealing the space between the upper end of said sleeve and said up-



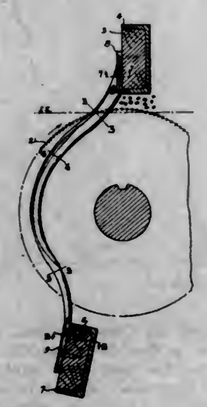
per pile section, and a passage connecting said annular space with the hollow interior of said upper section whereby when said hollow interior is filled with freshly mixed concrete the concrete will flow through said passage into said annular space to form therein a concrete shell to reinforce the joint between said pile sections.

1,786,969. HAIR-DRYING APPARATUS. CORNEAL VAN DER HEUEL, Richmond Hill, N. Y. Filed Nov. 30, 1929. Serial No. 410,732. 1 Claim. (Cl. 34—26.)



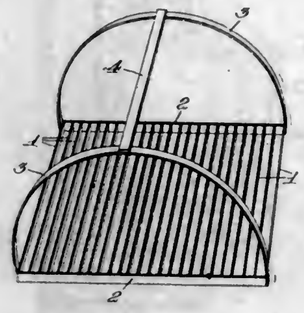
A hair drying apparatus comprising a main pipe open at one end and closed at is opposite end, an electric hot air blower attached to the open end of said pipe, branch pipes extending at an acute angle from said main pipe and depending downwardly therefrom, means whereby a proportionate amount of air passing through said main pipe may be diverted into the respective branch pipes, said means including various sized openings between the main pipe and the respective branch pipes, said openings decreasing in size towards the outer closed end of the main pipe, and deflector walls extending within said main pipe adjacent certain of said openings.

1,786,970. BRAKE MECHANISM. FRANK O. VAUGHN Ponghkeepsie, N. Y. Filed Jan. 23, 1929. Serial No. 334,392. 3 Claims. (Cl. 74—54.)



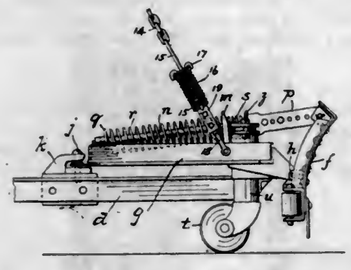
1. A brake mechanism comprising in combination, a cable winding means and a hand lever adapted to be reciprocated to rotate said winding means, a cable tightening ratchet secured to said cable winding means, a retaining ratchet also secured thereto, means carried by said hand lever for rotating said cable tightening ratchet comprising an arm pivoted to said hand lever, a roller mounted in said arm and adapted to be normally in engagement with the teeth of said cable tightening ratchet, means for preventing the backward rotation of the retaining ratchet, and means carried by said hand lever for rendering one or both of said ratchet operating means inoperative.

1,786,971. TESTING OUTFIT. CHARLES J. VILLELLA, Emporium, Pa. Filed July 9, 1930. Serial No. 466,836. 1 Claim. (Cl. 246—124.)



A portable workman's testing outfit for railroad signal and gate blocks comprising an annunciator circuit including an alarm, a source of current in the annunciator circuit, a relay including a pair of contacts normally spaced apart and serving to maintain the circuit broken, said relay including a coil, a lead extending from each end of the coil, and a connector on the other end of each lead, for detachable connection to a rail of a trackway.

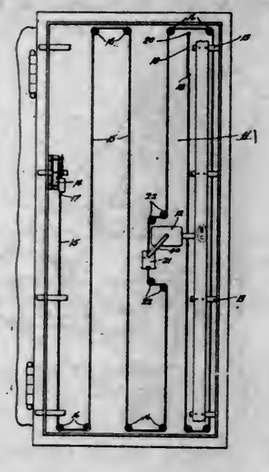
1,786,972. GIN RIB. JEFFREY JOHN WALLACE, Amite, La., assignor to Gullett Gin Company, Amite, La. Filed Oct. 9, 1929. Serial No. 398,492. 2 Claims. (Cl. 19—62.)



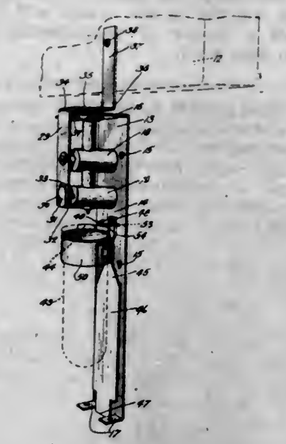
1. A gin rib comprising a body having flat plates at the opposite ends thereof adapted to be attached to the rib rails of the cotton gin and having an arcuate portion between said plates tapering in opposite directions from a point between the center of said portion and one of said plates, the opposite edges of the back of said body being provided with flanges which diminish in width in opposite directions from said point, the said body extending partly over the flat plate adjacent the wide end of the body, and said flanges terminating a short distance from the last named plate.

1,786,973. METHOD OF AND APPARATUS FOR SELECTING FIBER. ROBERT A. WEBBER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed July 18, 1927. Serial No. 206,477. 24 Claims. (Cl. 92—20.)

1. A method which comprises causing relative motion between a comparatively dilute cellulose pulp suspension and edge-presenting members so as to cause a folding of the long fibers over said members, and removing and recovering such long fibers from said members.



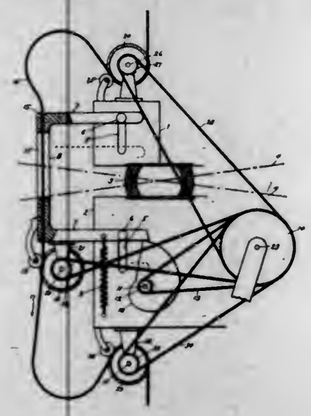
1,786,974. SNOWPLOW. GEORGE C. ABEE, Kennett Square, Pa., assignor to American Road Machinery Company, Inc., Kennett Square, Pa., a Corporation of Delaware. Filed July 16, 1926. Serial No. 122,753. 7 Claims. (Cl. 37—42.)



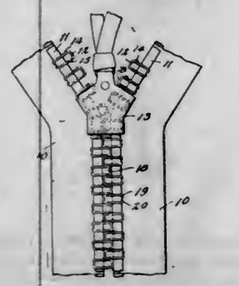
3. A snow plow structure comprising a support, a plow assembly pivotally secured to the support, means carried by the support for lifting the plow assembly, and a spring connected between said means and said plow assembly, said spring being normally under an initial stress about equal to the component of the weight of the plow assembly to be lifted.

1,786,975. VAULT RELEASE. H MILLER ANDERSON, Chicago, Ill., assignor, by mesne assignments, to The Lake Erie Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 7, 1928. Serial No. 317,810. 7 Claims. (Cl. 109—3.)

1. In a vault lock actuating mechanism, the combination with a lock, of wiring maintained normally under tension and adapted on release thereof to permit operation of said lock, said wiring including portions having looped ends, a connector engaging said looped ends for maintaining the continuity of the wiring, and means responsive to abnormal disturbance of the vault for displacing said connector.



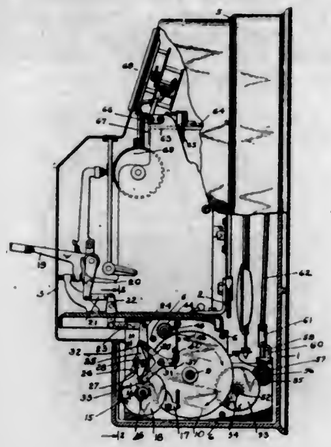
1,786,976. GAS-DISCHARGING DEVICE FOR SAFES. H MILLER ANDERSON, Chicago, Ill., assignor, by mesne assignments, to The Lake Erie Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 7, 1928. Serial No. 317,811. 3 Claims. (Cl. 109—6.)



1. The combination with a vault combination box, of a supporting bracket mounted adjacent thereto, a poison gas bomb carried by said supporting bracket, a firing mechanism for said bomb also carried by said supporting bracket, said firing mechanism comprising, a pair of pin guiding rod members, a firing pin guided thereby, said firing pin being provided with an annular groove disposed within one of said rod members, a trigger entering the head of said rod member and engaging said firing pin within said groove, a spring adapted when released to project said firing pin into bomb discharging engagement with said bomb, a trigger operating bar pivoted to the other of said pin guiding members and engaging said trigger, said trigger operating bar being secured to said combination box, whereby to release said trigger on dislocation of said combination box.

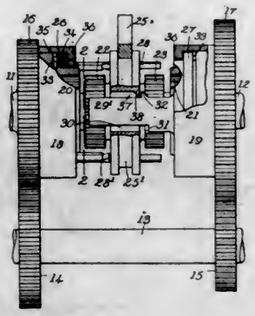
1,786,977. MOTION-PICTURE APPARATUS. NIKOLAI D. ANOSTCHENKO, Moscow, Union of Socialist Soviet Republics. Filed May 6, 1929, Serial No. 360,923, and in the Union of Socialist Soviet Republics Apr. 28, 1928. 2 Claims. (Cl. 88—18.)

1. In a motion picture apparatus, the combination with a projecting camera, of a frame slidably supported in said camera, a wheel supported on said frame and adapted to move a film through said frame, means to reciprocate said frame with said film and with said wheel, wheels on said camera above and below said frame for said film, means to drive all of said wheels at a uniform rate of speed, said film forming free loops above and below said frame between said wheels, the speed of the operating movement of said frame being equal and opposite to the speed of said film, and a stationary lens adapted to direct a beam of light against said film in said frame, said frame being provided with a window of approximately double the width of said light beam.



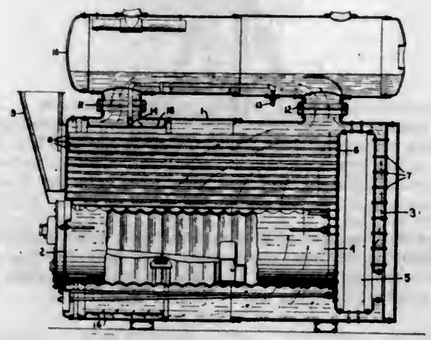
1,786,978. SEPARABLE FASTENER. PETER A. ARONSON, Devon, Conn., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Original application filed June 14, 1923, Serial No. 645,223, and in Great Britain June 6, 1924. Divided and this application filed May 19, 1928, Serial No. 279,152. 12 Claims. (Cl. 24—205.)

3. A locking member for a separable fastener comprising means for securing same to a tape, a semispherical projection on one side of said member, and a cylindrical socket in the opposite side of said member.



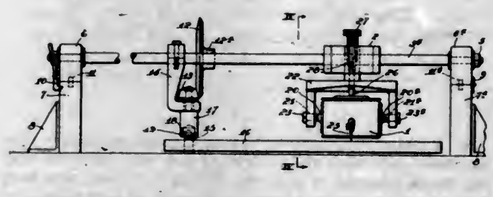
1,786,979. TIME RECORDER. JAMES W. BRYCE, Bloomfield, N. J., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed June 30, 1926. Serial No. 119,584. 10 Claims. (Cl. 185—40.)

1. In a recording apparatus, the combination comprising a manipulative member, a spring motor, means for storing energy in said spring motor upon actuation of said manipulative member, said means including a ratchet and ratchet wheel, means for positioning said ratchet



to engage or not engage said ratchet wheel, and means controlled by said spring motor for controlling the operation of said last named means.

1,786,980. CHANGE-GEAR MECHANISM. WILLIAM THOMAS CARLING, Guildford, England. Filed Oct. 3, 1929, Serial No. 397,078, and in Great Britain Oct. 3, 1928. 8 Claims. (Cl. 74—59.)

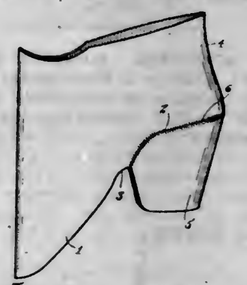


1. In a change gear mechanism, a selectively engageable pair of members transmitting rotary power in both directions of rotation, means for engaging the selected pair by sliding movement of one member of said selected pair, and a locking device for preventing engagement of said selected pair until the speeds of their engaging surfaces are approximately equal, said locking device comprising two successively acting stops for controlling the sliding movement of said one member of said selected pair, the first of said stops permitting an initial movement of said one member towards engagement following a reversal of the previous speed-relation of said selected pair, and the second of said stops preventing further movement of said one member towards engagement until the speed relation of said selected pair has again reversed.

1,786,981. STEAM BOILER. FRED W. CHIPMAN, Framingham, Mass. Filed June 15, 1929. Serial No. 371,285. 2 Claims. (Cl. 122—149.)

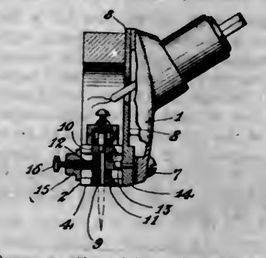
1. An internally fired boiler comprising a main cylindrical shell having front and rear tube sheets, fire tubes connecting said tube sheets, a fire box shell within the main shell extending between said tube sheets, a combustion chamber communicating with the rear end of said fire box shell and said fire tubes, a smoke box communicating with the tubes at the front end of the boiler, a horizontal water and steam drum above the boiler, water legs connecting the main shell and the drum at points near the front and rear thereof, a partition wall at the front of the boiler spaced a short distance from said main cylindrical shell and extending part way of the length of the shell to form a circulating conduit extending from the front water leg downwardly along both sides of the main shell and opening at the bottom, a feed water pipe having leaders extending in opposite directions from its end into said conduit to project the feed water into the said conduit in directions to accelerate the flow of water downwardly therein.

1,786,982. AEROPLANE PHONOGRAPH REPRODUCER. JAMES M. COBURN, Kansas City, Mo., assignor to Plane-Speaker Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 7, 1927. Serial No. 218,012. 4 Claims. (Cl. 179—100.4.)



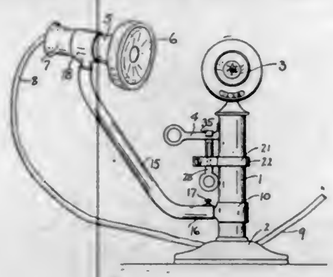
1. A reproducing mechanism for use with an aeroplane audio broadcasting apparatus adapted to deliver thereto only those impulses which it is desired to broadcast and whose operation is not affected by movements of the aeroplane, comprising a supporting frame, a power-actuated screw mounted therein, phonograph reproducing mechanism and reproducer-supporting means coacting with said frame to uniformly move the reproducer over a record while maintaining constant needle pressure irrespective of movements of the aeroplane.

1,786,983. MANUFACTURE OF FOOTWEAR. EDMUND J. DEMPSEY and EARLE H. COSTELLOW, Providence, R. I., assignors to Phillips-Baker Rubber Company, Providence, R. I., a Corporation of Rhode Island. Filed May 11, 1929. Serial No. 362,389. 6 Claims. (Cl. 12—142.)



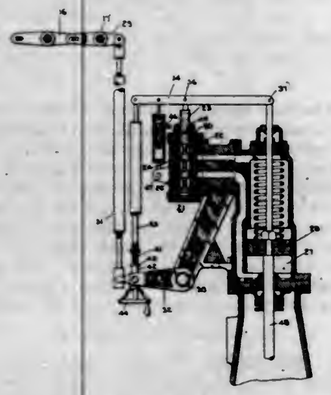
1. A shoe of vulcanized material comprising an upper having its vamp, folded pockets and quarter in one integral piece, with its extremities joined together along a single vertical seam.

1,786,984. MANUFACTURE OF FOOTWEAR. EDMUND J. DEMPSEY and EARLE H. COSTELLOW, Providence, R. I., assignors to Phillips-Baker Rubber Company, Providence, R. I., a Corporation of Rhode Island. Filed May 11, 1929. Serial No. 362,390. 2 Claims. (Cl. 36—5.)



1. The method of making a shoe of vulcanizable material which comprises cutting a quarter from stock having finished surfaces on both sides and forming the lower edge of the quarter along a line extending from the shank upward toward the back edge; cutting a reinforcing piece from stock having a finished surface on one side and a rubber impregnated surface on the other side; joining said reinforcing piece to the upper along the said line, with the impregnated surface outward; and completing the manufacture of the shoe including applying the finishing foxing directly to the said impregnated surface.

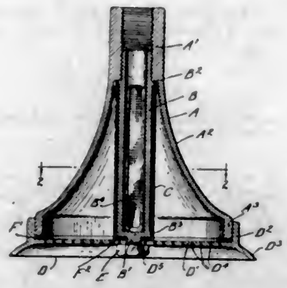
1,786,985. MAGNETIC PICKUP. ORVILLE M. DUNNING, Stamford, Conn., assignor to Acoustic Products Company, a Corporation of Delaware. Filed July 14, 1928. Serial No. 292,766. 4 Claims. (Cl. 179—100.41.)



2. An electromagnetic pickup including a four pole magnet, an armature having a pair of reluctance varying members disposed in reluctance varying position between the poles and a low impedance circuit comprising a few turns of wire directly wound upon the armature intermediate the reluctance varying members thereof, and means to pivot the armature intermediate the pole pieces.

1,786,986. TELEPHONE ATTACHMENT. JOHN R. ELLIS, Houston, Tex. Filed Jan. 6, 1930. Serial No. 418,705. 6 Claims. (Cl. 179—153.)

1. A telephone attachment including an arm secured to the telephone body and adapted to support the receiver in adjusted position spaced from said body, a latch to engage and hold the telephone receiver hook depressed, an arm on said telephone body, and a handle on said latch whereby said latch may be released from said arm.

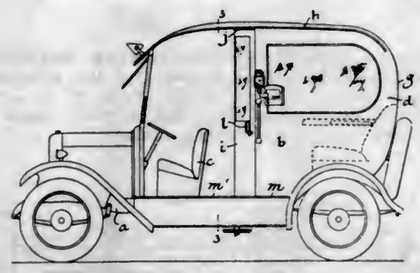


1,786,987. GOVERNOR. WARREN B. FLANDERS, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 22, 1927. Serial No. 162,846. 12 Claims. (Cl. 137—158.)

12. In a governing mechanism for a fluid motor, the combination of a plurality of admission valves of different capacities, means responsive to an operating condition of the prime mover for regulating said valves between the limits of their travels, and means for adjusting the time of operation of one of said valves with respect to the time of operation of the regulating means to an extent enabling a change in sequence of opening and closing of said one and one other of said valves, said means being operative during the operation of the governing mechanism without disassembling the same.

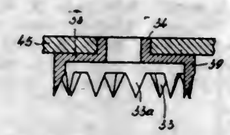
1,786,988. SHOWER HEAD. JAMES FRASER, Edge Moor, Del., assignor to Speakman Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 22, 1926. Serial No. 137,060. 4 Claims. (Cl. 299—141.)

1. A shower head comprising a shell portion surrounding a chamber open at one side and a laterally ported supply pipe portion extending from said shell into said chamber toward its open side and having a bolt extension on the closed free end thereof, a perforated wall closing



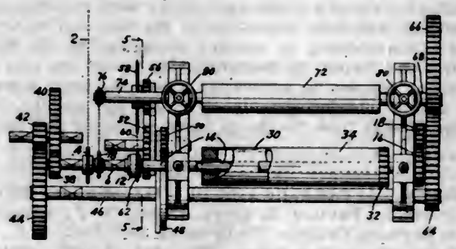
the otherwise open side of said chamber, a relatively rigid cylindrical strainer surrounding said pipe portion, said bolt extension extending through the perforated plate and an external clamping nut on said bolt extension.

1,786,989. PROCESS FOR ACETYLATION OF NITROCELLULOSE. HENRY A. GARDNER and CALVIN A. KNAUSS, Washington, D. C., assignors to Henry A. Gardner Laboratory, Inc., Washington, D. C., a Corporation of the District of Columbia. Filed Jan. 12, 1928. Serial No. 246,371. 7 Claims. (Cl. 260—101.)



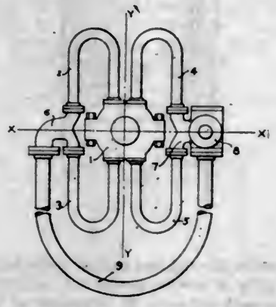
4. Process which comprises adding ethylene dichloride to a solution of acetylated nitro-cellulose in a solvent comprising acetic acid, and separating the resulting precipitated acetylated nitro-cellulose.

1,786,990. MOTOR-VEHICLE BODY. WILLIAM GOWAN, Folkestone, England, assignor to The Cape Body Limited, London, England, a British Company. Filed Sept. 12, 1928, Serial No. 305,356, and in Great Britain Sept. 26, 1927. 5 Claims. (Cl. 296—47.)



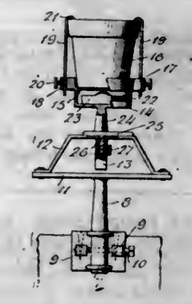
1. A motor vehicle body having a closed passenger compartment, provided at its forward end with laterally sliding doors, adapted to slide one behind the other, said body having a floor portion extending forward of said doors, and substantially level with the floor portion of the passenger compartment, and a driver's seat located on said forwardly extending floor portion out of the way of the apertures provided by the opening of said doors to leave an unobstructed passageway to either side of said vehicle, and said doors being of sufficient height above said floor portions to enable a passenger to step upon the said forwardly extending floor portion at either side of the vehicle and to enter or leave the passenger compartment through either door opening.

1,786,991. WOODEN CONSTRUCTION. WALTHER GREIM, Berlin, Germany, assignor to Siemens Bauunion Gesellschaft mit beschränkter Haftung, Kommanditgesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Original application filed Oct. 18, 1927, Serial No. 226,990, and in Germany June 11, 1926. Divided and this application filed Aug. 20, 1928. Serial No. 300,833. 6 Claims. (Cl. 20—92.)



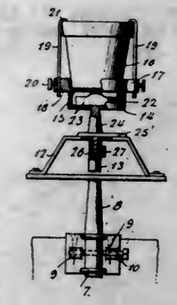
3. A structural junction element for wooden structures, comprising a stress transmitting disc having a central bolt hole and being recessable into the wood and having axially directed pyramidally shaped prongs arranged on its periphery, the pyramid points of said prongs being alternately offset in radial direction with respect to the disc center, to form two circles of points with two disc radii of different lengths, the axial directions of the interstitial spaces between adjacent prongs being located on lines traversing the disc between its center and its periphery.

1,786,992. MEASURING AND CUTTING DEVICE. FRED G. GRONEMEYER, St. Louis, Mo., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed May 4, 1928. Serial No. 275,125. 4 Claims. (Cl. 164—68.)



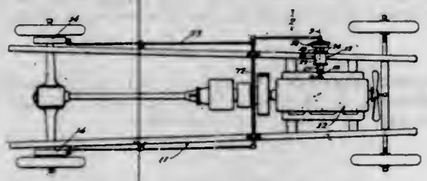
1. A machine for severing sheet material into lengths comprising means for feeding said sheet material, means for cutting said material during the feeding movement, and means for interrupting the normal feed of said material, said feeding means including an epicyclic gear train having a normally stationary member, and said interrupting means acting to move said stationary member.

1,786,993. ELASTIC-FLUID TURBINE. HENRY LEWIS GUY, Hale, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 26, 1928. Serial No. 315,167, and in Great Britain Dec. 28, 1927. 5 Claims. (Cl. 137—78.)



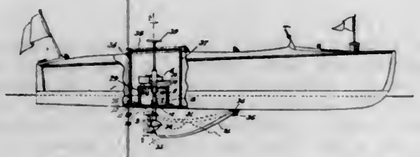
1. The combination with an elastic fluid turbine, of a distribution box or receiver disposed laterally of the turbine axis and connected to a source of motive fluid supply, and a plurality of pipes connecting the turbine casing with the distribution box, said pipes being similarly shaped and symmetrically arranged on opposite sides of a plane containing the turbine axis for the purpose of enabling the external forces exerted by said piping upon the turbine casing to substantially counterbalance one another.

1,786,994. FLOWERPOT STAND. JUDA HALBERSTADTER, Elizabeth, N. J. Filed June 22, 1927. Serial No. 200,547. 3 Claims. (Cl. 248—20.)



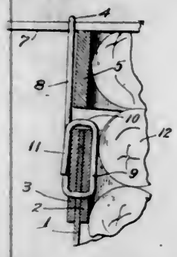
3. A flower pot stand including a holder, a bracket for supporting said holder including a plate adapted to be secured to a window sill or other support and having a bearing for receiving a supporting arm for said holder, bosses formed on said plate on opposite sides of said bearing, and a bolt extending through said bosses and said bearing and engageable with the arm in the latter to lock said arm in said bearing.

1,786,995. FLOWERPOT HOLDER AND BRACKET THEREFOR. JUDA HALBERSTADTER, Elizabeth, N. J. Original application filed June 22, 1927, Serial No. 200,547. Divided and this application filed July 30, 1928. Serial No. 296,251. 1 Claim. (Cl. 47—39.)



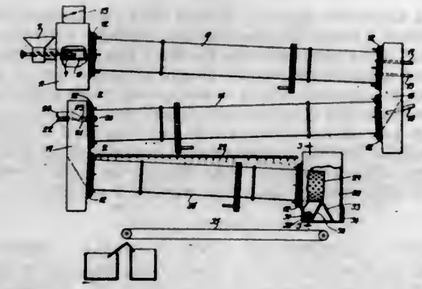
A flower pot stand including a holder, the body of which forms a receptacle and which is provided intermediate its top and bottom with an inwardly extending flange upon which the lower end of a flower pot is adapted to be supported, said body further having an opening extending completely therethrough and below said flange into which a drip pan may be inserted, opposed bosses on said body, clamping members secured in said bosses and having hook portions engageable over the rim of said pot to retain the same in position in the holder, and a single supporting standard depending centrally from the bottom of said body and capable of attachment to a support.

1,786,996. TORQUE BRAKE. ARTHUR W. HARRISON, Los Angeles, Calif., assignor, by mesne assignments, of one-half to Kay Brunner Steel Products, Inc., a Corporation. Filed Dec. 19, 1928. Serial No. 327,083. 9 Claims. (Cl. 188—162.)



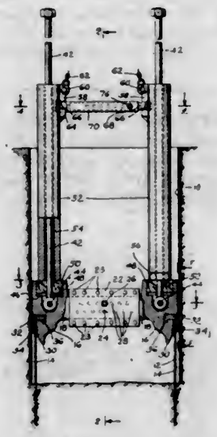
1. An electric brake comprising in combination a generator having rotatably mounted fields and rotor, means to rotate the rotor, a load in circuit with the rotor, means to energize the fields, the reaction of the rotor and the fields causing a rotation of the fields, a reduction gear train operatively connected to the fields, and means at the end of the train to operate brakes.

1,786,997. MARINE PROPULSION. JAMES W. HARVEY, Falmouth Foreside, Me. Filed May 16, 1930. Serial No. 452,942. 17 Claims. (Cl. 115—41.)



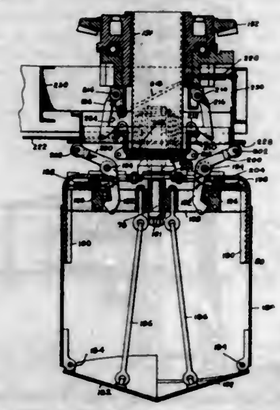
1. A boat having an opening in the bottom, a reinforcing casing extending upwardly through said opening and having a flange beneath the edge of the opening, means for clamping the flange to the bottom of the boat and a power unit adapted to be inserted into said casing including a vertical shaft housing and a bottom bearing plate adapted to substantially close the bottom of the casing said power unit and bottom plate being removable from said casing.

1,786,998. BASKET. ERNEST V. HAWKINS, Mitchell, Ind. Filed Mar. 18, 1929. Serial No. 347,759. 4 Claims. (Cl. 217—125.)



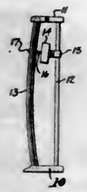
4. A shipping basket provided with an inverted substantially U-shaped wire handle rising above the top edge of the basket, the leg members of the handle extending downwardly along the outer side of the basket body and free to be bent outwardly therefrom, and said leg members extending inwardly through the side wall of the basket body and having portions of the leg members bent to lie alongside of the interior wall of the basket body, and means lying against the exterior of the basket body and connected with the leg portions on the interior of the basket for securing said inner leg portions against the inner wall of the basket and preventing them from becoming displaced and projected away from the basket wall and into the interior of the basket to the injury of the contents thereof as the result of the manipulations to which the handle is subject in the handling of the basket by the use of the handle.

1,786,999. REDUCTION OF METALS FROM ORES. JOHN WILLIAM HORNSEY, New York, N. Y., assignor to Granular Iron Company, a Corporation of Michigan. Original application filed Nov. 25, 1925, Serial No. 71,442. Divided and this application filed Sept. 27, 1928. Serial No. 308,798. 2 Claims. (Cl. 75—14.)



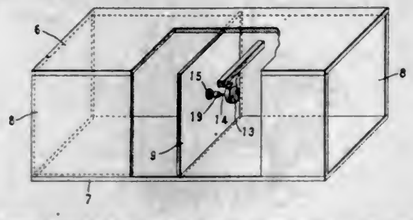
1. The process of solid reducing ores which includes feeding the ore to a preheating cylinder while maintaining a slightly oxidizing atmosphere in the feed end thereof and a non-oxidizing or reducing atmosphere at the discharge end thereof, in discharging the heated ore into a reducing cylinder, in introducing a reducing agent thereto, and in introducing a stream of fuel and air, the air being isolated from the charge being reduced by said fuel.

1,787,000. APPARATUS FOR DRIVING HOLLOW CYLINDERS. FRANCIS H. HUNT, Leonia, N. J., assignor to Raymond Concrete Pile Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 11, 1927. Serial No. 182,761. 13 Claims. (Cl. 61—73.)



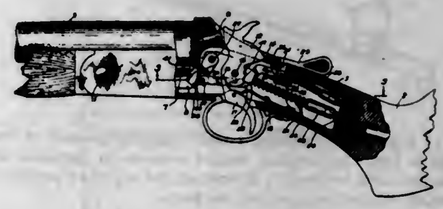
1. In device for driving hollow cylinders, in combination, a plurality of anvils, means for adjusting said anvils relatively to each other to fit cylinders of different diameters, and a hammer adapted to operate on each of said anvils.

1,787,001. EXCAVATING APPARATUS. FRANCIS H. HUNT, Los Angeles, Calif., and FREDERICK A. SCHROEDER, Rochelle Park, N. J., assignors to Raymond Concrete Pile Company, New York, N. Y., a Corporation of New Jersey. Original application filed Aug. 26, 1927, Serial No. 215,542. Divided and this application filed June 6, 1928. Serial No. 283,220. 12 Claims. (Cl. 255—67.)



1. In a machine of the class described, in combination, a rotatable digging bucket having a discharge gate, a latching device for holding said gate closed, means for hoisting said bucket to a discharge position, and means operable automatically when the bucket approaches discharge position for releasing said latching device to permit said gate to open.

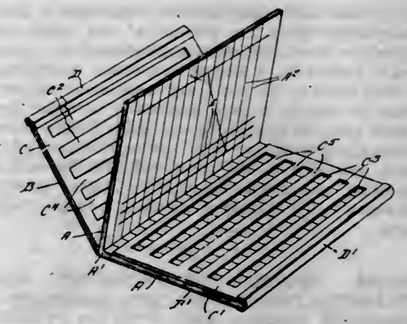
1,787,002. REENFORCED SOUNDING BOARD. MILLER REESE HUTCHISON, Llewelyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 15, 1927. Serial No. 175,456. 5 Claims. (Cl. 84—195.)



1. A sounding board including a tuned rod, means for impressing vibratory energy on said rod, and a web extending from the rod and receiving the vibratory energy from said rod.

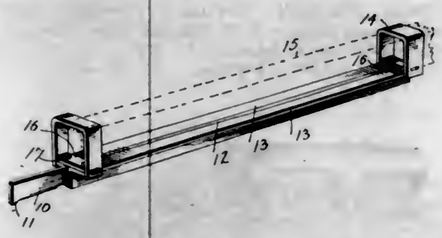
1,787,003. SOUND-PROPAGATING DIAPHRAGM. MILLER REESE HUTCHISON, Llewelyn Park, West Orange, N. J., assignor to Premier Laboratory Company, a Corporation of Delaware. Filed May 2, 1928. Serial No. 274,527. 1 Claim. (Cl. 181—31.)

A sound propagating apparatus comprising a diaphragm, means for damping the vibrations of said diaphragm formed of a plurality of spaced fiber sheets comprising a chamber surrounding said diaphragm in such a manner as to subject the diaphragm to the retarding influence of the inertia of the atmospheric medium within said chamber.



1,787,004. FIREARM. CHARLES J. JEFFERSON, Springfield, Mass., assignor to J. Stevens Arms Company, a Corporation of Massachusetts. Filed Feb. 11, 1930. Serial No. 427,481. 8 Claims. (Cl. 42—42.)

1. In a firearm, the combination with the frame, a barrel hinged to the frame on a horizontal axis, a hammer pivoted to the frame, and hammer-spring means bearing against the hammer, of locking means to lock the barrel in firing relation to the frame and confine the hammer spring on the hammer, said means including a lock-operating yoke within the frame extending rearwardly from adjacent the rear end of the barrel and passing close to the hammer-spring means at both sides thereof adjacent the bearing of the hammer-spring means on the hammer.



4. In a firearm, the combination with the frame, a barrel hinged to the frame on a horizontal axis, and a hammer pivoted within the frame, of a locking bolt hinged within the frame to lock the barrel in firing relation to the frame, an operating link therefor extending rearwardly from said bolt, a finger piece external of the frame connected to said link, and adjustable means cooperating with the locking bolt to limit the movement of the locking bolt in the locking direction.

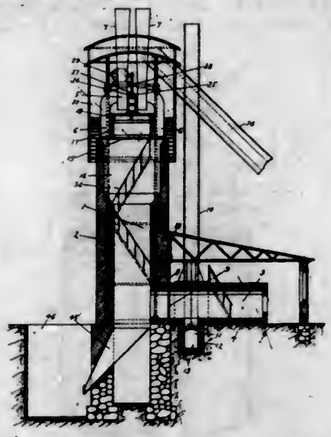
1,787,005. BOOK WITH PAGE-RULING ATTACHMENT THEREFOR. PHILLIP H. KAUFMAN, Cleveland Heights, Ohio. Filed Dec. 14, 1927. Serial No. 239,880. 6 Claims. (Cl. 281—3.)

3. A stack of leaves having a foldable cover, and a slotted line ruler having an edge connected to an outer edge of said cover, the said line ruler being foldable onto the said leaves, thereby enabling the ruling of lines on one side of each of said leaves.

1,787,006. PUTLOG. THOMAS HAVELOCK KINGSTON, West Somerville, Mass., assignor to Builders' Patent Scaffolding Company, a Partnership composed of Frank G. Kingston, A. R. Kingston, C. C. Pimm, and Mabel G. Kitchen, West Somerville, Mass. Filed Mar. 5, 1929. Serial No. 344,503. 6 Claims. (Cl. 304—39.)

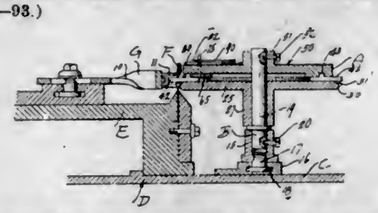
1. A putlog comprising a wall-engaging member of metal and a body comprising angles secured to opposite sides thereof with horizontal flanges at the top that provide extended staging-supporting surfaces.

1,787,007. VAULT-WALL-PROTECTING DEVICE. EUGENE C. KINNEAR, Evanston, Ill., assignor, by mesne assignments, to The Lake Erie Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 31, 1923. Serial No. 616,175. 5 Claims. (Cl. 109—6.)



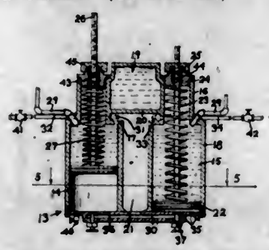
1. A vault protecting system, comprising a gas receptacle positioned on the interior of the vault, normally inoperative means for causing discharge of the contents of said receptacle, a flexible connection extending about the fixed walls of the vault, and devices operable by either release or pulling of said connection to cause operation of said gas discharging means, said devices comprising members of whiffle-tree form having one end held under spring tension and the other end held by said flexible connection, and means operable by pivotal movement of said members for causing operation of said gas discharging means.

1,787,008. PROCESS FOR INCREASING BASE-EXCHANGING PROPERTIES. OTTO LIEBKNECHT, Berlin-Grunewald, Germany, assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 2, 1927, Serial No. 165,488, and in Germany Feb. 4, 1926. 3 Claims. (Cl. 23—112.)



1. In the improvement in the base exchange power of glauconite the process which comprises heating glauconite with a solution of an alkali metal silicate under superatmospheric pressure until a substantial increase in base exchange power is attained.

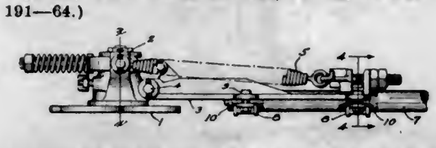
1,787,009. SALT DRIER. MICHAIL J. LURIE and ANATOLY P. WOROSHILOW, Moscow, Union of Socialist Soviet Republics. Filed Dec. 19, 1929, Serial No. 415,236, and in Union of Socialist Soviet Republics Mar. 10, 1928. 1 Claim. (Cl. 34—34.)



In a drier, the combination with a vertical chamber, of means to deliver hot gases into said chamber from the bottom, an enlarged portion on top of said chamber, a flat screen in said enlarged portion, fans above said screen, intake pipes extending into said enlarged portion on both sides of said screen, said fans being adapted to exhaust said hot gases from said chamber, a bin on top of said drier, a feeder between said bin and said screen, and means to control the admittance of the material to be dried from said bin to said feeder.

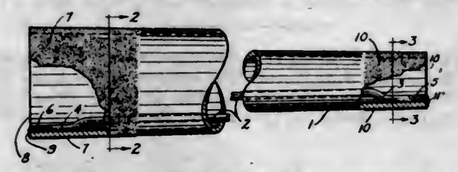
1,787,010. YARN-SINKING APPARATUS FOR KNITTING MACHINES. HARRY MCADAMS, Philadelphia, Pa. Filed Feb. 3, 1928. Serial No. 251,716. 7 Claims. (Cl. 66—93.)

1. In a wheel for introducing yarn upon knitting cylinder needles the combination of a supporting bed, means rotatably supporting the bed, sinkers slidably carried on the bed, gear teeth formed directly on the bed adjacent said sinkers, and a cam plate for projecting the sinkers from the bed.



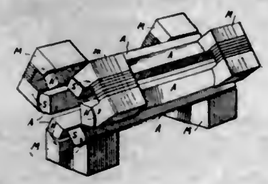
1,787,011. LUBRICATOR FILLER. BENITO MONTOYA, Los Angeles, Calif. Filed Jan. 5, 1929. Serial No. 330,517. 2 Claims. (Cl. 184—42.)

1. A lubricator container comprising in combination a body structure having a pair of lateral oil receptacles,



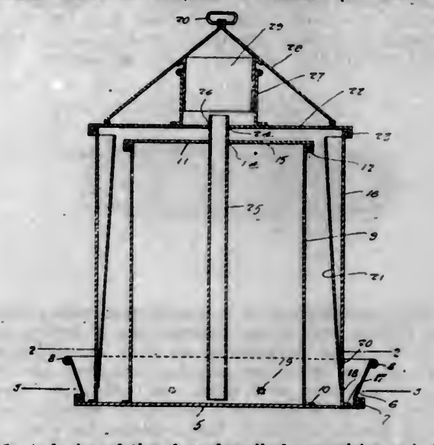
each having a reduced upper portion, a piston in each receptacle having a piston rod extending upwardly through the reduced section and through the top of the structure and each having indicia thereon, a central oil receptacle positioned between the two extensions, an air chamber below the central oil receptacle, a duct having valves leading from the air chamber to the lateral receptacles below the pistons, fillers for said receptacles, discharge connections from the lateral receptacles adapted to lead to lubricators, a filler plug and a discharge faucet for the central receptacle, and means to discharge air from the lateral receptacles below the pistons, the air connection from the cylinder to the receptacles comprising a base plate secured to the said structure and having a duct therein, ports in the base plate and controllable valve plugs for said ports, thereby forming valves.

1,787,012. TROLLEY-POLE BASE. EDGAR D. MOORE, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 16, 1929. Serial No. 392,767. 16 Claims. (Cl. 191—64.)



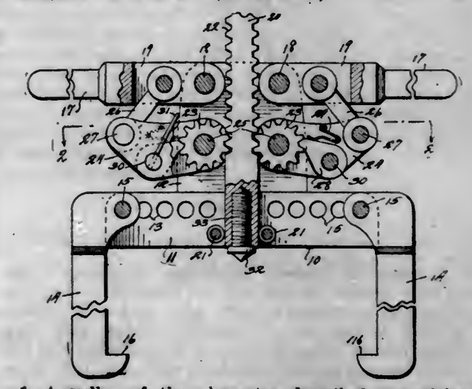
1. A trolley device comprising a stationary base member, a rotatable turret thereon, a pivotally mounted arm on the turret, springs biased to move the arm about its pivot, a trolley pole secured to the arm, means to secure the pole to the arm and a coating of non-ferrous metal on the arm and contacting with the pole.

1,787,013. TROLLEY POLE. EDGAR D. MOORE, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 6, 1930. Serial No. 433,676. 7 Claims. (Cl. 191—64.)



1. A trolley pole comprising a tubular member of ferrous metal, a conductor of copper within the member and extending from end to end of the member and having its ends welded to the inner surface of the member at its ends, a coating of copper applied to the outer surface of the ends of the member and extending back from the ends and extending across the end faces of the member and connected to the conductor.

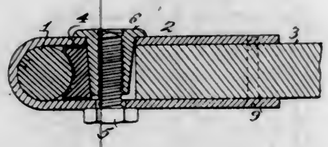
1,787,014. MAGNETO-ELECTRIC MACHINE FOR THE GENERATION OF MONOPHASE CURRENT. EMILE MOREL, Domene, France. Filed Nov. 7, 1928, Serial No. 317,830, and in France and Germany Nov. 9, 1927. 7 Claims. (Cl. 171—252.)



4. A magneto-electric machine comprising a rotor having a plurality of separate bar magnets disposed around and parallel to the rotor axis with adjacent extremities of unlike polarity, and pole pieces at each end of said rotor, said pole pieces each having an angular extent sufficient to magnetically couple two adjacent extremities of said bars whereby a plurality of said bars are coupled in magnetic series by said pole pieces, said pole pieces carrying windings to be energized.

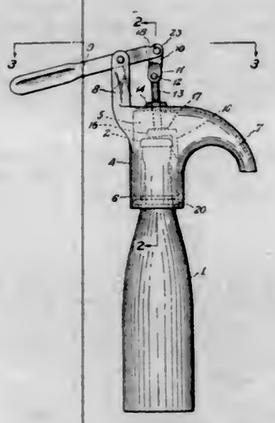
1,787,015. POULTRY DRINKING FOUNTAIN. ELMER J. J. MUELLER, Jefferson Barracks, Mo. Filed May 9, 1929. Serial No. 361,614. 3 Claims. (Cl. 119—77.)

1. A device of the class described comprising a bottom, a wall rising from the outer edge of the bottom, an inner drum rising from the bottom, an outer drum rising from the bottom, said inner drum being provided with openings below the level of the upper edge of the wall, said outer drum being provided with openings below the level of the upper edge of the wall, a top mounted on the upper end of the inner drum and having vent openings, a top mounted on the upper end of the outer drum, said outer drum provided with vent openings in the lower portion thereof below the level of the upper edge of the wall, a pipe leading through the centers of the tops and terminating a slight distance above the bottom and below the level of the upper edge of the wall, channel members fixed to the interior of said outer drum to receive air from the vent openings in the outer drum, said channel members terminating a slight distance below the top on the outer drum.



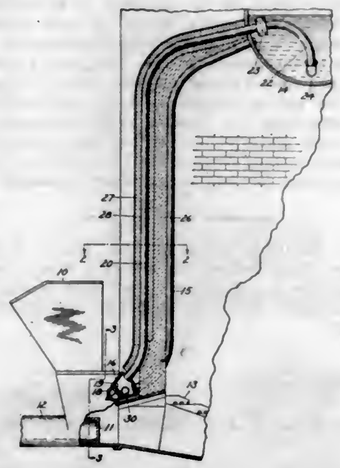
1,787,016. GEAR-WHEEL PULLER. WILLIAM G. OPEL, McKeesport, Pa. Filed Feb. 25, 1930. Serial No. 431,209. 6 Claims. (Cl. 29—85.)

1. A puller of the character described comprising a frame, a pair of wheel gripping members adjustably



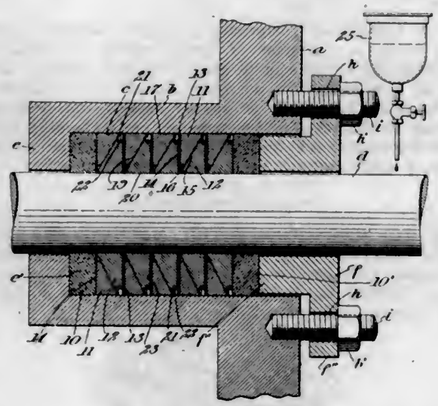
mounted on the frame, a shaft engaging member slidably mounted in the frame, anti-friction means mounted in the frame and engaging said shaft engaging member, said shaft engaging member having a plurality of teeth on the opposite edge portions thereof, rotatable gears mounted in the frame and engaging said teeth of said shaft engaging member, and rockable pawl members carried by the frame and adapted for engagement with said rotatable gears for rotation thereof.

1,787,017. DOOR-STRAP CLAMP. ABRAM FRANK PAUL, Upper Darby Branch, Philadelphia, Pa., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed June 16, 1926. Serial No. 116,252. 3 Claims. (Cl. 287—52.02.)



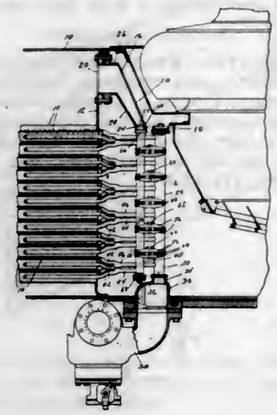
3. The combination of a U-shaped strap with a shaft nested within said strap, gripping means having two sets of serrations extending at an angle to each other, one set of said serrations engaging said shaft and the other set engaging said strap, and adjustable means mounted on the strap and arranged for engaging said gripping means to force it firmly against the shaft, so that one set of serrations thereof will bite into the shaft and the other set of serrations will engage the strap to prevent longitudinal and rotational movement of the strap with respect to the shaft.

1,787,018. MEANS FOR REMOVING BOTTLE CAPS. NORMAN P. PORZ, Cleveland, Ohio, assignor of one-half to George V. Porz, Cleveland, Ohio. Filed Nov. 18, 1927. Serial No. 234,125. 3 Claims. (Cl. 215—3.)



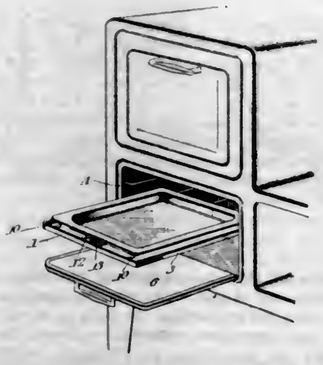
1. A bottle-cap remover comprising, a unitary chambered body member formed with an extended tubular portion adapted to enclose a bottle neck, said body member being also formed with a discharge spout, said neck-enclosing portion being provided with sealing means; and a handle member pivotally mounted upon said body member and formed with a cap-engaging portion extending within the chamber of said body member.

1,787,019. WATER-COOLED WALL. KARL PRANTNER, Berlin, Germany, assignor to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 21, 1930, Serial No. 437,854, and in Germany July 12, 1928. 7 Claims. (Cl. 122—6.)



1. In combination with a furnace fired by a multiple retort underfeed stoker having a grate surface within the furnace and spaced ram cases for fuel feeding rams near and outside of the front wall of the furnace, a water wall comprising steam generating tubes adjacent to the front wall extending downwardly substantially to the stoker grate surface, and means to supply water to the lower ends of the tubes which is located exterior of the furnace and so constructed that access may be had to the tubes between the stoker ram cases without disturbing any part of the stoker.

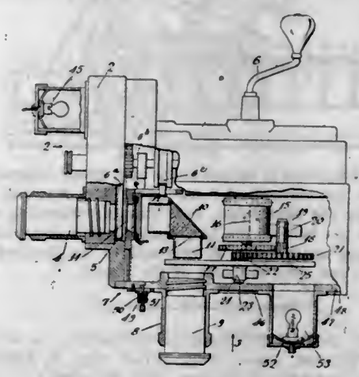
1,787,020. PACKING FOR RODS AND SHAFTS. HOSEA F. SAUTTER, Fort Worth, Tex., assignor to The Linde Air Products Company, a Corporation of Ohio. Filed Sept. 14, 1926. Serial No. 135,418. 4 Claims. (Cl. 286—25.)



1. A high-pressure packing comprising outer and inner packing rings having complementary beveled sides in contact; said rings being composed respectively of two different lead alloys, the outer ring containing a lower percentage of lead and being materially harder than the inner.

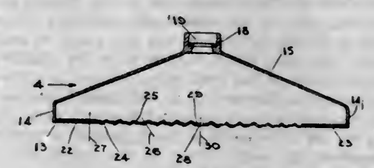
1,787,021. SUPERHEATER. CHRISTOPHER A. SCHELLENS, Marblehead, Mass., and EUGENE L. SCHELLENS, Maplewood, N. J., assignors to C-S Engineering Company, Jersey City, N. J., a Corporation of Delaware. Filed Apr. 2, 1926. Serial No. 99,358. 18 Claims. (Cl. 122—462.)

1. In a superheater for locomotive boilers, independent superheated and saturated steam headers having approximately parallel sectional branches extended therefrom which are free from rigid interconnections and are free to flex, means detachably connecting the sections, and looped superheated tubes having free and independent ends which are free to expand and flex independently of each other connected with said branch sections.



1,787,022. OVEN SHELF. FRANK E. SEELEY, Port Chester, N. Y., assignor to Abendroth Brothers, Port Chester, N. Y., a Corporation of New York. Filed July 24, 1929. Serial No. 380,636. 9 Claims. (Cl. 126—339.)

1. An oven shelf comprising a frame including front and rear end bars, and two laterally spaced members connecting said bars and each having a portion extending above the horizontal plane of the upper edges of the bars, whereby they serve to support a pan and also to limit relative horizontal movement, in the direction of the length of the end bars, between such pan and the frame.

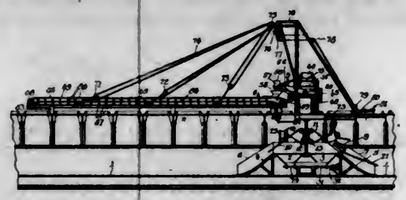


1,787,023. CAMERA AND METHOD OF PHOTOGRAPHY. JOHN F. SEITZ, Hollywood, Calif. Filed Nov. 22, 1926. Serial No. 149,937. 12 Claims. (Cl. 88—16.)

1. A combination camera and projector comprising a camera structure having a main lens, a film holder to receive light directly through the lens on the film, an auxiliary lens in the side of the camera, means to reflect light passing through the auxiliary lens on the back of the film, and a lamp holder secured in the side of the camera and shiftable to replace the auxiliary lens in relation to the reflector whereby light may be projected from the holder and reflected through the film and through the main lens.

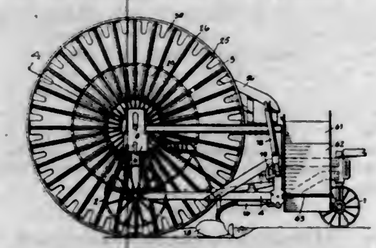
4. The method of making mats comprising making trial photographs on strips of film through a plurality of lenses positioned at an angle to each other in a camera-like structure, developing such strips of film and replacing same in the same camera-like structure, and projecting light in the same path traversed by light through one of the lenses in taking the photographs, said light passing through the developed film and following the path of the other lens and utilizing the projected picture in the formation of a mat.

1,787,024. MANUALLY-OPERATED IRRIGATOR. BERTHA SJÖSTRÖM, Los Angeles, Calif. Filed July 20, 1927. Serial No. 207,076. 8 Claims. (Cl. 299—141.)



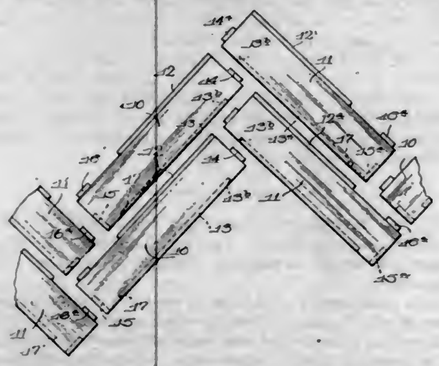
4. An irrigator having a casing with the front face with perforations and an inlet at the back in substantially the center, the center perforation having its axis in alinement with the intake, some of the perforations on each side having their axes inclined on the outside of the front wall inwardly toward the center perforation and some of the perforations at the extreme outside having their axes parallel to the center perforation whereby the outwardly flowing water in the irrigator is diverted by the inclined perforations to give parallel streams at each side of the center parallel to the center stream, and the back of the casing converging from the ends to the center whereby the streams from the extreme outside perforations are parallel to the center stream.

1,787,025. CARGO-DISCHARGING APPARATUS FOR SHIPS. LEWIS ANDREW STINSON, Oak Park, Ill. Filed Mar. 30, 1928. Serial No. 265,966. 2 Claims. (Cl. 214—15.)



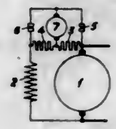
1. In combination with a cargo vessel, a pair of hoppers disposed side by side adjoining one another longitudinally above the floor of the vessel intermediate the ends thereof, longitudinal inclined chuteways leading from the cargo floor to said hoppers, means for drawing the cargo material from opposite ends of the vessel up said chuteways

into said hoppers, a horizontally disposed longitudinally vibrating table beneath the discharge orifices of said hoppers in the space between said chuteways having an outlet opening therein intermediate its ends and adapted to receive the material from the discharge orifices of the hop-



pers and discharge it downwardly at a point intermediate the same, an elevator for gathering the material from underneath the said table, said elevator traveling transversely of the hold of the vessel underneath the table and over to and up the side of the hold to an elevated position above and over the deck of the vessel.

1,787,026. AGRICULTURAL IMPLEMENT. JOHN BERNARD VERHOFF, Lima, Ohio. Filed Sept. 8, 1928. Serial No. 304,643. 3 Claims. (Cl. 55—108.)



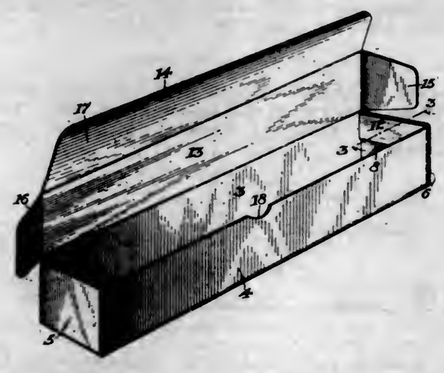
1. In a harvester for beets and the like, a pair of connected wheels, a plurality of pairs of radially extending finger members pivotally supported on the wheels at midradial points, each of the said finger members formed of two parts, a spring for connecting the parts of each finger member, the said parts having stops for limiting the pivotal movements of the said parts relative to each other by the pressure of the spring, a cylindrical member surrounding the axis of the wheels and having a cam edge for operating on the inner ends of the fingers to separate and bring together the outer ends of the fingers to grasp the beets by the tension of the springs.

1,787,027. HERRINGBONE FLOORING. ALEX WASLEFF, Chicago, Ill. Filed Feb. 20, 1929. Serial No. 341,352. 4 Claims. (Cl. 20—8.)

1. Herringbone flooring comprising pieces each having a long and short tongue on one side and a groove on the opposite side, and a relatively short tongue on one end and a short groove on the opposite end, said short tongue and groove both being disposed adjacent the same side of the piece, and having mutually interlocking engagement respectively with the side groove and the short side tongues of abutting pieces to restrain relative lateral movement of said abutting pieces in at least one direction.

1,787,028. EXCITING MEANS FOR DIRECT-CURRENT GENERATORS. ARLE YTTERBERG, Hogberget, Ludvika, and IVAR HERLITZ, Magnet, Ludvika, Sweden, assignors to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Corporation of Sweden. Filed Feb. 29, 1928, Serial No. 257,799, and in Sweden Mar. 5, 1927. 4 Claims. (Cl. 171—225.)

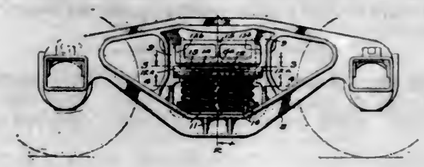
1. Exciting means for D. C. generators comprising a D. C. generator, a self-energized exciting winding therefor, an auxiliary independent voltage source of excitation, and oscillatory contact means for shifting the connections of said source to affect the said exciting winding fed thereby, so as to cause the said source to alternately cooperate with and counteract the self-energization of said exciting winding.



1,787,029. VEHICLE. HENRY AANONSON, Eland Junction, Wis. Filed May 13, 1929. Serial No. 362,813. 5 Claims. (Cl. 180—4.)

1. A vehicle of the class described including a body, an axle at each end of the body, traction members on the ends of the axles for supporting the body, a motor carried by the body and operative connection between the motor and the axles for imparting an alternate reciprocating movement to the axles whereby one axle remains stationary while the other is in motion, the movement of the axles through their connection with the motor imparting movement to the body in the same general direction.

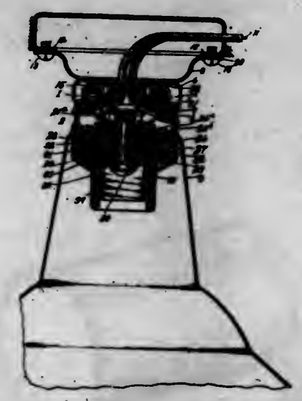
1,787,030. ONE-PIECE BOX. CHAMPE S. ANDREWS, North Chattanooga, Tenn., assignor to Box Blank Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1926. Serial No. 85,138. 5 Claims. (Cl. 229—33.)



1. A container and cover therefor composed of a single blank, said container having a bottom wall and side and end walls, said cover extending from and being hinged on one side wall, said side walls having side wall flaps on their vertical edges, said end walls having end wall flaps

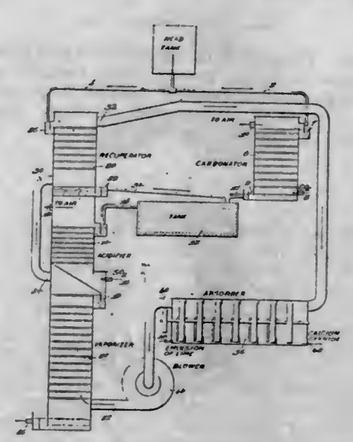
on their upper edges, said side wall flaps being disposed between their respective end walls and end wall flaps, the upper portions only of said side wall flaps having

adhesive on both faces, whereby said side wall flaps, are firmly adhesively secured between said end walls and said end wall flaps respectively.



1,787,031. CAR TRUCK. FRANKLIN L. BARBER and EDWIN W. WEBB, Chicago, Ill., assignors to Standard Car Truck Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 9, 1928. Serial No. 268,511. 8 Claims. (Cl. 105—197.)

1. In a railway car truck, a bolster, side frames each having an upper compression chord, a lower tension chord, and spaced columns connecting the chords and forming between them an opening to receive an end of the bolster, each tension chord having a flat horizontal portion extending from the base of one column to the base of the other and reinforcing webs on opposite sides thereof extending downwardly at an incline from the columns to the horizontal portion inwardly of the columns, a group of bolster supporting springs on said horizontal portion, certain springs of said group occupying the spaces adjacent the column between said reinforcing webs, a roller seat interposed between the upper ends of said springs and the bolster, and bearing rollers interposed between the seat and bolster.

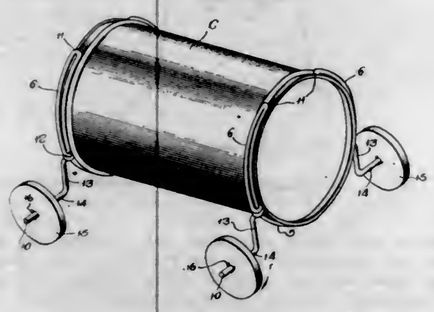


1,787,032. FIXTURE CONSTRUCTION. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1927. Serial No. 206,158. 6 Claims. (Cl. 240—85.)

1. A ceiling fixture construction comprising a unit to be secured to the ceiling and a second unit detachably secured to said first unit, said first unit comprising a wiring base and an inverted cup-shaped housing in which said wiring base is mounted, said housing being provided with a screw-threaded connector member surrounding said wiring base, said wiring base being provided with wiring terminals and readily engageable and disengageable contact members, said second unit comprising a reflector member and a lamp socket carried thereby, said reflector member being provided with a threaded connector member rigid therewith and non-rotatable with respect thereto for engagement with said first threaded connector member, whereby the connection may be made by rotating the reflector member, said socket comprising lamp

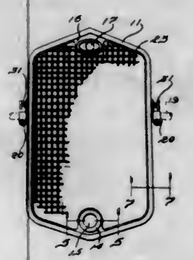
contacts and readily engageable and disengageable contacts for engagement with the contacts on the wiring base, said connector members being distinct from and not electrically connected with said contact members.

1,787,033. METHOD FOR RECOVERING CYANIDES. RUSSELL R. BRYAN, Pachuca, Hidalgo, Mexico, assignor, by mesne assignments, to The Merrill Company, San Francisco, Calif, a Corporation of California. Filed June 2, 1926. Serial No. 113,174. 9 Claims. (Cl. 23—84.)



3. The method of recovering cyanide from cyanide solutions which consists in acidifying the solution to form hydrocyanic acid, passing a current of air through the acidified solution, treating the current of air by brief contact with an alkaline solution to remove foreign acid constituents without appreciable neutralization of hydrocyanic acid, and thereafter subjecting the current of air to prolonged intimate contact with an alkaline solution to absorb the hydrocyanic acid.

9. The method of recovering cyanide from cyanide solutions containing an alkali and carbonates which consist in dividing the solution into two portions, treating one portion with carbon dioxide to neutralize the alkali, treating it with sulphur dioxide to form hydrocyanic acid and carbon dioxide, passing a current of air through the

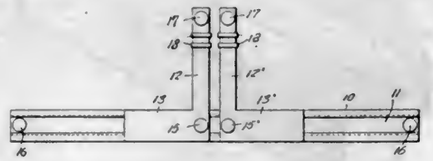


solution to vaporize the hydrocyanic acid and also carbon dioxide and sulphur dioxide, passing the air current through the remaining portion of the original cyanide solution to utilize its sulphur dioxide and carbon dioxide content by neutralization of the alkali of the solution, absorbing the remaining hydrocyanic acid in an alkaline solution to form a cyanide, and thereafter passing said remaining portion of the original solution into contact with the sulphur dioxide.

1,787,034. TOY VEHICLE FRAME. ONSLOW R. BURNS. Chicago, Ill. Filed Jan. 17, 1930. Serial No. 421,542. 14 Claims. (Cl. 46—48.)

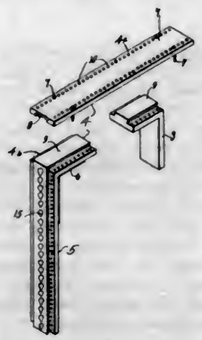
1. The combination with a body, means for converting said body into a vehicle comprising a main spring member adapted to embrace a portion of said body and maintain engagement therewith solely through the spring action of said member, auxiliary members formed integrally therewith, and wheel supporting means coacting with said auxiliary members.

1,787,035. SHIELD FOR AUTOMOBILE RADIATORS. CLARENCE R. DAVIS, Detroit Mich., assignor to Davis Tool & Engineering Company, Detroit, Mich., a Corporation of Michigan. Filed June 30, 1930. Serial No. 464,780. 9 Claims. (Cl. 293—54.)



1. A shield for automobile radiators comprising a frame, holding means secured to said frame and comprising forwardly projecting arms and rearwardly projecting resilient buffers, a screen extending over the central portion of said shield and secured to said frame.

1,787,036. PROCESS FOR THE PRODUCTION OF PROPENYL DERIVATIVES OF AROMATIC HYDROCARBONS. JACOB EHRLICH, Belleville, N. J., assignor to Verona Chemical Co., Newark, N. J., a Corporation of New Jersey. Filed Oct. 12, 1928. Serial No. 312,213. 8 Claims. (Cl. 260—150.)

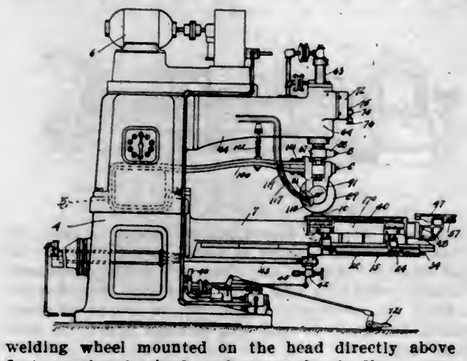


1. In a process for the production of propenyl derivaties of aromatic hydrocarbons from their corresponding allyl derivatives, the step which comprises heating an allyl derivative of an aromatic hydrocarbon with an alkali in the presence of an organic phenolic compound which causes a solution of the allyl compound and its corresponding propenyl derivative during the isomerization process and in which process said phenolic compound remains practically chemically unchanged.

1,787,037. LINE-UP GAUGE FOR PROVING TYPE FORMS. JOHN P. FLYNN, Medford, Mass. Filed Feb. 24, 1928. Serial No. 256,602. 2 Claims. (Cl. 33—184.5.)

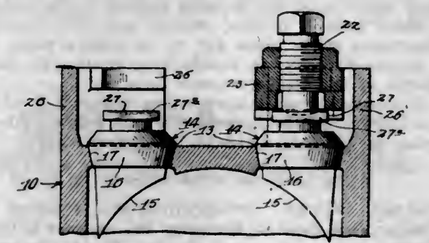
1. A line-up gauge for proving type forms having the general shape of a T-square having a straight-edge head bar and two straight-edge members parallel with each other and extending at right angles to the head bar, each of said parallel members having an adjustable connection with the head bar whereby they are adjustable longitudinally of the head bar and laterally with relation to each other, and means for clamping the said parallel members in their adjusted positions, said head bar and parallel members having legs to support the gauge in the gutter of a type form, straight-edge members mounted on each of said parallel members and adjustable longitudinally thereof, said movable straight-edge members being adapted to serve as spacers to engage the sides of the gutter.

1,787,038. WALL STRUCTURE AND ATTACHMENT. HENRY G. GEOFFRAY, Cleveland, Ohio. Filed Sept. 12, 1927. Serial No. 219,013. 2 Claims. (Cl. 248—17.)



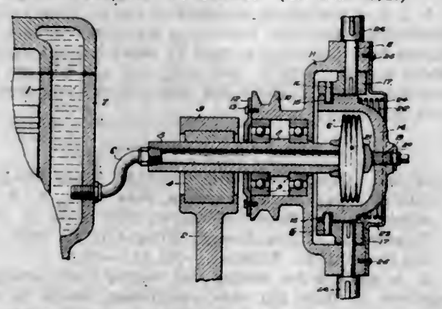
1. A universal wall-carried support, comprising an extensible arm adapted to be laid up in a wall, means permitting extending said arm, said means comprising telescoping sections having rib and groove interengagement, an anterior arm connected to the first-mentioned arm, an attachment-carrier engageable with said anterior arm, and means for regulating the height of said attachment-carrier relative to said anterior arm.

1,787,039. SEAM-WELDING MACHINE. WILLIAM H. GIBB, Bay City, Mich., assignor, by Mesne Assignments, to Thomson-Gibb Electric Welding Company, a Corporation of Massachusetts. Filed June 28, 1928. Serial No. 288,863. 15 Claims. (Cl. 219—4.)



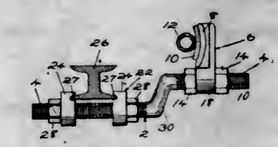
1. In an electric seam welding machine comprising a frame, a mandrel secured thereto, a traveling carriage

mounted thereon and insulated from said mandrel, a welding wheel journaled on said mandrel, an arm on the frame, a reciprocating head mounted thereon, an upper



welding wheel mounted on the head directly above the first mentioned wheel, and means for feeding current to said welding wheels.

1,787,040. OIL-REFINERY FITTING. CLARENCE B. HARBISON, Lima, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a Corporation of Ohio. Filed Mar. 7, 1929. Serial No. 345,188. 6 Claims. (Cl. 137—76.)



1. A plug lock for pressure systems comprising a casing having an aperture, and a plug having an inner deflector surface seated therein, upstanding walls on opposite sides of said aperture and open at one side, opposed locking flanges on said walls, a set lock movable laterally through said open side into non-rotatable engagement beneath said flanges, means on said plug for interlocking non-rotatable engagement with said set lock and permitting insertion of the latter beneath said locking flanges in but one angular position of said plug relative to said casing, and a set screw threaded in said set lock adapted to engage with said plug when said locking piece is engaged with said locking flanges.

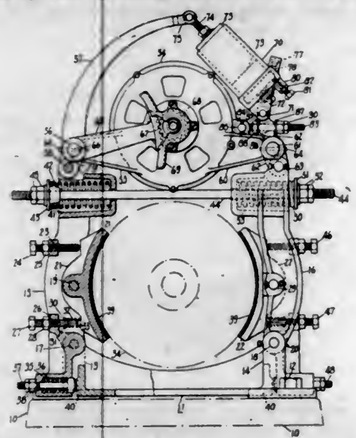
1,787,041. THERMOSTAT-CONTROLLED FAN. WALTER J. HUGHES, Chicago, Ill. Filed Feb. 28, 1929. Serial No. 343,479. 16 Claims. (Cl. 123—171.)

1. The combination with an engine forming a source of heat, a fan, means including an eccentric for supporting the fan with respect to the engine, and means for automatically regulating the air moving capacity of the fan directly in response to the heat of the engine, said control means including a thermostat housed in the fan and directly connected with the engine.

1,787,042. STEERING STABILIZER. NATHAN E. JOAQUIN, Los Angeles, Calif., assignor of one-half to John E. Stewart, Los Angeles, Calif. Filed Jan. 14, 1929. Serial No. 332,253. 5 Claims. (Cl. 280—89.)

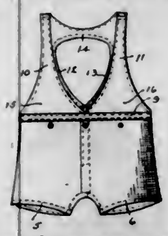
1. A vehicle steering stabilizer comprising a rotatable rod, a pressure foot adjustably associated with said rod, and adapted for rotation thereon, said pressure foot being adapted to engage one of the relatively movable members of said vehicle, and an anchoring means adjustably associated with said rod, and also rotatable thereon, and adapted to be anchored on the other of said members whereby the steering mechanism of said vehicle may be stabilized.

1,787,043. KNITTED CAP AND METHOD OF MAKING THE SAME. DAVID KARGER, Milwaukee, Wis. Filed Feb. 16, 1929. Serial No. 340,586. 2 Claims. (Cl. 2—201.)



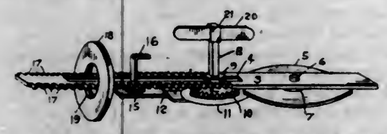
1. A knitted cap, comprising a one-piece knitted blank having selvages of angular form at each side, the end edges of the blank being secured together and the adjacent angular portions of the upper selvage being secured together to form an upper ovate end, said cap having a pair of adjacent narrow front areas with the outer side edges of the upper portions thereof secured together and the material thereof folded inwardly, the rows of knitting of said narrow front areas being oppositely and diagonally extending, said narrow front areas terminating a substantial distance below the apex of the cap, a pair of wider front areas adjacent the narrow areas and having their rows of knitting diagonally, outwardly, downwardly extending, a pair of wide side areas with horizontal rows of knitting, and a pair of rear areas having diagonally upwardly extending rows of knitting from the rows of the side areas, the lower portions of the areas forming quadrilateral laps with a rear neck recess therebetween.

1,787,044. MOTOR-OPERATED BRAKE. GEORGE W. LAUTRUP, Yonkers, N. Y., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 11, 1927. Serial No. 225,508. 8 Claims. (Cl. 188—171.)



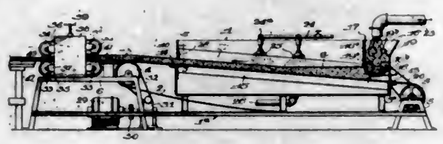
1. A brake comprising; a rotatable drum; a pair of brake shoes for frictionally engaging said drum; an oper-

ating member for each shoe; a motor having a frame and a rotative element, said motor frame being pivotally supported by said operating members; and means driven



by said rotative element for causing movement of said operating members to move said shoes with respect to said drum.

1,787,045. UNDERGARMENT. FRED J. LEWIS, Indianapolis, Ind., assignor to McLoughlin Manufacturing Company, Indianapolis, Ind. Filed Aug. 23, 1928. Serial No. 301,457. 3 Claims. (Cl. 2—78.)

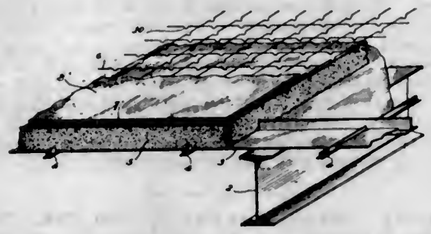


1. An undergarment, comprising a laterally disposed I-shaped portion having divergent arms at each of its ends, a pair of straps extending from the arms of the I-shaped portion at one side thereof, a pair of relatively shorter straps extending from the arms of the I-shaped portion at the other side thereof, and an encircling portion to which the lower ends of said straps are secured.

1,787,046. CAN OPENER. CELESTE A. LIQUORI, New York, N. Y., assignor of one-half to Ernest F. Liquori, New York, N. Y. Filed July 26, 1929. Serial No. 381,132. 2 Claims. (Cl. 30—3.)

1. In a can opener the combination of a slotted frame, a large disk rotatably mounted thereunder at one end, a slot in said frame running from the inner edge of said disk to a point near the opposite end of said frame, a handle and stem mounted in said slot so as to slide and rotate easily therein, a knurled disk and circular knife mounted on said stem under said frame so as to rotate therewith, an extension member mounted on said stem below said knife and carrying a pusher rigidly secured to its outer end, threading on the outer edges of said frame and a wheel internally threaded to engage the threading on said frame.

1,787,047. PULP-FILTERING MACHINE. EMIL C. LOETSCHER, Dubuque, Iowa. Filed Sept. 12, 1929. Serial No. 392,061. 14 Claims. (Cl. 92—39.)



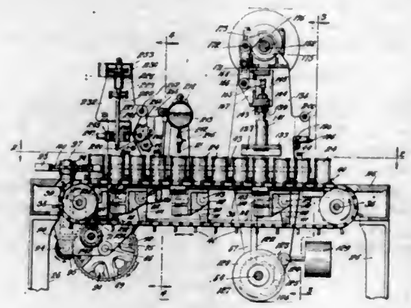
1. A pulp filtering apparatus comprising a tank, an endless screen belt adapted to travel in an upwardly inclined direction through said tank, means for continuously feeding pulp into said tank above said belt whereby the fibres are deposited on said belt in a mat of predetermined thickness as said belt emerges above the level of said pulp.

1,787,048. HYPOCHLORITE COMPOSITION. ROBERT BURNS MACMULLIN and MAURICE C. TAYLOR, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Aug. 16, 1928. Serial No. 300,148. 12 Claims. (Cl. 23—86.)

1. The method of producing a new hypochlorite compound which comprises bringing together in the presence of water sodium, calcium, chloride and OCl ions at a temperature below about 16° C. to form a triple salt of calcium hypochlorite, sodium hypochlorite and sodium chloride in hydrated crystalline form.

11. As a new product, a crystalline triple salt of calcium hypochlorite, sodium hypochlorite and sodium chloride, having the formula $Ca(OCl)_2.NaOCl.NaCl.12H_2O$.

1,787,049. FLOOR CONSTRUCTION. HERBERT E. MARKS, Glen Osborne, Sewickley, Pa., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1926. Serial No. 102,834. 3 Claims. (Cl. 94—8.)

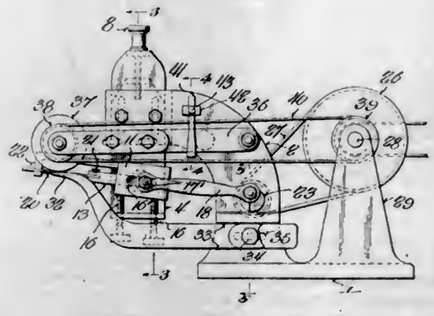


1. A floor comprising a monolithic slab of chalky calcium cementitious material, reinforcing material laid upon and spaced from the upper surface by offset integral portions which are anchored to said slab, and a relatively thin wearing layer of concrete laid upon the slab and encasing said reinforcing material.

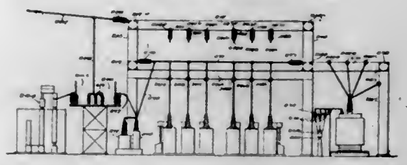
1,787,050. MACHINE FOR CLOSING AND SEALING CANS. JOHN M. MCCLATCHIE, New York, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed July 13, 1929. Serial No. 377,974. 7 Claims. (Cl. 113—30.)

1. A machine for closing and sealing cans having an aperture in their top ends, comprising, means for supporting the cans in upright position, means for intermittently advancing the cans through the machine, means

for supporting a strip of metal, means for cutting disks from the strip of metal and inserting them into the apertures in the cans, means for applying flux to the joints between the disks and the apertures, and means for soldering the joints between the disks and the apertures.

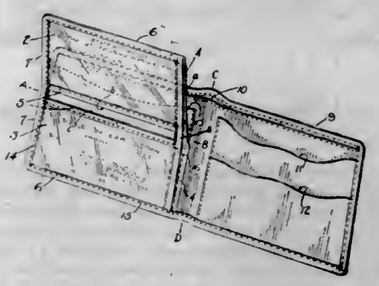


1,787,051. PILE FABRIC. WALTER F. MILLER, Freehold, N. J., assignor to A. & M. Karagheusian, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 18, 1929. Serial No. 400,572. 3 Claims. (Cl. 139—405.)



1. A two shot multi-color pile fabric the pattern of which is formed of a plurality of yarn threads of different individual colors, comprising a plurality of weft shots interwoven with ground chains, wherein a pattern forming yarn passes under a first weft shot, over a second weft shot and above the ground chain to form a pile loop, and finally over a third shot and under a fourth shot.

1,787,052. SKIVING MACHINE. SIGMUND J. PENTLER and OTTO R. SHORT, Wausau, Wis. Filed July 11, 1929. Serial No. 377,553. 4 Claims. (Cl. 69—15.)

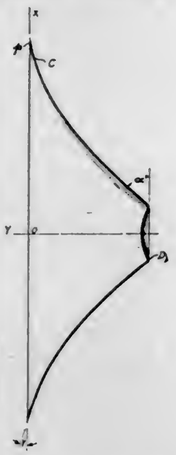


1. A skiving machine comprising a base, a standard carried by said base, a plate adjustably carried by said standard, a guide block having a pivotal connection with said plate, means for adjusting the angle of said guide block, a reciprocative knife having a slidable connection with said guide block, an anvil adjustably carried by said standard, a pivotal arm carried by said standard, means carried by said standard for supporting said arm, and a driven roller carried by the free end of said arm and cooperating with said anvil to hold the work material and creating tension upon the same during the skiving operation.

1,787,053. STATION CONSTRUCTION. ALLEN M. ROSSMAN, Chicago, Ill., assignor, by mesne assignments to Rossman Patents, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1927. Serial No. 243,908. 26 Claims. (Cl. 175—298.)

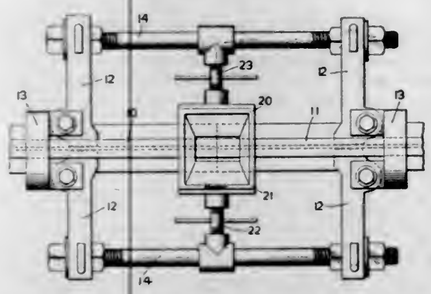
21. In a system of the class described, a plurality of stationary busses having parallel conductors, a plurality of stationary lines having parallel conductors transverse to and below the bus conductors, circuit breakers on the ground having terminals and connections from the terminal to the bus and line conductors said connections being disposed substantially in planes transverse to the line conductors.

1,787,054. WALLET. JACOB H. SCHEUER, New York, N. Y., assignor to Herman Scheuer's Sons & Co., Long Island City, N. Y., a Copartnership composed of Jacob H. Scheuer and Henry Lichtenstein. Filed Sept. 14, 1927. Serial No. 219,378. 2 Claims. (Cl. 150—38.)



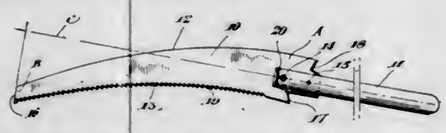
2. A wallet having opposed parts foldable together on a line between them and having on its inside to the left of said line when the wallet is right edge up a pocket having opposed parts whose inner side is transparent foldable together on a line intersecting the said wallet fold line, said pocket opening to the right adjacent the line of fold of the wallet, whereby the pocket when open displays its contents and the wallet when closed conceals the pocket and closes its open end.

1,787,055. ACOUSTIC DIAPHRAGM. VESPER ANDERSON SCHLENKER, Orange, N. J. Filed Mar. 16, 1928. Serial No. 262,290. 14 Claims. (Cl. 181—32.)



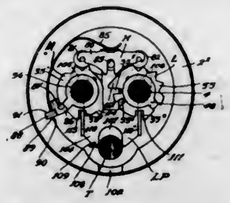
1. A sound reproducer comprising a self-supporting direct acting diaphragm of thin metal, of such shape that any section containing the axis is a curve convex toward the

said axis and any section made by a plane normal to the axis is a curve concave toward the axis, the mass and area



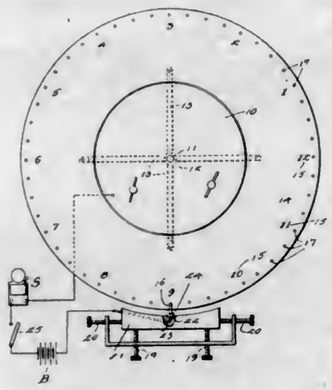
of said diaphragm being such that the fundamental period thereof when vibrating freely as a bell is below the lowest important voice frequency.

1,787,056. WELDING PROCESS. HUGH G. SPILSBURY, Cranford, N. J., assignor, by mesne assignments, to Francis Earle, Montclair, N. J. Filed Aug. 27, 1927. Serial No. 215,769. 5 Claims. (Cl. 22—206.)



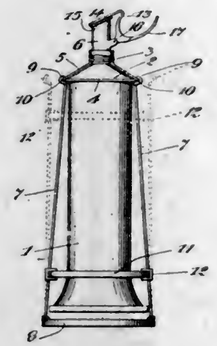
1. The process of welding rails which comprises locating a pair of rails with the heads and base portions abutting, providing a space between adjacent web sections, applying superheated molten metal about said rails whereby the head and base sections may be heated to the welding temperature and the molten metal permitted to unite with the adjacent web sections, and applying abutting longitudinal pressure to the rails to form an integral unitary rail.

1,787,057. PRUNING SAW. OTTOMAR LLEWELYN WARD, Waterville, Nova Scotia, Canada. Filed Sept. 26, 1929, Serial No. 395,422, and in Canada June 10, 1929. 1 Claim. (Cl. 30—11.)



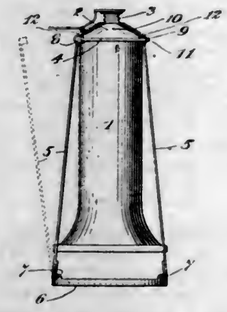
A pruning saw comprising a blade and a handle shaft secured to and extending longitudinally from the inner end of the blade, the inner end of said blade being wider than and projecting on both sides of said handle, the cutting side of said blade being cut away at said inner end to form a hook in the body of the blade and lying alongside said handle, the inner end of the non-cutting side of said blade being notched and sharpened to form a knife and means for securing said handle to said blade.

1,787,058. IGNITION AND LIGHTING SWITCH. ALFRED H. WEISS, Wilmette, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 24, 1920, Serial No. 383,675, now Patent No. 1,563,411, dated Dec. 1, 1925. Divided and this application filed Jan. 27, 1922. Serial No. 532,142. 9 Claims. (Cl. 200—166.)



1. A rotor device of the character described including a mounting plate, a non-rotatable supporting member secured to said mounting plate, a supporting stud rotatably carried by said non-rotatable supporting member, a star wheel carried by said stud, a circuit closer carried by said stud, a pair of insulating cams located on each side of said circuit closer, means for preventing rotation of said cams and circuit closer relative to each other, a member securing said star wheel and said circuit closer to said stud to prevent said star wheel and circuit closer from rotating relative to said stud, means cooperating with said star wheel for yieldingly holding said rotor in position, and locking means adapted to engage said star wheel to prevent any rotation of said rotor.

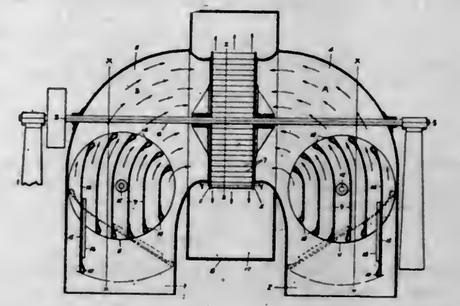
1,787,059. ELECTRIC CLOCK. FLOYD E. WHITE, Winamac, Ind. Filed Dec. 8, 1928. Serial No. 324,771. 6 Claims. (Cl. 200—36.)



3. In combination, a member having a circular periphery having time indicia thereon, a clockworks for rotating the member, a relatively stationary member having a socket formed therein, a conductor extended into said socket, a liquid conductor disposed in the socket and of a character such that it projects above the surface of the member, and an angularly inclined rigid conductor adjustably connectible with the periphery of the rotating member, said rotating member having spaced openings in its periphery, the conductor carried thereby being angular in form and having an end portion adapted for selective engagement in said openings.

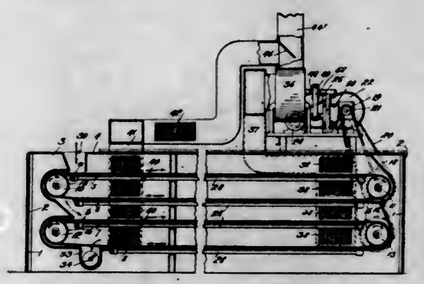
1,787,060. ATTACHMENT FOR CONTAINERS. FRANK WOLF, New York, N. Y. Filed Dec. 24, 1928. Serial No. 328,102. 11 Claims. (Cl. 221—60.)

1. An attachment for a collapsible tube with a soft body and a comparatively rigid top having an outlet nipple at the center and a bead-flange at the periphery of the top; the attachment being shaped to be put over said top and to constitute a sheathing for said top and outlet nozzle, and retaining means adapted to afford and maintain an engagement with the attachment to hold it in place on the bead flange.



1,787,061. ACCESSORY FOR CONTAINERS. FRANK WOLF, New York, N. Y. Filed Dec. 24, 1928. Serial No. 328,103. 7 Claims. (Cl. 221—60.)

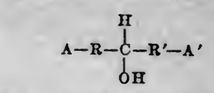
1. A soft collapsible tube comprising a rigid top with a bead-flange at the periphery of the top, an attachment for the tube to engage the flange at the top, and an accessory member for the top extending past the flange to grip the attachment and hold it in engagement with the tube.



1,787,062. BLOWER. EDWARD L. ANDERSON, Grosse Ile, Mich., assignor to American Blower Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 29, 1929. Serial No. 351,079. 12 Claims. (Cl. 230—114.)

1. In combination in a fan, a casing therefor having an inlet passageway, a plurality of spaced guide vanes in said passageway, spaced plates for supporting the ends of said guide vanes leaving the space therebetween free for the passage of air, means for rotatably mounting said plates and said vanes in the passageway so that they may be adjusted rotatably with respect to the passageway, a

damper guide vane depending from said end plates adapted when rotated with the end plates to cut off the flow of air through the inlet passageway.



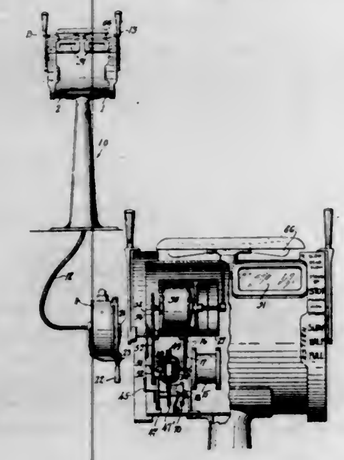
1,787,063. CONDITIONING MACHINE. VERNON CANO, Elizabeth, N. J., assignor, by mesne assignments, to Maryland Air Conditioning Corporation, a Corporation of Maryland. Filed Aug. 29, 1928. Serial No. 302,844. 1 Claim. (Cl. 34—12.)

In a machine of the character described comprising a bed or table for the material to be treated and means for conveying the material over said supporting bed comprising a movable belt, said belt being formed of flexible open mesh wire fabric and marginal link carrier chains having transverse connecting rods passed through the openings of the wire fabric, said belt being arranged to have sliding bearing engagement with the upper surface of the supporting bed and adapted to receive the material to be treated in the interstices thereof whereby it is agitated and conveyed by the belt as it moves over the supporting bed.

1,787,064. METHOD FOR RETARDING THE DETERIORATION OF RUBBER. WILLIAM S. CALCOTT and WILLIAM A. DOUGLASS, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 30, 1929. Serial No. 389,607. 19 Claims. (Cl. 18—50.)

1. The process of increasing the resistance of rubber to deterioration which comprises incorporating with the rubber a product having the following general formula

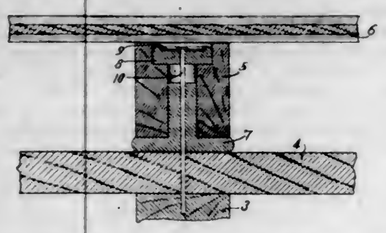
wherein A and A' represent amino groups or mono- or dialkyl amino groups, and R and R' represent aryl nuclei.



1,787,065. METHOD OF RETARDING THE DETERIORATION OF RUBBER. WILLIAM S. CALCOTT and WILLIAM A. DOUGLASS, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 9, 1929. Serial No. 391,504. 18 Claims. (Cl. 18—50.)

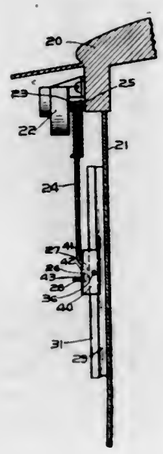
1. The process of increasing the resistance of rubber to deterioration which comprises incorporating with the rubber a compound having the following general formula

$$A-R-\overset{O}{\overset{\|}{C}}-R'-A'$$



wherein each of A and A' represents an amino group or a mono- or dialkyl amino group, and R and R' represent aryl nuclei and thereafter vulcanizing.

1,787,066. SHIP'S TELEGRAPH AND RECORDER SYSTEM. LESLIE F. CARTER, Leonia, and FREDERICK S. HODGMAN, Glen Rock, N. J., assignors, by mesne assignments, to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 3, 1925. Serial No. 54,188. 7 Claims. (Cl. 234—27.)



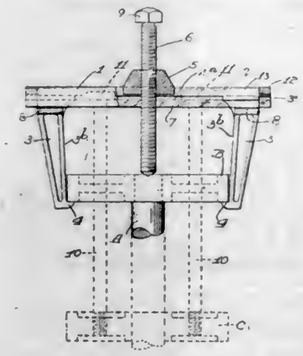
1. In a ship's telegraph and recorder device, a traveling chart, a recording stylus coacting with said chart, a bridge transmitter for sending orders, an engine room transmitter for transmitting responses to said orders, means whereby both of said transmitters actuate said stylus, and means for differentiating the records made by said stylus due to actuation by one of said transmitters from those due to actuation by the other of said transmitters.

1,787,067. FLOOR CONSTRUCTION. HENRY G. EISLER, Wilmette, Ill. Filed Jan. 19, 1929. Serial No. 333,724. 7 Claims. (Cl. 20—6.)

6. The combination, with a nailing strip having holes therein through which nails may be driven to attach the strip to a support, of a pair of bushings for each hole to insulate the strip from the nails, one bushing of each pair serving also as a support for the strip.

1,787,068. BLADE-ATTACHING MEANS FOR WINDSHIELD WIPERS. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr., a Corporation of Nebraska. Filed Apr. 21, 1930. Serial No. 445,846. 1 Claim. (Cl. 15—255.)

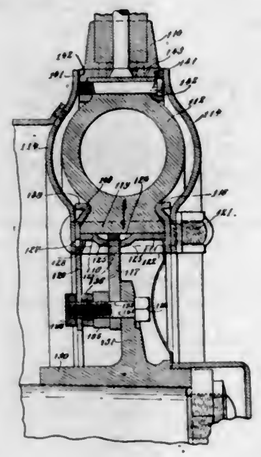
In combination with a wiper element having a transverse opening therethrough, a sheet metal clip of U-shape resiliently engaging over the back portion of the wiper element and provided in opposite sides with indentations engaging in the opposite ends of said aperture of the wiper element for holding the clip in position thereon, said clip provided at its free edges with inturned flanges engaging the edge portions of the back strip of the wiper element for holding the clip thereto, and a spring arm having a free end hook portion detachably engaged with said clip.



1,787,069. COLORING MATTER OF THE ANTHRACENE SERIES. IVAN GUBELMANN and ROBERT J. GOODRICH, South Milwaukee, and WILLIAM DETTWYLER, Milwaukee, Wis., assignors to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed Dec. 11, 1926. Serial No. 154,304. 8 Claims. (Cl. 260—37.)

1. The process of preparing coloring matters of the anthracene series, which comprises condensing an anthraquinone halogen substituted benzacridone which contains a halogen atom in meta position to the imino group in the benzene ring, with an amino anthraquinone body and heating the resulting product with a metal chloride.

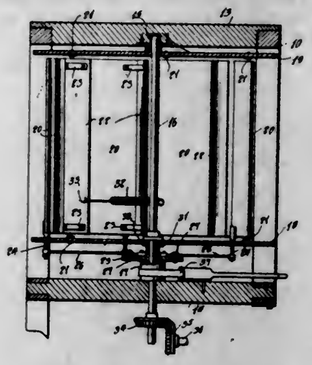
1,787,074. DISK-WHEEL MOUNTING. J HAROLD Maywood, Ill. Filed Apr. 15, 1927. Serial No. 183,974. 2 Claims. (Cl. 29—85.)



1. In combination, a cross-bar having a longitudinal slot open at both ends and unobstructed throughout its length with opposed ribs extending from the side walls of the slot to form an undercut channel in the bar, a pair

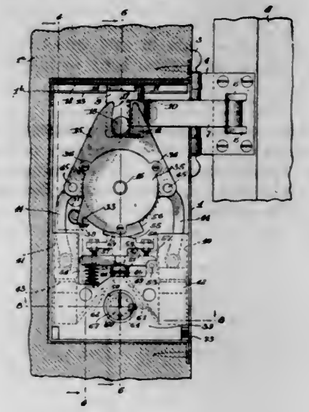
of pulling fingers with bases laterally grooved for sliding engagement with said ribs, a boss at the middle of the

bar disposed opposite the slot but offset from the undercut channel, and pressure exerting means associated with said boss.



1,787,071. RESILIENT WHEEL. SCHUYLER C. HATFIELD, Baltimore, Md. Filed Apr. 5, 1927, Serial No. 181,034. Renewed May 27, 1930. 11 Claims. (Cl. 152—41.)

1. An elastic wheel comprising an annular rim section, a hub section encircled by and spaced inwardly from the rim section to provide relative radial motion and a pneumatic pad between the sections, the hub section consisting of a sheet metal ring and a separate radial plate with interlocking means connecting the two together, and means securing the plate to a hub.



1,787,072. WINDMILL. JOHN HENDERSON, Picher, Okla. Filed July 12, 1928. Serial No. 292,052. 1 Claim. (Cl. 170—38.)

A windmill having a relatively unobstructed interior and comprising a shaft, plates carried thereby, wings pivoted eccentrically to the plates and arranged substantially in the path of a circle, said wings at one side edge having inwardly extending flanges for the purpose specified, a substantially diametrically arranged contractile spring connecting certain of the wings between said axis

and flanges, a hub journaled on said shaft below the plates, connections from said hub to each of said wings including studs depending from the wings, the lowermost plate having slots through which said studs pass and in which they move.

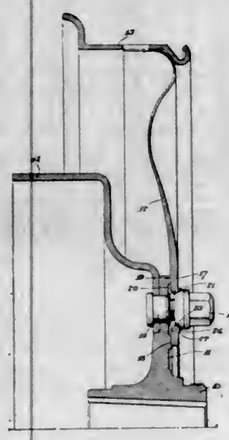
1,787,073. DOOR-CONTROL APPARATUS. REUBEN HILL, Detroit, Mich., assignor to Sargent & Greenleaf, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 23, 1927. Serial No. 214,969. 25 Claims. (Cl. 16—66.)

1. In a door closing device, the combination of a door, a door jamb having a chamber provided therein, a pivotally mounted element in said chamber, a slidably mounted operating member for said element, a link connecting said member with said door, and a spring operatively associated with said element and tending to move it in one direction, whereby said door is urged to a closed position.

1,787,074. DISK-WHEEL MOUNTING. J. HAROLD HUNT, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1926. Serial No. 135,314. 1 Claim. (Cl. 301—9.)

A vehicle wheel comprising in combination a hub, a radial flange on said hub, said radial flange being provided

with a pair of spaced annular lands adapted to form bearing surfaces for a wheel body and having an annular depression therebetween, a series of bolts secured to said hub flange within the radial confines of said annular depression, a wheel body in the form of a web plate, said wheel body being provided in its radial portion between said lands with a series of annularly arranged openings adapted to receive said bolts, the openings in said web



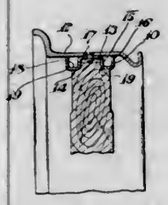


plate being outwardly coined and provided with concave seats, and a plurality of nuts of considerably smaller diametrical extent than the radial extent of said depression adapted to co-act with said bolts in securing said wheel body and flange in their assembled relationship, said nuts having convex portions adapted to be received in the concave seats in said wheel body, whereby to resiliently clamp said wheel body to said flange.

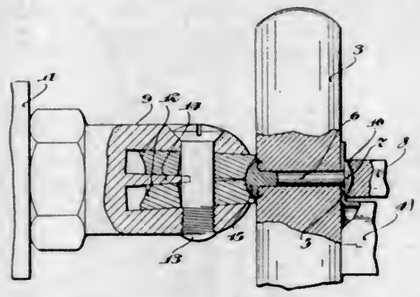
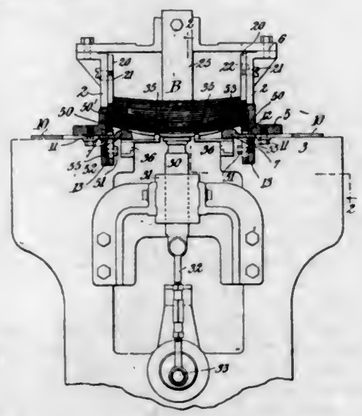


1,787,075. SPOKE-END-CAP CONSTRUCTION. J HAROLD HUNT, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 23, 1927. Serial No. 242,036. 2 Claims. (Cl. 301—67.)

1. A sheet metal spoke end cap comprising a transverse bottom portion for securement to the rim and double side walls spaced apart but connected together at the top to form a transverse shoulder providing a spoke end seat.

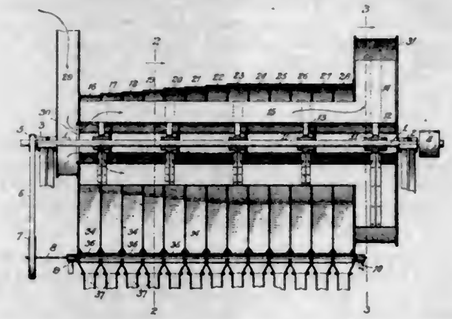


2. A sheet metal spoke end cap comprising a cup-shaped body portion facing radially outwardly and having its outer side wall adapted to seat against the rim of the wheel and its central portion depressed and adapted to engage the wheel rim for securement thereto and to receive a spoke tenon therein and a shoulder between said recess and the outer side wall of the body of the cap forming an abutment for a shoulder surrounding a spoke at the base of its tenon.

1,787,076. RIVETED STRUCTURE. JOHN E. KALGREN, Minneapolis, Minn., assignor to J. R. Clark Company, Minneapolis, Minn., a Corporation of Minnesota. Original application filed Mar. 12, 1927, Serial No. 174,995. Divided and this application filed Jan. 28, 1930. Serial No. 424,028. 2 Claims. (Cl. 78—46.)

1. A method of forming a mushroom head on a rivet and clinching the same directly into a compressible member while supporting the rivet in said member, which consists in upsetting the end of the rivet by spinning action directly against the member and simultaneously curling the peripheral edge of the head being formed rearwardly and inwardly toward the rivet shank into the compressible material of said member, the curling edge cutting and imbedding itself into such material on an inwardly directed arc.

1,787,077. APPARATUS FOR SEPARATING SHEETS. PETER KRUSE, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed July 22, 1927. Serial No. 207,594. 6 Claims. (Cl. 271—32.)

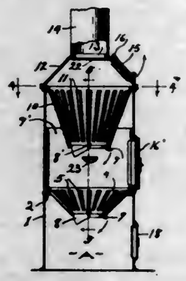


1. A sheet-separating device, comprising convergent guides, the surfaces of which approach sufficiently to cause a plurality of the sheets of a stack which is fed between them to buckle, whereby the most advanced sheet will be centrally separated from the sheet next succeeding it, the convergence of said guides being insufficient to prevent the downward movement of the said stack, and stack-supporting means adapted to engage the exposed surface of said advanced sheet between the central portion and the edge thereof whereby the stack of sheets will be retained between the said guides, an adjusting means being provided between said convergent guides and said stack-supporting means, whereby the said supporting means can be adjusted to engage the stack only after the convergent guides have, by their wedging action, buckled the sheets to produce the required separation of such sheets.

1,787,078. METHOD OF PRODUCING SODIUM STANNATE. WILLIAM T. LITTLE, Westfield, N. J. Filed Sept. 10, 1929. Serial No. 391,707. 4 Claims. (Cl. 23—53.)

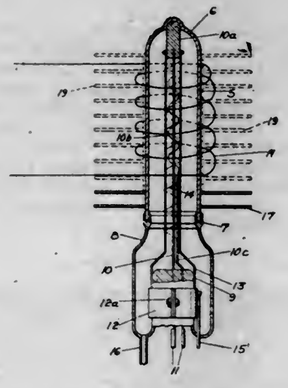
1. In the recovery of sodium stannate in crystalline form from sodium stannate solutions, the process which comprises adding a strong NaOH solution to such a sodium stannate solution, thereby precipitating crystals of sodium stannate.

1,787,079. PULVERIZED-MATERIAL SEGREGATOR. HENRY G. LYKKEN, Minneapolis, Minn. Filed Oct. 4, 1924. Serial No. 741,532. 13 Claims. (Cl. 209—144.)



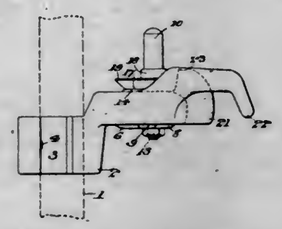
4. A segregator for ground material, comprising a housing, a rotor in said housing, means for causing an uninterrupted stream of material laden air to flow through said housing and along said rotor, and a series of chambers in said housing and surrounding said rotor to receive material projected from said stream by said rotor in successive grades of fineness.

1,787,080. METHOD OF PRODUCING A NEW HYPOCHLORITE COMPOSITION. ROBERT B. MACMULLIN and MAURICE C. TAYLOR, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Original application filed Aug. 16, 1928, Serial No. 300,148, and in Germany May 11, 1929. Divided and this application filed Mar. 6, 1930. Serial No. 433,803. 1 Claim. (Cl. 23—86.)



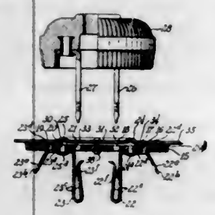
The method of producing a new hypochlorite compound which comprises adding sodium chloride to a saturated solution of calcium hypochlorite at a low temperature to form a triple salt of calcium hypochlorite, sodium hypochlorite and sodium chloride in crystalline form.

1,787,081. INCINERATOR. JOSEPH R. MCLELLAN, Wichita, Kans. Filed Oct. 16, 1926. Serial No. 142,140. 2 Claims. (Cl. 110—18.)



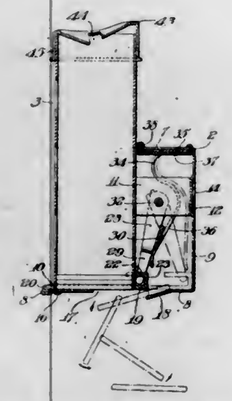
1. In an incinerator of the class described, a shell having a frusto-conical firepot with a plurality of elongated openings through the wall thereof to function as vents, said firepot having flanges to engage on the top of the shell as supporting means therefor, a second frusto-conical firepot for débris, said firepot having a plurality of elongated openings functioning as vents, spaced below the center of the shell and carried thereby, a lining resting on the upper rim of said firepot, said lining extending a short distance above the lower end of the first said firepot, a door as means of access to each of said firepots, and a gas burner intermediately positioned to the said firepots.

1,787,082. VACUUM-TUBE MAKING. FREDERICK S. MCCULLOUGH, Wilkinsburg, Pa. Filed Mar. 29, 1924. Serial No. 702,818. 7 Claims. (Cl. 250—27.5.)



1. The method of preparing a high emitting low temperature cathode in electron tubes having metal shells with glass seals, which consists in assembling into the tube a cathode having a low temperature high electron emitting coating thereon, connecting the assembled tube with a pump, baking the entire tube to partially de-gasify it at a moderately high temperature but below the melting point of glass, then raising the temperature of the metal shell of the tube to a glowing temperature while maintaining the glass seal hot but below its melting temperature, the tube remaining in connection with the pump, and the cathode being heated in a vacuum by the radiation of heat from the shell, whereby the cathode is conditioned for service and de-gasified in a vacuum and in place in the tube.

1,787,083. YARN-TENSION DEVICE. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1929. Serial No. 353,799. 12 Claims. (Cl. 242—150.)



3. A yarn tension device comprising tensioning means and a supporting frame therefor provided with an offset closed loop through which the yarn is drawn upwardly in loop form in the threading of the yarn through the tensioning means, said supporting frame having "leading-in" and "leading-out" recesses for guiding the yarn into and out of the tensioning means.

1,787,084. ELECTRICAL PLUG RECEPTACLE. GEORGE J. MEUER, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 19, 1929. Serial No. 386,809. 8 Claims. (Cl. 173—339.)

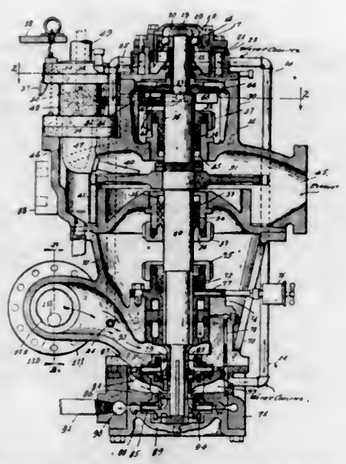
C. As an article of manufacture, a combined contact and terminal member for plug receptacles, said member comprising a horizontal portion to be permanently secured to the under side of a suitable support, a reflexed contact clip portion depending from said horizontal portion, the free end of said reflexed clip portion being flared outwardly to provide a guide for a plug jack, a wiring terminal portion also depending from said horizontal portion, and a lug struck upwardly from said horizontal portion and adapted for positive engagement with cooperating shoulders on said support.

1,787,085. CHANGE MAKER. ARTHUR F. NELSON, Harrisburg, Pa. Filed Feb. 4, 1927. Serial No. 165,810. 18 Claims. (Cl. 133—6.)

1. In a change maker, a frame structure including a coin tube and a base plate forming a support for coins within the tube and having a coin discharging opening rearwardly of the bottom of the tube, means operable to move coins rearwardly from the bottom of the tube to said opening, and a coin interrupting part terminating in a forward edge located beneath the rearward portion of said opening in spaced relation to the plane of the base plate and constructed to be encountered by the rearward portion of a coin during its descent from said opening and cause the forward portion of the coin to descend in advance of the rearward portion thereof.

1,787,086. HEAT INTERCHANGER. ARTHUR E. PEW, JR., Bryn Mawr, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed June 10, 1926. Serial No. 114,910. 3 Claims. (Cl. 257—239.)

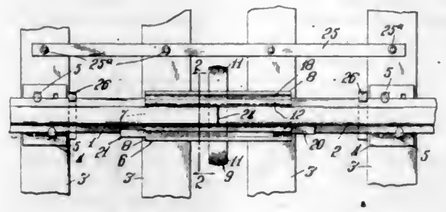
1. A heat exchanger casing composed of a plurality of pairs of sections, each pair being composed of complementary semi-cylindrical sections, abutting longitudinally extending flanges along adjacent edges of the casing sections



of each pair and abutting circumferential flanges on adjacent ends of adjacent pairs of casing sections, and means securing said abutting flanges.

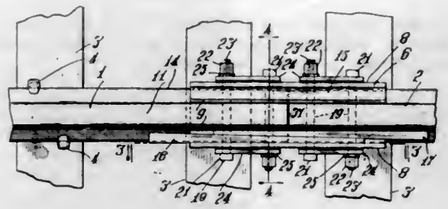
1,787,087. SCREW DRIVER AND METHOD OF MAKING SAME. PETER L. ROBERTSON, Milton, Ontario, Canada. Filed Mar. 1, 1929. Serial No. 343,769. 3 Claims. (Cl. 76—101.)

1. A method of making a screw driver consisting in boring a hole in the end of a soft metal shank, forming a bit from a length of longitudinally ridged tool steel tapered at one end and forcing said tapered end into the round hole in the shank deforming the metal, the ridges of said bit being imbedded in the metal of the shank without broaching.



1,787,088. TURBO PUMP. VICTOR SCHLEYER, Anderson, Ind. Filed Jan. 10, 1927. Serial No. 160,198. 7 Claims. (Cl. 103—87.)

1. In combination, a turbo-pump having a vertical shaft, a single main anti-friction bearing supporting said shaft and located at the top thereof, a steady bearing near the lower end of the shaft, a steam turbine located between the two bearings and having a gland between it and each bearing, each gland being spaced from the adjacent bearing, and a multi-stage pump mounted on the shaft below the steady bearing.

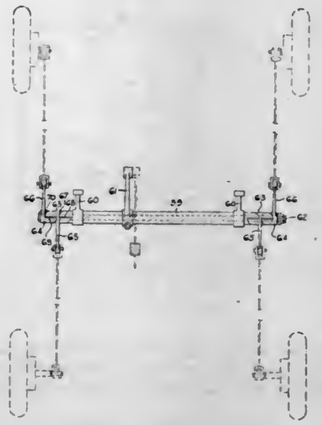


1,787,089. RAIL JOINT. RICHARD T. SCHOLES, Hinsdale, Ill. Filed Aug. 5, 1929. Serial No. 383,718. 15 Claims. (Cl. 238—263.)

1. A rail joint comprising a rigid one-piece rolled channel section of sufficient length to rest upon at least two adjacent ties and having a base portion adapted to support the end portions of the rails, and having integral side flanges extending upwardly at substantially right-angles to the base at the sides of the rails, joint bars adapted

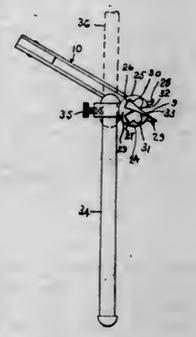
to engage the respective sides of the rails between the head and base flanges thereof, a spacer interposed between one joint bar and the adjacent side flange of the channel, and wedging means interposed between the other joint bar and the adjacent side flange of the channel.

1,787,090. RAIL JOINT. RICHARD T. SCHOLES, Hinsdale, Ill. Filed Aug. 5, 1929. Serial No. 383,719. 11 Claims. (Cl. 238—208.)



1. A rail joint comprising a rigid channel section having a base portion adapted to support the end portions of the rails, and having side flanges extending upwardly at the sides of the rails beyond the neutral axis of the rails, joint bars overlapping the adjacent end portions of the rails and engaged long the respective sides of the rails, adjustable spacing means interposed between the side flanges of the channel and the joint bars, and tying means inserted through the rails, joint bars and spacing means.

1,787,091. TROLLEY EAR AND ATTACHMENT THEREFOR. ANGUS G. SCOTT, Shaker Heights, Ohio. Filed Aug. 5, 1929. Serial No. 383,764. 12 Claims. (Cl. 191—43.)

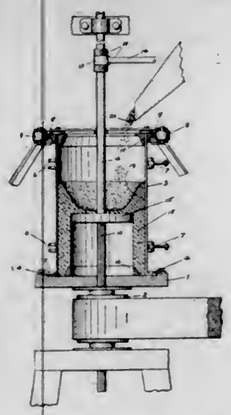


1. A detachable protecting device for a trolley car rigidly attached to a trolley wire, comprising a metal sheath, and readily-releasable means integral with the sheath for fastening said sheath detachably to said ear.

1,787,092. POWER-EQUALIZING DEVICE FOR VEHICLE BRAKES. JOHN W. SMITH, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Sept. 26, 1922, Serial No. 590,565. Divided and this application filed June 27, 1928. Serial No. 288,575. 8 Claims. (Cl. 188—204.)

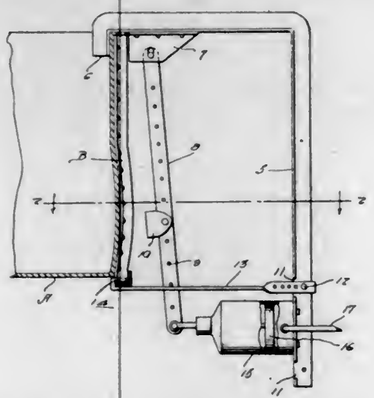
1. A power equalizing device comprising a plurality of relatively movable elements and means for effecting a gradual binding engagement between the several elements upon the movement of one element relative to the others, together with front and rear vehicle brakes operated respectively from the said elements.

1,787,093. STANDARD BARBER RAZOR HOLDER. ALESSANDRO SODA, New York, N. Y. Filed Apr. 11, 1930. Serial No. 443,375. 2 Claims. (Cl. 30—12.)



1. In a standard razor holder adapted to hold a razor blade, a base formed with two razor blade back holding grooves approximately 60 degrees apart, and having spring extensions integral therewith engageable with said razor blade and a boss upon said base slidably holding a handle.

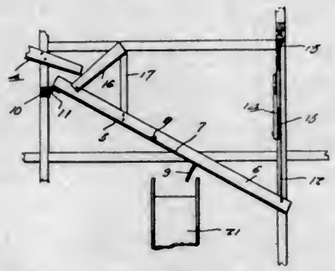
1,787,094. CENTRIFUGAL MOLDING APPARATUS AND PROCESS. CLAUDE S. SORENSEN, San Carlos, Calif., assignor to California Concrete Products Co., Sunnyvale, Calif., a Corporation of California. Filed Jan. 4, 1930. Serial No. 418,538. 12 Claims. (Cl. 25—30.)



1. Centrifugal pipe molding apparatus comprising a vertically disposed revolvable mold shell, means for sup-

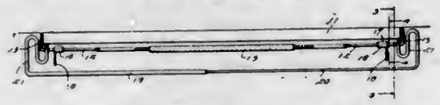
porting and revolving the shell at high speed, a disk within the shell substantially of the diameter of the inside of

the pipe to be molded, means supporting said disk centrally within the shell and for vertical movement, and means for raising and lowering said disk within the shell.



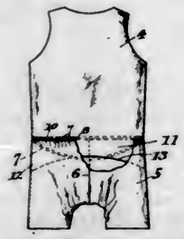
1,787,095. COAL-CAR STAKE-STRAIGHTENING DEVICE. CAREY E. STRAUSBAUGH, Chillicothe, Ohio. Filed July 5, 1928. Serial No. 290,636. 2 Claims. (Cl. 153—32.)

1. In a coal car stake straightening device, a frame unit, means associated with one end of the frame unit whereby to facilitate its attachment to the upper edge of a wall of the car directly above the upper end of the stake to be straightened, means whereby the lower end of the frame may be secured in spaced relation with the car, a cylinder associated with the frame and having a rectilinearly movable piston therein, a lever pivoted at one end to the forward end of the piston rod and at its opposite end to the said frame and a straightening head associated with said lever and adapted to be moved into engagement with the bent portion of the stake when pressure is admitted into the cylinder in back of said piston.



1,787,096. COAL SEPARATOR. PHILIP TARONE and JOHN ROWLAND, Ravenrun, Pa. Filed Aug. 15, 1928. Serial No. 299,668. 1 Claim. (Cl. 209—118.)

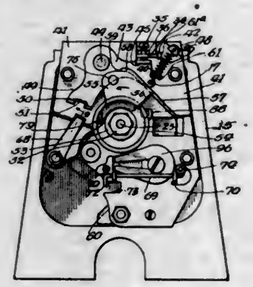
In a coal separator, a supporting structure, a plurality of inclined chutes hingedly connected at their upper ends to the supporting structure, means at the lower ends of the chute for vertically adjusting the same, the upper ends of the inclined chute underlying the lower ends of the uppermost chute, a retarding chute extending laterally and upwardly from the upper portion of each of the aforementioned chutes for deflecting the material for the next uppermost chute against the chute to which the retarding unit is attached, said retarding chutes being oppositely inclined from the supporting chutes and rigidly secured there-



on and further having their lower ends communicating with the supporting chutes in spaced relation thereto, each of the hingedly mounted chutes being formed in its bottom with an opening through which the impurities of the coal pass, the upper longitudinal edge of the opening being slightly curved upwardly, a downwardly extending deflecting lip formed on the opposite longitudinal edge of each opening, and an inclined trough for disposition beneath each of the openings.

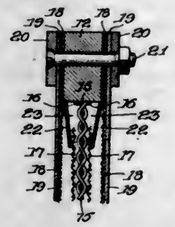
1,787,097. SHADE AND CURTAIN FIXTURE. ADA B. WENDEL, Smithland, Iowa. Filed Mar. 6, 1928. Serial No. 259,485. 1 Claim. (Cl. 156—23.)

A curtain or drapery fixture comprising a member clamped on and extending transversely of a window frame and slightly spaced from the front thereof, and a curtain or drapery rod extending in parallel relation to and outwardly of said member, said rod having laterally turned terminals directed toward the window frame and having notches in their lower edges receiving the upper edge portions of the said member, the end faces of said terminals bearing against the said front face of the window frame whereby to maintain said rod against sagging, the portions of said terminals between the notches and said end faces serving to brace the clamped member against twisting and sagging under weight imposed thereupon.



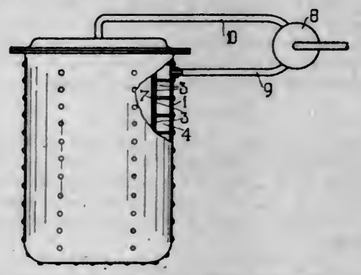
1,787,098. UNION SUIT. NATHAN WOLFF, New York, N. Y. Filed Mar. 6, 1929. Serial No. 344,780. 1 Claim. (Cl. 2—78.)

A union suit comprising front, back and posterior sections, the back section terminating above the crotch por-



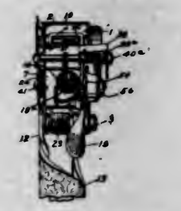
tion of the front section and stitched along side edges of the front section for the full depth of the back section, the posterior section overlapping the lower portion of the back section and stitched along its side edges to side edges of the front section and the overlapped portion of the back section, a marginal casing being formed across the upper end of the posterior section for the full width thereof, and an elastic band within said casing stretched and having its ends secured at the ends of the casing, said casing being secured at its ends with seams connecting the front and back sections and free from the back section for the remainder of its length.

1,787,099. CHECK-CONTROLLED MECHANISM. ALFRED D. ANTOINE, Chicago, Ill., assignor to Advance Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1927. Serial No. 210,768. 11 Claims. (Cl. 194—102.)



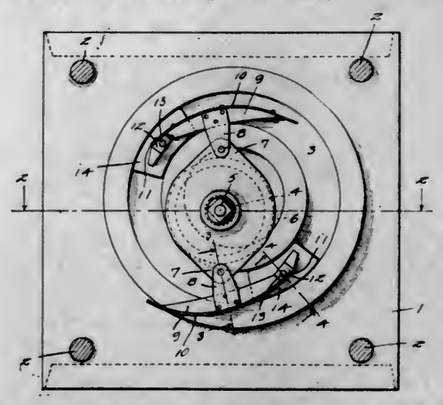
1. Check controlled mechanism embodying a check carrier having a check seat, a pivotally mounted detector member, a portion of said member being disposed adjacent the path of movement of the check in the check seat to be engaged and shifted by the check, a pivotally mounted locking member for controlling the actuation of the check carrier, said members being separate from each other and both fixed against bodily movement, and an adjustable element carried by one of said members and engaging the other member for varying the fixed relative position of the members, said locking member being responsive in its operation to the operation of the said detector member.

1,787,100. FILTER-LEAF CONSTRUCTION. WILLIAM H. BACHELDOR, Wood River, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Aug. 5, 1929. Serial No. 383,635. 7 Claims. (Cl. 210—195.)



1. A filter press leaf comprising an imperforate frame provided with an enlarged fenestral opening, perforate supporting means carried in said opening, filter media carried by said frame and positioned outside of and adjacent to said perforate supporting means, means positioned adjacent said frame and within the opening therein for spacing a portion of said filter media from said perforate supporting means and thereby forming a continuous liquid channel along said frame and between said perforate supporting means and said filter media, and a liquid outlet conduit communicating with said channel.

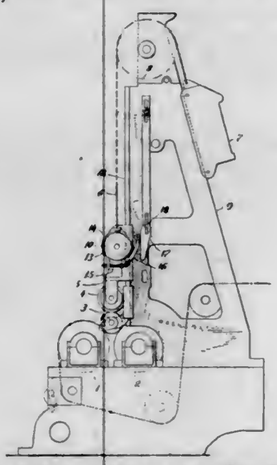
1,787,101. LINING VESSELS FOR CARRYING OUT OPERATIONS WITH LIQUIDS AND THE LIKE. FRANCIS HERBERT BRAMWELL, London, England, assignor to Imperial Chemical Industries Limited, London, England, a British Company. Filed Jan. 10, 1930, Serial No. 419,917, and in Great Britain Jan. 9, 1929. 7 Claims. (Cl. 220—63.)



7. A container for corrosive substances, said container having spaced walls, the inner wall being perforated and having a non-corrodible lining.

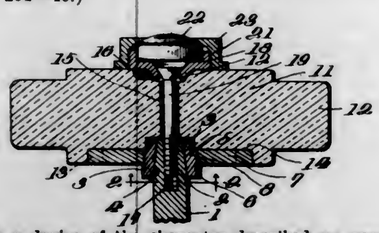
1,787,102. KNOTTER. BRITTON E. BYRD, Gastonia, N. C., assignor to Mill Devices Company, Inc., Gastonia, N. C., a Corporation of North Carolina. Filed Feb. 11, 1928. Serial No. 253,595. 13 Claims. (Cl. 289—3.)

8. In a knot tying device, in combination, a tying bill mechanism having cutting and clamping means, and means for positioning a plurality of threads to be acted upon by the tying bill mechanism to produce a knot, said means including mechanism for moving the threads into crossed relation at one side of the bill, and means at the other side for moving the threads into double crossed relation.



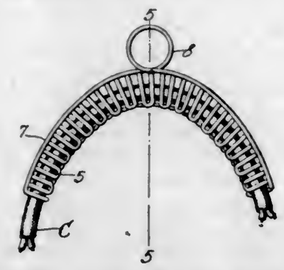
1,787,103. FLUID-POWER WHEEL. WILLIAM R. CALDWELL, Keyser, W. Va. Filed Mar. 19, 1929. Serial No. 348,238. 2 Claims. (Cl. 170—149.)

1. A power wheel, comprising a frame, a hub body rotatably mounted in the frame and carrying at each end



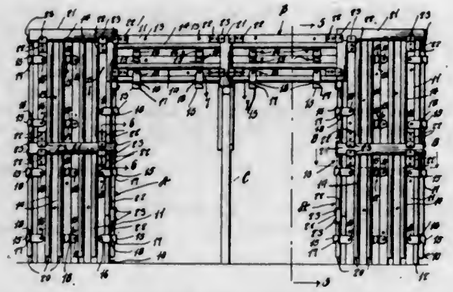
radially directed arms, arcuate blade members each extending longitudinally of the hub, means at each end edge of each blade for pivotally connecting the same to an arm, said means comprising an inwardly extending link attached to the blade adjacent the center thereof, a reinforcing rib extending transversely of the rear edge of each blade, means for reinforcing each end edge of the blade, a block pivotally attached to each end of each reinforcing rib, and an annular guide mounted on the opposite end portions of the frame arranged eccentrically of the pivotal center of and at each end of the hub and continuously controlling the adjacent blocks.

1,787,104. VARIABLE-BRAKE-RESISTANCE DEVICE FOR WINDING MACHINES. JAMES A. CAMERON, Brooklyn, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 18, 1928. Serial No. 313,276. 10 Claims. (Cl. 242—66.)



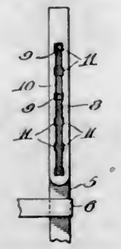
1. In a winding machine, a member displaceable by accumulation of wound material, and means to resist the displacement of said member including: a rotatable transmission element that rotates in response to the displacement of the member, a variable brake to oppose rotation of the element, and means to automatically vary the pressure of the brake as movement of the displaceable member occurs.

1,787,105. HANDLE. EDWARD L. DELANY, Brooklyn, N. Y. Filed Apr. 11, 1927. Serial No. 182,917. 5 Claims. (Cl. 251—45.)



2. In a device of the character described an operating stem having its outer end tapering and of an angular form, a bushing tightly fitting the outer end of the operating stem, and having an angular exterior surface, and an attaching plate fitting said angular portion of the bushing and held against downward movement thereon, a composition handle having a recess to receive the attaching plate, and a clamping screw passing through the handle and spaced therefrom and screwed into the operating stem, and clamping the attaching plate in the recess in the handle.

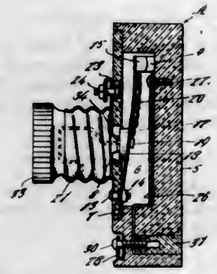
1,787,106. CORD HANGER. CAROLYN MCFALL GLAZENER, Hendersonville, N. C. Filed Mar. 26, 1927. Serial No. 178,701. 3 Claims. (Cl. 248—31.)



2. A cord hanger including a single length of resilient wire provided with a series of regularly spaced bends, said series being extended throughout the length of the hanger and forming a freely flexible tube, the ends of the wire being extended longitudinally and outside of said tube from one end to the other thereof continuously, and a support engaging element integral with said ends of the wire at the center of the tube, said wire being fixedly attached to each of the bends forming the tube to hold them properly spaced and to reinforce the tube.

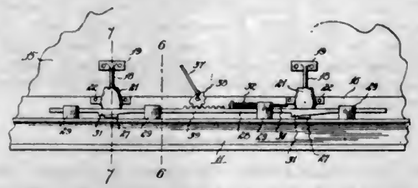
1,787,107. FORM FOR MOLDING CONCRETE AND CEMENT. EDWARD F. HARPER, Philadelphia, Pa. Filed May 17, 1928. Serial No. 278,485. 4 Claims. (Cl. 25—131.)

1. A form of the class described comprising units, latch means securing the units together, said units having reenforcing members terminating short of their ends to provide shoulders, battens for securing the sections together end to end engaging said shoulders, and brackets on the sections engaging said battens.



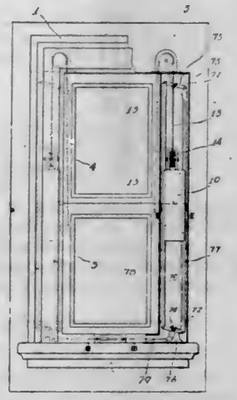
1,787,108. SECURING MEANS FOR LAPPED ELEMENTS. EVAN C. HARTER, Sturgis, Mich. Filed Aug. 22, 1929. Serial No. 387,619. 1 Claim. (Cl. 155—88.)

In an adjustable chair, in combination, an element to be secured having a hole therethrough, an element in



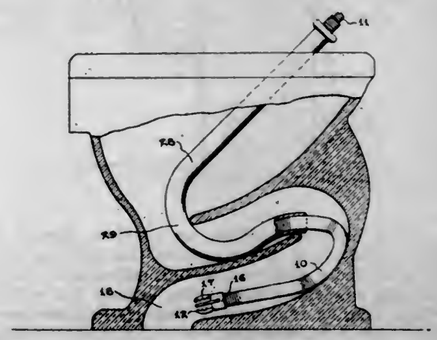
lapped relation with the first mentioned element, the second mentioned element having a slot and lateral enlargements of said slot at spaced locations, said slot and its enlargements extending completely through the second mentioned element, a fastening bolt, said bolt comprising a substantially polygonal portion adapted to engage and substantially completely fill portions of the slot and the adjacent enlargements, a head extending from said substantially polygonal portion and overlapping and contacting the second mentioned element, a shank extending from the substantially polygonal portion at the side thereof opposite to the head, said shank extending through said hole, and a fastening member adjustably disposed on said shank and engageable against the first mentioned element.

1,787,109. SECONDARY CONTACT SPRING FOR PLUG CUT-OUTS. EDGAR LEE HAWLEY, Atlanta, Ga. Filed July 6, 1929. Serial No. 376,449. 1 Claim. (Cl. 200—119.)



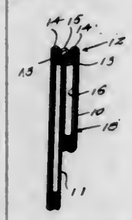
A plug cut out comprising a fuse box having a recess and a fixed contact in the recess, a cover for said recess having a substantially small central aperture, a flat spring disposed upon the inner face of said cover and extending diametrically of the central aperture, said spring having one end secured to the cover and being flexed to normally lie flat against the cover, a pair of contacts mounted on said spring and extending oppositely therefrom, one of said contacts being positioned adjacent the free terminal of the spring for engagement with the fixed contact of the recess when the spring is flexed outwardly from the cover, and the other contact being positioned intermediate the ends of the spring and normally extending through the aperture of the cover for engagement with a fuse, a flexible conductor electrically connecting the said contact of the spring, a fuse socket mounted on the outer face of said cover and over the central aperture thereof, said socket having its bottom end open to expose the said aperture and said fuse-contact member of the spring, and a connector on said socket for an electrical conductor.

1,787,110. ANTITHEFT LOCK FOR AUTOMOBILES. EDWARD M. HEIDORN, Hillside, Ill. Filed Aug. 8, 1929. Serial No. 384,311. 6 Claims. (Cl. 292—27.)



1. A hood locking mechanism for automobiles comprising depending bolts secured to the cover sections forming the hood, clutches secured to the chassis and having jaws adapted to engage said bolts, slidable plates engaging the jaws for moving them in and out of locked engagement with the bolts, and means for moving the plates operated from within the body of the automobile.

1,787,111. SASH BALANCE. KITARO KATOW, Tokyo, Japan. Original application filed June 25, 1927, Serial No. 201,455. Divided and this application filed Jan. 18, 1928. Serial No. 247,651. 2 Claims. (Cl. 16—194.)

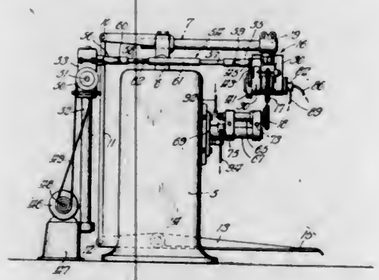


1. A window comprising a frame having a side chamber, a pair of sashes vertically slidable in said frame, a weighted member vertically movable within a side chamber in said frame, a roller carried on said weighted member, a pair of guide rollers mounted above said side chamber and having fixed bearings, a sash-cord secured to one of said sashes and extending over one of said stationary rollers, engaging under said weight carried roller and over the other stationary roller and having the other end secured to the other sash, thus suspending said weighted member therefrom through said weight carried roller, a pair of vertical link rods in said side chamber for guiding the vertical movements of said weighted member therebetween, and means for moving said link rods toward and from each other for applying braking action on or releasing said weighted member.

1,787,112. CLOSET AUGER AND STOPPAGE GRIP. RANDALL A. KING, Pueblo, Colo. Filed Mar. 8, 1928. Serial No. 260,086. 3 Claims. (Cl. 137—70.)

1. A device for the purpose indicated comprising a staff, a stem movable longitudinally of the staff, a head carried at one end of the staff and provided with a plurality of hingedly mounted jaws, operative connections between the stem and jaws to effect opening and closing movement of the same upon the stem relative to the staff, and a handle having operative connections with the stem remote from the head for imparting longitudinal movement to the same and operative connections with the staff for imparting angular or turning movement to the same.

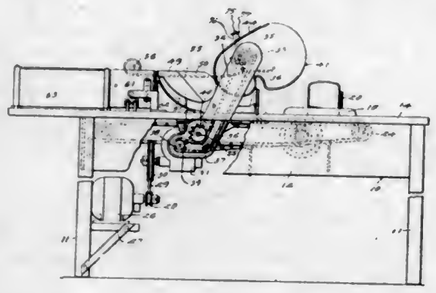
1,787,113. COLLAR AND CUFF. ELSIE C. LARSON, Nevada, Iowa. Filed Oct. 2, 1928. Serial No. 309,779. 3 Claims. (Cl. 2—123.)



1. A collar and cuff construction of the folded type comprising plies secured together along their marginal edges, one of the plies having a box-plait formed therein at the fold of the collar and cuff whereby to produce a multiplicity of exposed folded edges at such fold.

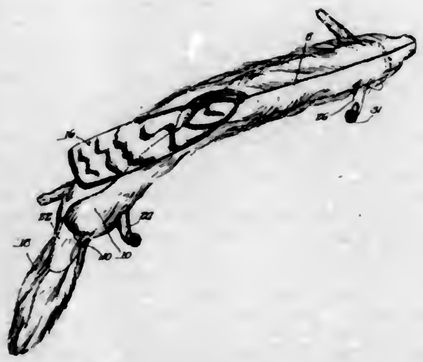
1,787,114. NUT-LOCKING DEVICE. WILLIAM ARTHUR LELEAN, Eltham, London, and DERRICK CHARLES BROWN, Kenton, England. Filed Apr. 28, 1930, Serial No. 448,024, and in Great Britain Apr. 11, 1929. 2 Claims. (Cl. 151—5.)

2. A locking member according to the preceding claim having a plurality of diametrical recesses, holes, or slots, for the split pin or the like, the said holes, recesses or slots being unequally spaced for the purpose specified.



1,787,115. WELDING MACHINE. GEORGE S. LEWIS, Oak Park, Ill. Filed May 18, 1928. Serial No. 278,788. 8 Claims. (Cl. 219—4.)

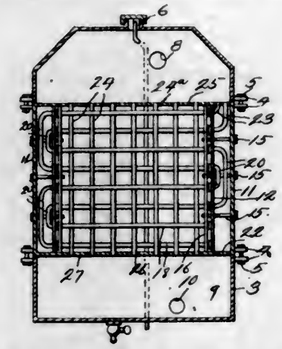
4. In a welding machine, an electrode formed of a shaft containing a recess opening through one end of said shaft and a disk portion surrounding said shaft and internally recessed, a journalling support for said electrode, a plug on said support and opposing the recessed end of said shaft, said plug containing separate passages, and a pipe communicating with one of said passages and extending into the recess in said shaft in spaced relation to the wall of said recess, the wall of the recess in said shaft being ported for communication of the recess in said shaft with the recess in said disk portion.



1,787,116. SEMIAUTOMATIC WRAPPING MACHINE. FRED MARASSO, Joliet, Ill. Filed July 12, 1928. Serial No. 292,091. 3 Claims. (Cl. 93—2.)

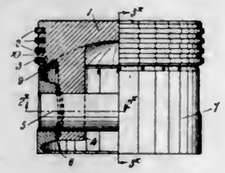
1. A machine of the class described having a rotatable folder, said folder having portions to effect the folding of separate folds and a slot between said portions for the purpose specified, and a coacting folder, the rotatable folder at a portion thereof being movable laterally opposite the coacting folder, said coacting folder having a

portion functioning dually as a folder member and to accommodate the aforesaid movement of the rotatable folder laterally opposite the coacting folder, and said coacting folder also having a folder portion spaced below the deflected folder portion.



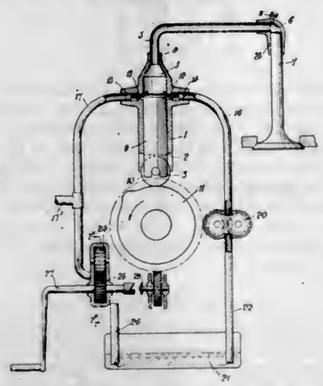
1,787,117. WEARING APPAREL. FLOY C. MERRILIES, Chicago, Ill. Filed Aug. 29, 1930. Serial No. 478,582. 6 Claims. (Cl. 2—65.)

1. An imitation animal neck scarf formed of yarn knitted or crocheted to provide a relatively narrow, tubular body of sufficient length to embrace the neck and shoulders of the wearer, and a separable filler comprising a body of light, warm material enclosed in an envelope, said filler being positioned within the tubular fabric body, said fabric body having a slit or opening to permit the removal of said filler, whereby said fabric body may be washed for cleaning, and means for closing said slit, said filler when positioned within the tubular body being constructed and arranged to give warmth and characteristic shape to the scarf.



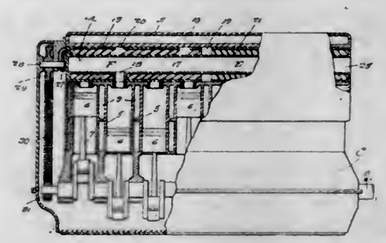
1,787,118. RADIATOR. PENDLETON W. MURRAY, Omaha, Nebr. Filed July 9, 1929. Serial No. 376,976. 3 Claims. (Cl. 257—131.)

1. A radiator comprising an upper section having a chamber therein into which water enters, a lower section having a chamber therein into which water enters and from which water is discharged, an intermediate section, said intermediate section comprising side chambered members, horizontal tubes carried by the intermediate section, vertical tubes carried by the intermediate section and communicating with the chambers of the upper and lower sections, U couplings connecting the ends of adjacent horizontal tubes thereby forming zig zag conduits, the upper horizontal tubes having one of their ends con-



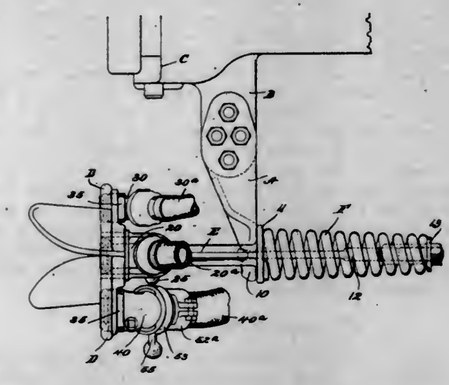
nected to the upper section, the ends of the horizontal lower tubes discharging into the lower section and said vertical tubes interwoven in the horizontal tubes and forming communication between the chambers of the upper and lower sections.

1,787,119. PISTON. WARREN NOBLE, Detroit, Mich. Filed June 17, 1927. Serial No. 199,472. 10 Claims. (Cl. 74—108.)



1. In a piston, a head and a skirt in spaced relation, fluid heat insulating means between the lower edge of said head and the upper edge of said piston and oil passages in said skirt below said insulating means, the lower edge of said head acting as an abutment for the upper edge of said skirt whereby rocking is definitely restricted.

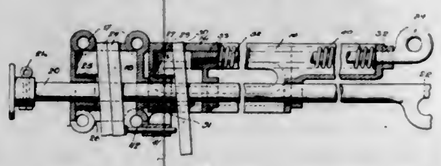
1,787,120. HYDRAULIC-VALVE-OPERATING MECHANISM. WARREN NOBLE, Detroit, Mich. Filed June 12, 1928. Serial No. 284,774. 15 Claims. (Cl. 123—90.)



1. In combination, an engine, a hydraulic valve system in said engine, a fluid reservoir, a pipe line from said reservoir to said system having a non-return valve therein, and means for unseating said valve to admit fluid from said reservoir to said system prior to the starting of said engine.

1,787,121. INTERNAL-COMBUSTION ENGINE. NICHOLAS A. B. ODOM, San Antonio, Tex. Filed July 6, 1929. Serial No. 376,447. 2 Claims. (Cl. 123—190.)

1. In an internal combustion engine, a hollow rotary tubular valve closed at one end and opened at its opposite end for communication with the atmosphere, said valve comprising spaced inner and outer concentric walls, the space between said walls constituting a longitudinally extending intake gas passage closed at opposite ends of the valve, the outer wall of said valve being provided with an annular intake port intermediate the ends of the valve for communication with said passage, said outer wall being further provided with an exhaust port for each cylinder of the internal combustion engine, said inner walls being provided with an exhaust port for each cylinder, said exhaust port extending through said passage and opening outwardly of said outer wall for communication with the cylinders, a spiral rib formed on the inner face of said outer wall extending from one side of said single intake port to one closed end of said passage, a second spiral rib extending from the other side of said single intake port to the other closed end of said passage, said spiral ribs having their outer edges in spaced relation to said inner wall of the valve.

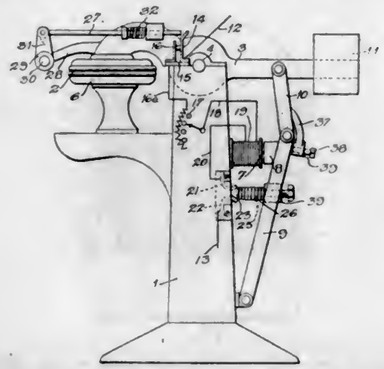


1,787,122. AUTOMATIC CONNECTER. JOSEPH ROBINSON, New York, N. Y. Filed July 29, 1921, Serial No. 488,373. Renewed Apr. 18, 1929. 4 Claims. (Cl. 285—24.)

1. In an automatic train pipe connecter, a coupling head having an opening therethrough, there being a shoulder formed adjacent the front end of the opening, a train pipe hose, a nipple rotatably connected to said hose and arranged in said opening and having its front end spaced from said shoulder, cooperating means on the nipple and

head for removably locking the nipple in said opening, a gasket mounted in said opening in front of said nipple, said gasket having a portion resting against the end of the nipple and another portion resting against said shoulder and extending slightly beyond the front face of the head, said gasket being shaped to expand under fluid pressure and hold said nipple in locked position and to seal the joint between the nipple and head.

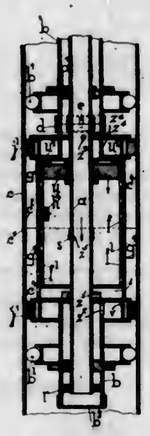
1,787,123. SLACK ADJUSTER. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Gould Coupler Company, New York, N. Y. Filed Feb. 9, 1925. Serial No. 7,955. 4 Claims. (Cl. 188—199.)



1. In an apparatus of the character described, in combination, a slack adjuster casing supported from the car body, a second casing movable relatively with respect thereto, an adjusting rod connected with the brake actuating mechanism, a swing adapted to be compressed on excess travel of the brake rigging, a take up rod connected with the upper end of the dead lever adapted to be actuated on release of the brakes after excess travel has occurred, flexible means associated with each of said connections adapted to permit relative movement of the truck with respect to the adjuster, and means whereby both the temporary and permanent take up and holding means may be released by a single operation when it is desired to replace worn parts.

1,787,124. METHOD FOR MAKING PURE ALUMINA BY ELECTROTHERMAL REDUCTION OF THE IMPURITIES IN ALUMINA-CONTAINING RAW MATERIALS. HANS SIEGENS, Horrem, near Cologne, Germany. Filed Dec. 22, 1927, Serial No. 242,001, and in Germany June 1, 1926. 8 Claims. Cl. 23—142.)

1. A method for making pure alumina by electrothermal reduction of the impurities in alumina-containing raw materials comprising the steps of charging the furnace at the beginning of the process with a raw material containing less carbon admixed than is necessary for the reduction of the impurities, then charging with mixtures of raw material and carbon containing increasing amounts of carbon, until the theoretical amount of carbon in the reaction mixture is reached, finishing the charging process with mixtures of raw material and carbon in such amounts that an excess of carbon is present in the reaction mixture, and tapping the liquid pure alumina at a moment when still such an amount of free carbon is present in the melt that a sample drawn is still light grey but not white and carbon monoxide is developed by the melt, thereby producing during the last period of the heating process a non-oxidizing atmosphere directly above the surface of the melt.

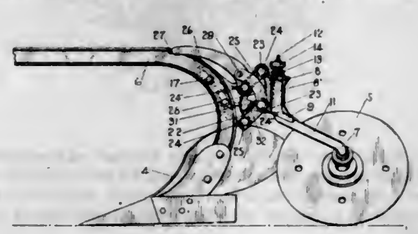


1,787,125. PRESS. ARTHUR E. SNOW, Cincinnati, Ohio, assignor, by mesne assignments, to The Daly Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 29, 1926. Serial No. 98,093. 4 Claims. (Cl. 68—9.)

1. A pressing machine comprising a bed, a movable head, toggle means operatively connected to the head and to a relatively fixed part and arranged to straighten with the closing of the head, manual means for closing the head, and means for affecting the pressing operation effective at substantially the knuckle of the toggle means, comprising magnetically permeable material on said knuckle, an electro-magnet on said frame, said electro-magnetic means being so spaced from said knuckle as to

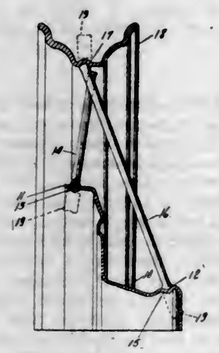
become effective when the toggle means have not quite straightened out so that the force exerted by the leverage of the toggle means and the magnetic attraction of the knuckle causes a relatively great proportionate increase in pressure as the head approaches the bed.

1,787,126. DEVICE FOR COATING THE INTERIOR OF WALLS OF PIPES OR CONDUITS. JOHANN STEINNES, Oberhausen, Germany. Filed Feb. 26, 1927, Serial No. 171,308, and in Germany Mar. 1, 1926. 13 Claims. (Cl. 91—43.)



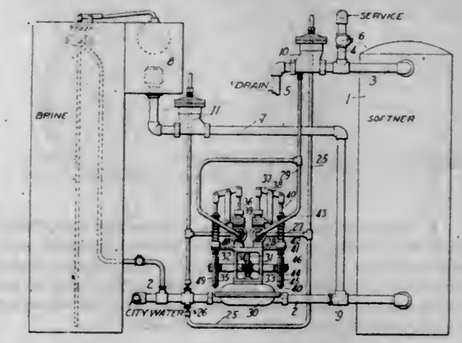
1. A device for coating the interior surfaces of pipes or conduits with paint, insulating material, corrosive substance or the like, comprising in combination. a vessel provided with outlet orifices and adapted to be inserted containing said coating material, means controlled from an end of the pipe for regulating the outlet orifices in said vessel and for ejecting the coating material from the latter, and a piston adapted to be moved from the end of the pipe longitudinally of the vessel to eject the coating material therefrom.

1,787,127. PLOW. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 12, 1928. Serial No. 318,630. 19 Claims. (Cl. 97—127.)



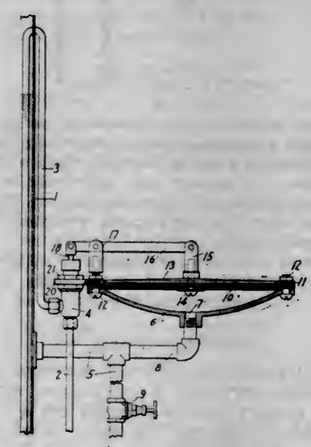
1. In a plowing implement, the combination of a supporting member, a plow carried thereby, a bracket having

vertically spaced slots therein, bolts passing through said slots and through said supporting member for securing said bracket thereto, serrations on said bracket adjacent to said slots and cooperating with said bolts for holding said bracket in different vertical adjustments relatively to said supporting member, upper and lower horizontal pivot bosses on said bracket, a rear furrow wheel, an axle therefor, a wheel mounting member in which said axle is swiveled for castering movement, upper and lower horizontal pivot bosses on said wheel mounting member, parallel link mechanism for movably connecting said wheel mounting member with said bracket comprising upper and lower U-shaped links having their side pivot portions passing through said upper and lower pivot bosses, up-



per and lower link bars mounted on the projecting ends of said side pivot portions, lifting mechanism comprising a lifting lever pivotally mounted on the front pivot portion of said upper U-shaped link, a lifting link pivotally mounted on the rear pivot portion of said lower U-shaped link, a pivot connecting said lifting lever and lifting link in a toggle joint adapted to pass over center beyond a straight line extending between the pivot centers of said lifting link and lifting lever when said lever is moved rearwardly in a lifting operation, and stops on said bracket and on said wheel mounting member adapted to contact for predetermining the lower position of said plow relatively to said rear furrow wheel when said lever is moved forwardly in a lowering operation.

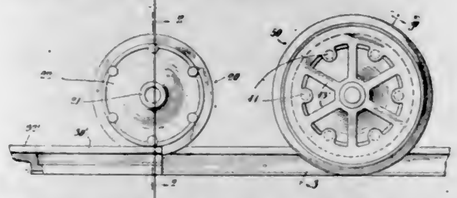
1,787,128. METHOD OF MAKING WIRE WHEELS. JOSEPH G. SWAIN, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 23, 1928. Serial No. 248,647. 6 Claims. (Cl. 29—174.)



1. The method of manufacturing compression spoke wire wheels comprising pressing spaced external indentations about the inner and outer ends of a hub, pressing a series of circumferentially spaced indentations about the radially inner surface of an oversized rim, forming a series of straight outer spokes with upset ends conforming to the contour of the indentations in the hub and rim, forming a series of double inner spokes of a single wire bent to substantially V-shape, upsetting the vertices and the ends of said double spokes to conform to the contours of the indentations in the inner end of the hub and in the rim, respectively, positioning the spoke ends and vertices in alignment with their respective indentations in the hub and rim, contracting the rim onto the spokes to compress the latter against the hub, applying electrical welding platens to the rim and hub in juxtaposition to the ends of a spoke, and welding the parts together under heat and pressure to produce an integral, unitary structure free from unequal stresses.

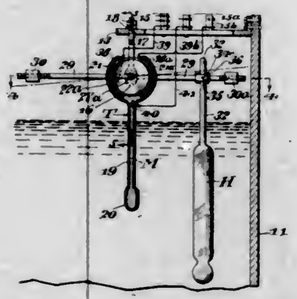
1,787,129. WATER-SOFTENING APPARATUS. EDWARD T. TURNER, Dayton, Ohio. Filed Aug. 31, 1925. Serial No. 53,524. 8 Claims. (Cl. 210—24.)

1. In an apparatus of the character described, a container, a pipe for supplying water to said container, other pipes connected with said container, separate fluid pressure operated valves interposed in said other pipes, connections between said supply pipe and said valves to normally subject the same to pressure, pilot valves to control the pressure on the respective fluid operated valves, a motor operated by the water delivered to said container, and means controlled by said motor for opening and closing said pilot valves.



1,787,130. LEVEL-CONTROLLING DEVICE FOR LIQUID CONTAINERS. EDWARD T. TURNER, Dayton, Ohio. Filed Jan. 3, 1927. Serial No. 158,711. 8 Claims. (Cl. 137—68.)

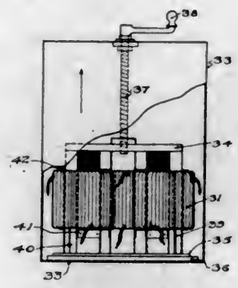
1. The combination with a container for a liquid, a supply pipe connected with said container, and a valve to



control the flow of liquid through said supply pipe, of a concave receptacle having open communication with said container at a point below the normal level of the liquid in said container, a diaphragm extending across the concave side of said receptacle, a clamping ring resting upon said diaphragm, means for securing said ring to said receptacle to clamp the edge of said diaphragm between the ring and said receptacle, said ring having a part projecting therefrom and adapted to engage said valve and support the same in fixed relation to said receptacle, and an operative connection between said diaphragm and said valve.

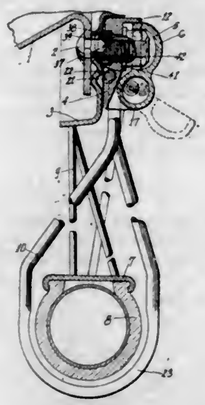
1,787,131. VEHICLE CONSTRUCTION. LEON UNDERWOOD, New York, N. Y. Filed Jan. 5, 1928. Serial No. 244,608. 6 Claims. (Cl. 295—8.5.)

1. A wheel for railway vehicles and the like comprising a main wheel body and a peripheral portion provided with inner and outer rail-engaging treads and an intermediate circumferentially disposed rib, in combination with a removable auxiliary road wheel and associated tire engaging the outer one of said rail-engaging treads.



1,787,132. GRAVITY-INDICATING SYSTEM. ALLEN A. VAN OSDALE, Houston, Tex., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 22, 1926. Serial No. 111,081. 2 Claims. (Cl. 177—351.)

2. Apparatus responsive to changes in the specific gravity of a liquid comprising in combination a pivoted receptacle comprising a chamber partially filled with mercury and extending into contact with said liquid, a conductor carried by said receptacle and dipping into the mercury to an extent affected by the thermal expansion of the mercury and the angular position of said receptacle, and means connected to said receptacle and subjected to the flotative action of said liquid for adjusting the angular position of said receptacle as the density of said liquid changes.

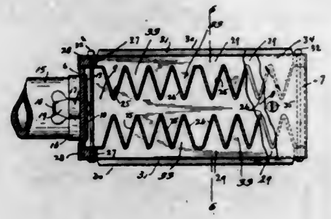


1,787,133. MEANS FOR REGULATING THE SPEED OF INDUCTION MOTORS. JOHN WILSON, Chicago, Ill., assignor to Ilg Electric Ventilating Co., a Corporation of Louisiana. Filed Mar. 20, 1925. Serial No. 16,968. 2 Claims. (Cl. 172—274.)

1. A regulator for ventilating fan motors of the squirrel cage type, comprising a housing having a base, three tubes mounted on said base and spaced substantially equi-distant from each other, a coil surrounding and carried by each of said tubes, above said base, to minimize eddy-currents and afford ventilation, a supporting member above said

coils, three cores secured to said member and extending into said tubes and a shaft secured to said support and passing up through said casing whereby said cores may be raised and lowered simultaneously from outside said casing.

1,787,134. LOCKING DEVICE FOR AUTOMOTIVE EQUIPMENT. SOLOMON WISE, Cincinnati, Ohio. Filed May 22, 1928. Serial No. 279,690. 13 Claims. (Cl. 70—90.)

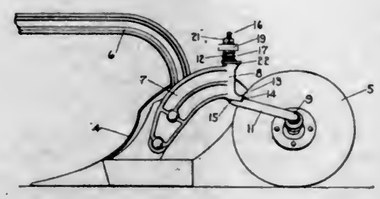


10. A locking device comprising a body plate perforated to receive a bolt, a bearing surface about said perforation, a nut revolvably mounted to exert pressure on said bearing surface, said body plate enlarged at one side to form a barrel section with a bore therein, said barrel section slotted intermediate its ends, a lock cover comprising a cover for said nut and a barrel section, said second barrel section mounted within the slot in said first barrel section, and locking means in the bore of said composite barrel section whereby said lock cover is pivoted upon said body plate and whereby it may be locked thereagainst, said locking means comprising a divided plug one portion of which is fastened to said body plate and the other portion of which is fastened to said lock cover, and means for locking said plug portions against relative rotation.

1,787,135. AIR FILTER. EUGENE L. BARNES, Buffalo, N. Y. Filed Apr. 22, 1929. Serial No. 357,040. 4 Claims. (Cl. 183—71.)

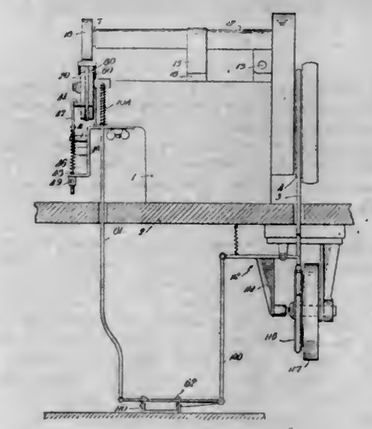
1. A filtering device comprising an open body frame, the body frame being provided with side walls, a top, and a

bottom, the top and bottom of the frame being formed with corrugated edges, an open retaining frame at each side of the body, having corrugated edges for co-operative engagement with the corrugated edges of the top and bot-



tom of the body frame, a filtering unit secured at each side of the body and held in place between the corrugated edges of the co-acting body frame and retaining frame, and means for connecting the filter to a source of suction.

1,787,136. PICK FOR STRINGED MUSICAL INSTRUMENTS. GEORGE D. BEAUCHAMP, Los Angeles, Calif. Filed July 30, 1928. Serial No. 296,192. 5 Claims. (Cl. 84—322.)



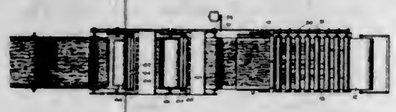
1. A pick for stringed musical instruments comprising a base member, terminating in a tip adapted for string engagement, said base member being provided with a perforation.

1,787,137. PLOW. THEOPHILUS BROWN, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 12, 1928. Serial No. 318,653. 10 Claims. (Cl. 97—127.)

1. In a plowing implement, the combination of a supporting member, a plow carried thereby, a furrow wheel in rear of said plow, a bracket carried by said supporting member having a substantially vertical bearing boss, a swinging axle for said furrow wheel comprising a forwardly and upwardly extending arm portion and a substantially vertical pivot standard at its front end, said pivot standard being mounted for rotative and vertical sliding movement in said bearing boss and having its upper end projecting above the same, the forwardly extending arm portion of said axle having a rounded upper surface, a lug projecting from the lower end of said bracket and having a concave under surface extending along and embracing the rounded upper surface of said arm portion, a spring surrounding the upper end of said pivot standard and bearing on said boss, a collar on said pivot standard engaging with the upper end of said spring, and a nut screwing down over said pivot standard for adjusting the pressure of said spring through said collar.

1,787,138. TAPE-APPLYING APPARATUS. LELAND K. BUTLER, Manchester, N. H., assignor, by mesne assignments, to Excel Taping Machine Co., Lynn, Mass., a Corporation of Massachusetts. Filed Jan. 10, 1929. Serial No. 331,550. 21 Claims. (Cl. 154—42.)

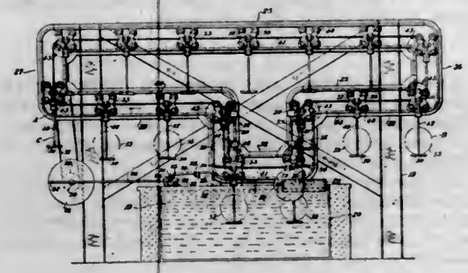
9. A machine of the class described comprising a pair of juxtaposed feed rolls, mechanism to drive the same at substantially the same peripheral speed whereby sheet material may be fed between the same, control means movable in opposite directions to initiate and stop operation of the driving mechanism, and a cutter adjoining the bite of the rolls automatically operate when the control means receives one of said movements.



1,787,139. PROCESS OF FORMING IRON FOILS. JOHN R. CAIN, Washington, D. C., assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed June 11, 1926. Serial No. 115,405. 1 Claim. (Cl. 204—1.)

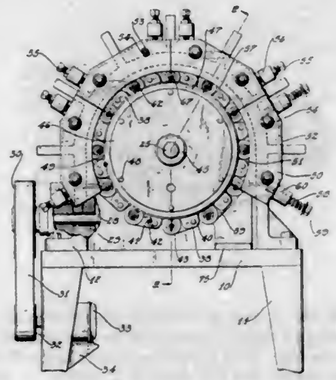
The process of producing iron foil which consists in electro-depositing iron upon a base of bright, clean copper, and then removing the copper electrolytically in a cyanide solution resulting in a foil having a polished appearance.

1,787,140. PROCESS AND APPARATUS FOR THE PRODUCTION OF FELT-BASE FLOOR COVERING. JOHN B. CAMPBELL, Salem, N. J., assignor, by mesne assignments, to Carthage Mills Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 17, 1925. Serial No. 69,610. 13 Claims. (Cl. 91—43.)



1. In an apparatus of the class described, means for feeding a web, means for producing a field upon the surface of the web comprising a plurality of applicator units

interspaced in the direction of travel of said web, each associated with a predetermined character of coating material and each unit comprising a reservoir of coating substance and a plurality of elements which control the application of the coating material associated with its unit to the surface to be coated, said elements being shiftable relatively to each other and transversely of the direction of movement of the web, whereby upon the movement of the web, the coating material associated with each unit, will be deposited thereby along a plurality of lines, each extending generally longitudinally of the web, with the lines of deposit positioned laterally of each other, the relative position of said lines varying with the relative position of the elements and means for shifting said elements relatively of each other as the elements are applying the coating material to the surface being coated.

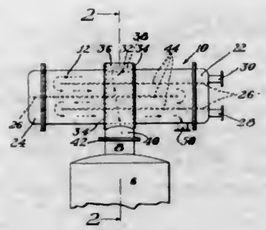


12. In an apparatus of the class described, means for feeding a web, means for producing a field upon the surface of the web comprising a plurality of applicator units arranged in back of each other, and each associated with a predetermined character of coating material, and each unit including a plurality of elements which control the application of the coating material associated with its unit to the surface to be coated, said elements being shiftable relatively to each other and transversely of the direction of movement of the web, whereby upon the movement of the web, the coating material associated with each unit will be deposited thereby along a plurality of lines, each extending generally longitudinally of the web, with the lines of deposit positioned laterally of each other, the relative position of said lines varying with the relative position of the elements and means for shifting said elements relatively of each other as the elements are applying the coating material to the surface being coated.

1,787,141. GALVANIZING MACHINE. JOHN CARROLL, Wheeling, W. Va., assignor to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Nov. 2, 1928. Serial No. 316,754. 8 Claims. (Cl. 91—126.)

1. Apparatus for coating metal articles, including a pot of coating material, a carriage movable adjacent to the pot, a frame pivoted upon the carriage and adapted to carry a pail and the like, means for moving the carriage to pass the pail through the coating material, and a cam track for swinging the frame upon its pivot to tilt the pail in different directions as it passes through the coating material.

1,787,142. CRIMPING MACHINE. JOHN M. CHRISTMAN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 25, 1927. Serial No. 235,481. 24 Claims. (Cl. 29—87.1.)

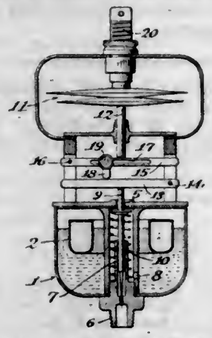


1. A crimping machine comprising a rotatable member, an arcuate member positioned eccentrically thereto, a work supporting head and work supporting devices on the head for rotatably supporting work pieces intermediate the rotatable member and the arcuate member.

1,787,143. SNAP FASTENER. CECIL F. CLARK and MABEL V. CLARK, Los Angeles, Calif. Filed July 1, 1927. Serial No. 202,808. 7 Claims. (Cl. 24—150.)

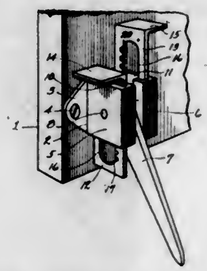
1. In a snap fastener including a plate, a pair of pins pivotally connected to one end of said plate, teeth on said plate against which said pins are adapted to rest to grip the cloth.

1,787,144. CONDENSER. RAYMOND R. COLLINS, Newton, Mass. Filed May 16, 1929. Serial No. 363,665. 7 Claims. (Cl. 257—28.)



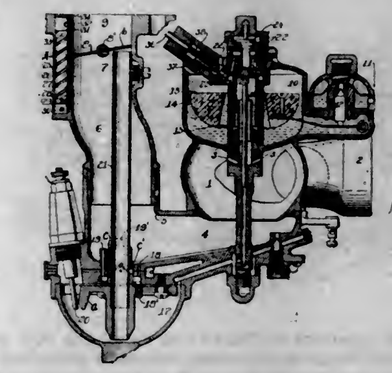
1. An overhead condenser for mounting on the top of a column having, in combination, a shell having a vapor inlet opening in the top, tubes in the shell, and a vapor conductor for conveying vapors from the column to the inlet opening, the conductor surrounding and being connected with the shell.

1,787,145. PROCESS OF VULCANIZING RUBBER TO LEATHER. LEON B. CONANT, Cambridge, Mass., assignor, by mesne assignments, to Standard Patent Process Corporation, a Corporation of Massachusetts. Filed July 22, 1927. Serial No. 207,819. 7 Claims. (Cl. 18—59.)



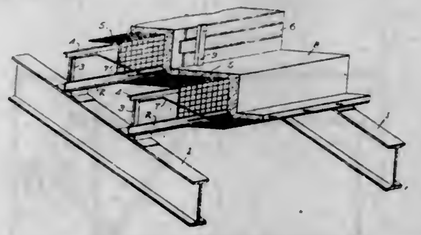
1. The process consisting in taking cement coated leather heated to adaptation for hot vulcanization and while at approximately the same temperature uniting and vulcanizing rubber composition thereto.

1,787,146. TEMPERATURE REGULATOR. GEORGE CRAIG, Los Angeles, Calif. Filed June 8, 1928. Serial No. 283,941. 5 Claims. (Cl. 236—99.)



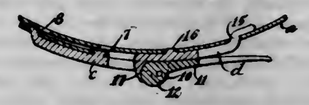
1. In a temperature regulator, a bowl adapted to contain liquid, said bowl having an outlet, a spring held needle valve controlling said outlet, a lever fulcrumed at one end and bearing on said needle valve, a second lever arranged above the first mentioned lever, which second mentioned lever is fulcrumed at one end, a pin adjustably mounted on the intermediate portion of the second mentioned lever and adapted to engage the intermediate portion of t' first mentioned lever, a push rod bearing on the intermediate portion of the second mentioned lever and a thermostat adapted to engage said push rod.

1,787,147. DOORCHECK. MERTON L. DODGE, Seattle, Wash. Filed Jan. 27, 1926. Serial No. 84,035. 3 Claims. (Cl. 292—338.)



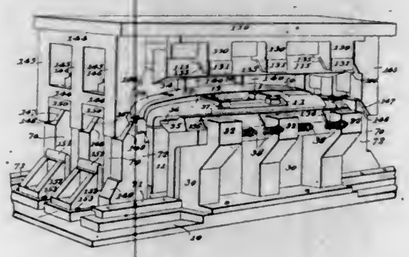
1. A door check comprising a mounting having means for attachment to a door and comprising spaced apart flanges with vertical guideways formed therein, a pivot pin extending between the said flanges, a sprag mounted at one end on said pin to swing between functional and non-functional positions, a gear on each side of the sprag concentric with said pivot pin, plates slidable in said guideways having rack teeth in mesh with said gears; one of said plates being operable downwardly to swing the sprag upwardly and the other plate being operable downwardly to swing the sprag to downward position and each of said levers being reset by actuation of the other lever.

1,787,148. CARBURETOR. ORVILLE H. ENSIGN, Pasadena, Calif., assignor to Ensign Carburetor Company, Los Angeles, Calif., a Corporation of California. Filed June 11, 1924. Serial No. 719,297. 10 Claims. (Cl. 261—69.)



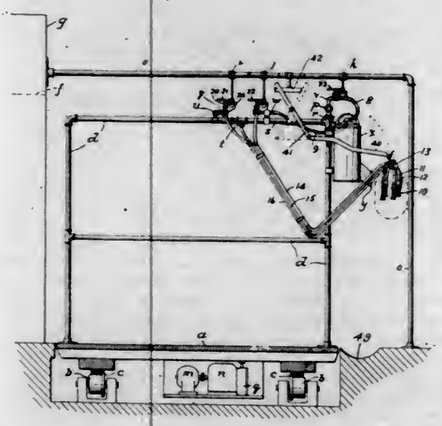
1. In combination with a carburetor, an economizer air bleed valve connected and adapted to be operated by predetermined manifold depression for controlling the admission of air into the fuel passage of the carburetor; a thermostat controlled valve positioned to be influenced by the temperature of the mixture to operatively connect and disconnect from the manifold the economizer valve at predetermined mixture temperatures.

1,787,149. CONCRETE STRUCTURE AND METHOD OF MAKING SAME. CHARLES R. GEISLER, Pittsburgh, Pa. Filed July 31, 1928. Serial No. 296,569. 8 Claims. (Cl. 72—1.)



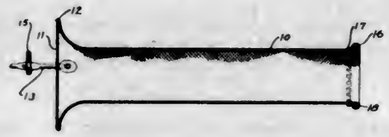
1. A monolithic floor structure having an interrupted surface consisting of risers and treads, comprising in combination, a plurality of spaced-apart girders sloping downwardly, transverse supports secured to said girders, and a reinforcing material consisting of wire mesh having a backing sheet on one side, secured to said transverse supports and bent to form treads and risers, the backing sheet of said reinforcing material constituting a form for the monolithic floor.

1,787,150. FLAGPOLE HOLDER. JOHN A. GEROW and ALFRED C. CANNON, El Segundo, Calif. Filed Aug. 11, 1928. Serial No. 298,914. 3 Claims. (Cl. 24—19.)



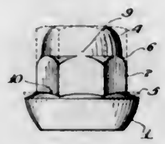
1. In a clamp, a plate having a curved head and an offset end for securing the plate to an object and a second plate provided with a cam-headed lever adapted to cooperate with the curved head of the first plate.

1,787,151. FLANGING BODY PANELS. OTTO J. GROEHN, Grosse Pointe Park, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 12, 1929. Serial No. 339,364. 20 Claims. (Cl. 113—48.)



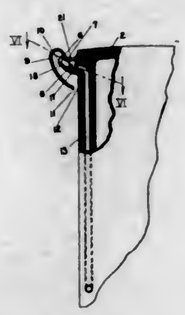
1. An apparatus for flanging an automobile body panel having a convex back portion, forwardly extending top and side portions; which consists of means for supporting the panel with the top and side portions extending downwardly, means for clamping the inner and outer faces of said panel portions, and means for forming inwardly projecting flanges simultaneously along the edges of said top and side portions.

1,787,152. COW-MILKING APPARATUS. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 17, 1928. Serial No. 262,337. 45 Claims. (Cl. 31—58.)



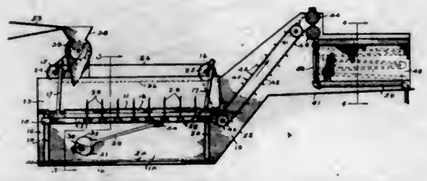
37. In a cow milking machine, the combination with a rotatable platform adapted to carry cows to be milked while the platform is rotating, of a source of vacuum, milk pails arranged at intervals along the platform, means adapted to connect the respective milk pails with vacuum or atmosphere, said means including valves adapted to connect the respective milk pails with atmosphere, sets of teat cups and milk conduits adapted to connect them with the respective pails, said pails having milk outlets, closures controlling said outlets and adapted to be held closed by a vacuum within the pails, and a relatively fixed actuator adapted, in the rotation of the platform, to operate said valves successively and thereby admit air to the pails successively and allow corresponding pail closures to open successively and discharge milk.

1,787,153. INFLATION DEVICE. WILLIAM E. HUFFMAN, Dayton, Ohio. Filed Oct. 29, 1929. Serial No. 403,270. 7 Claims. (Cl. 230—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



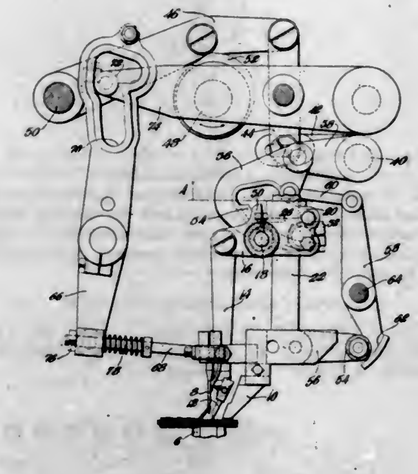
1. A refillable pliable container having one end normally open to receive a fluid and a valve at the other end of said container to permit deflation of said container when in an inflated condition.

1,787,154. CAP NUT. JAMES W. HUGHES, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 20, 1926. Serial No. 149,730. 3 Claims. (Cl. 85—35.)



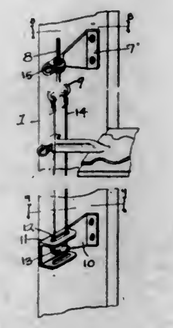
1. A cold forged cap nut comprising a solid forged main body having a tapered engaging face, merging by a conical surface into a polygonal body, a dome-like end portion surmounting said body, of a diameter substantially equal to that of the polygon across the sides and connected thereto by a fragmentary cone-shaped portion, and a spherical depression in the top of said dome-like end, having a distinguishing character impressed therein.

1,787,155. MOTOR VEHICLE. CARL H. INGWER, Elyria, Ohio. Filed Feb. 17, 1927. Serial No. 168,892. 5 Claims. (Cl. 296—137.)



1. In a motor vehicle, the combination with a motor vehicle body, a top therefor, a conduit supported by the vehicle adjacent the border portion of the said top, means to connect a source of water under pressure to the said conduit, said conduit being effective to discharge water against the sides of the motor vehicle adjacent the top, said conduit being approximately scroll-shaped and having superposed rain water conducting eaves, and cleansing water conducting channel portions, said eaves portion being disposed above the said channel portion, said eaves portion containing openings to drain water therefrom into the said channel portion.

1,787,156. USED JOURNAL-BOX-WASTE CLEANING MACHINE. THOMAS M. LAWSON, Indianapolis, Ind. Filed June 17, 1929. Serial No. 371,328. 4 Claims. (Cl. 141—12.)



1. In a used journal-box waste reclaiming machine, a tank, a transverse floor across the tank having openings therethrough, fingers carried below the floor, and means for raising and lowering said fingers through said openings, a waste sweating compartment having a perforate bottom, heating means about said compartment, a drain floor below said compartment, means for transferring the waste from said tank to said compartment, and said drain floor sloping back to said tank to drain oil thereto coming through the perforate bottom.

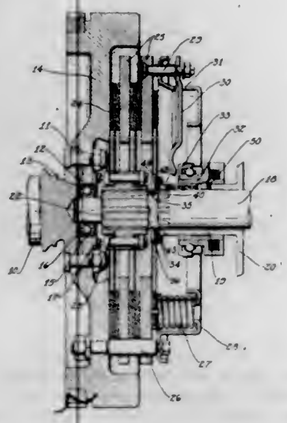
1,787,157. FEED MECHANISM FOR SEWING MACHINES. BERNARD T. LEVEQUE, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 19, 1925. Serial No. 63,230. 11 Claims. (Cl. 112—47.)

7. A sewing machine having, in combination, stitch forming devices, a presser foot, a lever pivoted thereon and having a limited swinging movement, a feed point pivotally mounted at its upper end on one end of the said lever, an abutment on the other end of the lever, a presser foot lifting member, means for moving the lifting member to engage the abutment and swing the lever on the presser foot until the feed point engages the work and thereafter lift the presser foot and feed point, and means controlled by the thickness of the work for positioning the lifting member to cause it to engage the abutment at the same point in its lifting movement regardless of the thickness of the work.

1,787,158. GUIDE FOR VENETIAN BLINDS. THOMAS E. MCNULTY, Alameda, Calif. Filed Feb. 16, 1929. Serial No. 340,519. 8 Claims. (Cl. 156—17.)

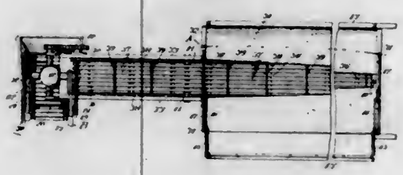
1. A guide for a window shade comprising a pair of wires arranged in spaced parallel relation at a side of the shade; and a plurality of slides arranged in spaced relation along said side of the shade, slidably confined by the wire guides.

1,787,159. BALLOON SPINNER. BENJAMIN C. MERRITT, Shrewsbury, Mass. Filed Apr. 4, 1929. Serial No. 352,559. 6 Claims. (Cl. 46—53.)



6. In a balloon spinner, the combination with a rod and means at the top thereof for supporting an inflated balloon, of a handle rotatably mounted on said rod and a wire supported by the rod at a distance from the handle and projecting therefrom and provided with a weight on the end for the purpose described.

1,787,160. CLUTCH BRAKE FOR MOTOR VEHICLES. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 4, 1927. Serial No. 230,973. 9 Claims. (Cl. 192—13.)

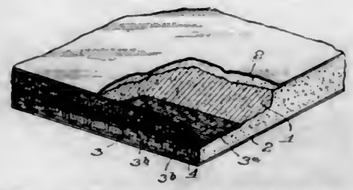


7. A brake mechanism comprising a clutch shaft, a thrust washer on the shaft secured against rotation and axial movement, a sleeve on the shaft secured against rotation, a clutch brake pressure sleeve slidably mounted on the shaft intermediate the thrust washer and the sleeve

secured against rotation, fingers on the clutch brake pressure sleeve engaging slots in the sleeve secured against

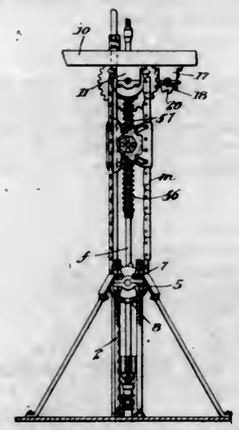
rotation, springs mounted in the fingers and means engaging the springs to actuate the clutch brake pressure sleeve for coaction with the thrust washer.

1,787,161. METHOD OF AND APPARATUS FOR HANDLING BEETS. LEONARD B. NEIGHBOUR and FREDERICK A. THOMANN, East Moline, Ill., assignors to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed June 29, 1923. Serial No. 648,445. 29 Claims. (Cl. 209—2.)



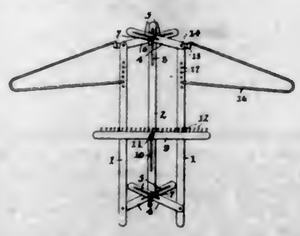
1. An apparatus for separating dirt from beets and like articles, comprising in combination a horizontally elongated receptacle adapted to contain the articles in mass, means underlying and forming a horizontally elongated bottom for said receptacle which supports the articles therein in mass while permitting matter separated from such articles to pass therethrough, means under said receptacle for removing the separated material, and means for moving the lowermost of such articles longitudinally of said receptacle substantially horizontally under and relatively to the mass of overlying articles, and out of the receptacle.

1,787,162. STUCCO MIX AND PROCESS FOR MAKING THE SAME. GUSTAVE ADOLPH NEW, Port Clinton, Ohio, assignor to American Gypsum Company, Port Clinton, Ohio, a Corporation of Ohio. Filed May 19, 1927. Serial No. 192,793. 8 Claims. (Cl. 106—20.)



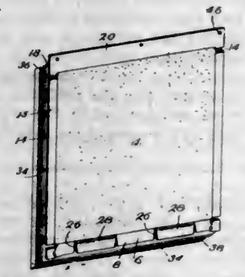
8. A composition for producing a gypsum product of cellular texture consisting of a mixture of calcined gypsum in plastic form and a foam consisting of an agitated solution of blood albumin and lime.

1,787,163. GYPSUM WALL BOARD. GUSTAVE ADOLPH NEW, Port Clinton, Ohio, assignor to American Gypsum Company, Port Clinton, Ohio, a Corporation of Ohio. Filed Mar. 26, 1928. Serial No. 264,658. 23 Claims. (Cl. 154—2.)



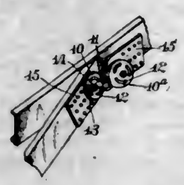
1. A wall board comprising a plaster body, covering sheets of fibrous material extending over the top and bottom faces of said body and a strip of mesh fabric applied over the edge face of said body and having a portion thereof extending into said body.

1,787,164. PUMPING JACK. HENRY W. PARKIN, Los Angeles, Calif., assignor of one-half to Harley J. Gunderson, Los Angeles, Calif. Filed July 5, 1928. Serial No. 290,297. 6 Claims. (Cl. 74—14.)



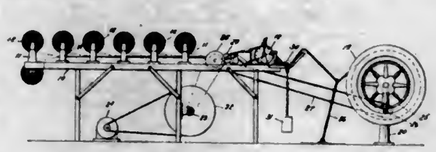
1. In a cross head, a central member formed with bifurcated ends and with a bore, means for guiding movement of an object through said bore arranged in said bifurcated ends, and a pair of cheek members rotatively secured to said central member.

1,787,165. GARMENT STRETCHER. LOUISE W. PEEBLES, Hawthorne, N. J. Filed May 9, 1929. Serial No. 361,556. 5 Claims. (Cl. 223—19.)



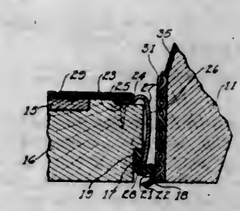
1. A garment stretcher including a body structure and a rebent wire stretching form having its ends bent off at right angles to each other, the body structure having a hole receiving one of said ends and in which it is held substantially fixed and also holes successively spaced from the first hole and any one of which is adapted to receive and hold the other of said ends.

1,787,166. BUILDING SLAB. JOHN H. POWERS, Kansas City, Kans.; Mary A. Powers owner by decree of court. Filed Nov. 26, 1928. Serial No. 322,029. 2 Claims. (Cl. 72—40.)



1. In combination with a plurality of strips spaced equal distances apart and arranged perpendicularly upon the wall of a building, a plurality of slabs secured to said strips and each consisting of a plastic body, a reinforcing member embedded in each body, a tongue extending longitudinally of the upper portion of each reinforcing member, and a tongue and groove at the lower portion of each reinforcing member, the last-mentioned tongue fitting between two of the strips while said groove receives the tongue at the upper portion of an underlying reinforcing member.

1,787,167. CONNECTING MEANS FOR RAFTERS. FREDERICK L. PURDY, Columbus, Ohio. Filed Dec. 7, 1927, Serial No. 238,366. Renewed June 19, 1928. 3 Claims. (Cl. 189—36.)

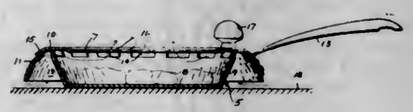


1. Means for connecting a rafter to a roof frame member, including leaves for attachment to the rafter and frame member respectively, universally adjustable means connecting said leaves, and means for securing said leaves in adjustment with regard to the frame and the rafter respectively.

1,787,168. TIRE-FLAP MAKING APPARATUS. EDWARD D. PUTT, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 19, 1928. Serial No. 286,693. 2 Claims. (Cl. 154—9.)

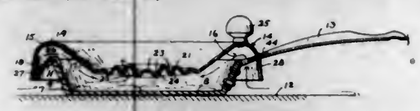
1. The combination of apparatus for assembling and compressing a plurality of continuous rubberized strips of material to form a laminated tire flap band, means for driving said apparatus, means for reeling said band onto a vulcanizing form, means for driving said form from said apparatus driving means, a weighted roller engageable with said band between said apparatus and said form for maintaining tension in said band, and means actuated by said roller for increasing or diminishing the speed of the reeling means as the tension in said band is respectively diminished or increased.

1,787,169. MOTOR-VEHICLE BODY. EDWARD F. ROBERTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 11, 1926. Serial No. 128,550. 7 Claims. (Cl. 296—29.)



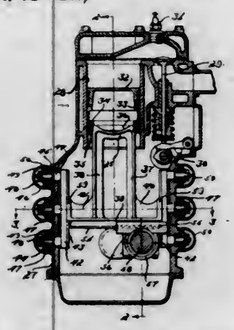
3. In a vehicle body, a floor having a sill and adapted to support a carpet, a door for said body adapted to close into spaced relation with said floor, a weatherstrip carried by the sill and adapted to be engaged by the door when closed, a resilient metal member secured to said sill and adapted to clamp the weatherstrip to said sill, and means attaching the metal member to said sill and concealed by said carpet.

1,787,170. CREASING AND CUTTING MACHINE. JOHN T. ROBINSON and HORACE F. COOK, Boston, Mass., assignors to John T. Robinson Company, Boston, Mass., a Corporation of Massachusetts. Filed June 6, 1929. Serial No. 368,979. 11 Claims. (Cl. 164—70.)



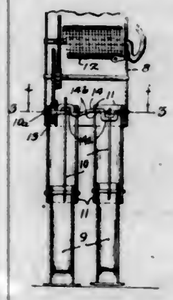
1. In a machine of the character described, in combination, a cutting member, a cutter holder, a cutter carrier movably mounted on said holder, a cutting disc rotatably mounted on said carrier and normally overlapping said member so as to cooperate therewith to shear stock passed therebetween, means for resiliently pressing said overlapping disc and member laterally against one another, and means for resiliently urging said carrier in a direction parallel to the plane of said disk away from said member and towards said holder.

1,787,171. CULINARY MEANS. ALFRED ROHRMANN, Oakland, and HELLMUTH SCHMIDT, Berkeley, Calif. Filed Jan. 21, 1929. Serial No. 333,864. 8 Claims. (Cl. 53—7.)



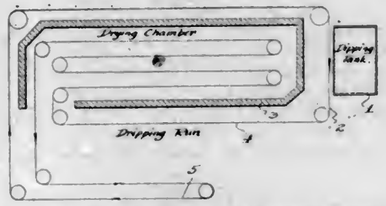
1. A cooking utensil comprising a vessel having a continuous side wall terminating in a rim defining a top opening for the vessel cavity, a hood member extending outwardly and downwardly from the wall at said rim to define an annular space encircling the vessel, a passage connecting said space and said cavity through said wall, and a cover member engaging said rim and having a central vent passage therethrough, no portion of said cover member extending above the plane of its rim engaging edge portion.

1,787,172. COVER FOR COOKING VESSELS. ALFRED ROHRMANN, Oakland, and HELLMUTH SCHMIDT, Berkeley, Calif. Filed Jan. 21, 1929. Serial No. 333,865. 5 Claims. (Cl. 53—7.)



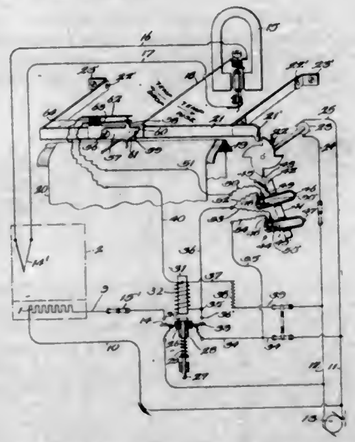
1. In combination with a cooking vessel having a rim defining a top opening, a cover arranged to be supported over said opening, said cover having an outer portion formed to provide a downwardly opening groove for receiving said rim in spaced relation from the walls thereof and a perforated inner portion arranged for disposal below the plane of said rim, and means on said cover engageable with the vessel for supporting the cover with said portions thereof in the aforesaid relations to the rim.

1,787,173. PISTON DRIVE. WILLIAM SAMUELS, Detroit, Mich. Filed Oct. 21, 1927. Serial No. 227,842. 4 Claims. (Cl. 74—14.)



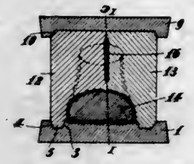
1. In a mechanism of the class described, a piston; a piston extension carrying crosswise a slide rail; guide bars for the piston extension; a crank; and a crank block forming a bearing around said crank and forming a slide saddle around said slide rail, said slide saddle having end recesses adapted to clear said guide bars in the extreme positions of the slide block.

1,787,174. MECHANICAL MOVEMENT AND TOY. ERNEST H. SCHMIDT, Mankato, Minn. Filed Apr. 23, 1928. Serial No. 272,009. 4 Claims. (Cl. 46—40.)



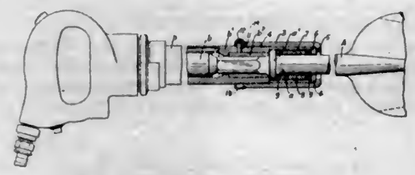
1. An automatic spring actuated walking toy comprising a body containing a clock work drive, upper and lower leg sections articulated together at the knee joints and supporting said body and a crank shaft supported by said body and receiving motion from said clock work drive, which shaft has two identical cranks of relatively long throw, located 180° apart in a common plane through the axis of said shaft's rotation and two identical cranks of relatively short throw located 180° apart in a common plane extending through the axis of said shaft's rotation, said plane intersecting said first mentioned plane wherein said long cranks lie, through said axis and at an acute angle and connections from said long cranks to the upper leg sections for imparting the pivotal or step by step motion to the legs and connections from said short cranks to said upper leg sections to secure the sidewise wabbling motion of said body relative to said legs and shift the center of gravity of the load from the moving to the stationary leg at the instant the step of the moving leg is being started.

1,787,175. APPARATUS FOR ENAMELING METAL ARTICLES. ALVIN G. SHERMAN, Grosse Pointe, and ALBERT MEADOWS, Detroit, Mich., assignors to The Detroit Vapor Stove Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 26, 1927. Serial No. 171,356. 2 Claims. (Cl. 25—2.)



1. In an enameling mill of the type having a rotary furnace for consecutively firing metal articles at a relatively high heat and means for receiving the fired articles, the combination with said firing furnace and said receiving means of a conveyer positioned therebetween, one end of the conveyer being adjacent the outlet of the furnace and the other end adjacent said receiving means, the surface of said conveyer being relatively flat whereby to receive the hot fired articles and to straighten the same, the length of the conveyer between said furnace and said receiving means being such as to insure cooling and fixing of the straightened articles whereby to insure that the articles will not be affected when transferred from the straightening conveyer to the receiving means.

1,787,176. HEAT REGULATOR AND RECORDER. ALBERT F. SPITZGLASS, Chicago, Ill., assignor to Republic Flow Meters Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 10, 1927. Serial No. 160,155. 19 Claims. (Cl. 236—70.)

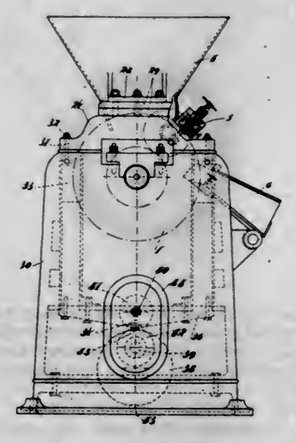


1. In a means for controlling the temperature in an enclosure including an electrically operable heating element, a pyrometer having an arm movable in accordance with the temperature within said enclosure, a bar periodically movable toward and from said arm, and means including a periodically operating part and another part located on the bar and cooperable with said arm for controlling said heating element in accordance with the position of the arm at the moment when the bar moves toward it, said bar and first named part operating in cycles in timed relation to each other.

1,787,177. MOLD FOR MANUFACTURING BOOTS, SHOES, AND SIMILAR ARTICLES OF RUBBER OR OTHER PLASTIC MATERIAL. HECTOR STEPPÉ, ALPHONSE STEPPÉ, and GUSTAVE STEPPÉ, Berchem-Ste. Agathe, near Brussels, Belgium. Filed Sept. 29, 1928, Serial No. 309,202, and in Belgium Mar. 26, 1928. 3 Claims. (Cl. 18—35.)

1. A mold of several parts for manufacturing boots, shoes and like articles of footwear of rubber or like plastic material, comprising top and bottom mold plates through which pressure is applied in molding, two side mold blocks, the oppositely disposed faces of which are hollowed out to conform with the upper of the footwear, a continuous recess in the inner face of said top mold plate for engagement by the top face of the side blocks, a recess in the inner face of said bottom mold plate for engagement by the bottom face of the side blocks and of such shape as to enclose in its center an outstanding portion for supporting the sole of the foot wear, bevelled edges on both side mold blocks and both recesses cooperating in such a way that the side mold blocks move inwardly on pressure being applied, and a last independent of the mold blocks and plates and adapted to be placed on the sole of the footwear.

1,787,178. TOOL-RETAINING COUPLING. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed May 2, 1924. Serial No. 710,682. 10 Claims. (Cl. 121—32.)

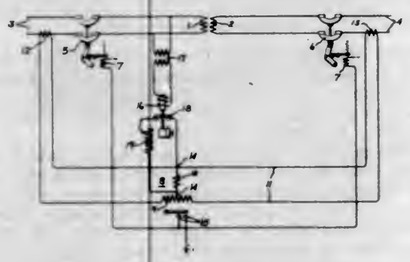


1. The combination with a percussive machine and a working tool having a collar, of a coupling device comprising a barrel nut secured to said machine and receiving the collared shank of the tool therewithin, said nut having at its outer end an inturned flange providing an opening of greater diameter than said collar, a split ring encircling the tool shank and engaging said flange to form an abutment for said collar, and means interposed between said machine and said ring for maintaining the latter rigidly in place.

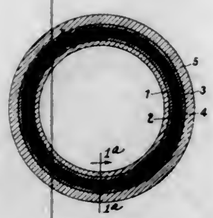
1,787,179. LENS EXTRACT AND PROCESS OF MAKING IT. ELMER H. STUART, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed Oct. 11, 1926. Serial No. 141,035. 16 Claims. (Cl. 167—74.)

1. The process of preparing a lens extract, which consists in extracting with alcohol lenses of the eyes of animals, repeating the extraction several times with separate quantities of alcohol, mixing the several extracts together, evaporating the combined extracts and adding water before the completion of the evaporation, defatting with a suitable hydrocarbon, evaporating further, and separating and preserving the clear liquid.

1,787,180. MILL FOR GRINDING PAINTS, INKS, ENAMELS, AND OTHER VISCOUS MATERIALS. ERNEST GEORGE TODD, Brussels, Belgium. Filed Sept. 21, 1929. Serial No. 394,357. 3 Claims. (Cl. 83—14.)



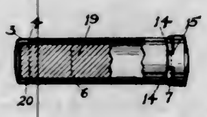
1. A mill for grinding paints, inks, enamels and other viscous materials, comprising a roller actuated to have a rotary movement, a feed hopper adjustably mounted above the roller, a casing fixed to the frame and extending longitudinally of the roller, a sliding member adapted to reciprocate longitudinally in said casing, a grinding block fixed to said sliding member and adapted to contact the roller along its whole length, cams adapted to reciprocate said sliding member, means driven from the roller to rotate said cams, a number of pressure screws adapted to press the block against the roller and reciprocating with the sliding member, winged heads for adjusting the pressure of said screws, a number of idlers adapted to press a lateral face of the block against a smooth surface of the sliding member and means to adjust the pressure of said idlers.



1,787,181. PROTECTIVE ARRANGEMENT. OLIVER C. TRAVER, Pennfield, Upper Darby, Pa., assignor to General Electric Company, a Corporation of New York. Filed Jan. 2, 1929. Serial No. 329,845. 5 Claims. (Cl. 175—294.)

1. In combination with electromagnetic apparatus subject to magnetizing inrush currents, fault responsive protective means including a relay having two cooperating windings respectively connected to be energized in ac-

cordance with the sum of and the difference between the currents into and from said apparatus and means responsive to the energization of said apparatus for decreasing the sensitivity of the relay until the subsidence of the magnetizing inrush current transient.

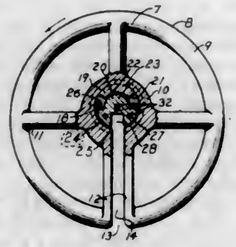


1,787,182. LOOM PICKER. VALENTIN WEISS, Berlin-Weissensee, Germany, assignor to the Firm Jaroslaws Erste Glimmerwarenfabrik, Berlin, Germany. Filed Apr. 15, 1929, Serial No. 355,019, and in Germany Apr. 20, 1928. 10 Claims. (Cl. 139—160.)

1. A picker for looms or similar article comprising untreated fibrous layers and fibrous layers treated with an artificial resin, the juxtaposed untreated and treated layers being firmly united by the said resin.

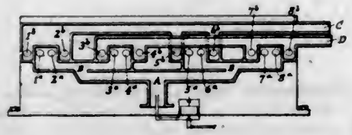
1,787,183. COSMETIC HOLDER. HENRY W. WILD and PHILIP A. REUTTER, Waterbury, Conn., assignors to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 7, 1928. Serial No. 268,109. 3 Claims. (Cl. 220—31.)

1. In a cosmetic holder, an outer casing having a bead, an inner casing extending above the bead of the outer casing, a cutout in the outer casing extending through the bead, and a cap having an integral extension shaped to form a pivot wider than the cutout and frictionally held in the bead by and between the outer and inner casings and hinging the cap to the holder.



1,787,184. RADIATOR SHIELD. BEN ALTHEIMER, University City, Mo., assignor to Myrtle Altheimer, University City, Mo. Filed Mar. 5, 1929. Serial No. 344,239. 7 Claims. (Cl. 237—79.)

3. An impervious shield formed from a single sheet of flexible material, folded to form a back, a top, a front apron and sides joining the ends of the top, apron and back, all the said parts being formed by folding the material and forming an unseamed, impervious cover open below, the material employed having sufficient body to



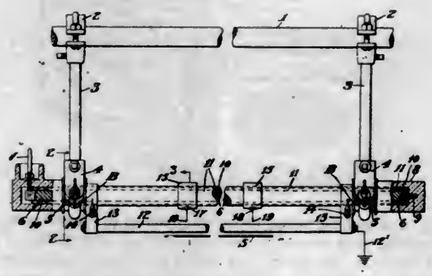
permanently retain the folds and make the shield self-maintaining as to shape, and means for securing the portions of the sheet in folded position.

1,787,185. WRENCH. LYNNE D. BAIRD, Tulsa, Okla. Filed Apr. 21, 1928. Serial No. 271,769. 4 Claims. (Cl. 81—53.)

1. In a coupling wrench, a support comprising a circular hub and a radial handle, the hub having concentric recesses at the upper and lower ends of its central opening, a socket member comprising a body rotatable in the central hub opening and an integral flange seated in one of said recesses, a plate seated in the other hub recess and fixed to the body to retain the socket member rotatably in the hub, and means for limiting the rotation of the socket member with respect to the hub, the hub and socket member being provided with openings to admit a coupling to the socket member.

1,787,186. INLET MANIFOLD FOR STRAIGHT-EIGHT INTERNAL-COMBUSTION ENGINES. JEAN A. H. BARKEIJ, Los Angeles, Calif. Filed Mar. 10, 1925. Serial No. 14,401. 15 Claims. (Cl. 123—59.)

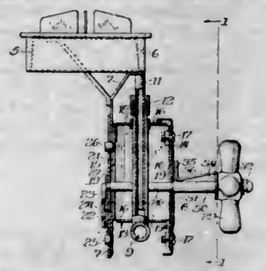
1. In an internal combustion engine having eight cylinders arranged in a line, a riser connected with two oppositely arranged branches, the free ends of said branches



being connected to other oppositely arranged branches, the free ends of said second branches of one of said first branches connected respectively to cylinders 1 and 2, and to cylinders 3 and 4, the free ends of said second branches of the other of said first branches connected to cylinders 5 and 6, and cylinders 7 and 8 respectively, so that the distances from the intake of said riser to all the individual cylinders of said engine is substantially the same, said cylinders of said engine numbered consecutively.

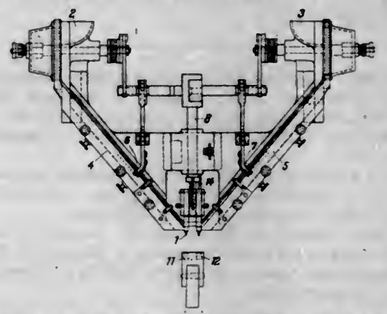
1,787,187. PRINTING-PRESS CYLINDER. MARTIN W. BRUESHABER, River Forest, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Filed Feb. 15, 1928. Serial No. 254,471. 4 Claims. (Cl. 101—375.)

1. A high speed rotary relief printing press cylinder including in combination a dense wear resisting metal shaft and a metal cylinder thereon of relatively low specific gravity with respect to the metal of the shaft.



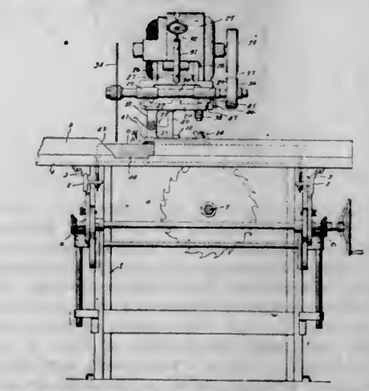
1,787,188. NEUTRALIZING APPARATUS. WILLIAM H. CHAPMAN, Portland, Me., assignor to Chapman Electric Neutralizer Company, Portland, Me., a Corporation of Maine. Filed Mar. 25, 1930. Serial No. 438,682. 2 Claims. (Cl. 175—264.)

1. In apparatus for neutralizing the static electricity of a moving sheet, a fixed support, a discharge bar clamped to said support, and a ground bar clamped to said discharge bar, and a plurality of discharge points suspended from said discharge bar, the clamp connection of the discharge bar with said support permitting the discharge bar and with it the ground bar and discharge points to be rotatively adjusted as a unit relative to the sheet, and the clamp connection of the ground bar with the discharge bar permitting said ground bar to be rotatively adjusted independently of said discharge bar and discharge points.



1,787,189. LIQUID-FUEL STOVE. WILLIAM L. COOPER and LEON D. FORTIER, Kankakee, Ill., assignors to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Aug. 4, 1927. Serial No. 210,513. 9 Claims. (Cl. 158—42.)

5. In a wickles fuel burner, in combination, a frame, a fuel container adapted to be positioned to change the fuel level therein to regulate a flame, a support for said container adapted for vertical movement relative to the frame, and means mounted on said frame for adjusting the position of said container, said means being movable vertically relative to said frame and adapted simultaneously with the movement thereof to effect a vertical move-



ment of said support relative to said means whereby the change in position of said container may be effected by a limited movement of said means.

1,787,190. RIVETING MACHINE. HEINRICH ELSNER, Dresden, Germany. Filed Apr. 16, 1929. Serial No. 355,612. 1 Claim. (Cl. 218—0.5.)

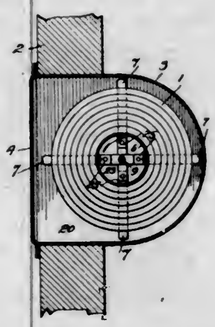
A riveting machine comprising two rivet feeding devices, a plunger formed with a double riveting set, a rivet case arranged directly on the said plunger and adapted to slide thereon, a spring to pull up the said riveting case on the said plunger, pairs of jaws adapted to swing about bolts on the said case, and springs to draw the jaws against the said plunger, the jaws being arranged to grip the rivets slightly below their heads.

1,787,191. WOODWORKING MACHINE. WILLIAM T. FISK, Detroit, Mich., assignor to Master Woodworker Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed June 23, 1927. Serial No. 200,833. 1 Claim. (Cl. 143—6.)

In combination with a support, a track pivotally mounted thereon, the pivotal axis being parallel to the longi-

tudinal axis of the track, whereby said track may be tilted in a direction transverse of its length, a vertical saw slidably mounted on said track and lying in a plane parallel to the longitudinal axis of the track, and a double stop member carried by said support and consisting of two arms engageable by said track in different angular positions, one of said arms being a vertical member adapted to hold said track in a horizontal position, and the other arm being inclined at 45° to the horizontal, whereby the angular movement of the track is limited to a movement between its horizontal position and one at an angle of 45° thereto.

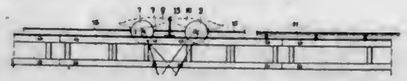
1,787,192. METHOD OF PURIFYING PHOSPHORIC ACID AND THE LIKE. AUGUSTUS H. FISKE, Providence, R. I., assignor to Rumford Chemical Works, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 11, 1928. Serial No. 299,106. 3 Claims. (Cl. 23—165.)



1. In the maunfacture of phosphoric acid, those steps which consist in adding relatively small amounts of a soluble sulphide to the dilute acid prior to concentration and in then evaporating in a vessel having a corrodable lining while gradually adding more sulphide to the acid as it concentrates.

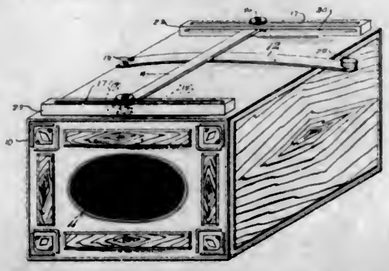
1,787,193. LEAVENING PREPARATION. AUGUSTUS H. FISKE, Warren, R. I., assignor to Rumford Chemical Works, Providence, R. I., a Corporation of Rhode Island. Filed July 2, 1929. Serial No. 375,595. 5 Claims. (Cl. 99—10.)

1. In a leavening preparation, gas forming reactants including a phosphate having added iron chemically combined therein in excess of normal residuum.



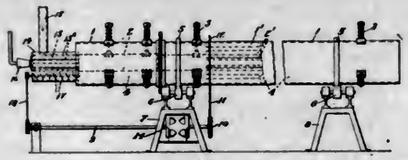
4. The method of improving the keeping quality of a leavening preparation including a phosphoric acid ingredient which consists in augmenting its iron ingredients above three per cent.

1,787,194. STATIONARY HOSE REEL. RICHARD T. FREETH, Hempstead, N. Y. Filed Jan. 5, 1928, Serial No. 244,604. Renewed May 22, 1930. 1 Claim. (Cl. 242—86.)



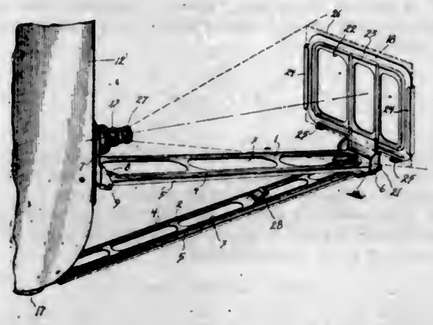
In a stationary hose reel, the combination with the wall of a building structure, of a casing permanently built therein and provided with a front opening having a cover, a hose reel mounted to revolve in the casing and consisting of a drum and cross arms at the ends of said drum, which arms extend beyond the ends of the drum, and which arms at their intersections carry projecting journals on which the drum revolves, a pinion on one of the drum journals, a pinion driving said first pinion, a shaft carrying the driving pinion, an elongated bearing for said shaft on the side of the casing, a crank for rotating the latter driving shaft, a clamping device on one of the arms near the drum for clamping one end of the hose, and a clamping device consisting of spring fingers on the outer end of one of the arms for holding the other end of the hose after the hose has been wound on the drum.

1,787,195. CIRCULAR-SAW MACHINE. HUBERT GOPOLD, Zubak, Czechoslovakia. Filed Oct. 4, 1929, Serial No. 397,305, and in Czechoslovakia May 3, 1928. 1 Claim. (Cl. 143—32.)



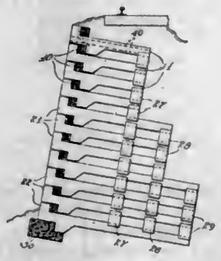
In Combination, a saw table, two laterally spaced circular saws mounted on said table in a common vertical plane and with their axes disposed in a common horizontal plane, the teeth of said saws being pitched outwardly relative to one another, means for rotating said saws in opposite directions outwardly relative to one another, said saw table being disposed at one side of said saws, a carriage frame disposed at the other side of said saws, a carriage mounted for movement along said carriage frame across the saws, the top of said carriage being disposed in a common horizontal plane with the top of said saw table, and saw table extensions at the ends of said saw table having their tops disposed in a common horizontal plane with the top of said saw table and the top of said carriage.

1,787,196. SOUND-PRODUCING INSTRUMENT. PHILIP L. HAINS, Cleveland, Ohio. Filed Apr. 28, 1930. Serial No. 447,938. 2 Claims. (Cl. 84—456.)



1. A sounding instrument comprising a sounding box, a vibrating reed extending across the box and fixed at one end thereto, the other end being free and projecting beyond the side of the box, a stop bar movable along the reed, and guides on the box for the opposite ends of the stop bar.

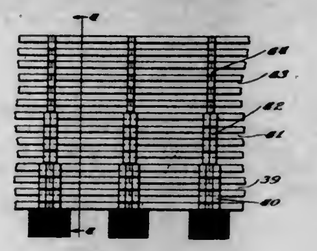
1,787,197. ROTARY DRIER. WILLIAM A. HARTY, Buffalo, N. Y., and FRANK W. MOORE, Thorold, Ontario, Canada, assignors to Harmor & Co. Inc., Buffalo, N. Y., a Corporation of New York. Filed May 5, 1928. Serial No. 275,361. 2 Claims. (Cl. 34—6.)



1. A drier comprising a rotary shell and an internal hollow mandrel rotating therewith and extending beyond the intake end of the shell as a firing end, a drive shaft and driving connections to said shell, and a conveyor disposed beneath said mandrel extension and driven from said drive shaft.

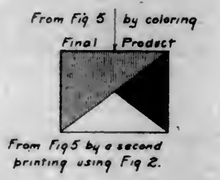
1,787,198. PHOTOGRAPHIC DEVICE. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed July 26, 1928. Serial No. 295,372. 4 Claims. (Cl. 88—24.)

1. In a device of the character described the combination of two similarly disposed extension support members pivotally secured together for movement into and out of overlying relation, means whereby corresponding free ends of said membera may be detachably and predeterminately secured in spaced relation to a photographic camera, a card holder pivotally secured with said support members in spaced relation with said free ends thereof for movement from an overlying relation with respect to said support members into a predetermined photographing position with respect to the camera, and releasable means for securing said support members and card holder in overlying relation.



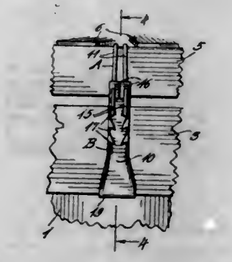
1,787,199. CRIBBING. JOHN S. HUNTOON, Detroit, Mich., assignor to Massey Concrete Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 1, 1926. Serial No. 145,392. 8 Claims. (Cl. 61—47.)

1. In a cribbing, a plurality of rectangular stretchers and a plurality of headers of substantially rectangular cross section having an upwardly extending leg and a downwardly extending leg, said legs being offset an amount equal to the width of said stretchers.



1,787,200. CRIBBING. JOHN S. HUNTOON, Detroit, Mich., assignor to Massey Concrete Products Corporation, Chicago, Ill., a Corporation of Virginia. Original application filed Nov. 1, 1926, Serial No. 145,392. Divided and this application filed July 20, 1928. Serial No. 294,070. 5 Claims. (Cl. 61—47.)

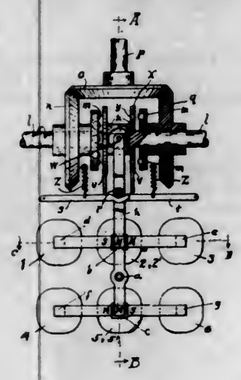
1. In a cribbing, a plurality of stretchers of one shape, and a plurality of transverse headers of a second shape, piled alternately upon each other to form said cribbing, said headers having plane sides and a plurality of headers being placed side by side at the base of a header wall, a



lesser number of headers supported upon all of the first named headers, to graduate the header wall in thickness from the bottom to top.

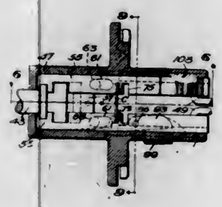
1,787,201. COMBINED BLACK AND WHITE AND COLORED IMAGE PHOTOGRAPHY. WILLIAM V. D. KELLEY, Jersey City, N. J., assignor to Kelley Color Films, Inc., a Corporation of New Jersey. Filed Nov. 4, 1925. Serial No. 66,698. 3 Claims. (Cl. 95—2.)

1. A transparent carrier coated on one side only with gelatine having a reduced silver image of the minus reds in the original subject and a toned color representation of the red in the original subject.



1,787,202. ADJUSTABLE FASTENER FOR FRUIT BASKETS. OLIVER O. KENDALL, Denver, Colo., assignor to Enos B. Hiatt, Denver, Colo. Filed June 11, 1928. Serial No. 284,552. 2 Claims. (Cl. 292—19.)

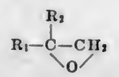
1. An adjustable device for attaching a cover to a basket, said device comprising an elongated member formed from sheet metal, a portion of each side edge of the member being bent reversely so as to form opposing grooves, one end of said member having a hook adapted to engage a portion of a basket, the edges of the reversely bent sides being provided with opposed ratchet teeth, a cooperating member formed from a wire bent intermediate its ends into a hair pin shape, the end having the bend being bent transversely of the plane of the member so as



to form a hook adapted to engage a portion of a cover, the free ends of the hair pin shaped portion being bent so as to form hooks that are adapted to engage the ratchet teeth on the other member, those portions of the wire member between the hooks at the free ends and the first mentioned hook being straight and located in the grooves which form guides.

1,787,203. COUPLING DEVICE. RICHARD KEMLEIN, Berlin, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed July 11, 1928, Serial No. 291,836, and in Germany May 4, 1927. 14 Claims. (Cl. 192—12.)

1. In combination, a first shaft, a second shaft, coupling gears connected to said shafts, a shifting member pivotally arranged to effect coupling connection for imparting rotating motion from one to the other of said shafts, and electro-magnetically operated control means exerting a mechanical torque on said shifting member on both sides of its pivot point.



1,787,204. VENDING MACHINE. CHARLES LEA, Boston, Mass., assignor to The Automatic Merchandizer Inc., Boston, Mass., a Corporation of Delaware. Filed Aug. 2, 1927. Serial No. 210,095. 12 Claims. (Cl. 194—93.)

1. Coin controlled mechanism having a plurality of locks each permitting limited movement of said mechanism, and means for controlling the open positions of said locks in accordance with different diameters of the coin comprising a lock controlling feeler for each lock movable radially of the coin, said feelers adapted to contact with the latter at different points on its periphery, and means responsive to the limited movement of said mechanism permitted by said locks for causing unlocking of the latter when a coin of predetermined diameter is inserted.

1,787,205. PRODUCTION OF ALCOHOLS. OSKAR LOEHR, Uerdingen, Niederrhein, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed June 1, 1928, Serial No. 282,282, and in Germany June 7, 1927. 9 Claims. (Cl. 260—156.)

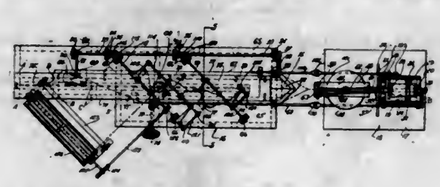
1. A process of producing primary alcohols which comprises reacting upon an olefine oxide which corresponds to the general formula:

wherein R_1 stands for an alkyl or aryl residue and R_2 for a hydrogen atom or alkyl, aryl or aralkyl group with hydrogen in the presence of a hydrogenation catalyst.

5. A process of producing n-propyl alcohol which comprises reacting upon propylene oxide with hydrogen in the presence of finely divided nickel.

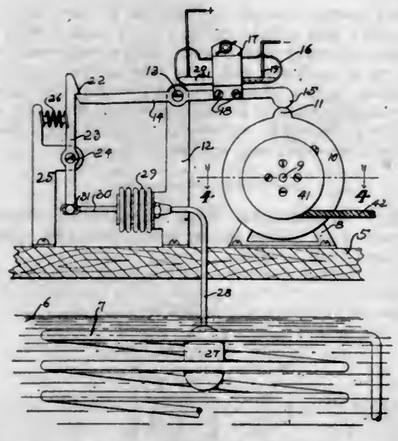
1,787,206. CARRIER FOR DISPATCH SYSTEMS. FRANK W. MACMARTIN, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed May 1, 1930. Serial No. 448,894. 7 Claims. (Cl. 243—36.)

5. A carrier for use in a pneumatic dispatch system, said carrier having an elongate body provided with a head at one end and an enlargement at the opposite end and being adapted for transmission through the system like an ordinary carrier, said carrier being so constructed and arranged as to preclude its use as a conveyor for articles, and being provided upon its outer surface between the head and enlargement with a plurality of color bands.



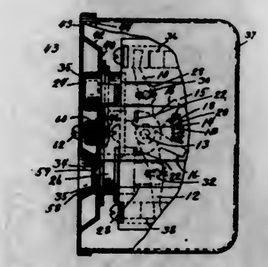
1,787,207. MOUTH EQUIPMENT FOR DOLLS' HEADS. SAMUEL MARCUS, New York, and ALEXANDER KONOFF, Brooklyn, N. Y., assignors to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 17, 1928. Serial No. 254,926. 9 Claims. (Cl. 46—40.)

1. The combination of a doll head with an animated tongue member comprising, a doll head having a mouth opening, a suspension frame affixed interiorly to the front wall of the doll head at said mouth opening, said suspension frame being confined in its overall dimensions whereby it is localized at the mouth opening and positioned entirely below the eye members of the doll head, and



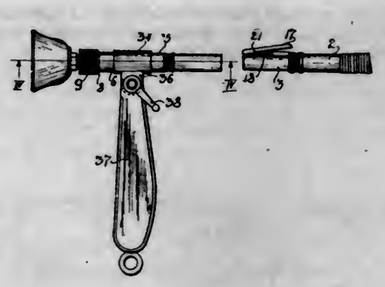
an animated tongue member located at said mouth opening, said animated tongue member being vibratably suspended on said suspension frame.

1,787,208. MACHINE FOR CUTTING BIAS FABRICS. JOSEPH P. MORRIS, Bridgeport, Conn. Filed July 23, 1927. Serial No. 207,858. 5 Claims. (Cl. 164—65.)



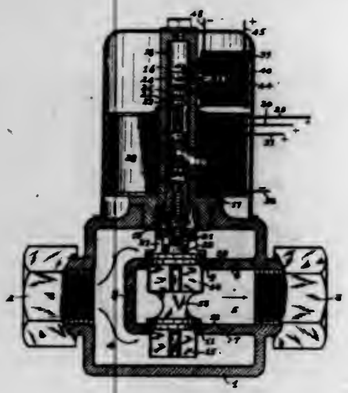
1. In a machine for cutting a cloth tube into a bias strip, a flat mandrel, means for spirally feeding the cloth tube in the direction of the mandrel, rolls disposed on top of the mandrel for feeding the cloth tube along and spirally about the mandrel, means for cutting the cloth tube into a bias strip as it is fed, and means for moving the bias strip from the cutter.

1,787,209. REFRIGERATOR CONTROL. GLENN MUFFLY, Detroit, Mich., assignor to Copeland Products Inc., a Corporation of Michigan. Filed Sept. 20, 1928. Serial No. 307,107. 5 Claims. (Cl. 62—4.)



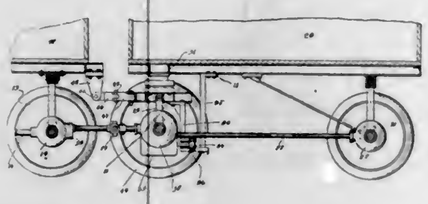
1. A control for refrigersting systems comprising means for commencing the operation of an alternately operative device at predetermined intervals and means for automatically stopping the operation of such device in response to conditions produced by such operation.

1,787,210. PUSH-BUTTON ELECTRIC SWITCH AND COVER PLATE THEREFOR. GEORGE W. O'KEEFFE, Milton, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed June 27, 1928. Serial No. 288,726. 19 Claims. (Cl. 200—168.)



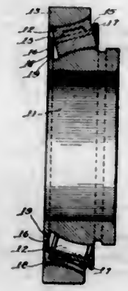
1. In an electric switch, the combination of an enclosing casing, a pair of switch operating push buttons extended through and beyond the outer wall of said casing, means separate from said casing having means to affix it temporarily to said casing and when affixed to said casing arranged to cooperate therewith to enclose the extended ends of both push buttons and also to maintain one only of said push buttons in a depressed position.

1,787,211. VIBRATOR AND METHOD OF USING THE SAME. CHARLES A. PRIEST, Chicago, Ill., assignor to The Scholl Mfg. Co. Inc., Chicago, Ill., a Corporation of New York. Filed Nov. 23, 1927. Serial No. 235,334. 1 Claim. (Cl. 128—45.)



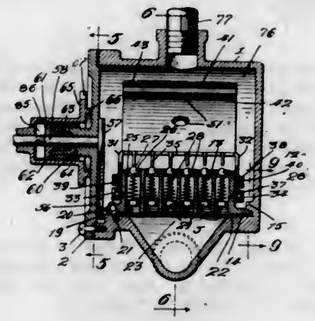
A massaging device including a massaging implement, a handle therefor including a sleeve having an aperture in the wall thereof, and having a slot formed in one end thereof, a shaft journaled for rotation in said sleeve and operatively connected to the massaging implement, a second sleeve having a shaft rotatable therein and arranged to slide into the first sleeve so that its shaft locks into the shaft in the first sleeve, means for removably coupling the two sleeves, the said means including a member on the second sleeve arranged to enter the slot in the first sleeve, and having a reversely bent spring member with a toe arranged to enter the aperture in the wall of the first sleeve.

1,787,212. VALVE. FREDERICK B. RICKENBERG, Pittsburgh, Pa. Filed Apr. 2, 1929. Serial No. 351,908. 5 Claims. (Cl. 137—139.)



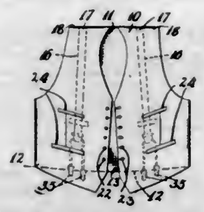
1. In combination, a valve comprising a valve casing, a valve element mounted in said valve casing and shiftable in the latter for opening and closing the valve, a stem provided with a bore and detachably secured to said valve casing, said bore having a closed outer end and an enlarged inner end communicating with said valve casing, a plunger shiftably mounted in said bore, a connecting bolt adjustably connected with said plunger and having a shiftable connection with said valve element, and an electro-magnet mounted on said stem and operable for actuating said plunger to shift said valve element to the opening position in said valve casing, said enlarged bore end providing clearance for said valve element when the latter is shifting to the opening position.

1,787,213. MOTOR-TRUCK TRAILER. JACOB SALOMONSEN, Greenwood, Wis. Filed Nov. 19, 1925. Serial No. 69,983. 13 Claims. (Cl. 180—14.)



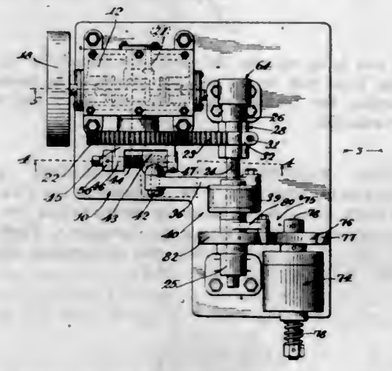
2. The combination with a motor truck trailer having a swiveled front running gear structure, a rear axle differential and a transmission shaft for said differential; of a power receiving shaft on the front running gear structure; a stud shaft on said structure; compensation gearing arranged on said stud shaft for receiving power from the power receiving shaft and transmitting power to the transmission shaft, curved racks carried respectively by said structure and the trailer proper; and a differential arm fixed to said intermediate gear and having a pinion engaging between said racks, substantially as described.

1,787,214. ANTIFRICTION BEARING. JULIUS E. SHAFER, Chicago, Ill., assignor to Shafer Bearing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 16, 1928. Serial No. 246,927. 17 Claims. (Cl. 308—213.)



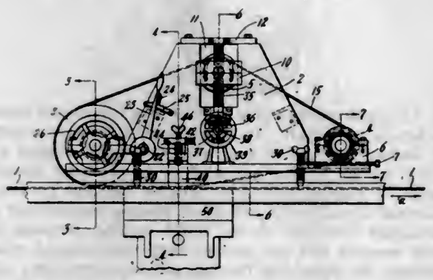
1. An antifriction bearing comprising a plurality of bearing rollers and means contactive with said rollers only on the bearing surfaces thereof for retaining the same in position.

1,787,215. MIXING VALVE. LEONARD SINCLAIR, Newburgh, N. Y., assignor to Becker Valve and Specialty Corporation, Newburgh, N. Y., a Corporation of New York. Filed Mar. 19, 1929. Serial No. 348,321. 9 Claims. (Cl. 236—12.)



1. In a mixing valve, in combination, a casing having an outlet and a pair of inlet ports, a valve head having passageways extending therethrough, said passageways being connected respectively with said inlet ports, a valve for controlling the flow of liquid through each of said passageways, a rocker member pivotally mounted upon the valve head, having fingers for opening said valves, and a thermostatic unit connected with said rocker member.

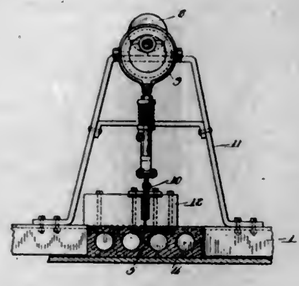
1,787,216. SUSPENDER VEST. SIGMOND SPIELBERGER, Jamaica, N. Y. Filed Mar. 8, 1930. Serial No. 434,210. 3 Claims. (Cl. 2—102.)



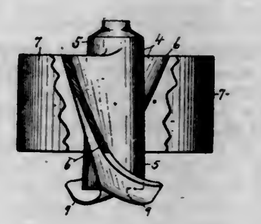
1. A combination vest and trouser supporter, comprising a vest having a lining consisting of a pair of chest portion lining sections and a back portion lining section, and each of said chest portion lining sections comprising outer and inner sheets secured together, straps between said inner and outer sheets and attached at their top ends to the lining in the vicinity of the shoulders of the vest and extending thru slots in the inner sheets substantially at their centers and terminating at their free ends in means for supporting a pair of trousers, and means for transmitting tension from said supporting straps to the lining for urging different portions of the lining against a wearer of the device to change its feed on the person and consequently its comfort.

1,787,217. AUTOMATIC TIMING MECHANISM. CLARENCE E. STEERE, Los Angeles, Calif. Filed Oct. 5, 1929. Serial No. 397,544. 4 Claims. (Cl. 74—7.)

1. A device of the character described comprising a gear, means for rotating said gear, a shaft, a segmental gear on said shaft, a ratchet on said shaft, and means for actuating said ratchet from said gear to bring said segment into mesh with the gear.



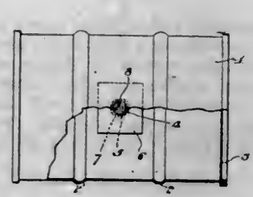
1,787,218. METHOD OF AND MEANS FOR MAKING DECORATED PAPER. JESSE H. TRASK, Wausau, Wis. Filed Oct. 22, 1928. Serial No. 314,038. 12 Claims. (Cl. 92—48.)



1. The method of making a marked paper, which comprises bringing a stencil against one face of a formed and partially dried web, passing marking material through said stencil against said web, and then withdrawing said stencil while preventing adhesion of the web thereto.

1,787,219. METHOD OF AND APPARATUS FOR SCORING BLOCKS. FRED TROTTER and ARTHUR SWANSON, Fort Dodge, Iowa, assignors to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1927, Serial No. 185,471. Renewed Jan. 26, 1929. 6 Claims. (Cl. 25—1.)

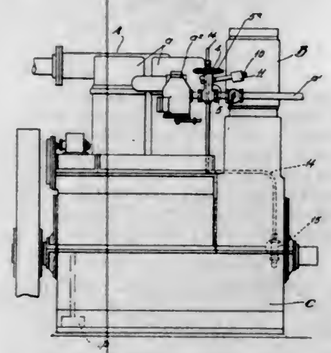
2. In a tile scoring machine a scoring device comprising a scoring blade, guides therefor a drive shaft having a rotary motion, eccentrics connecting the rotating drive shaft to the scoring blade, transforming the rotary motion into a vertical reciprocal motion, and a counterbalance on the drive shaft to balance the weight of the eccentrics and the scoring blade.



1,787,220. IMPELLER FOR MECHANICAL DISHWASHERS. FORREST A. WALKER, Syracuse, N. Y., assignor to Walker Dishwasher Corporation, Syracuse, N. Y., a Corporation of New York. Filed Nov. 28, 1926. Serial No. 150,230. 4 Claims. (Cl. 170—168.)

2. An upright impeller for mechanical dishwashers comprising a hollow hub provided with outwardly projecting blades having their outer portions curved downwardly and forwardly from top to bottom in the direction of rotation, the radius of curvature of each blade being gradually diminished from top to bottom thereof and the lower end of each blade being extended forwardly in a plane at substantially right angles to the axis of the hub.

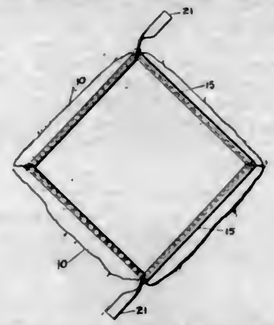
1,787,221. METALLIC RECEPTACLE. HUGH H. WARD, Chester, Pa. Filed Mar. 26, 1926. Serial No. 97,606. 3 Claims. (Cl. 220—24.)



2. A metallic cask-like receptacle containing a flanged aperture forming a smooth surfaced bunghole for a driven bung, and a re-enforcing plate surrounding said bunghole and having a flange engaging the flange surrounding said aperture.

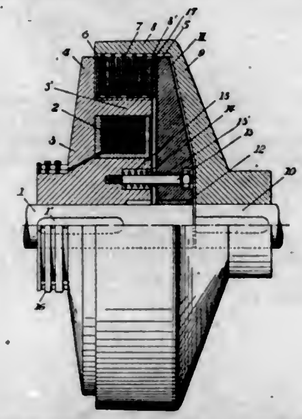
1,787,222. COMBINATION CONTAINER AND DISPLAY DEVICE. HARRY C. WARNER, Kansas City, Mo. Filed Dec. 19, 1928. Serial No. 327,064. 5 Claims. (Cl. 206—44.)

1. A support for fly swatters and the like comprising an envelope provided with transverse slits to admit the handles of the swatters to the envelope to retain the handles for support of the swatters with the heads thereof exterior to the envelope.



1,787,223. SAFETY STOP APPARATUS FOR ENGINES. HARRY C. WASSON, Franklin, Pa., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 20, 1929. Serial No. 356,648. 3 Claims. (Cl. 123—196.)

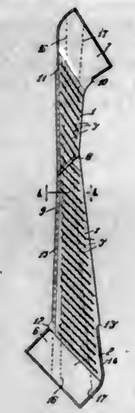
1. The combination with a prime mover having a force feed circulating system, of a conduit for the motive agent leading to said engine, a valve for closing said conduit including a plunger carrying the valve proper, a lever having an adjustable weight for moving said plunger to valve closing position, and means utilizing the pressure in said circulating system to counteract the action of said weight.



1,787,224. SUCTION CLEANER. HARRY B. WHITE, Canton, Ohio, assignor to The Hoover Company, a Corporation of Ohio. Filed Apr. 16, 1927. Serial No. 184,218. 4 Claims. (Cl. 150—4.)

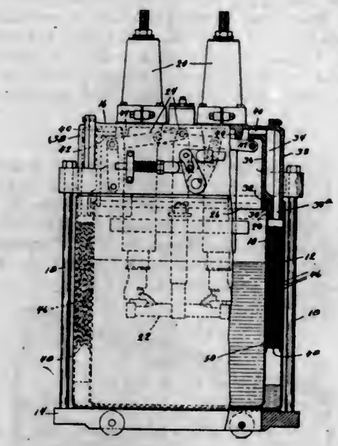
1. A dust bag having a discharge opening adjacent one end thereof, means defining the discharge opening comprising links and levers connected one to another, the links secured to the peripheral edge of the bag, the levers also secured to that edge between their fulcrums and one end, that portion of the lever between the fulcrum and the

other end lying outside the enclosure defined by the connecting links and levers and forming holding means for preventing the frame from collapsing when the bag is being emptied.



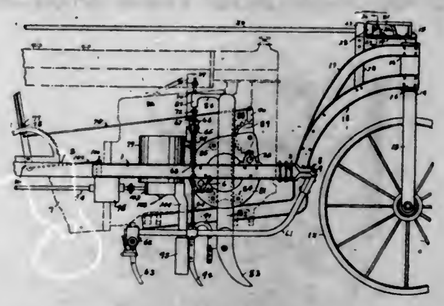
1,787,225. ELECTROMAGNETIC COUPLING. BRUNO WITTKUHNS, New York, N. Y., assignor to the Firm Magnet-Werk G. m. b. H. Eisenach Spezialfabrik fur Elektromagnet-Apparate, Eisenach, Germany. Filed Apr. 20, 1927, Serial No. 185,252, and in Germany May 20, 1926. 5 Claims. (Cl. 192—84.)

1. In combination, a pair of shafts; a cup-shaped clutch member on one shaft; an electromagnetic body mounted fast on the other shaft and received in said member and having a hub portion provided with inwardly opening shouldered longitudinal bores; friction members alternately secured to said body and clutch member repsectively; a disk-shaped armature in the clutch member between the clutch member and the magnet body and adapted, when attracted, to press the friction members together; said armature having bolt holes alined with said bores and having countersunk ends adjacent to the clutch member; bolts passed through said holes and bores and screwed into the magnet body; springs on said holes compressed between the armature and the shoulders of the bores to press the armature from the magnet body; and nuts on the ends of the bolts in said countersunk ends to limit movement of the disk toward the clutch member.



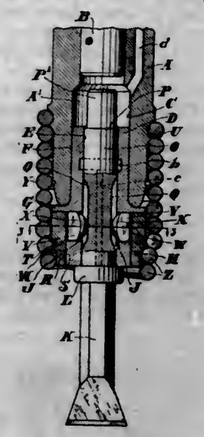
1,787,226. NECKTIE. HARRY WOLF, Chicago, Ill., assignor to Cutter-Crossette Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 28, 1928. Serial No. 328,899. 1 Claim. (Cl. 2—146.)

The method of making neckties which includes the spreading of a piece of lining material over a piece of outer bias cut silk fabric, the side edges of the latter and the lining being substantially parallel, then attaching the lining to the outer fabric over substantially the entire area of the lining, then bias cutting the lined fabric into conventional blanks, then arranging and joining the



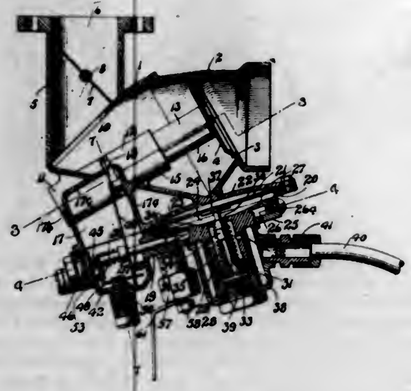
cut blanks to form a complete tie blank, and thereupon trimming away a side edge portion of the lining to leave a free edge portion of silk to permit hemming and stitching together of opposite side edge portions of the outer fabric free of the said lining, and thereupon completing the tie.

1,787,227. ELECTRIC SWITCH. JOSEPH D. WOOD, Quincy, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1924. Serial No. 747,478. 13 Claims. (Cl. 200—150.)



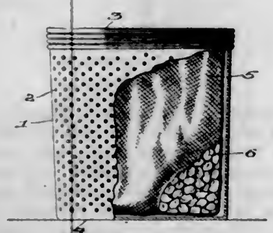
1. An electric switch having an outer oil-catching receptacle, an oil-containing receptacle disposed within and having its side walls spaced from the side walls of said outer receptacle, separable switch members located in the oil in said oil-containing receptacle, a plurality of relatively closely-spaced metal plates having approximately parallel surfaces disposed in the upper portion of the space between said two receptacles, and means to direct fluid from said inner receptacle to flow downwardly between said plates and into said outer receptacle.

1,787,228. AGRICULTURAL IMPLEMENT. FRANK J. ZALESKY, Buckholts, Tex. Filed Jan. 28, 1927. Serial No. 164,248. 8 Claims. (Cl. 97—47.)



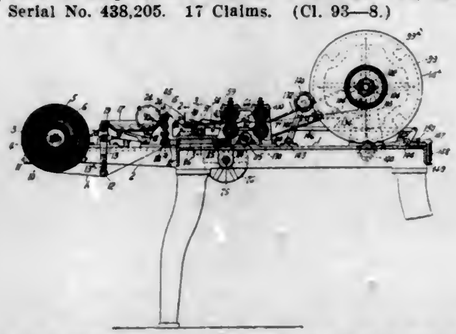
1. An implement of the character described comprising tractor wheels, an axle to which said wheels are fixed, a framework supported by said axle, and including outside side members and a supplemental frame having inside side members spaced apart and spaced from the respective outside members, forwardly extending supporting means supporting the front end of the framework, a motor supported by the supplemental frame and operatively connected with said axle, ground working means supported by the framework on each side and at the rear thereof, said rear ground working means comprising bearing members, depending from said outside members, rearwardly extending hanger arms pivoted to said bearing members, stocks depending from said arms, shares yieldingly mounted on the said stocks, a rotatable shaft on said outside members, lift arms attached to said shaft, and yieldably connected to said hanger arms, and means for rocking said shaft to elevate and lower said shares.

1,787,229. TOOL RETAINER FOR PNEUMATIC TOOLS. WILLIAM FRANK ZIMMERMANN, Waverly, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 10, 1928. Serial No. 245,717. 1 Claim. (Cl. 121—32.)



In a tool retainer for a pneumatic tool, the combination of a barrel, a bushing extending slidably into said barrel and having a flange intermediate its ends, a working tool extending slidably into said bushing, key ways in said working tool and in said bushing, keys in the key ways of the bushing extending into the key ways of said tool for retaining said tool in the bushing, a sleeve disposed on the front end of said bushing to retain said keys in position, and a spring threaded to the sleeve and the barrel to hold the sleeve against the flange and thus provide a yieldable seat for the bushing.

1,787,230. CARBURETOR. EDWARD G. ATKINS, Jackson, Mich., assignor to Wolverine Carburetor Company, Jackson, Mich., a Corporation of Michigan. Filed Oct. 24, 1927. Serial No. 228,152. 7 Claims. (Cl. 261—69.)

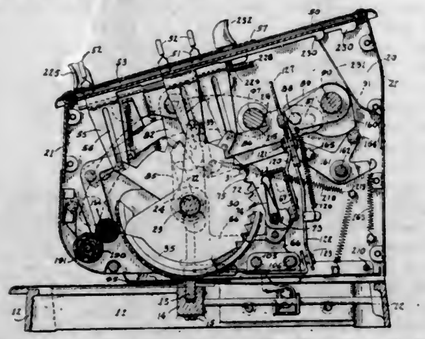


1. In a carburetor, the combination of a mixing chamber having an air inlet and an outlet thereto, a spring pressed valve normally closing the air inlet and actuated to open the air inlet by the excess of atmospheric pressure over the pressure within said mixing chamber, a fuel conduit adapted to lead from a source of fuel supply to said mixing chamber, two fuel valves in said fuel conduit, the first being located nearest to the mixing chamber and the second nearest to the source of fuel supply, interposed means between the air valve and the first of said fuel valves for moving said first fuel valve when the air valve is opened to thereby withdraw the first valve partly from said fuel conduit, a spring normally holding the second fuel valve in a position to close said fuel conduit, a diaphragm bearing against the second fuel valve and flexing under atmospheric pressure when the pressure within said fuel conduit between the fuel valves has decreased sufficient that the excess of atmospheric pressure acting on said diaphragm will overcome the spring, whereupon the second fuel valve is moved to open the fuel conduit, said spring acting on the second fuel valve being of such strength that before the fuel conduit is opened by movement of the second fuel valve a difference in pressure is made between atmospheric pressure and that within the fuel conduit between the fuel valve sufficient to raise a column of liquid fuel equal to the maximum lift ever required in operation.

1,787,231. SANITATION OF REFRIGERATORS. GILBERT C. BACON, Tamaqua, Pa., assignor to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 25, 1926. Serial No. 144,152. 4 Claims. (Cl. 183—4.)

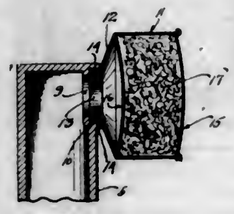
4. Apparatus for aiding in the sanitation of refrigerators which comprises a body of coarse-grained activated carbon and means for holding said body in free communication with the air inside the refrigerator and for preventing the formation of galvanic couples by said carbon, said means comprising a perforated container adapted to prevent electrical contact of said carbon with oxidizable metals.

1,787,232. TUBE FORMING AND REELING MACHINE. LOGAN A. BECKER and JOHN M. MUNSON, Lakewood, Ohio, assignors to The Dobeckmun Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 22, 1930. Serial No. 438,205. 17 Claims. (Cl. 93—8.)



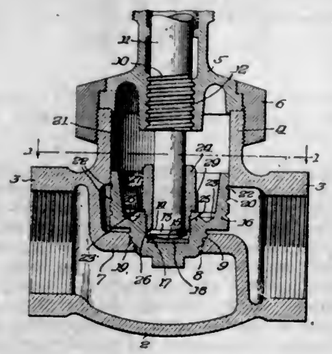
1. In combination, means to support a roll of web material, means to continuously draw said web material from said roll, means to apply a strip of gum along an edge of said drawn web, means to continuously fold said drawn web into a tube and to simultaneously fold the sides of the tube inwardly to form a plicated tube, said web drawing means also serving to press said plicated tube in a flat form, and reeling means driven by said web drawing means for continuously reeling said flattened tube under tension.

1,787,233. INK. CHALFANT E. BIVINS, Brooklyn, N. Y. Filed Apr. 6, 1925. Serial No. 21,214. 11 Claims. (Cl. 134—38.)



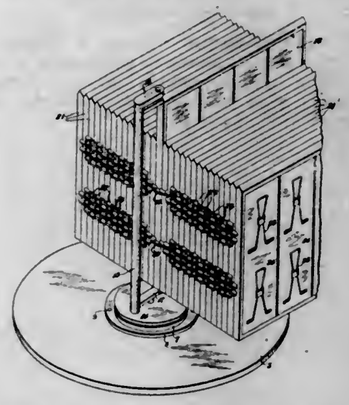
1. An ink containing therein in dry powdered form an admixture of suitable coloring matter, a crystalline organic substance selected from the group consisting of citric acid, benzoic acid, a combination of these acids, salicylic acid, tartaric acid and succinic acid, for avoiding undue precipitation of sediment, and crystalline benzoic acid.

1,787,234. CHECK WRITER. RAYMOND E. BOHRER and WALTER B. PAYNE, Rochester, N. Y., and CHARLES G. TIEFEL, deceased, Rochester, N. Y., by Ella M. Tiefel, executrix, Rochester, N. Y., assignors to The Todd Company, Incorporated, Rochester, N. Y., a Corporation of New York. Filed Feb. 14, 1928. Serial No. 254,313. 30 Claims. (Cl. 101—20.)



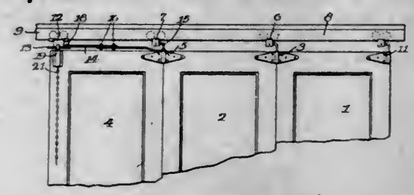
1. In a check writer, the combination of a platen, a plurality of type segments, a shaft on which said segments are mounted, side plates having slots forming guiding means, the ends of said shaft extending into said slots and being guided therein for bodily movement toward and away from said platen, and operating means including a toggle for moving said shaft to shift said type segments toward and away from said platen.

1,787,235. AIR CLEANER AND COUPLING. FRANK A. DONALDSON, Minneapolis, Minn. Filed Aug. 1, 1929. Serial No. 382,686. 5 Claims. (Cl. 183—45.)



1. An air cleaner having a contracted neck portion formed with an external channel and in said channel an expansible and contractible split spring coupling ring adapted for engagement with a seat into said channel neck is insertable.

1,787,236. VALVE. CARL A. DOPP, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1928. Serial No. 247,801. 3 Claims. (Cl. 251—46.)



1. In a valve construction in combination, a valve disc having a threaded recess in one side, a stem having an end portion rotatably disposed in said recess, a shoulder on said stem end portion facing outwardly of said disc recess, a hollow nut surrounding said stem and rotatable thereon, threadedly engaged with the threads of said recess and providing a thrust bearing for said shoulder, said disc having a second recess adjacent the first said recess, and a lock washer of distortable metal secured between said nut and disc and having a portion engaged in the second said recess and a portion engaged with one of the sides of said nut for securing said nut and disc against relative rotation.

1,787,237. FILING APPLIANCE. WILLIAM E. DUNNING, Alliance, Ohio, assignor to The McCaskey Register Company, Alliance, Ohio, a Corporation of Ohio. Filed Feb. 24, 1928. Serial No. 256,563. 6 Claims. (Cl. 40—102.)

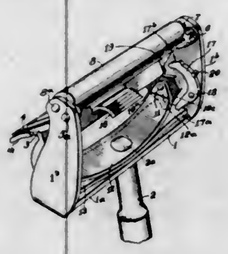
1. A filing appliance including a base, a revoluble plate on the base, an upright support upon said plate, and a series of upright holders hinged together at their rear ends for swinging apart at their forward ends, one of said holders being connected to said upright support.

1,787,238. GARAGE-DOOR CONSTRUCTION. WILLIAM D. FERRIS, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed Apr. 27, 1928. Serial No. 273,168. 13 Claims. (Cl. 20—20.)

1. In sliding door construction for a garage or other building, the combination of one or more sliding door sections, an inwardly swinging door section hinged to one side edge of a sliding door section to swing free of control when the sliding door structure is in closed position, an overhead track section above the doorway, an overhead track section on the side wall of the building, a curved track section connecting the said two tracks together, traveling means to support the door structure on said track sections, so that the entire door structure can be moved out of the doorway and around the curve and into a position at the side of the building, and guiding instrumentalities serving to prevent any swinging movement of this door section during the sliding movement of the door structure on said side wall track, said instrumentalities having engagement with the swinging door at a point thereon a distance from the hinge support thereof, holding the swinging door section to its course.

1,787,239. PRODUCTION OF INTAGLIO PRINTING COLORS. HANNS FLEISCHMANN, Ludwigshafen-on-the Rhine, and OTTO JORDAN, Mannheim, Germany, assignors to I. G. Farbenindustrie Atkiengesellschaft, Frankfort-on-the Main, Germany, a Corporation of Germany. Filed Mar. 13, 1929, Serial No. 346,797, and in Germany Mar. 15, 1928. 4 Claims. (Cl. 134—36.)

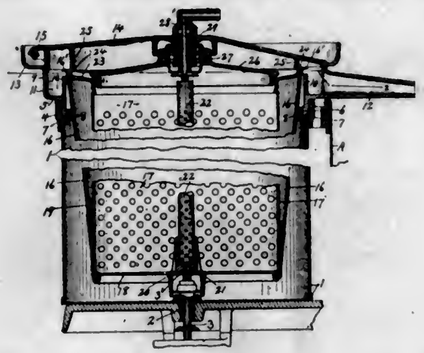
1. Intaglio printing colors comprising a finely dispersed coloring material and a solution, in a volatile organic sol-



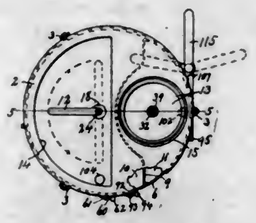
vent, of a resinous product selected from the group consisting of condensation products of a urea with an aldehyde, of organic vinyl esters, and of dibasic organic acids with polyhydric alcohols.

1,787,240. SAFETY RAZOR. HENRY J. GAISMAN, New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed July 20, 1927. Serial No. 207,036. 14 Claims. (Cl. 30—12.)

1. A safety razor comprising a frame, a blade holder pivotally carried by the frame to swing through the latter for stropping and a guard pivotally carried by the frame, adapted to extend outwardly from the frame for shaving and to fold within the frame, and spring means cooperative with the guard and operative on opposite sides of the guard pivot for retaining the latter in shaving relation to a blade in the blade holder and for retaining the guard folded respecting the frame.



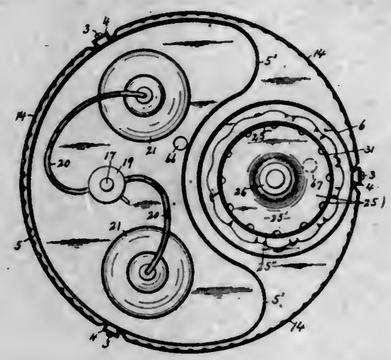
1,787,241. SAFETY RAZOR. HENRY J. GAISMAN, New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Oct. 19, 1927. Serial No. 227,109. 10 Claims. (Cl. 30—12.)



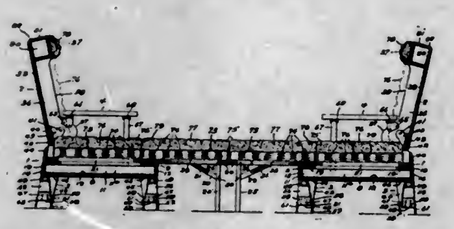
1. A safety razor comprising a frame, a blade holder pivotally carried by the frame to swing therethrough, means to cause the holder to swing through the frame for stropping a blade, a guard pivotally carried by the frame and adapted to swing within the frame beneath the blade holder and the blade, said guard and blade holder having cooperative means to engage when the guard has been moved within the frame under the blade holder to shaving position, and means to retain the guard and blade holder in shaving relation.

1,787,242. CENTRIFUGAL CLOTHES DRYING AND RINSING APPARATUS. PETER E. GELDHOF, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of Delaware. Filed Aug. 6, 1927. Serial No. 211,115. 4 Claims. (Cl. 210—67.)

1. In a centrifugal clothes drier, a rotary container for the clothes having a vertical foraminous peripheral wall, and a shell including an axially tapered imperforate wall extending circumferentially around the foraminous wall of the container and rigidly connected thereto for deflecting the expelled fluid toward the larger portion of the shell away from the container, a collecting trough communicating with the larger end of the shell for receiving the expelled fluid therefrom, a flange associated with the upper ends of the two walls for directing fluid into the trough, and means for rotating the container.



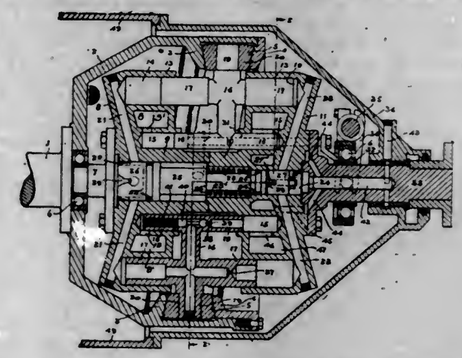
1,787,243. MECHANICAL CLOTHES WASHER AND DRIER. PETER E. GELDHOF, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of Delaware. Filed Dec. 27, 1927. Serial No. 242,613. 3 Claims. (Cl. 68—15.)



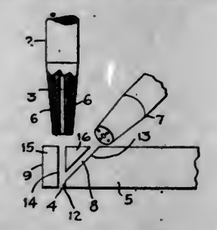
1. Apparatus of the character described comprising a cylindrical vat having a circular bottom, a vertical partition wall extending transversely of the vat and providing two chambers arranged side by side within the vat, a power driven vertical shaft extending upwardly into one chamber, a centrifuge on the upper end of the shaft, a second power-driven vertical shaft extending upwardly into the other chamber closely adjacent the partition wall and substantially midway of its transverse extent, a clothes washing element on the upper end of the second shaft, said element oscillating through an arc of substantially 180° toward and from the partition wall.

1,787,244. MECHANICAL CLOTHES WASHER. PETER E. GELDHOF, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of Delaware. Filed Feb. 11, 1928. Serial No. 253,693. 1 Claim. (Cl. 68—19.)

In a washing machine of the character described, a cylindrical casing, a vat therein having a cylindrical convex side conforming to the curvature of the casing and disposed adjacent thereto and a cylindrical concave side spaced from the opposite side of the casing and there being lobes on each side on the concave side of said vat, a second cylindrical vat in the casing nesting in the concave side of the first named vat, a rotary centrifuge in the second vat, a vertically reciprocating clothes washer in the first named vat including a vertically reciprocable shaft and a clothes washing element thereon projecting at each side of the shaft within the end lobes.



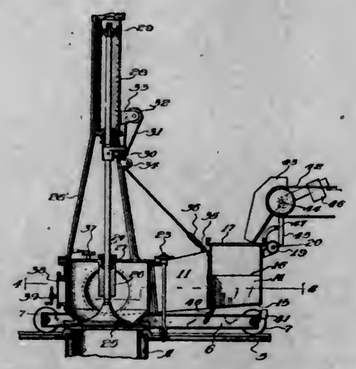
1,787,245. COMBINED CHAIR, TABLE, AND BED. WILLIAM A. GRAHAM, Chicago, Ill., and WILLIAM F. DOYLE, Washington, D. C. Filed Feb. 25, 1926. Serial No. 90,585. 9 Claims. (Cl. 155—41.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757).



1. A combined chair, table and bed unit adapted to be compactly folded for shipment comprising, a seat frame having a seat portion and an extension, legs foldably mounted on said frame and adapted to support the parts when arranged as a chair, leg extensions foldably mounted on said legs adapted to support the parts when arranged as a table, a combined chair back and table top having cut-away side members, pivotally mounted on said seat portion, adapted to rest on said seat portion when the parts are arranged as a table and folded for shipment, chair arms foldably mounted on said combined chair back and table top, and on said chair frame, adapted to fill the cut-away portions in said chair back and table top, when the parts are arranged as a table and folded for shipment, and removable back and seat cushions adapted to rest on the seat portion and on said extension when the parts are arranged as a bed unit.

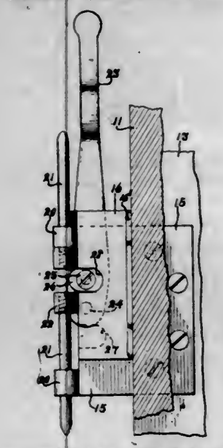
1,787,246. VARIABLE-SPEED TRANSMISSION. HERALD B. GREENING, Hamilton, Ontario, Canada, and JAMES W. GALLOWAY, Detroit, Mich., assignors to Galloway Engineering Company, Limited, Hamilton, Ontario, Canada. Filed July 26, 1928. Serial No. 295,427. 9 Claims. (Cl. 192—59.)

1. In a variable speed transmission, a driving member having a cam, a driven member having a plurality of reciprocable members operatively engaging said cam and reciprocated thereby in a direction longitudinally of the axis of the driven member, a plurality of pistons carried by each of said reciprocable members, cylinders co-operating with said pistons, a fluid carried by the cylinders of the driven member and opposing the movement of said pistons, and means for controlling the bye-passing of said opposing fluid.



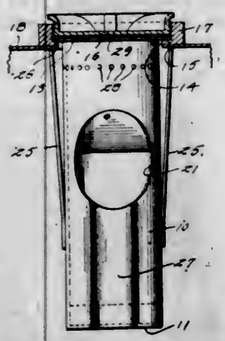
1,787,247. METHOD OF SHAPING EDGES FOR FUSION WELDING. HAROLD J. GROW, East Orange, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1929. Serial No. 410,672. 6 Claims. (Cl. 148—9.)

1. The method of shaping the edges of ferrous metal plates and sheets to provide an edge composed of two faces in angular relation to each other, which method comprises simultaneously advancing two cuts produced by oxygen jets acting in planes which intersect within the thickness of the metal.



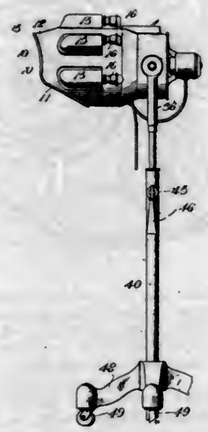
1,787,248. FUEL CHARGER FOR GAS GENERATORS. FRED B. HAYES, Fort Wayne, Ind., assignor to The Gas Machinery Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 17, 1929. Serial No. 378,875. 6 Claims. (Cl. 214—18.)

1. A mechanical fuel charger comprising a charger body having an opening therein to register with the fuel re-



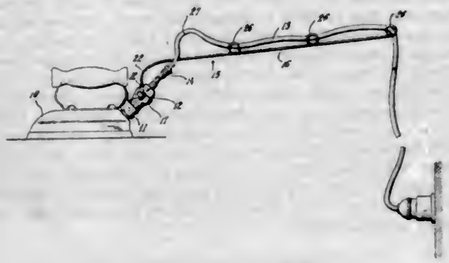
ceiving opening of a generator, a fuel container movably mounted in the charger body and in continuous communication with the interior thereof, hopper-closure means for the fuel container, closure means for the opening in the charger body, means for actuating the closure means for the charger opening, and operative connections between the movable fuel container and said closure means for the charger opening.

1,787,249. CASEMENT-WINDOW HINGE. JOHN L. C. HEINZ, Chicago, Ill. Filed Aug. 24, 1929. Serial No. 388,073. 3 Claims. (Cl. 16—160.)



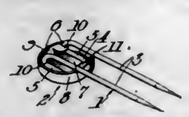
1. A hinge comprising a pair of leaves which are connected to slide longitudinally and to swing on each other and which contain notch means at the connected edges, spaced elements on the connected edge of one leaf, a lever fulcrumed adjacent the edge on the other leaf, and operating means on said lever to operate between said spaced elements for sliding one leaf longitudinally on the other and to move in said notch means for positively retaining the one leaf at either end of its longitudinal movement on the other.

1,787,250. THEFT-PREVENTING ATTACHMENT FOR TANKS. THOMAS W. HUGHES, Rawlins, Wyo. Filed Jan. 17, 1929. Serial No. 333,101. 3 Claims. (Cl. 220—86.)



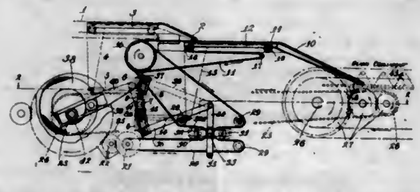
1. An anti-theft attachment for gasoline storage tanks of automobiles and the like comprising a tube having a closed inner end adapted to be inserted in and locked in position in the filling opening of the tank, the wall of the tube having an opening formed therein intermediate its ends, and a partition extending from one side of the tube adjacent the top thereof downwardly through said tube to a point adjacent the bottom thereof and preventing access to said opening through the open end of the tube.

1,787,251. HAIR DRYING AND TREATING APPARATUS. BENNO F. JANCKE, Brooklyn, and JOHN E. KELLEY, New York, N. Y., assignors to Eastern Laboratories, Inc., New York, N. Y. Filed Oct. 3, 1928. Serial No. 310,068. 11 Claims. (Cl. 34—26.)



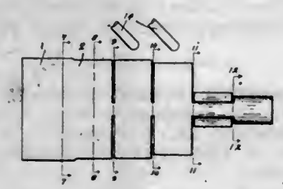
1. An apparatus of the class described comprising a helmet for disposition over the head in service, means associated therewith for uniformly applying radiant heat to a plurality of adjoining zones of the hair and head and means associated with said helmet for causing a stream of air to pass into said helmet and through a restricted space between the wall of the helmet and the hair and head over the said adjoining zones.

1,787,252. EXTENSION SUPPORT FOR FLEXIBLE ELECTRICAL CONDUCTORS. HORATIO D. JONES, Brooklyn, N. Y. Filed Sept. 24, 1924. Serial No. 739,536. 7 Claims. (Cl. 248—30.5.)



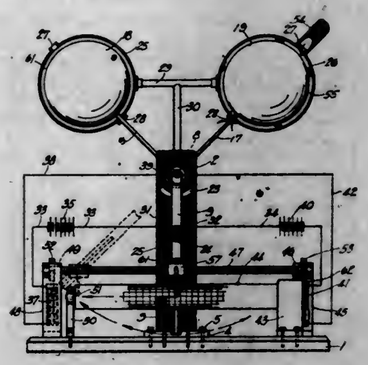
1. A device of the character described comprising a flexible supporting member adapted to be carried at one end by an electrical device provided with a flexible conductor, and double loops arranged in parallelism substantially longitudinally of the supporting member formed at intervals along said member adapted to grip the conductor therebetween to hold said conductor in position upon said member, substantially as specified.

1,787,253. DOUBLE-POINTED PIN FASTENER. GEORGE A. KING, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 3, 1930. Serial No. 465,695. 6 Claims. (Cl. 24—152.)



3. In a pin fastener, a pin and a shell, said pin having a pair of legs bent to form a shell-engaging member, and said shell having a bifurcated extension providing deformable fingers adapted to be bent into engagement with the bent portions of said legs between said legs and shell-engaging member.

1,787,254. CONVEYING OR DELIVERING BISCUITS OR LIKE ARTICLES. HERBERT KIRMAN and GEORGE RALPH BAKER, Willesden, England, assignors to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Jan. 28, 1930. Serial No. 424,121, and in Great Britain Jan. 30, 1929. 3 Claims. (Cl. 107.—7.)



2. In combination, an oven having a continuously traveling conveyor carrying baking pans, a band conveyor traveling continuously at a uniform speed supplying biscuits from a cutting machine, a reciprocating panner blade co-operating therewith, a transfer band conveyor, means imparting travel thereto at alternately faster and slower speeds, said transfer band conveyor positioned to receive biscuits from said supply conveyor in rows grouped into batches, a reciprocating panner blade co-operating with said intermittently moving transfer band, said band and panner blade arranged to deliver said batches to the pans on the oven conveyor, and means for imparting reciprocatory motion to both of said panner blades in synchronism with said alternating faster and slower movements of the transfer band conveyor and in synchronism with each other but in opposite sense.

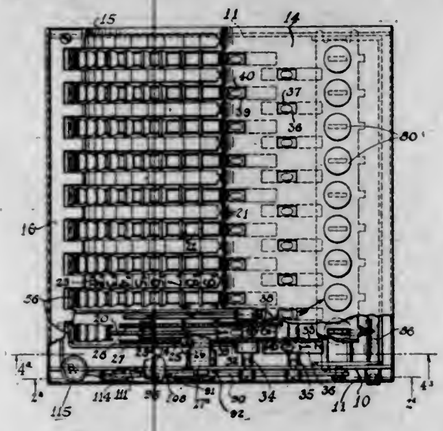
1,787,255. METHOD OF MAKING SHEET-METAL BEARINGS. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 1, 1928, Serial No. 316,472. Renewed May 29, 1930. 8 Claims. (Cl. 29—149.5.)

1. In a method of making bearings, the steps which consist in partially shearing a blank from a sheet of metal, forming such blank into open channel form while still integrally united with said sheet, and then severing such blank and forcing the same into closed cylindrical form.

1,787,256. SPECIFIC-GRAVITY BALANCE. DAVID O. LIMA, Oklahoma City, Okla. Filed Nov. 4, 1929. Serial No. 404,634. 7 Claims. (Cl. 234—28.)

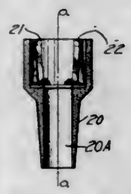
1. A device, as described, embodying a pair of hollow shells spacedly supported upon a first standard, one of said shells having openings for admitting one fluid, the other having an inlet and an outlet for another fluid, a pair of hollow airtight floats spacedly disposed upon a second, balanced standard, one of said floats within each of said shells, said standards having their axes of rotation identically located and operable thereon separately.

1,787,257. METHOD OF MAKING LUBRICANT-RECEIVING FITTINGS. GEORGE L. MOORE, Chicago, Ill., assignor to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed Apr. 13, 1927, Serial No. 183,441. Divided and this application filed Mar. 2, 1929. Serial No. 344,080. 5 Claims. (Cl. 29—156.)



1. The method of making nipples of the type having a substantially cylindrical body and having radially extending lugs projecting from the cylindrical surface thereof, which comprises rolling long rods having a cross section in the form of a circle separated into two arcs by substantially radial projections which extend outwardly from the circular portion for a distance sufficient to provide the length of the lugs, and turning off the projections in a lathe except at the point where the lugs are desired thereby leaving lugs of substantially rectangular cross section, and striking the lugs in a round die to reduce their cross section to circular form.

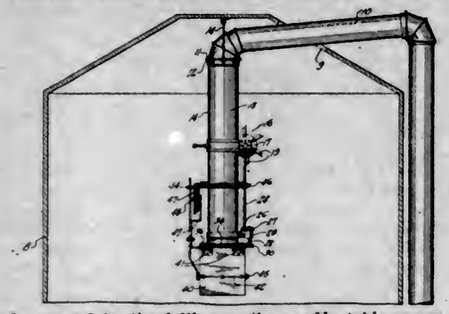
1,787,258. COMPOSITION FOR USE IN THE MANUFACTURE OF RUBBER AND THE LIKE. CLAYTON OLIN NORTH, Nitro, W. Va., assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Aug. 24, 1929. Serial No. 388,279. 9 Claims. (Cl. 18—53.)



2. As a new composition of matter the product formed by combining the reaction product of substantially three molar portions of butylaldehyde and one molar portion of aniline, the reaction product of substantially three molar portions of acetaldehyde and substantially two molar portions of aniline, creosote oil and pine oil.

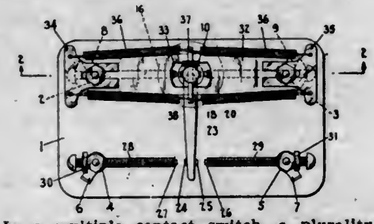
1,787,259. CALCULATING MACHINE. WALTER B. PAYNE, RAYMOND E. BOHRER, and WILLIAM FUHLBORN, Rochester, N. Y., assignors to The Todd Company Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 15, 1927. Serial No. 161,451. 4 Claims. (Cl. 235—81.)

3. In a calculating machine, the combination with an oscillatory operating member, of gear means operatively connected to said oscillatory member to oscillate therewith in both directions, gear means operatively connected to said oscillatory member to move therewith in one direction, a pair of shafts, a gear on one of said shafts meshing with one of said gear means, an indicating device operatively connected to said gear, a second gear on said one of said shafts operatively connected to the other of said gear means, a gear on the second of said shafts meshing with said second gear, and an indicating device operatively connected to said gear on said second shaft.



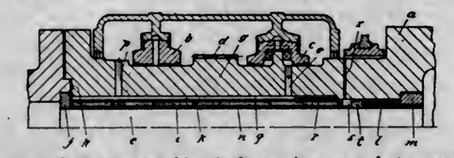
1,787,260. PLUGGING DEVICE. JOSEPH H. PENGILLY and VERNON BROWN, Los Angeles, Calif., assignors to Diamond Electrical Manufacturing Company, Ltd., Los Angeles, Calif., a Corporation of Delaware. Filed May 14, 1923. Serial No. 638,825. 6 Claims. (Cl. 173—332.)

1. In a plugging device, the combination of: a primary insulating support; a plurality of pairs of fingers carried on said support, the fingers of each pair being in mutual electrical contact with each other when the device is not in use; a secondary insulating support; a pair of active members carried by said secondary support and insulated from each other, said members being so formed as to readily pass between and separate any pair of said fingers; and inactive members adapted to pass between the fingers of all the other pairs of fingers carried by said primary insulating supports to separate and insulate the fingers of each pair from each other.



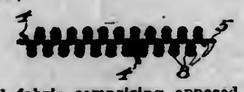
1,787,261. ENSILAGE DISTRIBUTOR. FRED C. REINKE, Mukwonago, Wis. Filed May 5, 1928. Serial No. 275,441. 3 Claims. (Cl. 302—60.)

1. An ensilage distributor comprising a tubular body portion having an opening at one end for receiving falling ensilage and having an opening at its other end for discharging the same, a spreading member connected to the tubular body portion adjacent the discharge opening, a propeller extending within the tubular body portion



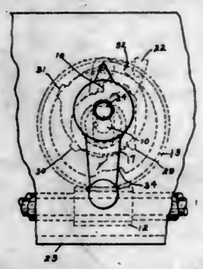
and operated by the falling ensilage, adjustable means for guiding the ensilage toward said propeller, and means operated by said propeller for imparting reciprocal motion to said spreading member.

1,787,262. SWITCH. LLOYD THOMAS ROBERTON, Milwaukee, Wis. Filed Sept. 20, 1929. Serial No. 393,879. 8 Claims. (Cl. 200—7.)



1. In a multiple contact switch, a plurality of contacts, a post secured to a source of current supply, contacts on said post, means to hold said contacts normally out of contact with the first named contacts, and means to close one or more of said contacts.

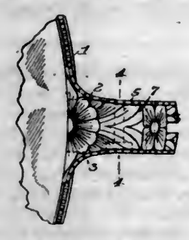
1,787,263. STEAM TURBINE. KARL RÖDER, Hanover, Germany. Filed Dec. 16, 1927, Serial No. 240,506, and in Germany Dec. 18, 1926. 6 Claims. (Cl. 308—77.)



1. A hollow rotatable shaft serving as a hot pressure fluid conduit and having a central hot pressure fluid conducting pipe of suitable diameter to form an annular chamber between the pipe and the inner shaft wall, to prevent heat from flowing from the pipe to the shaft, and means for circulating cooling fluid through said chamber.

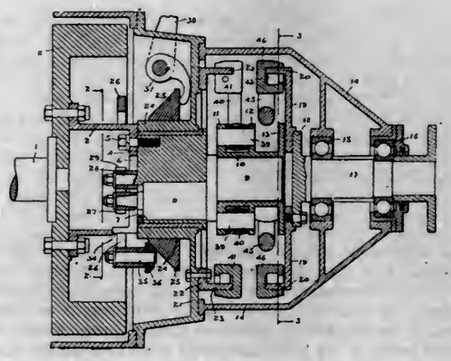
1,787,264. KNITTED FABRIC. MORRIS B. GOLDBERG, Philadelphia, Pa., assignor to Eagle Knitting Mills, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 10, 1930. Serial No. 494,524. 7 Claims. (Cl. 66—190.)

1. A knitted fabric comprising opposed rows of interlooped knitted loops of a loosely twisted thread having a relatively taut core strand, and an un-knitted loosely twisted thread, having a relatively taut core, extending through the fabric in a substantially straight formation intermediate of the opposed rows of interlooped knitted loops and encased therebetween;—said fabric being relatively non-stretching transversely.



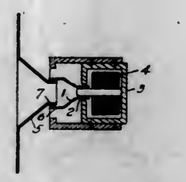
1,787,265. INTERMITTENT DRIVING MECHANISM. DALLAS F. GRAHAME, Montreal, Quebec, Canada, assignor to Sanford Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1924. Serial No. 743,038. 11 Claims. (Cl. 74—54.)

1. A driving mechanism comprising a continuously rotatable driving shaft, a rotary driven member, a pawl fastened to one member and a cooperating ratchet connected to the other, and a manually adjustable cam device including relatively adjustable cams and a cam follower connected with said pawl, said cams being so constructed that they may either provide a dwell throughout the entire cam surface and thus cause the pawl to remain in engagement with the ratchet for an indefinite period or they may provide a follower lifting portion extending above the dwell and thus remove the pawl from engagement with the ratchet at stated intervals, whereby the driven shaft may be rotated continuously or intermittently for a predetermined period of time.



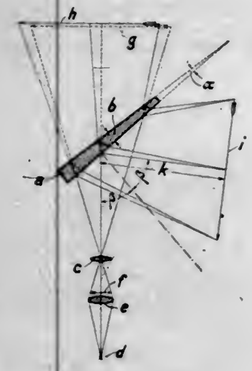
7. A driving mechanism comprising a driver, a driven member, a pawl and ratchet connection therebetween, a cam follower arranged to connect and disconnect the pawl from the ratchet, a cam to control said cam follower comprising two relatively adjustable parts, one serving to provide a dwell portion and the other having follower lifting portions of different lengths capable of holding the follower lifted for different time intervals, said follower lifting portions being movable successively from an ineffective position behind the dwell portion to an effective follower lifting position, and means for moving the cam and cam follower relatively so that the pawl may engage the ratchet and cause the driven member to rotate for a single turn after the driver has rotated through a predetermined number of turns as determined by the effective length of the follower lifting portion.

1,787,266. METHOD OF MAKING LENS MOUNTINGS. HENRY W. GROM, Newark, N. J., assignor to Continental Optical Frame Company, Newark, N. J., a Corporation of New Jersey. Filed Jan. 29, 1930. Serial No. 424,290. 9 Claims. (Cl. 29—148.)



1. The method of making lens mounts comprising hinge members, which consists in forming a plate and securing the same to the front faces of the hinge members spaced from each other, and cutting out that portion of the plate positioned over the gap between the hinge members.

1,787,267. VARIABLE-SPEED TRANSMISSION. HERALD B. GREENING, Hamilton, Ontario, Canada, and JAMES W. GALLOWAY, Detroit, Mich., assignors to Galloway Engineering Company, Limited, Hamilton, Ontario, Canada. Filed Oct. 26, 1928. Serial No. 315,190. 8 Claims. (Cl. 74—92.)



1. In a variable speed transmission, the combination with a stationary element and the driving and driven members, of concentrically arranged clutch rings carried respectively by said stationary element and driven member, a plurality of clutch elements engaging each of said rings, transmission means for supporting said clutch elements adapted to transmit power from the driving to the driven member, and manually controllable means carried by the driving member adapted during the operation of the latter to be controlled to govern the relative working positions of said clutch transmission means in accordance with torque requirements independent of the speed of rotation of said driving member.

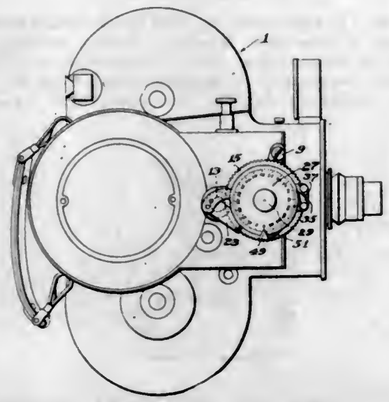
1,787,268. RADIO LOUD-SPEAKER. BRYAN GROOM, Galashiels, Scotland. Filed Apr. 29, 1929, Serial No. 358,805, and in Great Britain May 14, 1928. 3 Claims. (Cl. 181—31.)

1. A radio loud speaker of the class described comprising, in combination, a diaphragm and a non-resonant baffle arranged in telescopic relationship with said baffle and with the end nearest said diaphragm within said diaphragm.

1,787,269. DEVICE FOR PARTIAL DEFLECTION OF A CONICAL PENCIL OF IMAGING RAYS. GERHARD HANSEN, Jena, Germany, assignor to the Firm: Carl Zeiss, Jena, Germany. Filed Apr. 17, 1929, Serial No. 355,965, and in Germany Apr. 23, 1928. 1 Claim. (Cl. 81—1.)

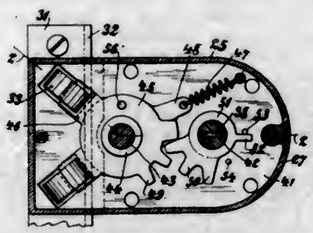
A device for partial deflection of a conical pencil of imaging rays and for combination of the deflected rays in a plane having from the locus of deflection a medial distance k, consisting of a wedge of transparent material, whereby of the medial thickness b of the said wedge, its wedge-angle α, its refractive index n and the angle β, at which the axial ray falls on the wedge, at least approximately the two following equations are complied with:

$$k=\frac{b}{\alpha}\cdot\frac{\sin\beta.\cos^2\beta}{n^2-\sin^2\beta},$$



$$2\sin^2\beta=3n^2-1-\sqrt{(1-3n^2)^2-4n^2}.$$

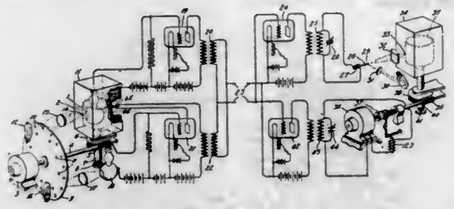
1,787,270. STAND FOR MOTION-PICTURE-PROJECTOR APPARATUS. ARTHUR C. HAYDEN, Brockton, Mass. Filed Sept. 27, 1926. Serial No. 137,858. 8 Claims. (Cl. 248—41.)



1. A stand comprising a post, legs pivotally connected intermediate their ends to the post and having arms adapted to extend along the post, and rubber trips for the arms adapted to engage and be compressed against the post thereby to limit the outward spread of the legs and stabilize the post.

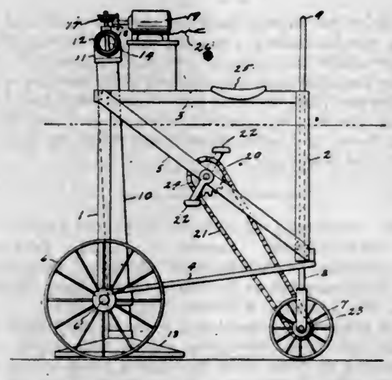
1,787,271. AUDIBLE FOOTAGE METER AND EXPOSED-FILM INDICATOR FOR MOTION-PICTURE CAMERAS. ARTHUR C. HAYDEN, Brockton, Mass. Filed Feb. 10, 1930. Serial No. 427,156. 12 Claims. (Cl. 116—73.)

1. In a unitary device for application to a motion picture camera, the combination of means for automatically audibly signalling length increments of feed of film in the camera, and means cooperating therewith for automatically indicating the length of exposed film.



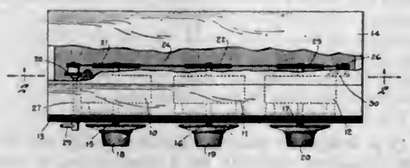
1,787,272. DOOR LOCK. JOHN HOLTZMAN, New York, N. Y. Filed Mar. 12, 1925. Serial No. 14,980. 21 Claims. (Cl. 70—46.)

3. A lock comprising a casing, a stem rotatable therein, a stud integral with said casing, a hub rotatable thereon, operative connections between said stem and hub, integral bolts extending angularly from said hub, a keeper having extending elements projecting through said casing to engage said bolts, and a spring urging said bolts into engagement with said keeper elements.



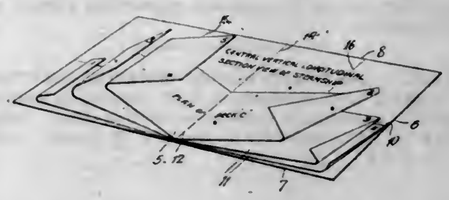
1,787,273. ELECTRICAL TRANSMISSION OF PICTURES. CHARLES A. HOXIE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Sept. 23, 1924, Serial No. 739,423, now Patent No. 1,648,687, dated Nov. 8, 1927. Divided and this application filed Mar. 23, 1927. Serial No. 177,684. 5 Claims. (Cl. 178—7.)

1. The combination of a movable member adapted to support a light sensitive member, a screen arranged to surround said movable member and provided with a small opening through which successive small areas of said light sensitive members are adapted to be exposed, a light source arranged to produce a beam of light alined with said opening when at rest, and means arranged to vibrate said beam



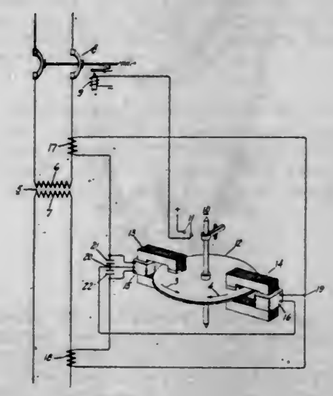
lineally and to produce on said screen an illuminated band which includes said opening and extends on opposite sides thereof.

1,787,274. APPARATUS FOR CLEANING SWIMMING POOLS. JORDIE J. JOHNSTON, Abilene, Tex. Filed Dec. 3, 1928. Serial No. 323,380. 3 Claims. (Cl. 210—207.)



1. In an apparatus for cleaning swimming pools without emptying the pools, comprising a traveling frame and a cleaning device carried by the traveling frame, said cleaning device comprising a substantially vertical pipe having the lower end flared, a shaft extending the length of said pipe and provided with a plurality of spaced propellers and means operatively engaged to the upper end of said shaft for revolving the shaft and propellers.

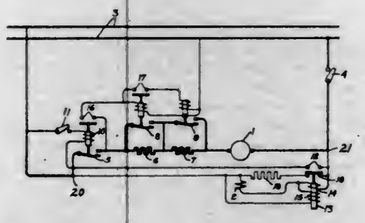
1,787,275. UNICONTROL APPARATUS FOR RADIO RECEIVING SETS. LESTER L. JONES, Oradell, N. J. Filed June 23, 1924. Serial No. 721,628. 12 Claims. (Cl. 74—7.)



1. In an apparatus of the class described, a plurality of tuning units each provided with a separate control handle or dial, a flexible connection means between the units for mechanically coupling the units for simultaneous adjustment and means for mechanically uncoupling the units to permit independent adjustment by the operation of the separate control handles.

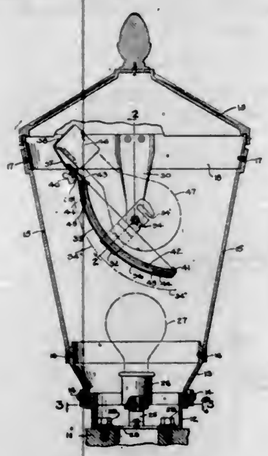
1,787,276. PRINTED FOLDER. WALTER H. JONES, Hasbrouck Heights, N. J. Filed June 14, 1928. Serial No. 285,316. 1 Claim. (Cl. 281—15.)

A printed folder comprising a booklet including a plurality of flexible booklet sheets arranged in a face-to-face relation and connected to each other along a transverse medial line and having leaf portions at opposite sides of said medial line serving as leaves of the booklet, said leaf portions being creased along definite lines parallel to said medial line; and a flexible cover sheet secured to said booklet sheets along the line of union thereof and forming in part a complete cover for the booklet, said cover being creased along definite lines in correspondence with said definite lines of said leaf portions and extending in the direction of said transverse medial line for a sustantial distance beyond a margin of the leaf portions of the booklet when said booklet is in an open position so as to provide space for exhibiting material comparable with material to be provided on respective pages of said booklet, said extending part being undivided in alignment with said transverse medial line and presenting an unbroken surface, said extending part being creased along definite parallel lines located correspondingly to the first-mentioned definite lines and adapted to fold over as a whole upon the open pages of said booklet; and said cover, booklet and extending part being adapted, when said extending part is folded over upon said booklet, to be folded simultaneously along their respective said definite lines into a compact unit with said extending part closed within the booklet of such unit.



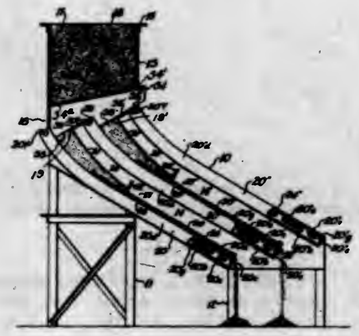
1,787,277. PROTECTIVE ARRANGEMENT. LUKE F. KENNEDY, Philadelphia, Pa., assignor to General Electric Company, a Corporation of New York. Filed Aug. 21, 1929. Serial No. 387,523. 10 Claims. (Cl. 175—294.)

1. In combination with an electric apparatus having windings subject to transient magnetizing currents and a circuit interrupter for controlling the circuit of said windings, means for controlling said interrupter including a differential relay having a movable member, restraining and operating means for controlling the movement there-



of respectively connected to be energized in accordance with the sum of and the difference between the currents of said windings, and means for additionally restraining the movement of said member only in accordance with the second harmonic of the transient magnetizing current of said apparatus.

1,787,278. ELECTRIC-MOTOR-CONTROL SYSTEM. WALTER O. LUM, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 3, 1928. Serial No. 274,908. 8 Claims. (Cl. 172—179.)

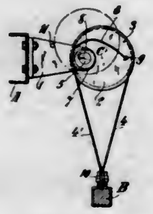


1. The combination with a motor provided with a shunt field winding, of means responsive to the current in said winding and additional means responsive to the voltage existing across said field for controlling the energization of said motor.

1,787,279. LIGHTING UNIT. HARRY YALE MAGEOCH, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 16, 1928. Serial No. 285,853. 17 Claims. (Cl. 240—25.)

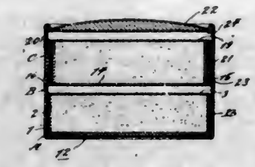
1. In a lighting unit provided in its upper portion with an annular band, an adapter for facilitating the mounting of a flood-lighting unit therein comprising a pair of fixed lateral supports respectively secured in downwardly extending relation to diametrically opposed sides of said band, means pivotally carried upon said supports for supporting a reflector, and a lamp receiving socket also secured upon said reflector supporting means and arranged with respect thereto such that when a lamp is inserted in said socket it bears a constant fixed relation with respect to said reflector irrespective of any adjusted position of said adapter.

1,787,280. DRIER FOR SAND AND THE LIKE. HENRY WILLIAM NAGEL, Alliance, Ohio, assignor to The Colonial Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 9, 1930. Serial No. 419,549. 19 Claims. (Cl. 34—33.)



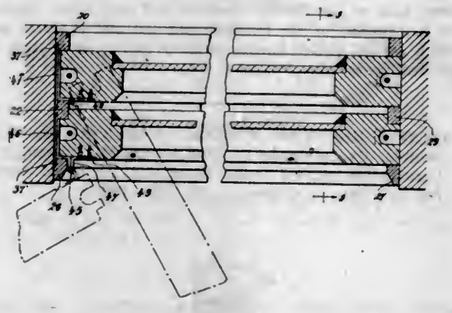
1. A drier for drying material such as sand and the like, the drier including a heating member having a surface over which the material may flow, means for delivering the material upon the surface, walls forming a material flow duct, the inner surface of one of the duct walls including the heating member surface over which the material flows, and walls forming a ventilating duct adjacent to the flow duct.

1,787,281. PROCESS OF TREATING ROSIN AND PRODUCT THEREFROM. ROBERT C. PALMER, Pensacola, Fla., assignor to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed June 28, 1928. Serial No. 289,079. 9 Claims. (Cl. 87—2.)



1. The process of preparing a rosin in solid form substantially free from crystalline abietic acid, which comprises adding to rosin while in a liquid phase an amount of caustic alkali sufficient to neutralize between 2.5 and 6% of the abietic acid content of the rosin to be treated, thereby forming a relatively small quantity of an alkali metal abietate, and allowing the treated rosin to solidify.

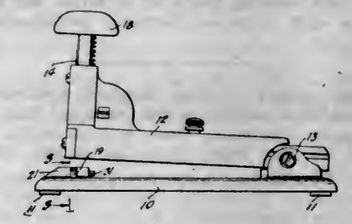
1,787,282. SNUBBER. PETER NICHOLAS PETERS, Brooklyn, N. Y. Filed Mar. 1, 1928. Serial No. 258,816. 51 Claims. (Cl. 267—10.)



6. In a device for damping relative oscillation of two spring connected elements of a mechanism, a member rotatably mounted on one of said elements, means made operative by a swing of said oscillation for causing said member to rotate to an angle commensurate with the amplitude of said swing, and means made operative by the recoil from said swing for causing the force of said recoil to be applied to said member at points where it is adapted to produce opposing torques thereon in definite relation to said angle.

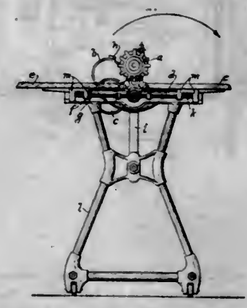
1,787,283. MULTIPLE-COMPARTMENT CONTAINER. GUSTAVUS A. PFEIFFER, New York, N. Y. Filed Sept. 25, 1929. Serial No. 394,938. 4 Claims. (Cl. 132—82.)

4. In a multiple compartment face powder box, the combination with a lower powder container having a seal forming its upper closure member thereof, an outer shoulder along its lower peripheral edge, there being a supply opening in the bottom thereof, and a permanent seal for said supply opening after the powder has been received, of an intermediate portion having an upper powder container and a cover member for a lower powder container, the upper powder container having a seal formed in its upper closure member and a shoulder along its lower peripheral edge, and an upper cover for the upper powder container, the lower edge of the cover member of the intermediate portion engaging the shoulder of the lower powder container and the lower edge of the upper cover member engaging the shoulder of the upper powder container to form spaces above the seals of said powder containers.



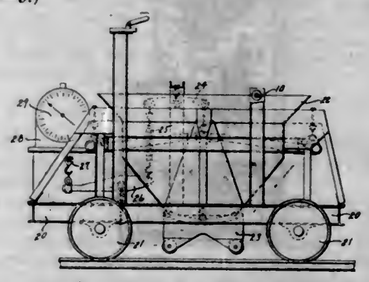
1,787,284. SASH WINDOW. ALFONSO PIETRONIGRO, Ozone Park, N. Y. Filed June 8, 1929. Serial No. 369,382. 4 Claims. (Cl. 20—50.)

1. In a sash window, a window frame provided with vertical runways, and upper and lower sash frames slidable within said runways, hinged structures at one side of said frame, each comprising a plate member and a hinged member pivotally connected thereto, said hinged member being attached to the corresponding sash frame, and said plate member being vertically slidable within the corresponding runway, guide members defining the runways at the opposite side of said frame, each having a removable section permitting swinging of said sash frames past said guide members, when removed, said removable sections being spaced from both ends of said runways, and a sashweight detachably connected to each sash frame at said opposite side.



1,787,285. CLINCHING MEANS FOR STAPLING MACHINES. FRIDOLIN POLZER, South Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Apr. 19, 1930. Serial No. 445,750. 10 Claims. (Cl. 1—3.)

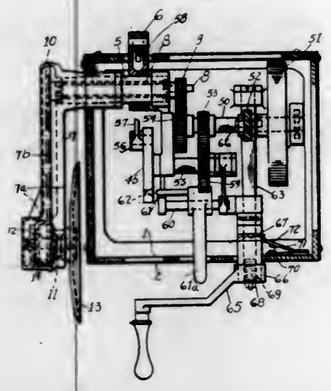
1. In a stapling machine a movable plunger for driving substantially U-shaped staples, an anvil provided with clinching surfaces to bend the prongs of the staples, said surfaces being arranged in pairs to set the staples in different manners, one of the surfaces forming a member



of two different pairs, and said anvil being shiftable to bring either pair of clinching surfaces in operative position.

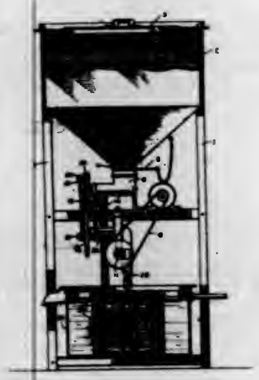
1,787,286. WASHING MANGLE. CARL RIEGER, Aalen, Germany. Filed Jan. 13, 1928, Serial No. 246,595, and in Germany Jan. 20, 1927. 1 Claim. (Cl. 312—30.)

In combination, a table comprising spaced frame members, a rod carried by one of said frame members, a pair of table top sections, at least one of which is mounted on said rod for swinging movement to and from a horizontal position and also for sliding movement towards and from the other section, mangle supporting brackets each pivotally supported at one end beneath said other table top section for swinging movement between a substantially horizontal position to dispose a mangle carried by said brackets above the table top and a substantially vertical position in which the mangle is suspended beneath the table top, and means carried upon the lower side of the slidable table top section for cooperation with the free ends of said brackets to support the latter in their horizontal positions.



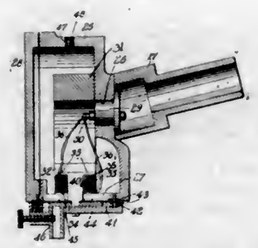
1,787,287. AUTOMATIC RECORDING MEANS FOR DUMP CARS. EUGENE W. SCHELLENTRAGER, Cleveland, Heights, Ohio, assignor to The Atlas Bolt & Screw Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 7, 1927. Serial No. 173,556. 4 Claims. (Cl. 265—9.)

1. In combination with a dump scale car arranged for movement along a way between loading and dumping po-



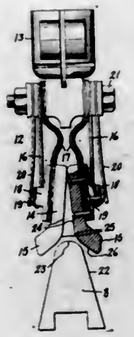
sitions and provided with means for weighing the load therein and for recording said weight, means for controlling said car movement, means dependent thereon for presetting said recording means for actuation, and means for delaying said actuation during a predetermined time interval.

1,787,288. MEAT SLICER. ELMER G. STRECKFUSS, Cincinnati, Ohio, assignor to The Cincinnati Time Recorder Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 20, 1926. Serial No. 96,296. 21 Claims. (Cl. 146—103.)



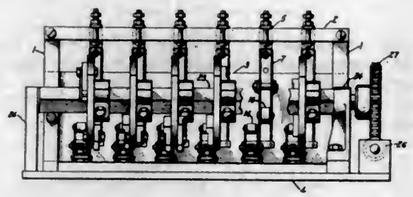
1. In a meat slicing machine, a meat advancing device having a meat clamp thereon a revolving knife having a path of movement to slice the meat, and means movable to a position in coincidence with the plane of cut of the revolving knife and arranged as an abutment against which meat may be crowded to give it a surface prepared for a slicing operation of the knife, said means formed as a hinged plate, and means for so hinging the plate that it moves to position by gravity out of the plane of cut of the knife.

1,787,289. REAGENT FEEDER. GEORGE G. THOMAS, Hillside, Ariz., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Nov. 28, 1928. Serial No. 322,341. 2 Claims. (Cl. 259—8.)



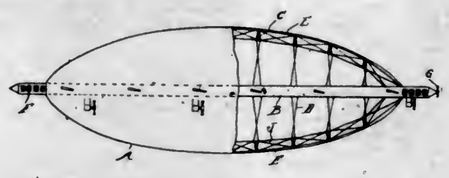
1. A method of feeding a reagent which comprises intermittently delivering a quantity thereof to a receiving tank, constantly supplying a quantity of liquid menstruum thereto, agitating both reagent and menstruum and constantly overflowing menstruum and reagent from the tank.

1,787,290. ELECTROMAGNETIC PICK-UP DEVICE FOR PHONOGRAPHIC RECORDS. LINCOLN THOMPSON, Naugatuck, Conn., assignor to Wm. H. Bristol Talking Picture Corporation, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 7, 1930. Serial No. 419,009. 6 Claims. (Cl. 179—100.41.)



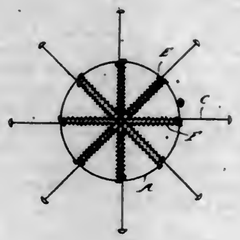
2. An electrical transmitter for phonographs, comprising a closed casing having an opening therethrough, a permanent U-shape magnet mounted in the casing with separated pole pieces at its ends and extending over said opening, a transmitting coil carried by the pole pieces and having a passageway therethrough coaxial with the said casing opening and the gap between the pole pieces, a flexible member secured to the casing over its opening to seal the same, a reed of soft iron fixedly secured to the inner face of the flexible member and extending through the passageway of the transmitting coil and the said gap, and a stylus holder fixedly secured to the outer face of the flexible member.

1,787,291. ELECTRIC SWITCH. CARL THUMIM, Philadelphia, Pa., assignor to General Electric Company, a Corporation of New York. Filed Nov. 22, 1928. Serial No. 321,190. 4 Claims. (Cl. 200—166.)



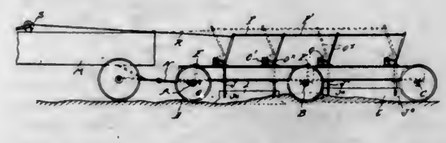
1. An electric switch comprising a wedge contact member, a cooperating contact member having contact plates arranged to engage opposite sides of the wedge contact member, and means for supporting said contact plates and yieldingly opposing outward movement thereof, said means being loosely connected with said contact plates to cause them to engage each other at their rear portions and rock about the point of engagement during the withdrawal movement of the wedge.

1,787,292. CIRCUIT-CONTROLLING DEVICE. GEORGE R. TOWNSEND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1928. Serial No. 317,095. 10 Claims. (Cl. 200—47.)



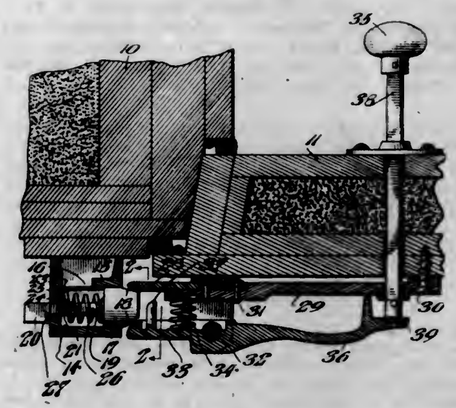
1. The combination of a movable switch member biased to one position, means for holding the switch member in another position against its bias to said one position, and a movable member for operating the switch member to said one position upon a predetermined movement of the operating member in one direction and for controlling said holding means to release the switch member for operation in accordance with its bias upon movement of the operating member in the other direction.

1,787,293. SAFETY AIRCRAFT. WILLIS C. WARD, Orchard Lake, Mich. Filed July 2, 1928. Serial No. 289,953. 4 Claims. (Cl. 244—3.)



1. A safety aircraft comprising a gas inflated shell and a compartment extending axially of said shell and projecting beyond the end of the same.

1,787,294. SAFETY DEVICE FOR AIRCRAFT. WILLIS C. WARD, Orchard Lake, Mich. Filed Oct. 1, 1928. Serial No. 309,528. 4 Claims. (Cl. 244—30.)

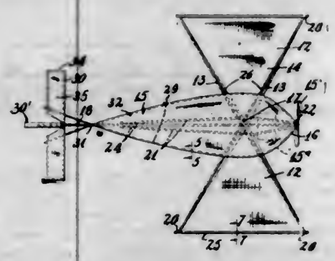


1. The combination with the fuselage of an aircraft, of telescopic rods projecting beyond each of the sides thereof and resilient means for opposing the inward telescoping of the rods and thereby absorbing a portion of the shock.

1,787,295. GRADER. WILLIS C. WARD, Orchard Lake, Mich. Filed Nov. 26, 1928. Serial No. 321,934. 4 Claims. (Cl. 37—181.)

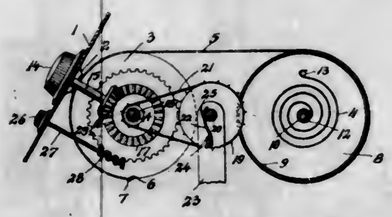
1. A grade comprising forward, rear and intermediate wheeled axles, reach frames respectively connecting said forward and rear axles with the intermediate axle and so as to provide pivotal connection between said frames, planer blades carried by the forward reach frame and spreader blades carried by the rear reach frame.

1,787,296. DOOR FASTENER. GUNTHER PHILIP WILD, Philadelphia, Pa. Filed Aug. 27, 1929. Serial No. 388,693. 4 Claims. (Cl. 292—340.)



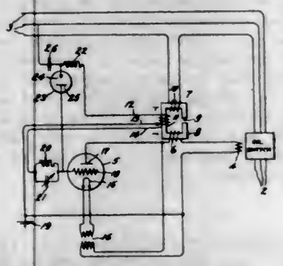
1. A latch device of the character stated comprising a casing having a relatively large rectilinear opening therein said casing being carried by a door jamb, a keeper the nose of which has opposed bevelled edges, the major part of said keeper being mounted within said casing, a horizontally disposed rod of reduced rectangular cross-section extended outwardly from said keeper nose and penetrating said rectilinear opening in said casing, the extended end of said rod having an enlarged portion of rectilinear cross-section and having a shoulder for engaging the outer face of said casing to limit inward movement of said rod, means including a member of substantially L-shaped cross section the longitudinal axis of which is arranged in parallelism with the end of said rod through said relatively large opening in said casing for retaining said rod with respect to said casing, and a spring interposed between the inner end of said keeper nose and said means.

1,787,297. GLIDER PLANE. JOSEPH C. YECKER, Lancaster, Pa. Filed May 29, 1930. Serial No. 457,138. 8 Claims. (Cl. 244—12.)



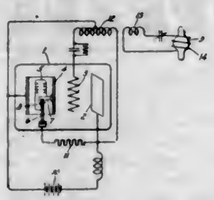
1. A glider, comprising transverse main wings consisting of a frame including crossed flexible rods and covering material forming wings simulating a bow tie, a longitudinal glider body above said main wings and having its nose located to the front of the point of crossing of said rods and including a longitudinal rod, a resilient frame connected with the outer ends of said main

wings and holding said body spaced from said main wings, shaper rods attached at their front ends on said nose and intermediate of their ends on said crossed rods near the



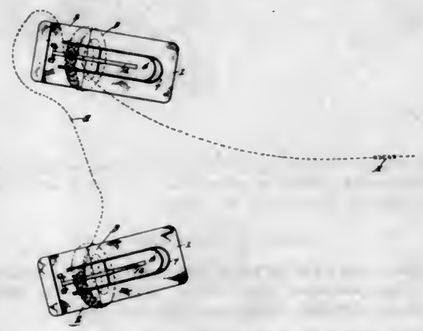
point of crossing, and means for adjustably connecting the rear ends of said shaper rods with said longitudinal rod for adjusting the bowed condition of said main wings.

1,787,298. RADIO DIAL CONTROL. HENRY A. ZIOLA, Milwaukee, Wis., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Original application filed Apr. 5, 1928, Serial No. 267,591. Divided and this application filed Jan. 24, 1929. Serial No. 334,704. 5 Claims. (Cl. 116—124.1.)



1. In a radio tuning device of the class described, a shaft, an indicator movable with said shaft, a tuning member shaft, means for causing movement of said indicator and of the tuning member shaft, said means comprising a chain and sprocket device mounted on said shafts, instrumentalities for operating said means, and a device for taking up slack in said chain.

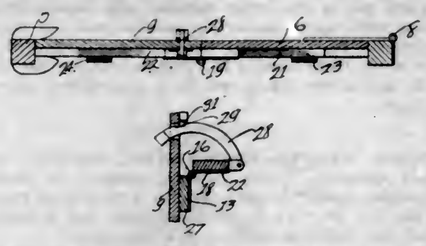
1,787,299. CONTROL SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 15, 1926. Serial No. 81,535. 9 Claims. (Cl. 175—320.)



9. The combination of a plurality of circuits, means for interconnecting said circuits, an electric valve including a cathode and anode connected to said interconnecting means and a grid for controlling the transmission of current between said cathode and anode, means for producing component voltages respectively proportional to the voltage and current of one of said circuits, and means connected between said cathode and grid for causing said valve to be opened only when the resultant sum of said component voltages exceeds a predetermined value, said means including a second electric valve responsive to a predetermined voltage to transmit current, and a circuit through which said current and voltage are applied to said valve.

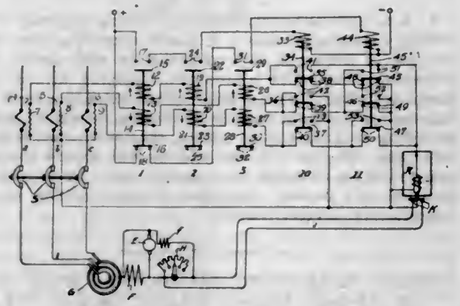
1,787,300. ELECTRIC-DISCHARGE DEVICE. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 16, 1927. Serial No. 233,722. 6 Claims. (Cl. 250—27.)

1. An electron discharge device comprising a receptacle, an anode and cathode mounted in the receptacle, the cathode including a heater element, said heater element being mounted in the receptacle and electrically connected with the cathode, and current responsive means for breaking the contact between the heater element and cathode.



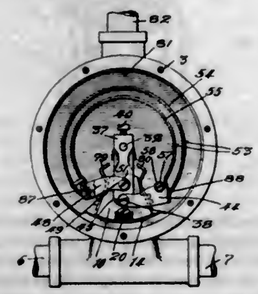
1,787,301. METHOD AND APPARATUS FOR CONTINUOUS WIRE FEEDING. CHARLES F. BAILEY, Peoria, Ill., assignor to Keystone Steel & Wire Company, Peoria, Ill., a Corporation of Illinois. Filed June 21, 1929. Serial No. 372,624. 5 Claims. (Cl. 140—125.)

1. The method for continuous and uniform wire feeding which consists in providing a plurality of spaced and independent bundles of coiled wire; welding the end of the wire at the rear of one bundle to the end of the wire at the front of another bundle; feeding off the wire from the front of the first mentioned bundle and when the wire of said bundle is completed automatically transferring the feeding of wire to the other bundle, and continuing such method of feeding by supplying additional bundles of coiled wire and welding the wires of the respective bundles together and alternately furnishing a continuous supply of wire by transference of feed from one bundle to the other.



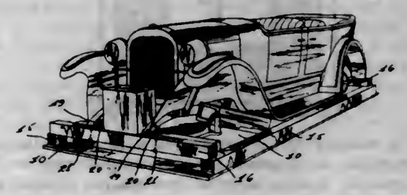
1,787,302. DOOR. DIETRICH C. BAKEHOUSE, North Hollywood, Calif. Filed June 5, 1929. Serial No. 368,597. 1 Claim. (Cl. 20—20.)

In a device of the character described a pair of doors hingedly supported, said doors being hinged one to the other, a locking bar hinged to said doors, said locking bar comprising two sections hinged one to the other and means for moving said locking bar from a position parallel to said doors to a position at right angles to said doors, said means including a link secured to said locking



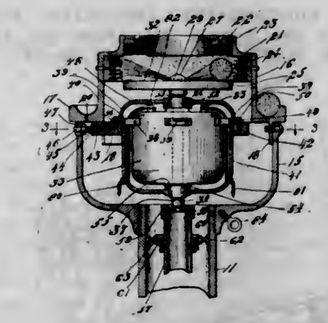
bar and extending through a slot formed in said doors, and means for engaging said link for the purpose of maintaining said link in adjusted position.

1,787,303. AUTOMATIC ELECTRIC REGULATOR OR OVERLOAD LIMITING APPARATUS. ANGELO BARBAGELATA, Milan, Italy, assignor to General Electric Company, a Corporation of New York. Filed June 28, 1926, Serial No. 119,059, and in Italy July 9, 1925. 12 Claims. (Cl. 171—119.)



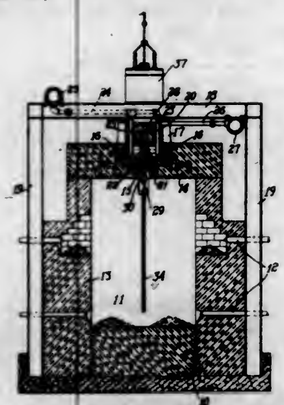
1. In combination, a polyphase electric circuit, means comprising an operating element for controlling the condition of energization of said circuit, and switching means operative upon the occurrence of unbalanced conditions in said circuit for selectively effecting energization of said operating element in accordance with the current in a phase conductor in which the current therein bears a predetermined order of magnitude with respect to the current in another phase conductor.

1,787,304. MIXING VALVE. HAROLD R. BECKER, Newburgh, N. Y., assignor to Becker Valve and Specialty Corporation, Newburgh, N. Y., a Corporation of New York. Filed Mar. 19, 1929. Serial No. 348,324. 26 Claims. (Cl. 236—12.)



1. In a mixing valve, in combination, a casing having an outlet and a pair of inlet ports, a valve head having a pair of passageways connected respectively with said inlet ports, a valve member for controlling the flow of liquid through said passageways, and said valve head and said valve having arc shaped surfaces having a rolling contact with each other.

1,787,305. SHIPPING CONTAINER OR BOX FOR MOTOR VEHICLES AND THE LIKE. JAMES CAMPBELL, Detroit, Mich., assignor, by mesne assignments, to Chrysler Corporation, a Corporation of Delaware. Filed May 31, 1927. Serial No. 195,486. 3 Claims. (Cl. 217—36.)

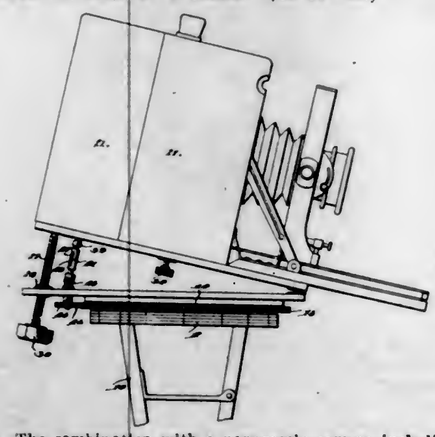


1. In a shipping box for motor vehicles and the like having a bottom, the combination with said bottom, of supporting members adjacent the ends of the box mounted upon and in spaced relation to said bottom whereby the vehicle may be rigidly supported through the frame thereof by the ends of said frame resting on said supporting members, and means for securing the ends of said frame to said supporting members.

1,787,306. DEVICE FOR WASHING GOLF BALLS. HOWARD D. DAY, Providence, R. I., assignor to Roterkleen Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 30, 1928. Serial No. 273,895. 8 Claims. (Cl. 15—21.)

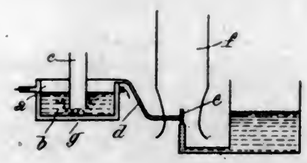
1. In a cleaning machine for golf balls and the like, a housing, an annular disk brush and a cylindrical brush mounted in said housing in axial alignment with each other, a rotatable member supporting the balls within one of the brushes for revolving the balls against said brushes, and means for imparting a vibratory motion to said balls while revolving in contact with said brushes.

1,787,307. FURNACE. WILLIAM F. DETWILER, Tarentum, Pa. Filed Mar. 9, 1929. Serial No. 345,818. 15 Claims. (Cl. 263—8.)



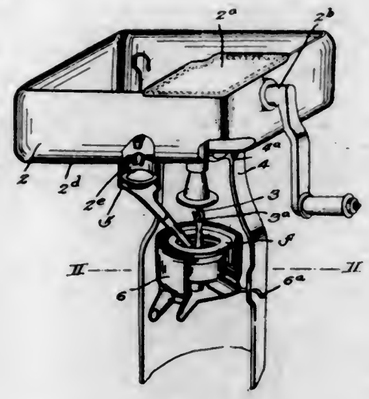
1. A heating furnace including a roof and having in combination a conveyor associated with said roof for continuously moving material through the furnace and a water cooled conveyor chamber disposed around the upper portion of said conveyor and provided with roof supporting members formed thereon.

1,787,308. HOLDER FOR DISPLAY STRIPS. ROLAND A. FURLONG, Rochester, N. Y., assignor to The Yawman & Erbe Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 26, 1929. Serial No. 409,773. 3 Claims. (Cl. 410—16.)



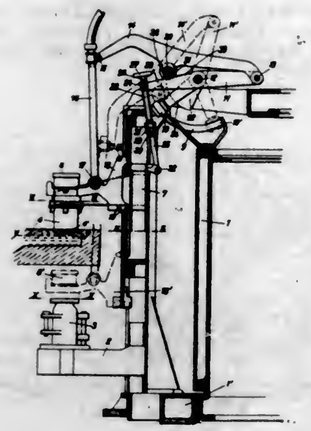
1. A holder for display strips comprising a web formed with upstanding flanges along its opposite edges, said flanges being yielding and provided with reentrant lips along their edges to receive a display strip flatwise, the strip camming against the lips during insertion into the holder and being held in position by the lips when the latter have flexed back to normal position.

1,787,309. PHOTOGRAPHIC APPARATUS. EUGENE O. GOLDBECK, San Antonio, Tex. Filed Apr. 16, 1929. Serial No. 355,573. 8 Claims. (Cl. 95—15.)



1. The combination with a panoramic camera including a turntable therefor, of an auxiliary support mounted on said turntable to sustain a camera thereon, said auxiliary support comprising a lower fixed member and an upper member hingedly connected at its forward end to the forward end of the lower member, and means for adjusting said upper supporting member and the camera carried thereby to dispose the same angularly with respect to the lower member in a manner whereby the travel of the lens of the camera will be in a horizontal plane at all times.

1,787,310. TEMPERATURE-CONTROL DEVICE. MAURICE GOUDARD, Neuilly, France, assignor to "Societe Anonyme Solex," Neuilly, France, a Society of France. Filed Oct. 20, 1928, Serial No. 313,926, and in Belgium Oct. 31, 1927. 2 Claims. (Cl. 261—12.)

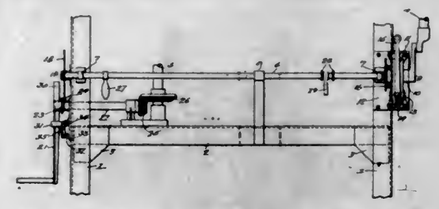


1. A temperature-controlled carburetting assembly comprising a mixing chamber, a nozzle extending into said chamber, a source of fuel connected to said nozzle, and temperature-controlled means for supplying air to said nozzle including a tank, a first conduit extending from the upper portion of said tank to the nozzle, a second conduit extending into said tank, and a substance contained in said tank and covering one end of said second conduit, said substance changing its viscosity with change of temperature and thereby regulating the rate of flow of air through said second conduit.

1,787,311. SEPARATING MACHINE FOR MILK. FERNAND HENRARD, Brussels, Belgium, assignor to Ecremeuses Melotte, Societe Anonyme, Remicourt, Belgium. Filed Oct. 4, 1929, Serial No. 397,284, and in Belgium Apr. 11, 1929. 5 Claims. (Cl. 233—45.)

1. In a separating machine, a milk reservoir, a rotatable bowl, a casing to contain a speed-multiplying device disposed within and formed in one piece with said reservoir, a shaft for driving said speed-multiplying device, a transmission device for connecting the speed-multiplying device with the bowl to rotate the latter, and means for delivering milk from the reservoir to the bowl.

1,787,312. BOTTLE-BLOWING MACHINE. HANS HILLMANN, Gross-Raschen, Germany. Filed Mar. 24, 1928, Serial No. 264,482, and in Germany Mar. 10, 1927. 11 Claims. (Cl. 49—5.)

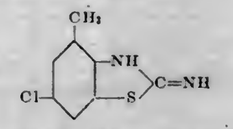


11. In a glass blowing machine of the class described, a rotary mold support, a glass tank associated with said support, a vertically adjustable carriage on said rotary support, a preliminary mold mounted on said carriage, a finishing mold adjustably mounted on said rotary support, a neck mold adapted to cooperate with the preliminary mold in one position and with the finishing mold in another position, actuating means for moving said neck mold to said respective positions, cam means controlled from the preliminary mold carriage to effect the cooperation of the neck mold with the preliminary mold in the various positions of the latter, a stationary support, and means on said stationary support for operating the actuating means aforesaid.

1,787,313. HINGE-SEAT GAUGE. JOHN R. HOUTS, McLean, Va. Filed Nov. 4, 1929. Serial No. 404,715. 3 Claims. (Cl. 33—42.)

3. A marker comprising a substantially rectangular body plate, flanges at the ends of said body, a marker plate fitting against said body between said flanges and having flanges at its ends and a blade along one side, a gauge plate fitting against said marker plate between the flanges thereof and having a flange along one side formed with a slot, a second marker plate fitting against said gauge plate and having a portion projecting through the slot in the flange of the gauge plate, a tooth carried by the projecting portion of the second marker plate, and means to slidably connect the plates and releasably secure the same in adjusted positions.

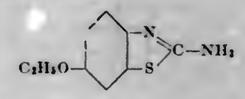
1,787,314. ACTUATING AND CONTROLLING MECHANISM FOR ELECTRIC SWITCHES. WILLIAM R. HUTTINGER, Philadelphia, Pa. Filed May 15, 1929. Serial No. 363,389. 4 Claims. (Cl. 200—50.)



1. An actuating and controlling device for a pair of switches comprising a connection for one of said switches, a crank for moving said connection, a shaft carrying said crank, a disk on said shaft having an opening, a second shaft, an escapement disk connected to permit operation of said second shaft, said disk also having a perforation, and a bar slidably mounted between said disks and of such length that it cannot be withdrawn from the opening in one of said disks without entering the perforation in the other, the bar thus preventing simultaneous movement of said disks.

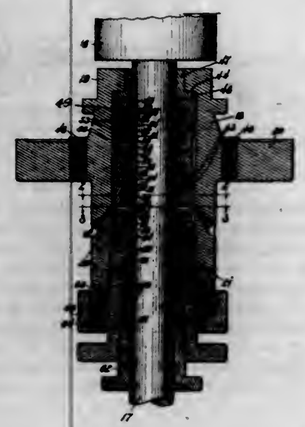
1,787,315. NEW COMPOUNDS OF THE THIAZOLIC SERIES AND PROCESS OF MAKING SAME. HANS PAUL KAUFMANN, Jena, and MAX SCHUBERT, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, a Corporation of Germany. Filed Apr. 12, 1927, Serial No. 183,228, and in Germany Apr. 15, 1926. 14 Claims. (Cl. 260—44.)

1. A process for producing new compounds of the thiazolic series which comprises allowing a salt of sulfocyanic acid to act on primary arylamines, wherein the paraposition to the aminogroup is either substituted by a monovalent radicle or blockaded, in the presence of a halogen.



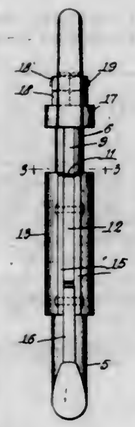
14. As a new product a compound containing sulfur, having probably a thiazole ring in its molecule and corresponding probably to the formula:

which is when dry a crystalline substance, melting at about 203° C. when recrystallized from spirit.



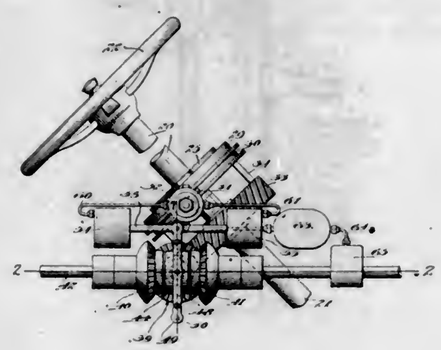
1,787,316. NEW COMPOUNDS OF THE THIAZOLIC SERIES. HANS PAUL KAUFMANN, Jena, and MAX SCHUBERT, Frankfort-on-the-Main-Fechenheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Original application filed Apr. 12, 1927, Serial No. 183,228, and in Germany Apr. 15, 1926. Divided and this application filed Aug. 23, 1929. Serial No. 388,028. 1 Claim. (Cl. 260—44.)

As a new product a compound containing sulfur, having probably a thiazole ring in its molecule and corresponding probably to the formula:



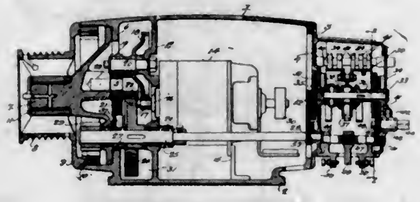
which is when dry a crystalline substance, melting at about 163°, when recrystallized from dilute spirit, and yielding a yellowish diazo compound.

1,787,317. STUFFING BOX. OTTO A. LABUS, Wisconsin Rapids, Wis., assignor, by mesne assignments, to National Carbonic Machinery Company, Wisconsin Rapids, Wis., a Corporation of Wisconsin. Filed Oct. 23, 1926. Serial No. 143,687. 3 Claims. (Cl. 286—27.)



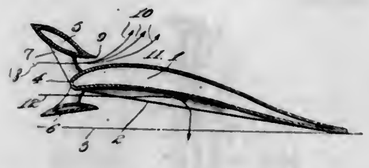
1. A stuffing box for piston rods, comprising a substantially cylindrical housing having a peripheral flange adapted to be secured directly to the end of a cylinder and a reduced portion extending inwardly to form the head of the cylinder, a bushing seated within said reduced portion, a metallic ring following the bushing and fitting closely within the housing but affording a clearance for the piston rod, said ring being counterbored at its inner edge, a floating ring fitting closely around the piston rod within the counterbore with a clearance between the outer edge of the floating ring and the counterbored ring, packing rings following the counterbored ring and floating ring, a separator ring following the packing rings, other packing elements following the separator ring and including a double-counterbored lantern ring with packing rings in front of and behind the same, and a gland at the outer end of the housing for adjusting said packing elements.

1,787,318. HOISTING HOOK. CLYDE LESTER MATTHEWS, Haynesville, La. Filed Sept. 26, 1930. Serial No. 484,656. 5 Claims. (Cl. 24—238.)



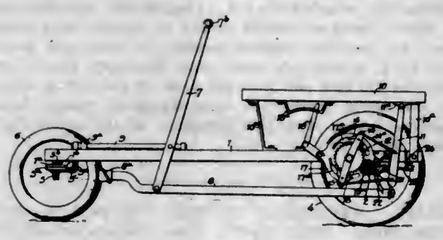
1. A safety hook comprising a hook portion and a shank portion, said shank portion having a recess formed therein, a sleeve slidably mounted on the shank, a latch member carried by the sleeve and engaging within the recess to hold the sleeve in its active position, a spring on the shank for moving the sleeve to its inactive position when the latch member is released, and means carried by the sleeve for engaging the hook to close the hook.

1,787,319. POWER STEERING MECHANISM. WILLIAM L. MCDONALD, Pensacola, Fla. Filed Aug. 16, 1928. Serial No. 300,062. 3 Claims. (Cl. 180—79.3.)



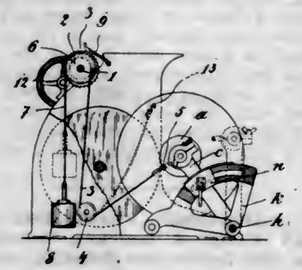
1. In steering mechanism for motor vehicles and the like, a driven shaft, spaced gear wheels on the shaft and having opposed clutch faces, a slidable clutch member on the shaft between the gear wheels and having a groove in its periphery, means for operating the steering mechanism from the gear wheels, opposed cylinders, pistons in the cylinders, springs between the pistons and cylinder heads, a rod connecting the pistons, a pivoted yoke engaging the groove of the slidable clutch member and pivoted to the rod at the center of its length, an air pressure reservoir connected with the cylinders, and a valve for controlling the admission of air to the said cylinders.

1,787,320. ELECTRIC STEERING DEVICE. JAMES AUGUSTINE MELLON, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 5, 1928. Serial No. 304,017. 9 Claims. (Cl. 172—239.)



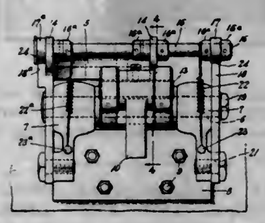
1. An electric steering machine comprising a substantially barrel-shaped main housing, a sub-housing constituting a closure for one end of the main housing, an end member closing the other end of the main housing, a grooved drum journaled for rotation on said end member, an electric motor mounted in said main housing and operatively connected with said grooved drum, and motor control mechanism mounted in said sub-housing and also operatively connected with the drum.

1,787,321. AIRPLANE WING. MATTHEW ORR, Dillon, Mont. Filed Aug. 12, 1929. Serial No. 385,317. 1 Claim. (Cl. 244—12.)



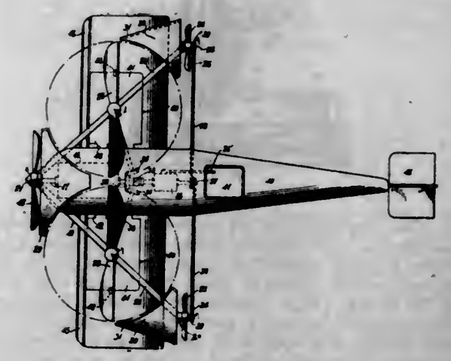
An aircraft having a sustaining plane, and complementary airfoils fixed in oppositely and rearwardly slanting positions, to be widest apart across the leading edges, being spaced above and below the leading edge of said plane to define a Venturi opening.

1,787,322. OCCUPANT-PROPELLED VEHICLE. WILLIAM J. PUGH, Oakland, Calif. Filed May 16, 1929. Serial No. 363,690. 18 Claims. (Cl. 208—36.)



1. In a vehicle, an axle, a gear for rotating said axle; a drive lever journaled beside said gear; means for rocking the lever, a double-ended dog pivoted on said lever adapted to engage the gear teeth with either end; means for yieldably maintaining either end of the dog in contact with said gear; and means for automatically shifting and maintaining the dog in neutral position when the lever is rocked beyond one end of its normal working stroke, said means permitting the dog to resume its former driving contact with the gear when the lever returns within the limits of its working stroke.

1,787,323. WARPING FRAME. WILHELM REINERS and GUSTAV KAHLISCH, Munich-Gladbach, Germany, assignors to W. Schlafhorst & Co., Munich-Gladbach, Germany, a Corporation of Germany. Filed June 10, 1929, Serial No. 369,845, and in Germany Dec. 19, 1928. 8 Claims. (Cl. 28—32.)

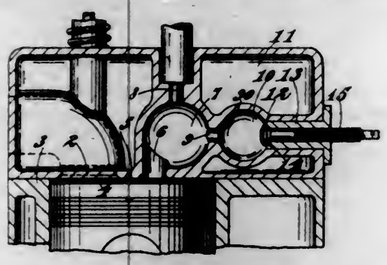


1. A warping frame with a warp beam driven by surface friction including a beaming drum, a warp beam driven from said drum by surface friction, a plurality of beam arms carrying said warp beam, means for producing a pressure of the warp beam against said beaming drum comprising a separate shaft, a torsional resistance means on said shaft and a flexible tension member connecting each of said beam arms with said shaft.

1,787,324. ATTACHMENT FOR CAN-BODY MAKERS. JOSEPH HOWARD RENSHAW, Cincinnati, Ohio, assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed May 18, 1929. Serial No. 364,284. 8 Claims. (Cl. 113—7.)

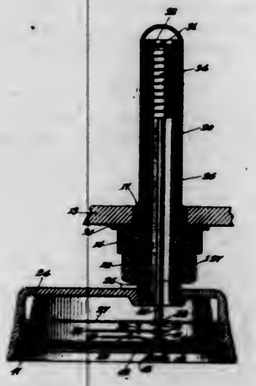
1. A body maker including means for supporting a body blank, means for scraping the inner overlapping portion of the blank forming the side seam in the region at the ends of the side seam for removing the enamel preparatory to the joining of the lapped portions by soldering.

1,787,325. AIRCRAFT. ERNEST RUBIN, Atlanta, Ga. Filed Oct. 18, 1929. Serial No. 400,638. 7 Claims. (Cl. 244—15.)



1. In aircraft, horizontal lifting propellers rotatable in opposite directions and co-acting flight propeller means arranged to compress and place air in rapid motion and project the same onto a blade of each of said propellers, and propeller means arranged to compress and place air in rapid motion and project the same onto another blade of each of said propellers.

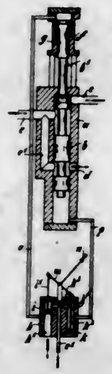
1,787,326. COMPRESSION-IGNITION INTERNAL-COMBUSTION ENGINE. ARTHUR FREEMAN SANDERS, Dursley, England, assignor to R. A. Lister & Company, Limited, Dursley, England, a British Company. Filed Nov. 11, 1929, Serial No. 406,831, and in Great Britain Nov. 20, 1928. 8 Claims. (Cl. 123—23.)



1. In an internal-combustion engine, a cylinder, a cylinder head having a water jacket and an interior flat surface, and a piston operable in said cylinder with

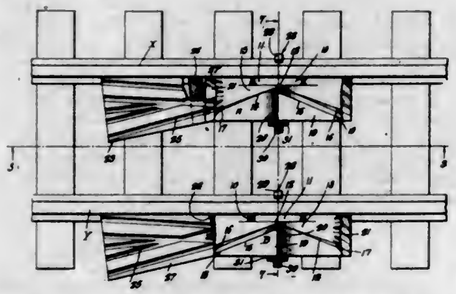
a minimum of clearance between the piston and said flat surface, said cylinder head having therein spaced cavities lying within the water jacket for receiving an

operative clearance volume and with one cavity opening directly into the cylinder and having a narrow passage extending between and intercommunicating the cavities.



1,787,327. TEMPERATURE INDICATOR FOR TRANSFORMERS AND THE LIKE. HERMAN SCHLAICH, Long Island City, N. Y. Filed Feb. 9, 1923. Serial No. 618,159. 2 Claims. (Cl. 73—118.)

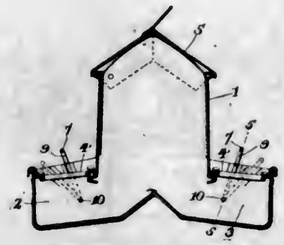
1. The combination of an electrical device adapted to be located at a considerable height above the ground and having a liquid containing casing provided in its bottom with a well, access to which may be had from without the casing, and a temperature indicating instrument attached to the bottom of said casing and positioned directly beneath and close to it, and having a temperature responsive operating element extending into said well for operating the instrument oppositely in response to rise and fall of temperature, a temperature indicating member located on the outside of and supported by the said casing in a position to be readable from the ground, means connecting said member to said element for operation by said element, and a housing for the member including a substantially horizontal bottom cover glass through which the indicating member can be seen from the ground and a protective flange or skirt surrounding the bottom cover glass and extending substantially below it; said instrument being separable as a unit from the casing and well.



2. In an instrument of the kind described, in combination, an indicator member, a freely rotatable shaft supporting the indicator member, a thermostatic actuating coil connected at one end to said shaft, a sleeve surrounding said coil, said sleeve being open adjacent the other end of the coil, and means connecting said other end of the coil to the sleeve in proximity to the open end of the sleeve and forming a bearing for the shaft.

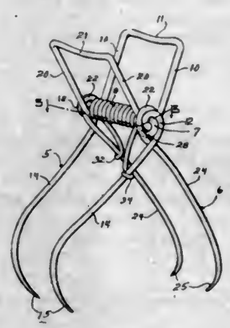
1,787,328. DISTRIBUTING GEAR FOR BIG HYDRAULIC WORKING MACHINES. EMIL SCHÖTTLER, Essen-Rutt, Germany. Filed Jan. 8, 1930, Serial No. 419,400, and in Germany Mar. 2, 1927. 5 Claims. (Cl. 138—16.)

1. In a distributing gear for big hydraulic working machines in combination: a hydraulically actuated piston valve; hand controlled means to operate said piston valve; an auxiliary piston serving to hold said piston valve in a middle position; said auxiliary piston projecting by its free end into the path of the piston valve; and the cross section of said auxiliary piston being somewhat larger than the difference of the active faces of said piston valve.



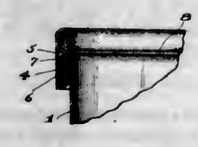
1,787,329. RERAILING DEVICE. AMMON T. SEXE, Hills, Minn. Filed Sept. 3, 1930. Serial No. 479,549. 6 Claims. (Cl. 104—262.)

1. Means for rerailing car wheels comprising an element adapted to be disposed lengthwise of a rail and having a substantially straight lateral face adapted to bear against and less in height than the side of a rail, the element being so formed from one end of its middle as to receive a flange of a car wheel and guide the flange of the wheel laterally toward the rail with its tread disposed on a level with the rail, the element being so formed from its other end to its middle as to engage and raise the tread of a wheel, bringing the flange thereof level with the upper face of the rail and engage the flange to force the wheel laterally to permit the flange to roll over the upper face of the rail.



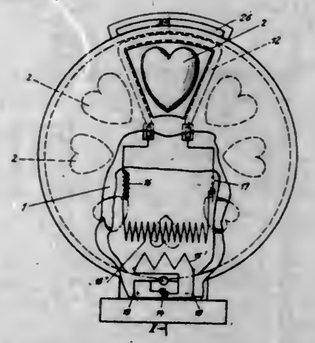
1,787,330. ADJUSTABLE GUARD FOR POULTRY FEEDERS. DANIEL E. SPEICHER, Urbana, Ind., assignor to The Cyclone Manufacturing Company, Urbana, Ind., a Corporation. Filed Jan. 3, 1929. Serial No. 330,003. 7 Claims. (Cl. 119—52.)

1. In a poultry feeder having an open top container provided with end walls, an angularly adjustable, inverted yoke-shaped feed guard for extension over the top of the open container and having its ends opposing the



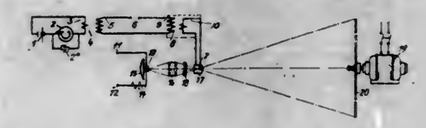
outer faces of and pivotally connected to said end walls of the container, said guard being of greater length than the length of the container.

1,787,331. NAIL TONGS. DONALD R. WILSON, Peshastin, Wash. Filed Nov. 25, 1929. Serial No. 409,686. 5 Claims. (Cl. 294—118.)



1. A device of the class described comprising a pair of U-shaped lever members, a hinge member pivotally connecting the lever members intermediate their ends to provide a pair of co-acting handle portions and a pair of co-acting claw portions arranged respectively above and below the hinge member, spring means normally urging the lever members to a spread position, and a stop extension formed on one end of hinge member and engageable by the claw portions for limiting spreading movement of the lever members.

1,787,332. TAPERED OR NESTING PAPER CAN. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Apr. 29, 1929. Serial No. 359,007. 9 Claims. (Cl. 229—55.)

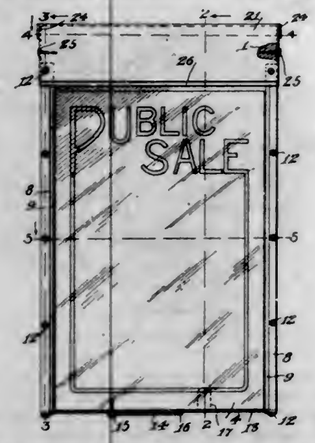


1. A paper can having a tapered body provided with a bottom closure at its small diameter end and at its large diameter end having a rigid compacted exterior enlarged annular rim formed by an exterior roll of the body, said rim having a vertical exterior circumferential surface to slidably receive and frictionally retain the annular flange of a flat top slip cover.

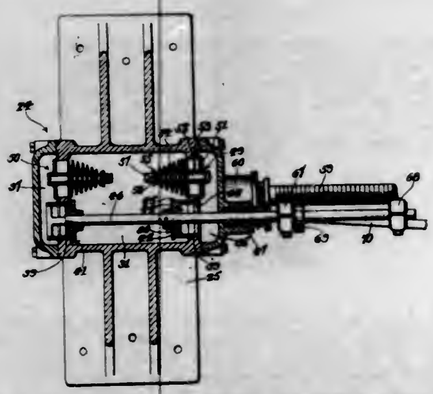
1,787,333. LIGHT ADVERTISING DEVICE. AUGUST ABEL, Leipzig, Germany. Filed Oct. 26, 1929, Serial No. 402,673, and in Germany Oct. 25, 1928. 5 Claims. (Cl. 40—52.)

1. In a device for the production of apparently moving display matter, means for causing an instantaneous short flash of illuminating light upon representations moved by a carrier to a point of observation; said means comprising a luminous gas-discharge tube connected in an electric circuit including a current interrupter synchronized with the carrier to permit momentary energization of the tube at predetermined regular intervals, a condenser connected in parallel with the interrupter for subduing the spark and reducnig its duration, and a transformer having a choke-coil and adjustable spark gap in the circuit of its secondary winding.

1,787,334. DEVICE FOR THE PRODUCTION OF APPARENTLY-MOVING DISPLAY MATTER. AUGUST ABEL, Leipzig, Germany. Original application filed Oct. 26, 1929. Serial No. 402,673, and in Germany Dec. 14, 1928. Divided and this application filed Aug. 14, 1930. Serial No. 475,154. 4 Claims. (Cl. 40—52.)



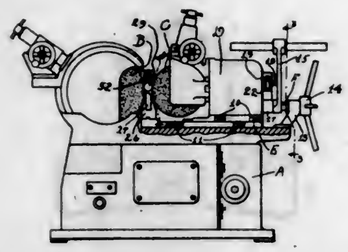
1. In a device for producing apparently moving display matter, a carrier having a plurality of representations of an object in different phases of movement arranged thereon in correspondence with such phases consecutively, means for driving the carrier to move said representations before the eye of an observer, a constantly shining source of light, and means collecting and converting the rays therefrom into short flashes of light occurring at the rate of one with each extent of the carrier's drive for the distance between adjacent representations so as to illuminate the same without perceptible shut-off of the light; said means embodying a light-electric relay connected in an electric circuit including a source of current, a current interrupter, a condenser in parallel with the interrupter, a transformer, and an adjustable spark gap associated therewith.



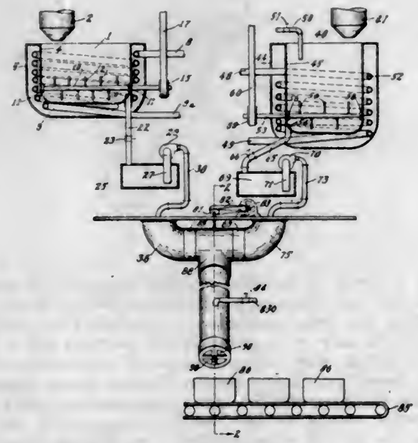
1,787,335. BILL HOLDER AND PROTECTOR. LAWRENCE ANDERSON, Fullerton, Nebr. Filed Apr. 25, 1930. Serial No. 447,302. 4 Claims. (Cl. 40—125.)

1. A bill holder and protector comprising a baseboard formed in its forward face with a recess opening through the lower edge of the baseboard, a transparent element positioned over the recess in spaced relation to the rear wall thereof, a cover for the baseboard, said cover including a rear portion, side portions and front portions, said front portions bearing against the forward face of the

transparent element and being formed at their lower edges with projections extending across marginal lower edge portions of the transparent element, and a resilient securing element having one end secured to the baseboard and having its other end formed with a lateral projection normally extending across the lower edge of the recess.



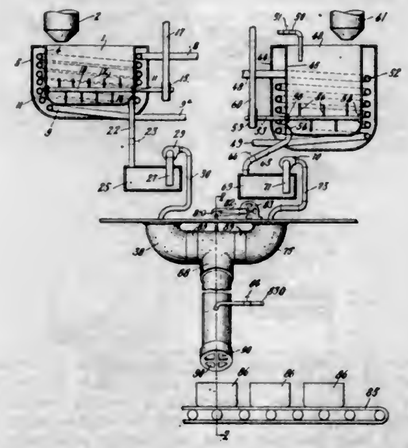
1,787,336. RAILWAY SWITCH. FRANCIS H. BAGLEY, Savannah, Ga. Filed June 30, 1930. Serial No. 464,947. 16 Claims. (Cl. 246—321.)



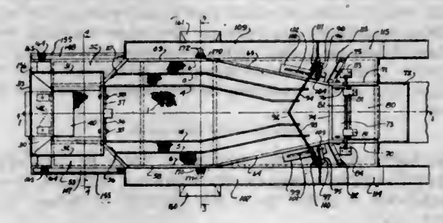
1. A railway switch comprising, a throw rod for connection with a switch point, a spring mechanism operatively connected with the throw rod for closing the switch after a train has trailed therethrough, and a dash pot mechanism operatively connected with the throw rod for resisting the action of the spring mechanism to close the switch, said dash pot mechanism including a housing formed at its ends with a pair of fluid chambers and further formed with a closed end chamber and an open end chamber disposed between the pair of chambers, and a piston slidable in said open end chamber and operatively connected with the throw rod to move therewith, said closed end chamber being in communication with one of said pair of said chambers and being closed to the other, said piston being formed with a by-pass.

1,787,337. GRINDING MACHINE. CLEMENT BOOTH, Cincinnati, Ohio, assignor to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 28, 1929. Serial No. 335,570. 20 Claims. (Cl. 51—103.)

1. In a grinding machine, the combination with a pair of opposed grinding and regulating wheels forming a grinding throat between them, of a block within the grinding throat, a work rest blade secured to the block, a bracket carried by the block, a lever pivotally secured to the bracket, resilient means for urging one end of the lever toward the work rest blade, and positive means for retracting the end of the lever from the work rest blade.



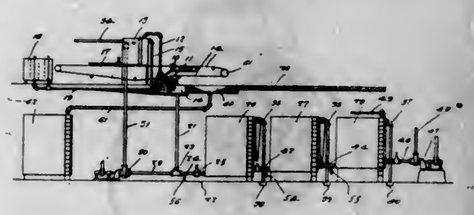
1,787,338. METHOD OF PRODUCING AQUEOUS DISPERSIONS. ALBERT L. CLAPP, Danvers, Mass., assignor to Bennett, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 8, 1925. Serial No. 55,063. 3 Claims. (Cl. 134—1.)



3. A method of producing aqueous dispersions of thermoplastic material, which comprises preparing a hot batch of liquefied thermoplastic material and a hot batch of aqueous sodium silicate solution, progressively withdrawing the thermoplastic material and the solution as continuously moving streams of comparatively small cross-sectional area from the batches, uniting the streams into a single, continuously moving stream, and thoroughly agitating the continuously moving stream to effect a dispersion of the thermoplastic material in the aqueous sodium silicate solution.

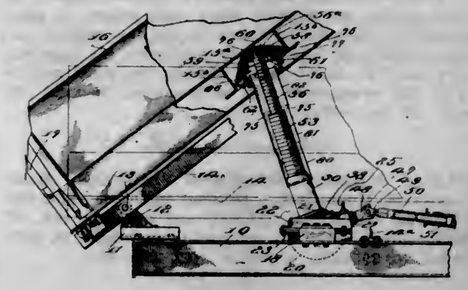
1,787,339. APPARATUS FOR PRODUCING AQUEOUS DISPERSIONS. ALBERT L. CLAPP, Danvers, Mass., assignor to Bennett, Incorporated, Boston, Mass., a Corporation of Massachusetts. Original application filed Sept. 8, 1925, Serial No. 55,063. Divided and this application filed Feb. 1, 1927. Serial No. 165,106. 5 Claims. (Cl. 134—1.)

1. Apparatus of the class described, comprising in combination a pair of material heaters, means for stirring material fed into said heaters, tanks arranged to receive material from said heaters, a cylindrical shell into one end of which continuous streams of heated material from said tanks may be delivered, a shaft arranged axially within said shell, and a spiral conveyor on said shaft for mixing and conveying the materials as a continuously moving stream from said one end through the shell.



1,787,340. MECHANISM AND PROCESS FOR SEPARATING INTERMIXED DIVIDED MATERIALS. KENNETH DAVIS, St. Benedict, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del., a Corporation of Delaware. Filed July 10, 1922. Serial No. 574,033. 24 Claims. (Cl. 209—467.)

1. A mechanism for separating intermixed divided materials, comprising an inclined separating unit having an air pervious bottom in which a bed of materials of substantial depth is maintained, means for vibrating said unit, separating partitions of substantial height extending substantially longitudinally of the separating unit defining channels of substantial depth, means for forcing air upwardly through the bed of materials, whereby flotation, stratification and separation of the materials moving along said channels is effected, and means for variably positioning the said partitions in the unit.

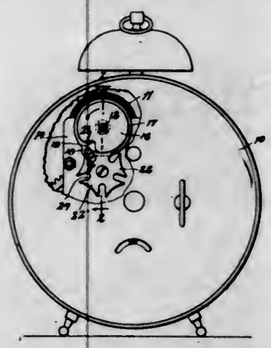


9. A process for separating intermixed divided materials varying relatively greatly in size and relatively little in their specific gravities, which comprises maintaining a bed of the intermixed materials of substantial depth on an air-pervious table, acting on the bed with lifting air currents and vibration to gradually stratify and separate the materials, progressing the lighter material in a substantially continuous, superior stratum to discharge, causing different sizes of heavy impurities to settle at different parts of the table beneath said superior stratum by passing air currents of different lifting force through different parts of the bed, deflecting and guiding the settled impurities transversely beneath the superposed lighter material, and discharging different sizes of heavy impurities from different parts of the table.

1,787,341. WHITE-WATER SYSTEM FOR RECLAIMING WHITE WATER OR ANY FIBER. CHARLES DUPUIS, Ladysmith, Wis. Filed Sept. 4, 1929. Serial No. 390,291. 14 Claims. (Cl. 92—38.)

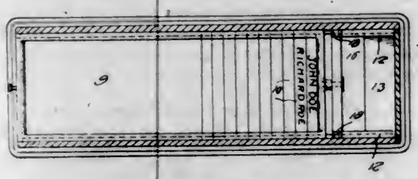
1. A setting system for paper machines comprising a white water receiving tank adapted for supplying water to the fan pump of a paper machine, a suction box pump adapted for conducting excess water from the paper machine, a conductor pipe connecting the suction box with the white water receiving tank, a drain pit on substantially the same level as the white water receiving tank and the suction box and having a drain pipe leading therefrom, a pump operatively connected with one side of the drain pipe and having an automatically controlled outlet discharging into the white water receiving tank, a series of settling tanks selectively connected together at their bottoms, the forward tank of the series being selectively connected with the other side of the drain pipe, overflow means on each tank, a pump operatively connected with the bottom of the last tank of the series for carrying off supernatant water, and automatic means on the last tank for admitting fresh water when the water in the settling tanks reaches a predetermined point.

1,787,342. RAISING MECHANISM. HENRY FORT FLOWERS, Findlay, Ohio. Filed Nov. 23, 1926. Serial No. 150,329. 16 Claims. (Cl. 298—21.)



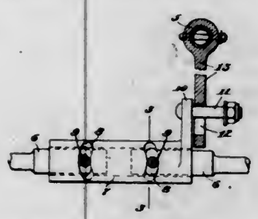
1. In a raising mechanism for the tiltable dump body of a vehicle having a frame, a lower socket member on said frame, a lower ball movable in said socket member, a rotatable sleeve journaled in said ball and having screw threads therein, a threaded spindle engaging the threads of said sleeve and adapted to tilt said body, means including a shaft to rotate said sleeve, a bearing for said shaft on said lower ball, and a guide on said socket member for said shaft, said guide serving to prevent rotation of said ball about the axis of said sleeve and to permit movements thereof in a plane including said axis.

1,787,343. SPRING-WINDING CONTROL DEVICE. WILLIAM THOMAS, New York, N. Y. Filed May 28, 1929. Serial No. 366,659. 2 Claims. (Cl. 185—43.)



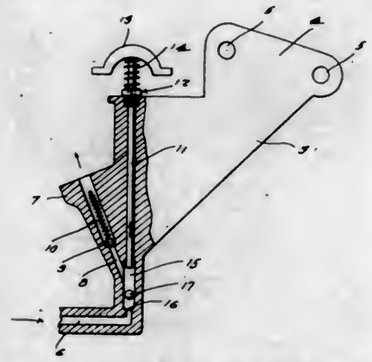
1. In a device of the character described, the combination with a coil spring and an arbor therefor of a wheel carried by said arbor, a projection on said wheel, a Geneva wheel mounted adjacent said first mentioned wheel

engageable with said projection for periodic rotation thereby, a supporting frame for said arbor and wheels, a projection on said supporting frame adapted to limit ro-



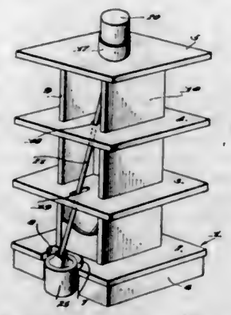
tation of said Geneva wheel, and a projection on said Geneva wheel engageable with the projection on said supporting frame.

1,787,344. INDEX CABINET SLIDE. HAL TURNER, Tulsa, Okla. Filed Jan. 17, 1928. Serial No. 247,366. 6 Claims. (Cl. 45—2.)



1. A cabinet having side guides, a follower slidably arranged within the cabinet along said guides, a panel arranged for slidable movement within the cabinet, and means for pivotally and swivelly connecting the inner end of the panel to said follower whereby the panel may be rotated and swung vertically when entirely disposed outwardly of the cabinet.

1,787,345. STEERING GEAR FOR VEHICLES. MARIO VEDOVELLI, Milan, Italy. Original application filed Oct. 11, 1928, Serial No. 311,890, and in Italy Oct. 27, 1927. Divided and this application filed Sept. 28, 1929. Serial No. 395,954. 4 Claims. (Cl. 280—95.)

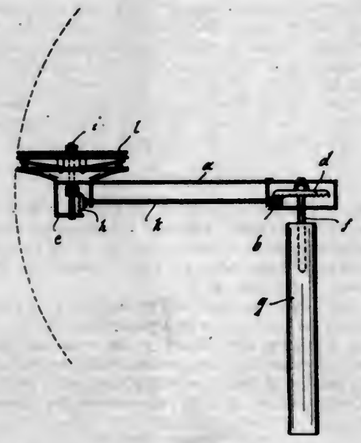


1. In a vehicle a pair of steering wheel supporting parts, arms each solid with one of said parts, bar sections each having one end pivotally connected with the end of one of said arms, means interconnecting the other ends of said bar sections, said means comprising at least a cam guide transverse to the axis of said bar sections and guides for said bar sections extending in the direction of the axis of the same, and steering means actuating said arms and said interconnecting means for the same.

1,787,346. FUEL PUMP. KENNETH J. WATTERS, Ocheyeden, Iowa. Filed Mar. 25, 1929. Serial No. 349,881. 1 Claim. (Cl. 103—154.)

Means in a pump engine for maintaining a constant feed of the fuel from the fuel supply tank to the carbureter of the engine, comprising a casting having an attaching flange for connection with the engine block and having a body portion bored to provide relatively angularly disposed internal passages converging toward a common point and forming a fuel intake from the supply tank, fuel outlet to the carbureter and plunger-receiving bore respectively, an elongated fuel collecting chamber connecting the converging ends of the passages and affording communication therebetween, a reciprocable plunger rod operably positioned within the said plunger receiving bore with its lower end extending into the said chamber, a ball check valve within the chamber and controlling communication between the latter and the fuel intake passage, said valve being operable to open the passage upon the intake stroke of the plunger and to close the same upon the exhaust stroke, and a spring tensioned ball check valve within the said fuel outlet passage for controlling communication between the latter and the said elongated chamber, said spring tensioned valve being operable to close the passage upon the intake stroke of the plunger and to open same upon the exhaust stroke of the latter.

1,787,347. COMBINED DISPLAY AND DISPENSING APPARATUS. ARTHUR WELLEMEYER, Klemme, Iowa. Filed Oct. 8, 1929. Serial No. 398,228. 2 Claims. (Cl. 221—69.)



1. A combined and dispensing apparatus comprising a stand composed of a plurality of shelves arranged in vertically spaced relation, one above the other, a funnel receiving opening in the top shelf, the other shelves having tube passages therein, a funnel mounted in said opening, a tube connected with said funnel and passing through said passages, the lower portion of said stand having a seat to receive a container to be filled whereby the container may be positioned for the insertion in the mouth thereof of the lower end of said tube.

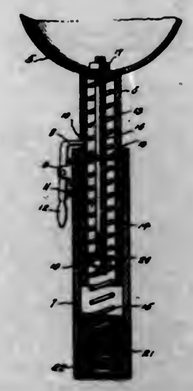
1,787,348. PROCESS OF REDUCING ORES. HERBERT WITTEK, Beuthen, Germany. Filed Dec. 1, 1926, Serial No. 152,069, and in Germany July 26, 1926. 8 Claims. (Cl. 75—17.)

1. The method of reducing ores which consists in contacting the ore and carbide, and then azotizing the carbide, while the ore and carbide are thus associated.

1,787,349. SPARK TOY. CARL ARNOLD, Nuremberg, Germany. Filed Nov. 19, 1929, Serial No. 408,308, and in Great Britain June 4, 1929. 1 Claim. (Cl. 46—14.)

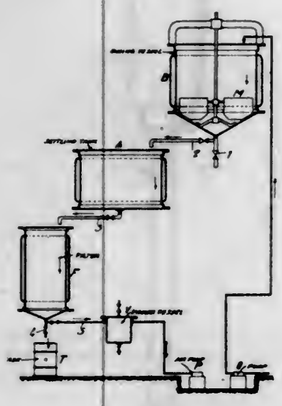
A spark producing device rotatably mounted on a handle said spark-producing device comprising in combination an axle, a mitre wheel gearing connected to said axle to rotate the same, a mitre wheel gearing connected with said handle, and a shaft connecting the mitre wheel gearing of said spark producing device and the mitre wheel gearing of said handle and adapted to rotate when the spark producing device is rotated around said handle and to cause the spark producing device to rotate on its axle.

1,787,350. PRISON BAR AND ALARM-SYSTEM CIRCUIT CLOSER. WILLIS MACKINLEY BARTON, Florence, Ala. Filed Feb. 13, 1928. Serial No. 254,014. 1 Claim. (Cl. 200—52.)



The combination with a window sash, of a metallic frame composed of angle iron members, the corresponding branches of which are provided with aligned spaced openings, grate hollow tubular bars supported by said frame and having their ends received by said openings, washers fixed on the ends of each rod and arranged within the frame bearing against the inner side of the adjacent angle members thereof, collars arranged within said bars adjacent the ends thereof, a sectional rod arranged within each bar and passed through said collars, each rod being of a greater length than the said bar and also passed through the openings in said frame members, a flange carried by each end of each rod and also arranged within the frame member, a coil spring surrounding each end of said rod and interposed between the adjacent flange and collar, and push button switches arranged in the said frame at the opposite ends of each rod and normally spaced from the flanges thereof for the purpose specified.

1,787,351. GROUNDING DEVICE. EDDIE F. BENNETT, Eastland, Tex. Filed Mar. 28, 1929. Serial No. 350,541. 1 Claim. (Cl. 173—31.)



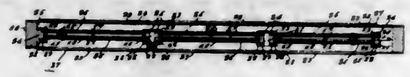
In combination, a grounding device comprising an elongated tubular member having a flattened lower end and an open upper end, said tube also having an opening in the wall thereof intermediate the ends of the tube, a terminal secured to the tube adjacent the upper end thereof, and a drip member loosely mounted on the upper end of the tubular member, said drip member comprising a reservoir, a cone-shaped drip nozzle depending within the upper end of the tubular member, an enlarged flange secured to the base of said cone-shaped nozzle, said flange normally engaging the upper end of the tubular member, and means for securing said flange to said reservoir.

1,787,352. SCOOP SCALE. JAMES M. BENSINGER, Gadsden, Ala., assignor of one-half to Alexander Howell, Gadsden, Ala. Filed Apr. 11, 1928. Serial No. 269,053. 2 Claims. (Cl. 265—66.)

1. A scoop scale comprising, a scoop, a tubular standard secured thereto, a tubular handle slidably receiving said standard, balance springs disposed in said standard and handle, an adjusting rod disposed longitudinally in said standard and extending through said scoop at one end, means on said rod for effecting individual adjustment of certain of said springs, and means carried by the handle for effecting individual adjustment of another of said springs.

1,787,353. REGENERATION OF LUBRICATING OILS. HERMANN BENSMANN, Bremen, Germany. Filed Nov. 2, 1926, Serial No. 145,905, and in Germany Mar. 25, 1926. 2 Claims. (Cl. 196—16.)

1. A process for the regeneration of used lubricating oils, more especially those which have absorbed impurities and decomposed to a considerable extent owing to having been used in internal combustion engines or at points exposed to high temperatures, consisting in first heating the oils to about 30° C., then gradually heating the said oils further to about 60–70° C. together with polymerizing agents, while stirring, in order to form asphalt-like substances from the decomposition products of the oil, drawing off the sludge, passing the oil through a settling vessel and treating the oil by means of a filter having a long filtering path with an aluminium magnesium hydrosilicate to remove the organic acids and tarry constituents.

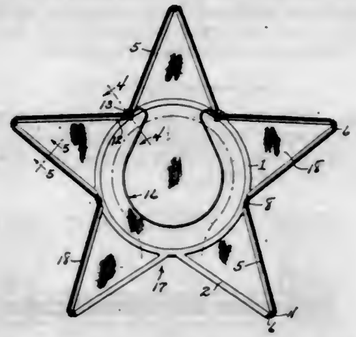


1,787,354. REPEATING RIFLE. ANDY BOCHNAK, Bobtown, Pa. Filed Nov. 15, 1929. Serial No. 407,475. 7 Claims. (Cl. 42—59.)

1. In a repeating rifle, a stock, a firing barrel extending therefrom, a cartridge storing barrel rotatably mounted upon the stock, means upon the periphery of the barrel for supporting an annular series of cartridges for presentation, successively, to the firing end of the barrel, a firing pin upon the stock, a hammer upon the stock for coaction with the firing pin, a trigger, and means actuated, automatically, upon pulling of the trigger, to first advance the cartridge storing barrel one step in its rotative movement to bring a cartridge into alignment with the stock barrel and with the firing pin, and to cock the hammer and then release the same for impact with the firing pin, upon further pulling of the trigger, the means for automatically advancing the cartridge storing barrel comprising a rack member slidably actuated through initial pulling of the trigger, a gear engaged by the said rack, and a rotatable member actuated by rotation of the gear and having a series of studs for engagement in sockets in the barrel.

5. A rotary cartridge carrier for repeating rifles comprising a barrel having a circumferential groove in its periphery, the walls of said groove being inwardly beveled, and a plurality of cartridge chambers provided with beveled bosses seating in said groove and extending in an annular series about the barrel.

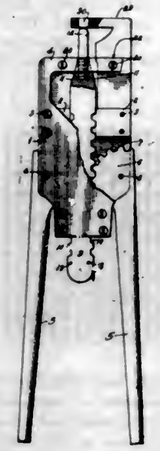
1,787,355. SIGN. MILTON VINCENT BROWN, Guthrie, Okla., assignor of one-half to Paul Richard Barnes, Guthrie, Okla. Filed Apr. 27, 1929. Serial No. 358,625. 2 Claims. (Cl. 40—130.)



1. An illuminating device of the character described comprising a housing having openings in the opposed side walls thereof, channel members vertically disposed at spaced intervals within said housing and openings, containers of hollow block like formation receivable within the guideways formed by the channel members, stenciled placards facing said containers, and said containers being filled with an electrically luminous gas designed to exhibit light of even density over the entire surfaces thereof exposed through the portions removed in the housing and the stenciled portions in the placards.

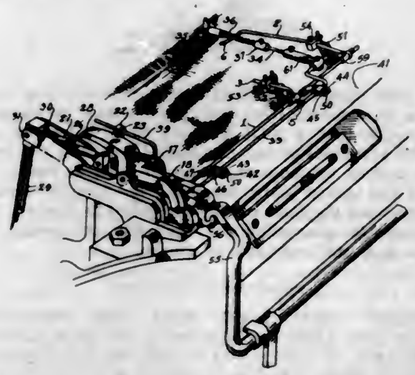
1,787,356. CRYSTALLIZATION PROCESS. WILLIAM E. BURKE, Trona, Calif., assignor to American Potash & Chemical Corporation, New York, N. Y., a Corporation of Delaware. Filed May 23, 1927. Serial No. 193,673. 22 Claims. (Cl. 23—41.)

5. An improved method of crystallizing borax from liquor saturated with borax and potassium chloride, which comprises bringing the liquor to supersaturation with borax and flowing the supersaturated liquor countercurrent to a sludge of borax crystals through a crystallizer which is relatively high with reference to its diameter.



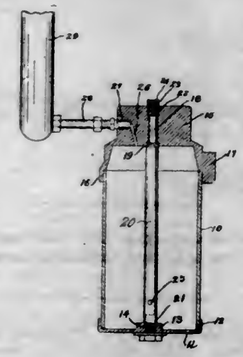
1,787,357. ORNAMENTAL LAMP SHADE. POMPEO CAPOCCI, Hollandale, Fla., assignor of one-half to Angelo Cammarata, Hollywood, Fla. Filed Nov. 7, 1928, Serial No. 317,764. Renewed May 28, 1930. 3 Claims. (Cl. 240—108.)

1. A shade for electric bulbs, including the frame that comprises a pair of spaced ring members, each having on its outer periphery equidistantly spaced bendable substantially V-shaped extensions designed to have their ends brought into contact and to be secured together, spacer elements between the rings, a spring bulb clamp in the frame, and a translucent covering for the frame.



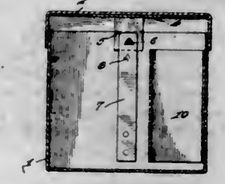
1,787,358. TOOL. WALTER F. CLAY, Texarkana, Tex. Filed July 21, 1928. Serial No. 294,474. 1 Claim. (Cl. 164—121.)

In a tool for the purpose set forth, a frame comprising two spaced plates, blocks arranged in spaced pairs between and removably secured to the plates, each of said plates having its central portion cut away beyond the outer blocks to provide the said plates with yoke-like extensions, a rack having both of its edges toothed, slidable between the blocks and yoke, a pair of handles each having a segmental head which is toothed, and which are pivoted between the sides of the frame, to engage with the teeth of the rack, a punch on one end of the rack, a jaw having a reduced shank received through the yoke and resting upon one of the outer spaced blocks, removable means se-



curing the shank to the yoke, said jaw having an outer widened portion which affords inner shoulders that rest on the outer edges of the yoke, the said wider portion having its inner face concaved and formed from thence with a right angular extension that has an opening therethrough in a line with the punch.

1,787,359. AUTOMATIC THIN-PLACE PREVENTER. WILLIAM F. CLAYTON, Huntsville, Ala., assignor of one-sixth to William E. James, Cullman, Ala., one-sixth to Nephanus E. James, Birmingham, Ala., and one-third to R. E. Smith, Huntsville, Ala. Filed Aug. 2, 1928. Serial No. 297,020. 5 Claims. (Cl. 139—348.)

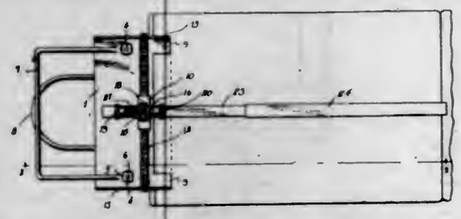


1. In loom mechanism, a detector finger in combination with bobbin replenishing mechanism, means operable responsively to the detection of a thin spot by said detecting finger for actuating said bobbin replenishing mechanism lifting means for said detecting finger, an operating connection responsive to the actuation of said replenishing mechanism for actuating said lifting means to lift said detecting finger out of the thin spot, said operating connection being severed by the lifting of said detector finger, and means operatively positioned by the retrogressive movement of the cloth for assuming the support of said detector finger when said supporting function is relinquished by the means which is responsive to the actuation of the bobbin replenishing mechanism.

1,787,360. INTERNAL-COMBUSTION-ENGINE-CLEANING DEVICE. FRANK F. COWHERD, Chicago, Ill. Filed Nov. 7, 1928. Serial No. 317,720. 1 Claim. (Cl. 123—198.)

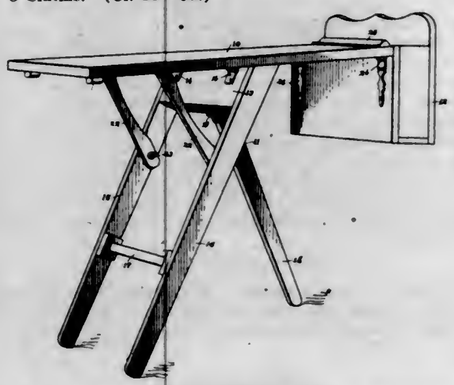
In an internal combustion engine cleaning device, a substantially cylindrical body member, a bottom member, a head member, an elongated member extended through said cylindrical member connected to said bottom member and said head member to hold the same on said body member to define a cleaning fluid storage chamber, said member having an inlet opening closed by a removable plug having a relatively restricted passage therein, said member having outlet openings adjacent the lower end thereof, said head member having outlet passages provided therein to which members may be connected to connect said chamber with the intake manifold of the internal combustion engine.

1,787,361. COMBINATION CIGARETTE AND MATCH BOX. EMEN DERWISH, Fertile, Minn. Filed Apr. 27, 1928. Serial No. 273,326. 1 Claim. (Cl. 206—38.)



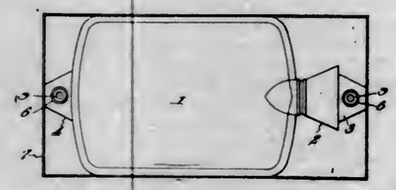
A device of the character set forth comprising a rectangular casing having one end open and provided with an opening in one wall adjacent the open end, a flanged cover hinged to the casing for closing the open end thereof and having its top wall spaced from the open end of the casing when in a position to close the casing, a serrated plate secured to the inner face of the top wall of the cover and bent angularly to provide a keeper to extend into the casing and terminate adjacent the opening when the cover is in a closed position, said angular portion of the plate being off-set and recessed adjacent the free end thereof, an elongated spring catch having one end secured to the interior of the casing adjacent the closed end thereof and having the free end angularly related to engage the recess for retaining the cover in a closed position, and a button secured to the catch and extending through the opening to permit a person to disengage the catch from the keeper by pressing on the button.

1,787,362. LINE FOLLOWER. OSCAR ERICKSON, Alexandria, Minn. Filed May 15, 1928. Serial No. 277,910. 3 Claims. (Cl. 120—33.)



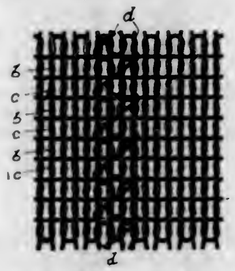
1. A line indicator including a support, a rack connected at its ends to the support and spliced therefrom between its ends, a tubular body encompassing the rack

and slidable thereon, a guide on the under side of the body extending across the rack, an indicating arm slidable in the guide between the rack and support, and a gear



element mounted upon the body and coacting with the rack to move the body and indicating arm over the support.

1,787,363. FOLDING DESK. WILLIAM B. FAHNESTOCK, Wyoming, Ohio. Filed Apr. 6, 1928. Serial No. 267,873. 3 Claims. (Cl. 45—69.)

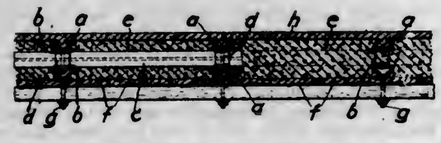


1. A foldable desk comprising a top, a foldable supporting structure connected with the top for supporting the top, and a receptacle movably suspended from one end of the top, said receptacle being open at the top, said receptacle being so suspended that it may move relatively to the top when the desk is being opened for use, or being folded, to assume an upright position.

1,787,364. MEANS FOR MOUNTING RUBBER CONTAINERS IN BOXES. PAUL E. FENTON, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 10, 1927. Serial No. 190,275. 3 Claims. (Cl. 206—69.)

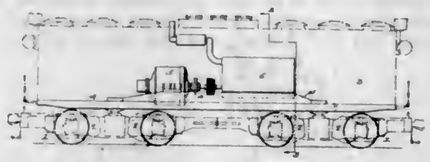
1. Means for mounting an elastic rubber container in a box, for shipping and display purposes and retaining it therein without liability of crumpling, said container having an elastic tab provided with a resilient eye, said box provided with a button definitely located therein and attached thereto and having a head of larger diameter than said resilient eye, said head projecting within the box, and said resilient-eyed elastic tab capable of being stretched to pass over the head of the button and thereafter resume normalcy and thus engage the button and prevent acidental disengagement therefrom and so secure the container in mounted position in the box, the other end of the container being anchored to the box.

1,787,365. STRIPED STOCKING. EARL THOMAS FLOYD, near Temple, Pa., assignor to The Nolde and Horst Company, Reading, Pa., a Corporation of Pennsylvania. Filed June 19, 1928. Serial No. 286,679. 1 Claim (Cl. 66—180.)



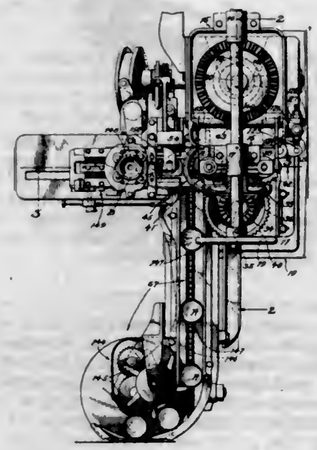
A stocking knit with two different body yarns simultaneously fed in alternating courses, and having separate striping yarn plaitedly interknitted in each wale with one of said body yarns to appear on the surface in the alternate courses of determined wales and with each rear portion of said striping yarn floated diagonally across an intervening course of the other body yarn to appear only on the reverse side of the stocking.

1,787,366. PLOW POINT. LEE COY FOUNTAIN, Kingsburg, S. C., assignor of one-third to Franklin Eli Weaver, Hyman, S. C. Filed Dec. 14, 1928. Serial No. 325,948. 1 Claim. (Cl. 97—125.)



A plow comprising a body formed of convergent wings and a substantially flat central part, a rear extension on the central part, a point having a shank extending rearwardly and covering the flat central part and the extension, a short tongue connected with the rear end of the point and spaced below the shank for forming a socket for receiving the front end of the central part of the body and bolts for connecting the shank with the central part of the body and both parts to a beam.

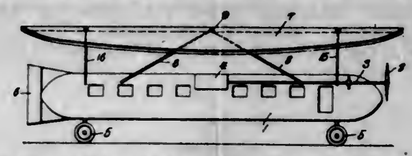
1,787,367. IRON-FRAME WALL FOR BUILDINGS AND THE LIKE. ALFRED FRANK, Stuttgart, Germany. Filed Feb. 28, 1928, Serial No. 257,740, and in Germany Mar. 5, 1927. 5 Claims. (Cl. 72—16.)



1. An iron frame wall for buildings and the like comprising a plurality of pairs of spaced beams; a plurality of intermediate beams arranged transverse to and between the spaced beams and secured to the spaced beams; and a filling mass in and between the beams and forming a plane and flush with the outer limits of the spaced beams.

1,787,368. SELF-PROPELLED RAILWAY VEHICLE. HARRY GLAENZER and CONRAD C. C. BURKHARDT, Philadelphia, Pa. Filed Oct. 31, 1928. Serial No. 316,138. 3 Claims. (Cl. 105—35.)

1. The combination in a self-propelled railway vehicle, of two trucks; a frame supported on the trucks, said frame having side rails; a generator located between the side rails and supported thereby, said frame also having an intermediate rail extending part of the length of the frame; two engines arranged side-by-side and resting on the side rails and intermediate rail; and gearing between both engines and the generator.



1,787,369. DOUBLE-SEAMING MACHINE. HENRY L. GUENTHER, Los Angeles, Calif. Filed Aug. 22, 1928. Serial No. 301,318. 6 Claims. (Cl. 113—14.)

1. A double seaming machine of the intermittent type comprising a first seaming station and a second seaming station, complementary chucks between which a can and cap are disposed at the first station and by which said can and cap are held in assembled relation to each other without axial rotation, a rotary seaming head at said first seaming station having rollers adapted to move around the perimeter of the can and cap to form the initial seam, can transfer means for moving the can and its cap from the first to the second seaming station, a pair of chuck members between which the assembled can and cap are positioned by said transfer means, means for driving said members to axially rotate the can and seaming means adapted to exert pressure against the partially formed seam to complete the seam.

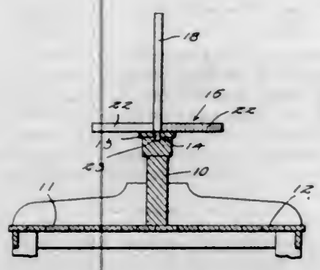
1,787,370. AEROPLANE WING. WILLIAM S. HALL, San Antonio, Tex. Filed Dec. 16, 1929. Serial No. 414,512. 1 Claim. (Cl. 244—12.)

The combination with the body of an aeroplane, of upwardly inclined struts mounted at opposite sides of the body, a shaft supported by the upper ends of the struts, a flight plane of elliptical marginal contour mounted upon said shaft for tilting movement and having its longitudinal axis in the same vertical plane as the longitudinal axis of the body, and means connected with the plane near the ends thereof for tiltably adjusting the said plane, the said means comprising shafts rotatably mounted in the body

of the aeroplane at points transversely below the front and rear end portions of the flight plane, drums upon the shafts, cables wound about and extending between the corresponding drums of the shafts and having their terminal stretches extending upwardly from the drums and connected to the flight plane adjacent the ends thereof, and manually operable means for rotating the forward one of said shafts.

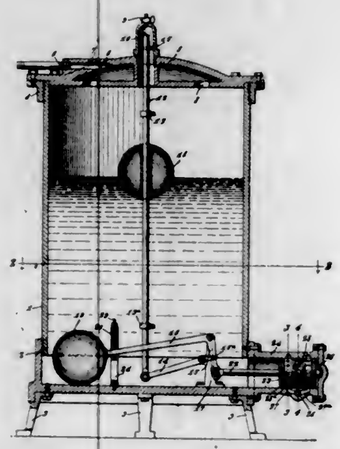
1,787,371. LAMINATED GLASS ARTICLE. MAURICE C. HEATON, West Nyack, N. Y. Filed June 27, 1928. Serial No. 288,782. 1 Claim. (Cl. 41—23.)

A laminated glass article comprising a plurality of narrow strips of glass arranged in contact so that their side edges will form the respective faces of a panel, a layer of cement arranged between groups of said strips and a backing of cement covering one edge of all of said strips of glass, said backing merging into said layers of cement whereby all the parts are locked together.



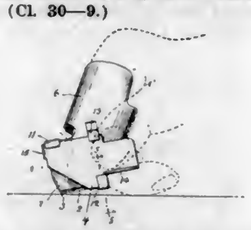
1,787,372. RAZOR STROP. FRANK K. HEHNLY, St. Petersburg, Fla. Filed Feb. 19, 1930. Serial No. 429,642. 1 Claim. (Cl. 51—200.)

A razor strop comprising sharpening and finishing plates of glass and slate respectively, a padding member positioned between the plates and at one end thereof projecting beyond the plates, said padding member adapted to cushion the plates and aid in preventing breaking of the plates, hand grip elements positioned against opposite faces of the extended portion of the padding member and stitched thereto, clamping plates positioned against the sharpening and finishing plates adjacent one of their ends and having inwardly extending side and end flanges and said end flanges engaging over the edges of said sharpening and finishing plates and the side flanges engaging



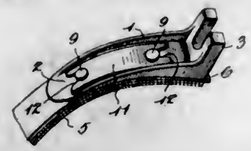
the hand grip elements, fasteners securing the clamping plates together and causing the side flanges to bite into the hand grip elements, and a clamp securing the sharpening and finishing plates together at the other ends thereof.

1,787,373. DISPLAY TRAY FOR USE ON STORE COUNTERS. ELDEN O. HENDERSON, McAllen, Tex. Filed Dec. 31, 1927. Serial No. 243,959. 2 Claims. (Cl. 45—141.)



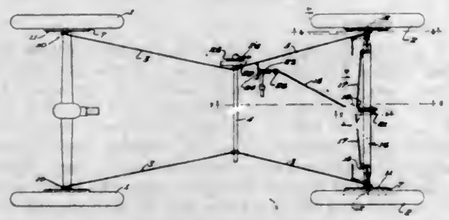
1. In combination, a counter attached support provided with a slot extending longitudinally thereof, a tray greater in width than the support and provided upon its bottom face with a centrally arranged reinforcing brace, the brace being slidably arranged upon the support, and a rib shorter than the brace and extending downwardly from the center thereof and slidably arranged in said slot to prevent the transverse displacement of the tray from the support.

1,787,374. STEAM TRAP. EDMUND T. HEWITT, St. Louis, Mo. Filed June 16, 1928. Serial No. 286,037. 2 Claims. (Cl. 137—103.)



1. A steam trap comprising a reservoir for condensed water, a reciprocable piston controlling a drain in the bottom thereof, a float actuated on a drainage of water from the trap to control said piston, an arm actuated by the float to open a vent in the drain, an auxiliary float on a vertical rod in slidable relation to the arm, a latch controlling the piston, and a pair of fixed collars on the rod at different fluid levels to engage the auxiliary float and set or unset the latch to control the drain.

1,787,375. PAPER CUTTER. MURVALE I. HIGBIE, New York, N. Y. Filed Sept. 5, 1928. Serial No. 303,994. 4 Claims. (Cl. 30—9.)

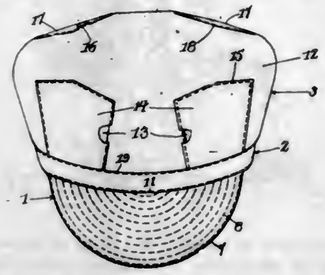


3. A paper cutter, comprising a supporting member, a base extending from the supporting member, a blade fitted against said base, a clamping plate for clamping said blade in position, said clamping plate having a projecting flange acting as a thumb rest, and means extending from said base fitting over said clamping plate for holding the clamping plate in position.

1,787,376. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor, by mesne assignments, to Hoffman-Paulding Company, a Corporation of Michigan. Filed June 20, 1923. Serial No. 646,615. 8 Claims. (Cl. 188—249.)

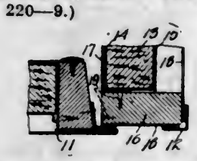
3. A transmission band comprising a band provided with studs projecting from one face and formed with a reduced diameter, an ear separable from the band and formed with openings to receive the studs of the band, and a spring fastening member in interlocking engagement with the reduced diameter of the studs and securing the ear to the band.

1,787,377. BRAKING MECHANISM FOR AUTOMOBILES AND OTHER MOTOR OR POWER DRIVEN VEHICLES. GLENN R. HOFFMAN, East St. Louis, Ill., assignor to Hoffman-Paulding Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 8, 1928. Serial No. 260,028. 9 Claims. (Cl. 188—10.)



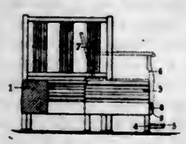
1. In a four wheel braking mechanism including means for simultaneously applying or releasing the brakes of the four wheels, means for releasing the brakes of the steering wheels independent of the means for simultaneously applying and releasing the brakes of the four wheels.

1,787,378. CAP. CAROLINE DILLS HOLLENBECK, Sheridan, Wyo. Filed Apr. 8, 1929. Serial No. 353,450. 1 Claim. (Cl. 2—195.)



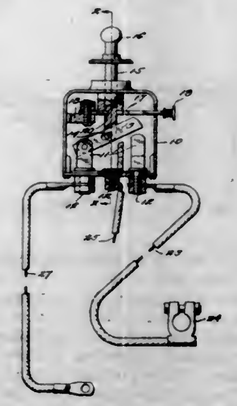
A cap having a flexible body portion providing a head covering including an outer part formed of an integral section provided with means for maintaining it in an upright

position, the said means comprising a pair of front and a pair of rear panels positioned at the front and back of said section, said pairs of panels spaced from each other and having portions of said section interposed therebetween, said panels being offset with respect to the outer face of said section to position the outer faces of said panels out of alignment with respect to the outer face of said section, the panels of each pair being spaced from and opposing



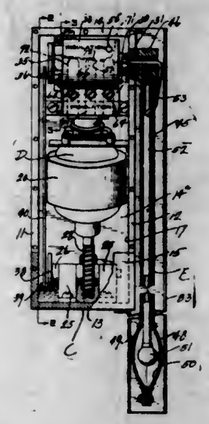
each other sidewise and having a portion of said section interposed therebetween, and spaced rows of stitching connected to said section, each row extending across the top and side marginal portions of a panel for securing the panels in non-aligning position with respect to the outer face of said section and further for securing the panels in position for maintaining said section upright when the cap is worn.

1,787,379. REFRIGERATOR CABINET. ROBERT WINTER HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed May 5, 1927. Serial No. 189,087. 1 Claim. (Cl. 220—9.)



A corner construction for metal refrigerator cabinets comprising a corner pillar forming a spacing and supporting member for the inner and outer metal walls of the cabinet, the said metal walls being secured to the said pillar, a metal facing plate on the front face of the said pillar, the outer metal wall being secured to an adjacent face of the pillar, the said faces extending nearly to meet at the outer corner of the pillar, said plates being doubled back from the corner upon themselves to form reversely extending flanges, a corner iron connecting the ends of the facing plates and being formed to fit around the corner and interlock with the facing plates and binding them together against the pillar to form reenforcing strain-resisting corner construction, said facing plates being maintained in spaced insulated relation to the inner lining of the cabinet by said corner pillar, substantially as set forth.

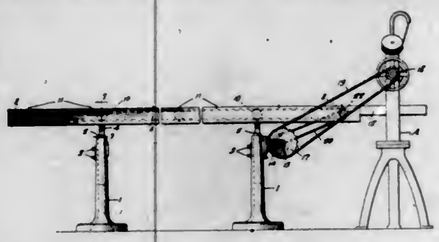
1,787,380. INVALID BED. ARAM IPLICJIAN, Athens, Greece. Filed Oct. 19, 1928, Serial No. 313,596, and in Germany Aug. 3, 1927. 1 Claim. (Cl. 5—81.)



An invalid bed having a mattress provided with a cut-out, said cut-out being adapted for the reception of a detachable mattress portion which completes the mattress, said mattress portion being provided with an underframe and a foot rest and securing means as eyes or the like, for the attachment of a detachable back rest after the mattress portion is pulled out from the bed.

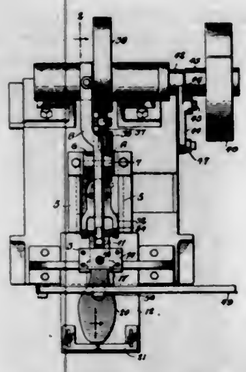
1,787,381. SAFETY SWITCH FOR MOTOR-OPERATED VEHICLES. PLINIO IRIZARRY, Santurce, Porto Rico. Filed June 10, 1927. Serial No. 197,926. 1 Claim. (Cl. 200—15.)

A switch comprising a casing, a plurality of contacts rising from the bottom thereof, binding posts depending from said contacts, a movable blade element pivoted on one of said contacts, a post slidable through the casing and connected with said blade for moving the latter into and out of engagement with the other of said contacts, said post having a notch therein, a slide supported within the casing and slotted to receive said post, and means for operating the slide to move the latter within the notch to hold the post against movement in a given position.



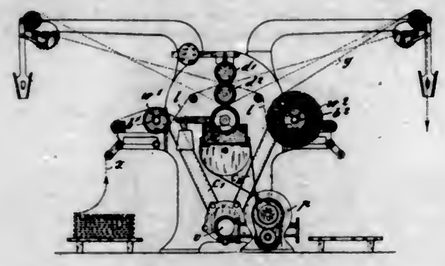
1,787,382. VEHICLE SIGNAL. EVERETT JONES, Lebanon, Ind. Filed June 15, 1925. Serial No. 37,373. 1 Claim. (Cl. 177—329.)

In a vehicle signal the combination of an elongated casing, a motor supported in the casing, substantially midway of the ends thereof, a shaft transverse to the motor rotatably carried at one end of the casing adjacent to an end of the motor, means connecting said shaft with the motor for rotation thereof, a second shaft transverse to the motor carried by the casing beyond the opposite end



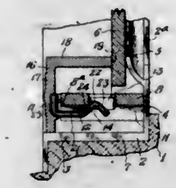
of the motor from the first shaft, a signal semaphore carried by the second shaft, and means connecting said shafts whereby the semaphore carrying shaft will be oscillated upon rotation of the first mentioned shaft.

1,787,383. PORTABLE SIGNATURE CONVEYER. JESSE C. LACY, Richmond, Va. Filed Oct. 28, 1929. Serial No. 403,011. 1 Claim. (Cl. 198—133.)



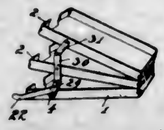
A conveyer of the class described comprising a table of inverted V shape with a slot at its apex, plates having their upper edges ridged to fit in the space formed by the V shape of the table and to which the table is connected, supporting means for some of said plates, each plate having a slot therein extending downwardly from the apex of the ridge, shafts passing through the upper portions of the slots and journaled in the plates, a roller on each shaft and arranged in the slot, an endless member passing over the roller and projections on the endless member, the projections on the upper reach of the endless member passing through the slot during the movement of the member.

1,787,384. SHOE-SOLE SKIVER. SAMUEL A. LEWIS, Derry, N. H., assignor of forty-seven one-hundredths to Ralph H. Barker, Derry, N. H., and George W. Barker, Rochester, N. Y. Filed July 9, 1928. Serial No. 291,344. 6 Claims. (Cl. 12—17.)



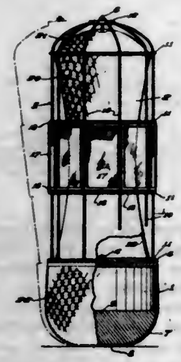
1. A shoe sole skiver, including a substantially U-shaped die having a beveled portion on the inside of the legs of the die, a support for said die, said support having a flat upper surface acting to support the die and prevent the shoe sole from protruding through the die when pressed by a roller, and thereby causing the shoe sole to remain in a certain position for the cutting operation, means for holding a shoe sole so that the heel portion will overlap said die, a depressing roller, means for forcing the depressing roller longitudinally over the die so that the heel portion of said sole will substantially fit said die with certain of the edges projecting beyond the die, and cutting means functioning during the operation of said roller for cutting off said edges.

1,787,385. TREATING DRY WEBS OF WOVEN MATERIAL. HERMANN MALY, Guben, Germany. Filed May 2, 1928, Serial No. 274,582, and in Germany May 10, 1927. 6 Claims. (Cl. 26—49.)



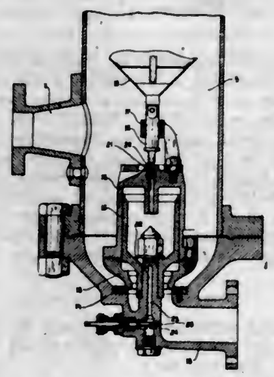
1. The process of treating dry webs of woven material consisting in moistening a wrapping cloth, forming the cloth and web into a roll in alternate layers, and leading a gaseous agent through the roll to uniformly transmit the moisture in the cloth to the web.

1,787,386. MOUNTING FOR GLASS WINDOWS OR THE LIKE. ALBERT H. MARTY, Cleveland, Ohio. Filed Apr. 27, 1929. Serial No. 358,594. 32 Claims. (Cl. 189—78.)



5. In a mounting for glass or the like, a member stationary with relation to said glass and a member comprising a rigid portion and a resilient element and movable with relation to said glass, said movable member being adapted to be automatically yieldingly held against said glass when moved into position in contact with the glass.

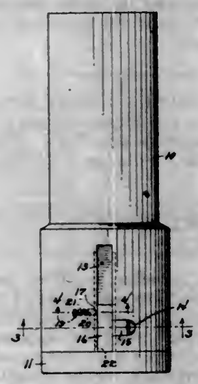
1,787,387. PAPER-SORTING DEVICE. CUNO MÄRZ, Schramberg, Germany, assignor to the Firm of Gustav Maier, Schramberg, Germany. Filed May 8, 1926, Serial No. 107,661, and in Germany Nov. 18, 1924. 3 Claims. (Cl. 206—72.)



1. In a device for separating and sorting letters and other papers, the combination with a plurality of containers provided with a hinge connection between their rear ends and connected at the side by toggle levers comprising a two legged lever pivoted to the container next above the base container of an arm rigidly connected to a member of the said toggle levers at an angle such as will allow by means of the said arm to turn the said member of the toggle levers around its pivot, thereby to align the toggle levers and thus to lift the containers apart from one another.

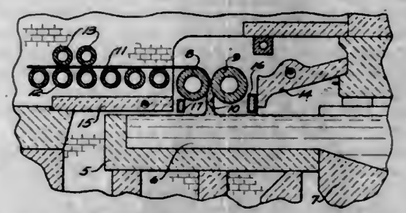
1,787,388. LIGHT-REFLECTING DEVICE. CLARENCE GARFIELD MCLEAN, Boston, Mass. Filed Feb. 2, 1928. Serial No. 251,363. 4 Claims. (Cl. 88—1.)

1. A light reflecting device of the class described comprising an upright column-like reflector embodying multiple reflecting surfaces arranged at different relative angles and a band of colored prismatic light transmitting and diffusing panels extending circumferentially around and spaced radially from said reflector between its ends.



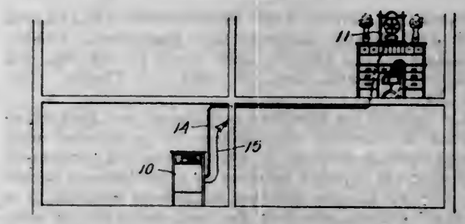
1,787,389. LIQUID-DELIVERING APPARATUS. REINIER MEIJER, Voorschoten, Netherlands, assignor to De Bataafsche Petroleum Maatschappij, The Hague, Netherlands, a Company of the Netherlands. Filed Dec. 27, 1928, Serial No. 328,801, and in the Netherlands Nov. 28, 1928. 3 Claims. (Cl. 137—68.)

1. In liquid delivering apparatus, a float chamber having an inlet and an outlet, an outlet valve, a float, a stationary cylindrical element, a cylindrical member secured to the outlet valve and adapted to telescope with respect to said element, a pressure chamber enclosed by said telescoping member and element, a passage between the float chamber and said pressure chamber, a valve associated with the float and adapted to control said passage, another passage between the said pressure chamber and the said outlet, and means for adjusting the effective cross sectional area of the last said passage.



1,787,390. LATCH. GEORGE W. MILLER, Sapulpa, Okla. Filed Oct. 28, 1927. Serial No. 229,429. 2 Claims. (Cl. 220—55.)

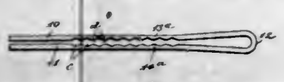
1. A latch comprising inner and outer members, said outer member having a slot in the wall thereof and a notch communicating with said slot, a lug on said inner member and adapted to enter said slot and pass into the notch, and a locking bar slidably mounted in said slot and adapted to close the notch when in one position for



locking the lug therein and when in another position adapted to permit free movement of said lug into and out of the notch.

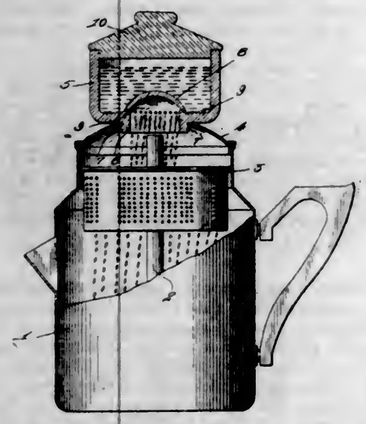
1,787,391. PROCESS AND APPARATUS FOR PRODUCING SHEET GLASS. OTTO C. MILLER, Charleston, W. Va., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 2, 1927. Serial No. 217,062. 7 Claims. (Cl. 49—33.)

4. In sheet glass apparatus, a receptacle containing a mass of molten glass, a pair of rolls disposed thereabove and arranged to create a sheet forming pass, and means for rotating the rolls in a manner to advance glass upwardly and through the pass to roll the glass into a sheet of predetermined thickness, the sheet being deflected over one of said rolls, the peripheral speed of the roll over which the sheet is deflected being relatively less than the peripheral speed of the other roll, so that the outer surface of the sheet will move relatively faster than the inner surface of the sheet when said sheet is being deflected.



1,787,392. REMOTE CONTROL FOR TALKING MACHINES. WILLIAM R. MOORE, Jr., Hagerstown, Md., assignor to Deca-Disc Phonograph Company, Waynesboro, Pa., a Corporation. Filed Dec. 22, 1927. Serial No. 241,931. 2 Claims. (Cl. 179—100.4.)

1. A talking machine comprising two units, one comprising a cabinet containing the records and operating mechanism therefor including an electric pick-up device

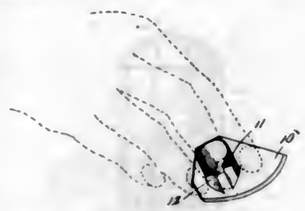


and an amplifier, and the other adapted to contain a speaking unit and mechanism for controlling the operating mechanism in the first-named cabinet, the unit containing the speaking and the controlling mechanism being positioned remotely from the operating mechanism, substantially as set forth.

1,787,393. BOB HOLDER. HARRY NATKIEL, New York, N. Y., assignor to The Rieser Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 1, 1927. Serial No. 230,280. 2 Claims. (Cl. 132—50.)

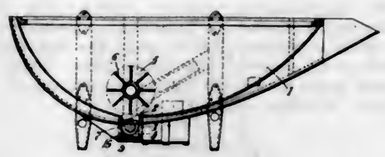
1. A bob holder including a pair of closely spaced legs joined by a substantially semi-circular connecting bight at one end, said legs being of greater width than thickness and said legs intermediate their ends having their confronting faces provided with complementary retaining and placement serrations, which serrations are slightly spaced apart at their projecting edges to define alternately arranged relatively wider clamping spaces.

1,787,394. ATTACHMENT FOR PERCOLATORS. BENNETT RUSSELL, Huntington, W. Va. Filed Jan. 24, 1930. Serial No. 423,211. 2 Claims. (Cl. 53—3.)



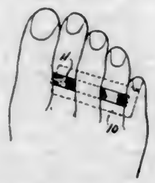
1. An attachment for percolators including a percolating tube carrying a coffee container and an apertured cover disposed over the container and tube, a receptacle having a discharge neck secured in the apertured cover and disposed over the tube and container, means located in the receptacle about the neck to permit a comparatively slow discharge of hot water from the receptacle onto the coffee in the container and to direct the water away from the upper end of the tube, and a cover for the receptacle.

1,787,395. METHOD FOR BLEACHING CELLULOSE OF ANY KIND. LADISLAV RYS, Ruzomberok, Czechoslovakia. Filed Dec. 20, 1928, Serial No. 327,458, and in Czechoslovakia Dec. 19, 1927. 5 Claims. (Cl. 8—2.)



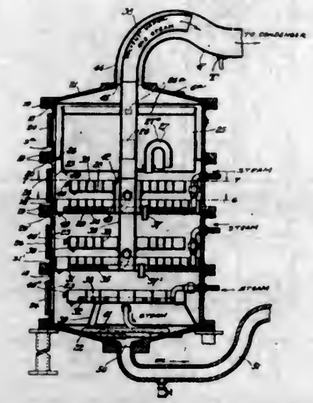
1. A method for bleaching cellulose of any kind which consists in digesting the cellulose to be bleached with diluted aqueous solutions of alkaline reacting compounds, subjecting the digested cellulose to a preliminary bleaching with an aqueous solution of gaseous chlorine in a measured amount less than the total necessary for complete bleaching, washing the pre-bleached cellulose and subjecting the washed cellulose to an after-bleaching with hypochlorites.

1,787,396. CIGAR KNIFE. FRANK W. SALMAR, Chicago, Ill. Filed Mar. 6, 1928. Serial No. 259,555. 1 Claim. (Cl. 131—49.)



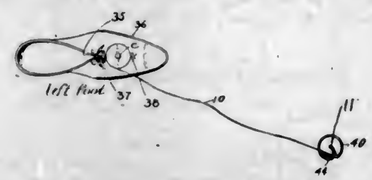
A cigar knife comprising a blade having an arcuate cutting edge all points of said edge lying in the same plane, a spring finger engaging clip secured to the face of the blade and extending upwardly therefrom, said clip having an outwardly flared opening whereby said blade will transversely underlie several fingers of a band to provide a bearing support therefor when said clip is engaged by one of the fingers of the hand.

1,787,397. APPARATUS FOR DISSEMINATING MATERIAL IN FINELY-DIVIDED OR POWDEROUS FORM. JOHN CLIFFORD SAVAGE, London, England. Filed Feb. 6, 1929, Serial No. 337,934, and in Great Britain Feb. 11, 1928. 10 Claims. (Cl. 244—1.)



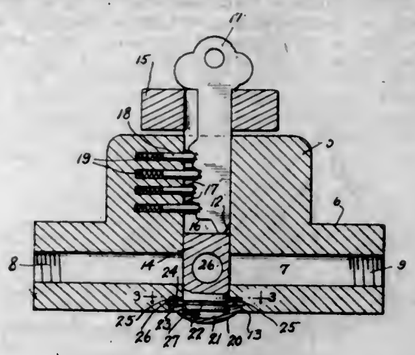
1. Apparatus for disseminating material in a finely divided form comprising a receptacle, a discharge throat depending from said receptacle, a feeding device of paddle wheel form mounted for rotation with small clearance in said throat and means disposed to occupy substantially one half of the cross sectional area of said throat on that side thereof towards which the material tends to be delivered by rotation of said feeding device of such form as to provide a passage for the material the cross sectional area of which progressively enlarges towards the opposite side of the throat where the material is discharged.

1,787,398. TOE SUPPORTER. HENRY W. SIDGREAVES, Newark, N. J. Filed Sept. 7, 1928. Serial No. 304,565. 2 Claims. (Cl. 128—81.)



1. As a new article of manufacture, an appliance for treating deformed toes, comprising an elongated base of soft material adapted to be arranged beneath the toes, a strap associated with the base and adapted to be passed over and under the toes of the foot supporting the base in position for use, and a relatively small pad slidably supported on said strap and adapted to singly engage the toe being treated.

1,787,399. DISTILLATION APPARATUS. LOUIS JOHN SIMON, London, England. Filed June 13, 1927, Serial No. 198,631, and in Great Britain July 19, 1926. 3 Claims. (Cl. 202—159.)



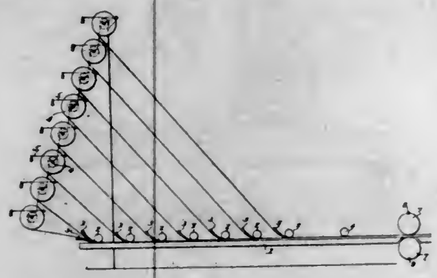
1. A distillation apparatus including a casing, a centrally disposed condensation outlet extending from near the bottom of the casing through the top thereof, an oil outlet at the lower end of said casing, a tank open at its top mounted in said casing adjacent the upper end thereof, said tank having an outlet through its bottom, a plurality of evaporating trays mounted in the casing below the tank, said tank emptying into the uppermost tray and each succeeding tray emptying into the tray immediately below it, and steam-heating coils in certain of said trays, the lowermost tray delivering the separated oil to the oil outlet while the gases of condensation pass upwardly from the tank and trays through the condensation outlet.

1,787,400. GOLF-TEE RETRIEVER. WALLACE D. SMITH, New Britain, Conn. Filed Apr. 15, 1929. Serial No. 355,133. 1 Claim. (Cl. 273—33.)

A golf tee retriever combination comprising a casing having a top wall that is provided with an opening, a button exposed through said opening, a flexible element emerging from said casing and having the free end adapted to be connected to a tee, winding mechanism for said flexible element connected to the other end thereof, ratchet elements for checking said winding mechanism subject to be released by pressing said button, means for supporting said casing upon the upper portion of the body of a shoe so as to position said button in convenient position for pressing by means of a golfclub, and said last named means being in the form of a clip structure having arms that are directed along a diameter for being positioned under the wings of a lace-shoe and held in place by the lacings.

1,787,401. VALVE LOCK. SAMUEL SPANGLER, Glenalum, W. Va. Filed Mar. 19, 1929. Serial No. 348,287. 2 Claims. (Cl. 251—6.)

1. In a valve lock of the character described, comprising a valve casing formed with a continuous passage therethrough, said casing being formed with a bore extending through the casing and across the passage, said casing also being formed with a recess communicating with one end of the bore, a cap bushing seated in said recess and having a socket therein registering with said one end of the bore, a valve stem having an opening for selective registration with said passage, said valve stem being rotatable in the bore and having one end rotatable in said socket, said valve stem being formed with a circumferential groove on that portion seated in said socket, expansible keys mounted in said cap bushing having one end of each engaging with said peripheral groove, and the other end of each engageable with the walls of the recess for locking the valve stem against longitudinal movement, the said valve stem being formed with a diametric key way through a portion of its length and also being formed with peripheral slots communicating with said key way, slidable pins mounted in the casing and projecting through said slots into said key way, and a key insertable in the key way for moving the pins in one direction.



1,787,402. BLEACHING AGENT AND PROCESS OF MAKING THE SAME. WILLIAM B. STODDARD, Stamford, Conn., and VAMAN R. KOKATNUR, New York, N. Y., assignors to Pilot Laboratory, Inc., Arlington, N. J., a Corporation of New Jersey. Filed Feb. 25, 1927. Serial No. 171,068. 10 Claims. (Cl. 23—250.)

1. A drying step in the manufacture of a substantially dry bleaching composition wherein the bleaching agent in substantially wet condition is an intermediate product, which comprises mixing with the wet bleaching agent a compound normally containing water of crystallization but containing less than its normal content of water of crystallization whereby the water present in the bleaching agent will be taken up by the added compound as water of crystallization and a mixture substantially free from water obtained.

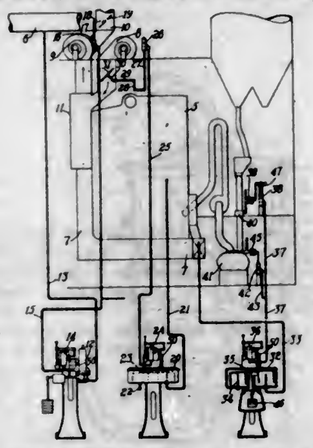
1,787,403. STEEL ALLOY INSENSIBLE TO HOT GASES AND VAPORS. BENNO STRAUSS, Essen-Bredeney, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Apr. 5, 1929, Serial No. 352,912, and in Germany Sept. 21, 1928. 3 Claims. (Cl. 148—31.)

1. As a new article of manufacture vessels adapted to be used in the conversion of oil residues to gasoline and consisting of an alloy that has been heated above the critical point Ac3, quickly cooled, and reheated to about 600° to 650° C. said alloy being composed of 0.1 to 0.2 per cent of carbon, 5 to 12 per cent of chromium, 0.2 to 0.5 per cent of vanadium, the remainder steel.

1,787,404. PROCESS OF MANUFACTURING GUM-BONDED LAMINATED BODIES. JOHN M. TAYLOR, Bridgeport, CLIFTON N. JACOBS, Norristown, and ROBERT R. TITUS, Villanova, Pa., assignors, by mesne assignments, to Continental-Diamond Fibre Company, Newark, Del., a Corporation of Delaware. Filed July 9, 1926. Serial No. 121,428. 2 Claims. (Cl. 154—40.)

1. A method of producing laminated gum-bonded bodies consisting of applying to a plurality of strips a synthetic resin in its soluble stage, drying the strips, superimposing the strips in successive order one upon the others, heating each strip prior to its application to the previously assembled strips to melt the resin and immediately thereafter rolling each individual strip into contact with the assemblage to insure complete adhesion of the applied strip thereto.

1,787,405. CHAIN. CHARLES E. DANSEREAU, Warwick Downs, R. I., assignor to D. & S. Jewelry Co., Providence, R. I., a Firm composed of Ernest De Robbio and John Silverman. Filed Mar. 19, 1930. Serial No. 437,050. 3 Claims. (Cl. 59—80.)

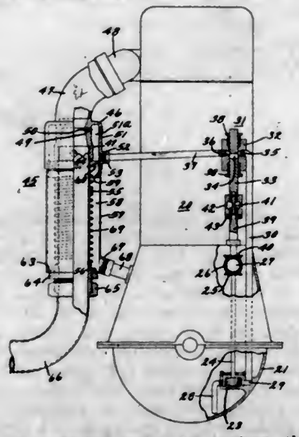


1. An ornamental chain comprising a plurality of solid block links having parallel sides and a transverse bottom recess at each end thereof, and an arm depending from each end and foldable over the adjacent recess, and a plurality of block link units formed of two spaced links connected by parallel pivot bars, the spacing being substantially the width of the solid block links, the adjacent sides of the spaced links being parallel and the said bars being inset from the edges of the spaced links, the solid block links being mounted between the spaced links with the foldable arms folded about the adjacent bars of the spaced link units with the ends of the arms abutting, the inset of said bars bringing the parallel sides of the solid links into substantial contact with the parallel sides of the spaced links, whereby the links are maintained in staggered alignment.

1,787,406. FOUNTAIN PEN. DONALD D. MUNGEN and ROBERT BACK, Chicago, Ill., assignors to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 12, 1926. Serial No. 128,735. 13 Claims. (Cl. 120—52.)

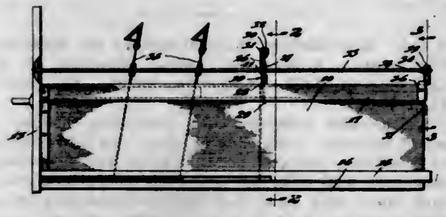
1. In a fountain pen, a removable pen section unit comprising a pen section, a pen irremovably secured thereto, and a feed member detachably positioned in said section and means associated with said member for effecting the easy withdrawal of said member from said section.

1,787,407. COMBUSTION-CONTROL APPARATUS. THOMAS A. PEEBLES, Mount Lebanon, Pa., assignor to John M. Hopwood, Dormont, Pa. Filed July 7, 1928. Serial No. 291,089. 8 Claims. (Cl. 236—14.)



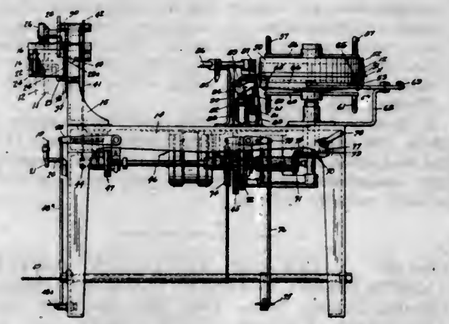
1. The combination with a boiler furnace having forced and induced draft mechanisms, of means for varying the operation of one of said draft mechanisms in accordance with the demand for steam, and means for operating the other of said draft mechanisms in response to variations in the furnace pressure.

1,787,408. CONDENSATION PRODUCT OF AROMATIC SULPHONIC ACIDS. FRIEDRICH POSPIECH, Dresden, Germany, assignor to Chemische Fabrik Pott & Co., Dresden, Germany. Filed Dec. 30, 1926, Serial No. 158,130, and in Germany Dec. 31, 1925. 16 Claims. (Cl. 260—159.)



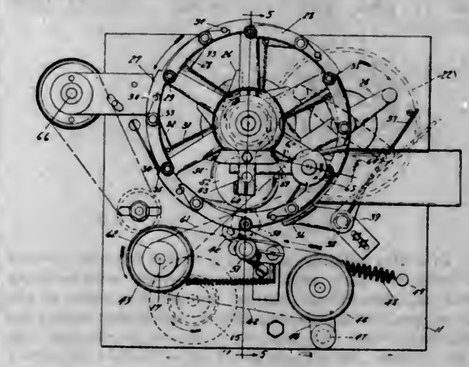
1. The process of producing condensation products of poly-nuclear cyclic compounds with olefines, which comprises heating poly-nuclear cyclic compounds with olefines in the presence of concentrated sulphuric acid to temperatures below 100° C.

1,787,409. OIL-TREATING APPARATUS. CHARLES R. SHORT and CHARLES L. LEE, Dayton, Ohio, assignors to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 9, 1923. Serial No. 637,812. 30 Claims. (Cl. 184—6.)



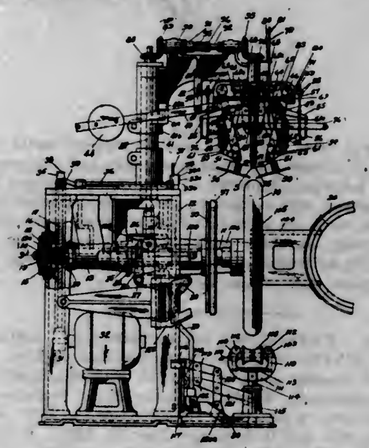
1. In an oil purifying device for engines, the combination of a reservoir forming part of the engine lubricating system, of an oil refining chamber, means for delivering oil from the reservoir to the refining chamber, an exhaust conduit for the engine arranged adjacent the chamber so as to heat the latter, and means whereby the exhaust gases flowing in the exhaust conduit reduce the pressure in the refining chamber below atmospheric.

1,787,410. FILING TRAY. SAMUEL SMILEY, Jr., Cincinnati, Ohio, assignor to The Globe-Werknicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 18, 1928. Serial No. 293,669. 9 Claims. (Cl. 129—16.)



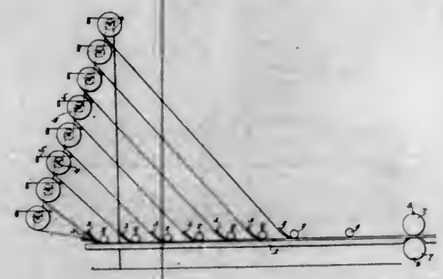
2. A filing device, comprising, a drawer having longitudinal depressions outwardly formed in its side walls, a follower plate mounted within said drawer having its side edges formed for slidable engagement within said depressions, longitudinally disposed rods mounted in said drawer above the respective side walls thereof, and ears extending from the respective opposite edges of said follower plate, said ears traversed by the guide rods for intermediately supporting the guide rods.

1,787,411. APPARATUS FOR REENFORCING TIRE BEADS. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Fire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 11, 1926. Serial No. 115,249. 17 Claims. (Cl. 154—9.)



1. Apparatus for reenforcing beads, comprising a horizontally rotatable drum having a fixed central portion and radially expansible sectional portions on either side thereof, said central portion constituting a seat for a bead and said sectional portions constituting folders for folding a strip outwardly about the bead, means for expanding each sectional portion of the drum, bead aligning supports operable toward and from the periphery of the drum to positions for supporting a bead about the central portion of the drum, means for holding the drum against rotation to facilitate mounting a bead thereon, means for rotating the drum, a stitcher blade movable downwardly over the surface of the drum while it is rotating, means for operating the stitcher comprising a lever supporting said blade and pivoted to swing horizontally toward and from the periphery of the drum and also vertically thereof, a roller movable to a position adjacent the periphery of the drum to provide a support on which a flipper may be formed on the bead and against which the stitcher blade may be actuated by said lever, said roller being mounted on a second lever having a cam thereon, and said first lever having a follower thereon for engaging said cam to move said roller to operative position when the stitcher blade is moved toward the drum, and a rest for said first lever to support it away from the drum.

1,787,412. GRINDING OR BUFFING MACHINE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 6, 1927. Serial No. 211,203. 3 Claims. (Cl. 51—108.)



1. A grinding or buffing machine comprising a conveyor wheel, studs carried by said conveyor wheel and adapted to have freely journalled thereon objects to be ground or buffed, a traveling abrasive element, means for intermittently rotating said conveyor wheel to bring each object successively into engagement with said abrasive element, and means for rotating said objects on said studs in a direction counter to the direction of the abrasive element.

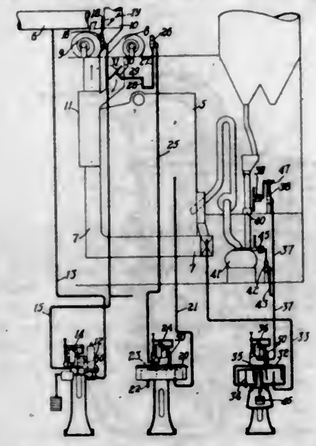
1,787,413. TIRE-BUILDING MACHINE. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 19, 1926. Serial No. 110,143. 12 Claims. (Cl. 154—10.)

1. Apparatus for building tires, comprising a rotatable core, means for rotating the core, a stitcher unit pivoted to swing to or from operating position with the core, means yieldingly holding the stitcher mechanism away from the core, and means for feeding the stitcher mechanism towards the core for a stitching operation on the core, said means including a screw shaft, a split nut connected to the stitcher for releasably engaging the stitcher

1,787,404. PROCESS OF MANUFACTURING GUM-BONDED LAMINATED BODIES. JOHN M. TAYLOR, Bridgeport, CLIFTON N. JACOBS, Norristown, and ROBERT R. TITUS, Villanova, Pa., assignors, by mesne assignments, to Continental-Diamond Fibre Company, Newark, Del., a Corporation of Delaware. Filed July 9, 1926. Serial No. 121,428. 2 Claims. (Cl. 154—40.)

1. A method of producing laminated gum-bonded bodies consisting of applying to a plurality of strips a synthetic resin in its soluble stage, drying the strips, superimposing the strips in successive order one upon the others, heating each strip prior to its application to the previously assembled strips to melt the resin and immediately thereafter rolling each individual strip into contact with the assemblage to insure complete adhesion of the applied strip thereto.

1,787,405. CHAIN. CHARLES E. DANSEREAU, Warwick Downs, R. I., assignor to D. & S. Jewelry Co., Providence, R. I., a Firm composed of Ernest De Robbio and John Silverman. Filed Mar. 19, 1930. Serial No. 437,050. 3 Claims. (Cl. 59—80.)

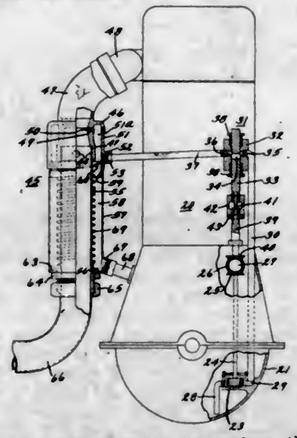


1. An ornamental chain comprising a plurality of solid block links having parallel sides and a transverse bottom recess at each end thereof, and an arm depending from each end and foldable over the adjacent recess, and a plurality of block link units formed of two spaced links connected by parallel pivot bars, the spacing being substantially the width of the solid block links, the adjacent sides of the spaced links being parallel and the said bars being inset from the edges of the spaced links, the solid block links being mounted between the spaced links with the foldable arms folded about the adjacent bars of the spaced link units with the ends of the arms abutting, the inset of said bars bringing the parallel sides of the solid links into substantial contact with the parallel sides of the spaced links, whereby the links are maintained in staggered alignment.

1,787,406. FOUNTAIN PEN. DONALD D. MUNGEN and ROBERT BACK, Chicago, Ill., assignors to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 12, 1926. Serial No. 128,735. 13 Claims. (Cl. 120—52.)

1. In a fountain pen, a removable pen section unit comprising a pen section, a pen irremovably secured thereto, and a feed member detachably positioned in said section and means associated with said member for effecting the easy withdrawal of said member from said section.

1,787,407. COMBUSTION-CONTROL APPARATUS. THOMAS A. PEEBLES, Mount Lebanon, Pa., assignor to John M. Hopwood, Dormont, Pa. Filed July 7, 1928. Serial No. 291,089. 8 Claims. (Cl. 236—14.)

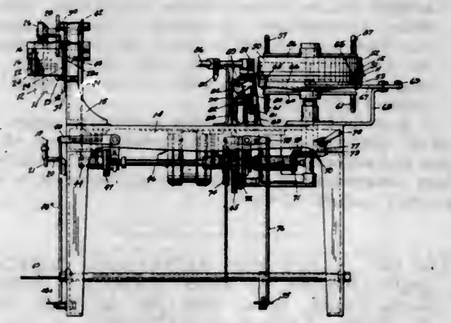


1. The combination with a boiler furnace having forced and induced draft mechanisms, of means for varying the operation of one of said draft mechanisms in accordance with the demand for steam, and means for operating the other of said draft mechanisms in response to variations in the furnace pressure.

1,787,408. CONDENSATION PRODUCT OF AROMATIC SULPHONIC ACIDS. FRIEDRICH POSPIECH, Dresden, Germany, assignor to Chemische Fabrik Pott & Co., Dresden, Germany. Filed Dec. 30, 1926, Serial No. 158,130, and in Germany Dec. 31, 1925. 16 Claims. (Cl. 260—159.)

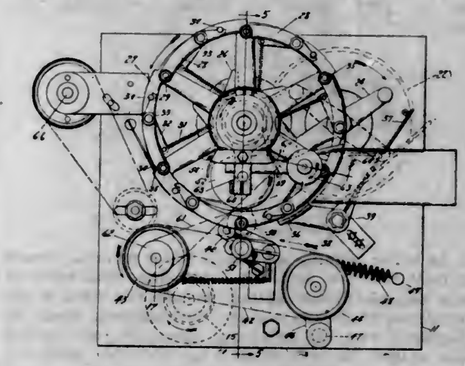
1. The process of producing condensation products of poly-nuclear cyclic compounds with olefines, which comprises heating poly-nuclear cyclic compounds with olefines in the presence of concentrated sulphuric acid to temperatures below 100° C.

1,787,409. OIL-TREATING APPARATUS. CHARLES R. SHORT and CHARLES L. LEE, Dayton, Ohio, assignors to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 9, 1923. Serial No. 637,812. 30 Claims. (Cl. 184—6.)



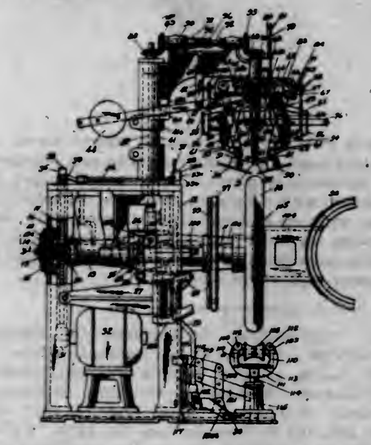
1. In an oil purifying device for engines, the combination of a reservoir forming part of the engine lubricating system, of an oil refining chamber, means for delivering oil from the reservoir to the refining chamber, an exhaust conduit for the engine arranged adjacent the chamber so as to heat the latter, and means whereby the exhaust gases flowing in the exhaust conduit reduce the pressure in the refining chamber below atmospheric.

1,787,410. FILING TRAY. SAMUEL SMILEY, Jr., Cincinnati, Ohio, assignor to The Globe-Werknicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 18, 1928. Serial No. 293,669. 9 Claims. (Cl. 129—16.)



2. A filing device, comprising, a drawer having longitudinal depressions outwardly formed in its side walls, a follower plate mounted within said drawer having its side edges formed for slidable engagement within said depressions, longitudinally disposed rods mounted in said drawer above the respective side walls thereof, and ears extending from the respective opposite edges of said follower plate, said ears traversed by the guide rods for intermediately supporting the guide rods.

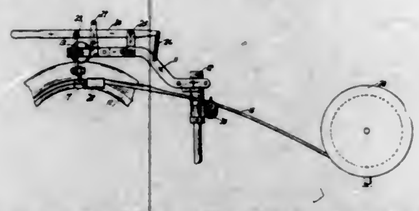
1,787,411. APPARATUS FOR REENFORCING TIRE BEADS. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Fire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 11, 1926. Serial No. 115,249. 17 Claims. (Cl. 154—9.)



1. Apparatus for reenforcing beads, comprising a horizontally rotatable drum having a fixed central portion and radially expansible sectional portions on either side thereof, said central portion constituting a seat for a bead and said sectional portions constituting folders for folding a strip outwardly about the bead, means for expanding each sectional portion of the drum, bead aligning supports operable toward and from the periphery of the drum to positions for supporting a bead about the central portion of the drum, means for holding the drum against rotation to facilitate mounting a bead thereon, means for rotating the drum, a stitcher blade movable downwardly over the surface of the drum while it is rotating, means for operating the stitcher comprising a lever supporting said blade and pivoted to swing horizontally toward and from the periphery of the drum and also vertically thereof, a roller movable to a position adjacent the periphery of the drum to provide a support on which a flipper may be formed on the bead and against which the stitcher blade may be actuated by said lever, said roller being mounted on a second lever having a cam thereon, and said first lever having a follower thereon for engaging said cam to move said roller to operative position when the stitcher blade is moved toward the drum, and a rest for said first lever to support it away from the drum.

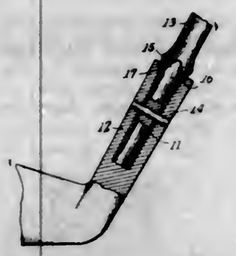
1,787,412. GRINDING OR BUFFING MACHINE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 6, 1927. Serial No. 211,203. 3 Claims. (Cl. 51—108.)

1. A grinding or buffing machine comprising a conveyor wheel, studs carried by said conveyor wheel and adapted to have freely journalled thereon objects to be ground or buffed, a traveling abrasive element, means for intermittently rotating said conveyor wheel to bring each object successively into engagement with said abrasive element, and means for rotating said objects on said studs in a direction counter to the direction of the abrasive element.



1,787,413. TIRE-BUILDING MACHINE. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 19, 1926. Serial No. 110,143. 12 Claims. (Cl. 154—10.)

1. Apparatus for building tires, comprising a rotatable core, means for rotating the core, a stitcher unit pivoted to swing to or from operating position with the core, means yieldingly holding the stitcher mechanism away from the core, and means for feeding the stitcher mechanism towards the core for a stitching operation on the core, said means including a screw shaft, a split nut connected to the stitcher for releasably engaging the stitcher



mechanism to the screw shaft, means for operating the split nut, means for rotating the screw shaft from the core rotating means, and automatic means for disconnecting said split nut from said shaft to allow said yielding means to move said stitcher mechanism away from the core.

1,787,414. STRIP-APPLYING DEVICE FOR TIRE-BUILDING MACHINES. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 11, 1926. Serial No. 140,803. 2 Claims. (Cl. 154—10.)

1. In a tire building machine a device movable toward and from the core, said device including, strip-applying means movable therein against the opposite sides of the core, means for positioning the strip-applying means by engagement with the core, and means for moving the device against the core adapted by continued movement thereof after the positioning means has engaged the core to urge the strip-applying means against the core.

1,787,415. GOLF CLUB. BOWDEN WASHINGTON, New York, N. Y., assignor to Union Hardware Company, Torrington, Conn., a Corporation of Connecticut. Filed July 13, 1927. Serial No. 205,404. 5 Claims. (Cl. 273—80.)

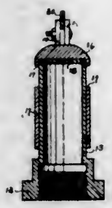
2. A golf club having a tubular tapered metal shaft socketed in a hozel and reinforced above and adjacent the hozel by having a diameter of said shaft enlarged for a short distance with respect to the inside diameter of the hozel, the walls of said enlargement being more steeply tapered than the shaft or its socketed portion on each side of said enlargement and the shaft being spaced from the top inner edge of the hozel.

1,787,416. CATALYTIC OXIDATION OF ORGANIC COMPOUNDS. ALFRED WOHL, Danzig-Langfuhr, Free City of Danzig, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 11, 1921, Serial No. 491,530, and in Germany June 22, 1916. 6 Claims. (Cl. 260—57.) (Granted under the provisions of the act of Mar. 3, 1921; 41 Stat. L., 1313.)

1. The process of catalytic oxidation of hydrocarbons to form carbonyl compounds, which comprises causing the vaporized hydrocarbons together with a gas containing free oxygen to pass at a temperature below red heat over a non-volatile catalyst of a non-basic character, which catalyst has the property of being regularly regenerated by free oxygen at said temperature.

1,787,417. CATALYTIC OXIDATION OF ORGANIC COMPOUNDS. ALFRED WOHL, Danzig-Langfuhr, Free City of Danzig, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporatin of Germany. Original application filed Aug. 11, 1921, Serial No. 491,530, and in Germany June 22, 1916. Divided and this application filed Aug. 8, 1929. Serial No. 384,461. 2 Claims. (Cl. 260—57.)

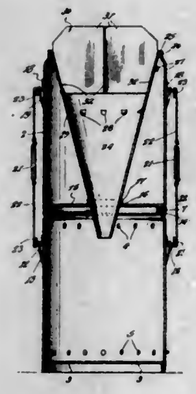
1. The method of oxidizing anthracene, which comprises subjecting anthracene in the vapor phase to oxidation by oxygen in the presence of an oxide of vanadium as a catalyzer, at a temperature of about 300° C. to 500° C.



1,787,418. DISPERSION AND METHOD OF MAKING THE SAME. RICHARD W. LEWIS, Montclair, N. J. Filed May 27, 1925. Serial No. 33,304. 18 Claims. (Cl. 134—1.)

1. A dispersion consisting of a dispersing medium, a dispersed substance comprising bitumen, and a dispersing agent containing hydrated metallic oxide, said dispersing medium and said dispersed substance being immiscible in each other, said agent and dispersed substance being of such a nature as to form an adhesive coherent mass in the absence or on removal of the dispersing medium, said dispersing agent being capable of dehydration, non-hydroscopic, insoluble, inert and of such nature as to be capable of being wetted by either of the other elements but resistant to being displaced by one of them when previously wetted by the other, and of such a nature that when completely wetted by the dispersing medium it will aid in the dispersion of the substance to be dispersed therein, and of such a nature as to resist after the removal of the dispersing medium by drying or otherwise being subsequently displaced by exposure to the dispersing medium.

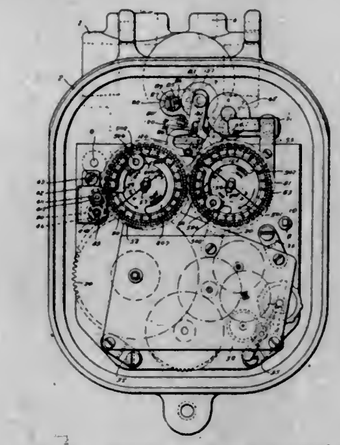
1,787,419. METHOD FOR USING MOTOR FUELS. THOMAS MIDGLEY, Jr., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Original application filed Apr. 15, 1922, Serial No. 553,270, Patent No. 1,573,846, dated Feb. 23, 1926. Divided and this application filed Jan. 22, 1926. Serial No. 83,133. 3 Claims. (Cl. 123—1.)



1. A method of utilizing a low compression motor fuel which comprises forming a combustible mixture of the fuel and air, and burning the mixture under a relatively high compression in the presence of vapors of a compounded metallic element.

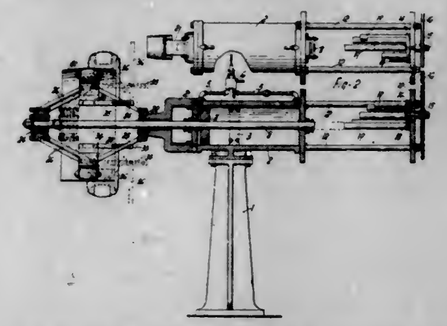
1,787,420. VALVE FOR MAINTAINING CONSTANT LIQUID HEIGHT IN TANKS. CLARENCE F. PEITZMAN, Dallas County, Iowa. Filed Apr. 29, 1929. Serial No. 358,958. 6 Claims. (Cl. 137—104.)

1. In a device of the class described, a base member designed to be threaded on the end of a pipe, a cylinder having one end integrally formed on said base member and having a bore in communication with said pipe, a sleeve slidably mounted on the free end of said cylinder, and having one end closed, said closed end capable of engagement with the free end of said cylinder when said sleeve is moved in one direction, a resilient member between said closed end and said cylinder, outlet ports in the side of said sleeve and located at a point slightly below said resilient member, and a float actuated bar capable of engaging said closed end of the sleeve.



1,787,421. BEETLE TRAP. WILLIAM A. RUDDELL, Cape May Point, N. J., assignor to Right Idea Jap-Beetle Trap Co., Norfolk, Va. Filed Apr. 2, 1929. Serial No. 351,934. 8 Claims. (Cl. 43—107.)

1. An insect trap comprising an insect container, a removable head for the upper end of said container formed with an opening, a bait receptacle seated upon said container and removable therefrom, means to releasably secure said receptacle in place upon said container, means to close the openings in the head of the upper end of said container when the receptacle is removed, a conduit extending vertically through said receptacle and having its lower end portion projecting through the bottom of the receptacle to extend into said container through the opening in the head thereof when the receptacle is in place upon the container, and means projecting above the upper end of said conduit for directing insects into the conduit.



1,787,422. TIME-SWITCH APPARATUS FOR GAS BURNERS. GUY B. COLLIER, Kinderhook, N. Y.; Charles Sager Collier, Chevy Chase, Md., and Elvira Brewster Collier, New York, N. Y., executors of said Guy B. Collier, deceased. Filed Mar. 23, 1928. Serial No. 264,107. 9 Claims. (Cl. 161—9.)

1. In a timing mechanism, a clock-driven dial having an annular slot therein, a rotatable, adjustable lifting arm rearward of said dial carrying a time setting indicator mounted co-axially with said dial and extending through said slot and means for holding the time setting

arm in adjustable position in said slot comprising a screw bolt passing through said slot and having threaded engagement with said arm and binding said arm to said dial.

1,787,423. BAND-STRETCHING MACHINE. WALTER E. HUMPHREY, Kent, Ohio, assignor, by mesne assignments, to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed June 24, 1927. Serial No. 201,187. 7 Claims. (Cl. 154—9.)

1. In an apparatus for mechanically expanding a continuous band, the combination of a plurality of carriers arranged in a circle, a support for said carriers, means to move the carriers radially of a central axis to expand the circle, said means operating through said support, and a roller mounted in each carrier, the several rollers supporting the band throughout its circumference.
